Preface

This book is an attempt to fill a particular niche in the vast field of one volume commentaries on the Bible. Rather than addressing all the varied elements of theology, literary structure, word meanings, history of scholarship, and so on, we have focused on the task of providing background information to the text.

Some might wonder what significance background information has for the interpretation of the text. What is it that we might expect to gain from knowing what this commentary seeks to make available? It has been rightly observed that the theological message of the Bible is not dependent on knowing where the places are or what the cultural background was. It is also correct to observe that one could gather all the proof from history and archaeology that, for instance, there actually was an Israelite exodus from Egypt, but that would still not prove that God orchestrated it—and it is God's involvement that is the most important point of the biblical author. So why should we spend so much time and effort trying to understand the background of Israelite culture, history, geography and archaeology?

The purpose of this book is not apologetics, though certainly some of the information we present could find use in apologetic discussions. Nevertheless, it was not an apologetic agenda that dictated our selection or presentation of the data. Instead, we are trying to shed light on the Israelite culture and worldview. Why? When we read the Bible as a community of faith, we want to draw as much theological content out of the text as possible. As a result people tend to read theological significance into the details. There is an inclination to read our own cultural biases and our own perspectives and worldview into the text as a basis for understanding theological significance if we are not alerted to the differences that existed in the Israelite way of thinking. The larger ancient Near Eastern world becomes significant in that many times it can serve as a window to the Israelite culture. In many cases, by offering insight into the Israelite or ancient Near Eastern way of thinking, this book can help the interpreter avoid erroneous conclusions. So, for instance, the theological significance of the pillar of fire, the scapegoat or the Urim and Thummim can be understood in new ways once we make connections to the general culture of the ancient Near East.

We have not limited our identification of similarities to precisely delineated time periods. We fully recognize that the occurrence of some cultural element in the town of Ugarit in the mid-second millennium may not have any relationship to the way Israelites of the mid-first millennium thought. Nevertheless, often our interest has been in merely indicating that certain ideas or concepts existed in the ancient Near Eastern cultures. It is not impossible that such ideas could have represented aspects of the general cultural matrix of the ancient world. We bring them up merely as examples of the kind of thinking that existed in the ancient

world. Such information must be used with caution, however, because we cannot assume a flat homogeneity across the eras, regions or ethnic groups of the ancient Near East. In our own day, for instance, it would be foolhardy to speak of "European culture" given our awareness of the significant differences between, for example, the Italians and the Swiss. We have attempted to show some sensitivity to these issues but have not imposed strict limitations on the information we offer.

The issue at hand is not a question of whether the Israelites "borrowed" from their neighbors or not. We are not seeking to discover a literary path and feel no need to establish that Israelites would have been familiar with this or that piece of literature in order to employ similar motifs. We have avoided terms like "influence" or "impact" to describe how information was shared. That is because we are trying to look at those elements that may simply be part of the cultural heritage of the ancient Near East. That heritage may be reflected in various pieces of literature, but the Israelites need not have had knowledge of, or been influenced by, those pieces of literature. They simply are a part of the common cultural matrix. God's process of revelation required that he condescend to us, that he accommodate our humanity, that he express himself in familiar language and metaphors. It should be no surprise then that many of the common elements of the culture of the day were adopted, at times adapted, at times totally converted or transformed, but nevertheless used to accomplish God's purposes. Indeed, we would be surprised if this were not the case. Communication requires a shared circle of common conventions and understandings. When we speak of "daylight-saving time" we assume the person we are speaking to understands this strictly cultural convention, and we do not explain it. Someone from a different era or culture that had no such practice of adjusting clocks would be absolutely clueless as to what was meant by the phrase. They would have to become familiar with our culture in order to understand. The same holds true as we try to penetrate Israelite literature. Therefore, if circumcision is to be understood in Israel's context, it is helpful to understand its ancient Near Eastern form. If sacrifice is to be appreciated for what it represented in Israel, it is helpful to compare and contrast what it represented in the ancient world. While sometimes this search for knowledge can result in problems that are difficult to resolve, maintaining ignorance of those problems would not mean they did not exist. And more often than not, our new knowledge has positive results.

Sometimes the information we provide is simply to satisfy curiosity. As teachers, however, we have found that much of our task is taken up with developing in our students a curiosity about the text and then attempting to satisfy, in some degree, that curiosity. In the process it is often possible to bring the biblical world to life—to help us become alert and informed readers. When information is presented in an entry, it is not necessarily being offered to help interpret the passage but perhaps only to provide data that may be pertinent to interpreting the passage. So information in Job 38 about mythological images of creation in the ancient Near East does not serve as a suggestion that the thinking in Job should be thought of in the same terms. The data are simply being provided for comparison.

This book is intended to serve a nonprofessional market rather than the academic and scholarly communities. If we were to footnote every piece of informa-

tion here so that our colleagues could find the resources and check out the original publications, we would end up with a multivolume work too detailed to be of any use to the lay people for whom we are seeking to provide a service. Though we often found it excruciating to omit references to journals and books, we here acknowledge our debt to our colleagues and hopefully the few bibliographic references we provide can lead the interested reader to them. We have additionally tried to be very careful with proprietary information and ideas so that a standard of integrity could be maintained. Another consequence of targeting the nonprofessional market is that our references to the primary literature have of necessity been somewhat vague. Rather than citing text reference and publication resource, we have had to be content to say, "Babylonian laws contain . . ." or "Hittite regulations include . . ." or "Egyptian reliefs show . . ." Knowing that the typical layperson would not have the opportunity or the inclination to go look up the text and that many of the citations would be obscure and inaccessible to nonspecialists, we concentrated our efforts on giving the pertinent information rather than on offering a research trail. We recognize that this will create some frustrations for those who would like to track the reference for further information. We can only recommend going back to some of the bibliography we have listed and tracing the information from there. As an aid to readers unfamiliar with certain terms that arise repeatedly, we have provided a glossary at the back of the book. Asterisks (*) in the text point readers to terms that can be found there.

For the lay reader, it is possible that the information will occasion some confusion. It was our objective to provide information, not to go into detail to show how that information should be used or what it proves or does not prove. The reader may well often ask, What am I to do with that information? In many cases there may not be anything that can be done with the information, but having that information may prevent one from doing something with the text that should not be done. For instance, information given concerning the "circle of the earth" in Isaiah 40:22 may not solve the readers quandaries concerning how to account theologically for Scripture's use of old-world ideas about the shape of the earth, but it will give the reader sufficient information to avoid the misconception that the text incorporated modern scientific ideas between its lines. More generally, it is hoped that even when the specific information may not be usable in one's context, there will be a greater appreciation developed for the many ways in which Israel and the Old Testament reflect the cultural heritage of the ancient Near East.

Other Resources for the Cultural Context of the Old Testament

This list provides the reader with some of the significant sources we found useful in developing the information we present. It is not a "beginning bibliography" in that some of the sources listed are fairly technical or advanced in nature. Neither is it a comprehensive bibliography—many fine works, even standard works, have been omitted. However, these would be the key works to refer to if the reader wants to find more information or discussion on the topics presented.

PENTATEUCH

Introduction

Though there are many reasons to consider the Pentateuch as a single, unitary piece of literature, the background materials pertinent to the study of each book are vastly different. As a result, we offer here an introduction to each of the five books individually.

Genesis

Genesis is typically divided into two main sections (1—11, 12—50). The background material most helpful for understanding the first section is the mythological literature of the ancient Near East. Both Mesopotamian and Egyptian mythology provide a wealth of materials concerning contemporary perspectives on the creation of the world and of human beings. These works include the *Enuma Elish* and the Atrahasis Epic, as well as a number of *Sumerian myths from the region of Mesopotamia. From Egypt there are three main creation texts, one each from Memphis, Heliopolis (in the Pyramid Texts) and Hermopolis (in the Coffin Texts). Additionally, there are several flood stories available from the region of Mesopotamia, found in the Gilgamesh Epic and in the Atrahasis Epic. Examination of this literature helps us to observe many similarities and differences between ancient Near Eastern and Israelite concepts. Similarities will make us aware of the common ground that existed between Israel and her neighbors. Sometimes the similarity will be in the details of the narrative (such as sending out birds from the ark) or in aspects of the text we might not have noticed before (such as the naming of things in conjunction with their creation). Some similarities might lead us to question whether we have read too much theological signifi-

cance into certain elements in the text (e.g., the creation of woman from a rib), while in other cases we might find that we have not seen enough of the theological significance (e.g., God's coming to the garden in the "cool of the day"). In general such similarities help us to understand the biblical accounts in broader perspective.

The differences between the ancient Near Eastern and biblical literatures will help us to appreciate some of the distinctives of both the Israelite culture and the biblical faith. These will again include specific details (shape of the ark, length of the flood) as well as foundational concepts (the contrast between the biblical view of creation by the spoken word of God and the Mesopotamian view that the creation of the world was associated with the birth of the cosmic deities). In many cases the differences are related (either directly or indirectly) to the unique monotheistic faith of Israel.

It is not unusual for the similarities and the differences to come together in a single element. The concepts of humankind's being created (1) from clay and (2) in the image of deity are both familiar in the ancient Near East, but Israel puts a unique twist on the idea that moves it into an altogether different sphere.

We cannot always account for the similarities and the differences as clearly or as conclusively as we might wish. Different scholars will have varying opinions of the implications based on some of their own presuppositions. The issues are often complex, and any individual scholar's conclusions may be highly interpretive. For this reason it is easier to offer information than it is to offer satisfying answers.

Finally, the comparative literature not only provides parallel accounts to some of those found in Genesis 1—11 but also provides a parallel to the overall structure of this section. The Mesopotamian Atrahasis Epic, like Genesis 1—11, contains a summary of creation, three threats and a resolution. Such observations can help us to understand the literary aspects to how this portion of the Bible is pieced together. Additionally, if this parallel is legitimate, it can help us see the genealogies in a different light, because when the biblical text has genealogies it reflects the Genesis blessing of being fruitful and multiplying, while in the comparable sections of Atrahasis the gods are distressed by the growth of human population and try to curb it.

Finding literary parallels to Genesis 12—50 presents more of a challenge. Though scholars have attempted to attach various descriptive terms to the patriarchal narratives (such as "sagas" or "legends"), any modern terminology is inadequate to encompass the nature of the ancient literature and is bound to mislead as much as it helps. There is nothing in the literature of the ancient Near East to parallels the stories about the patriarchs. The closest material is found in Egypt in works such as the *Story of *Sinuhe,* but that account covers only the lifetime of one man, rather than following several generations, and has nothing to do with resettlement or relationship with God. Even the Joseph story, considered on its own, is difficult to classify and compare. Again comparisons could be made to the stories of Sinuhe, *Wenamon or *Ahiqar (all dealing with the life and times of royal courtiers), but the similarities are quite superficial.

The background information for understanding these narratives comes from a different set of materials. These chapters concern the lives of the patriarchs and

their families as they move from Mesopotamia to Canaan to Egypt in the process of the formation of the covenant. A number of archives (*Nuzi, *Mari, *Emar, *Alalakh) that have been discovered in Syria and Mesopotamia have provided information about the history, culture and customs of the ancient Near East in the second millennium. Often these materials can shed light on the political events or settlement history of the region. They can also help us to see how families lived and why they did some of the things that appear odd to us. In the process we gain important information that can help us process the biblical materials. For instance, we commonly seek ethical guidance in the behavior of biblical characters (though this is not always a productive procedure). In order to understand why people do what they do and to understand the decisions they make, it is important to become familiar with the norms of culture. We may find, then, that some of the behavior of the patriarchs is driven by norms that we have misunderstood or that we could easily misconstrue. Corrective information can often be provided by the archives.

One of the interesting conclusions that can be drawn from this kind of analysis is the understanding that there was not much in the worldview of the patriarchs and their families that differentiated them from the common ancient Near Eastern culture of the day. Again, then, an understanding of the general culture may help us to sort out what elements in the text have theological significance and what elements do not. For instance, an understanding of the practice of *circumcision in the ancient Near East may provide helpful guidelines to our assessment of it in the Bible. Observations about the use of the torch and censer in ancient Near Eastern *rituals may open up the meaning of Genesis 15. Even Abraham's understanding of God can be illuminated by information from the ancient Near Eastern documents.

As we encounter all of this information, we must be impressed with how often God uses the familiar to build bridges to his people. As what was familiar to them becomes more familiar to us, we can understand more of the text. On the other hand it is important to realize that the purposes of the book of Genesis go far beyond any of the literature available in the ancient Near East. The presence of similarities does not suggest in any way that the Bible is simply a secondhand, second-class repackaging of ancient Near Eastern literature. Rather, the background material helps us understand Genesis as a unique theological product linked to people and events embedded in a specific cultural and historical context.

Exodus

The book of Exodus contains a virtual cornucopia of types of literature, from narrative to law to architectural instructions. All are skillfully woven together to narrate the sequence of events that led a people from feeling that God had abandoned them to understanding themselves to be God's elect people with his presence in their midst. As a result there are many different primary sources that may offer assistance.

As might be expected, Exodus has more connections to Egyptian sources than any other book. Unfortunately the uncertainty concerning the date of the events

and the sparsity of materials from some of the related periods of Egyptian history leave many questions unanswered. As a result it is not so much the historical literature of Egypt that we depend on but all the sources that give information about geography or culture. Locating the cities and places mentioned in the biblical text is very difficult and many uncertainties remain, yet one by one some of the gaps are being closed as archaeology continues to investigate significant sites.

The legal passages of Exodus are comparable to a wide range of law collections from Mesopotamia. These include *Sumerian legal texts such as the reform of Uruinimgina (or Urukagina), the laws of *Ur-Nammu and the laws of *Lipit-Ishtar. These are fragmentary texts that date from the late third millennium and early second millennium B.C. The more extensive texts are the laws of *Eshnunna and *Hammurabi (from the *Old Babylonian period, eighteenth century B.C.), the *Hittite laws from the seventeenth century and the Middle Assyrian laws from the twelfth century. These law collections, as indicated by the paragraphs that surround them, are intended to testify to the gods how successful the king has been at establishing and maintaining justice in his kingdom. As such, the laws are designed to reflect the wisest and fairest decisions the king could imagine. Like the candidate making a campaign speech who seeks to find every possible piece of legislation that he can claim responsibility for, the king wanted to show himself in the best possible light.

These laws help us to see that the actual legislation that determined the shape of Israelite society was not all that different on the surface from the laws that would have characterized Assyrian or Babylonian society. What was different was that for Israel the law was part of God's revelation of what he was like. The Babylonians had just as strong prohibitions of murder as the Israelites had. But the Babylonians would have refrained from murder because murder was disruptive to the smooth ordering of society and the principles of civilization. Israelites would have refrained from murder because of who God was. The laws may look the same, but the foundation of the legal system was remarkably different. For the Israelites, *Yahweh their God was the source of all law and the foundation of all societal norms. In Mesopotamia the king was entrusted with the authority to perceive what the law ought to be and to establish the law. The gods were not moral, nor did they require moral behavior, but they did expect humans to preserve the values of civilization and therefore to act in orderly and civilized ways.

The point is, then, that the law given at Sinai does not necessarily prescribe new laws. Its actual legislation may be very much like the laws that Israel had been living under in Egypt and is clearly similar to the laws that governed other societies of the ancient Near East. What is new is the revelation of God that is accomplished through the institutionalization of the law as part of the *covenant between God and Israel. Comparing the law of the Bible to the ancient Near Eastern law collections can help us to understand both the concept of law and order as well as the philosophical and theological underpinnings of the law.

When we get to the section of Exodus that has to do with the construction of the tabernacle, we may be well served by understanding the use and construction of shrines (portable and otherwise) in the ancient Near East. The detailed description of the materials that were used in the construction of the tabernacle, can be

understood as we become aware of the value that culture attached to those materials. For example, consider the value that our society places on a mink coat, an oak desk, a leather chair or a stone house. Alongside of materials, we also attach value to positioning, as in the penthouse apartment, the corner office or the house at the top of the hill. So as we become acquainted with the materials and positions that the ancient Israelites attached value to, we can appreciate the rationale behind certain details. Again, we will often find that the rationale is cultural rather than theological. Once we understand the cultural elements, we can avoid attaching a foreign theological significance to some of the features.

Leviticus

The book of Leviticus is filled with instructions concerning how to maintain the holy space that was set apart for God's presence. This includes details of the sacrificial system, instructions for the priests and laws concerning *purity. In the ancient world *impurity was believed to create an environment for the demonic, so *purity needed to be maintained. This generally involved *rituals as well as incantations. For Israel *purity was a positive value that included rules of ethical behavior as well as issues of etiquette.

The ancient Near Eastern material that is most helpful for understanding the book of Leviticus is that which gives information about sacrifices, rituals and instructions for priests and dealing with *impurity. This information usually must be gleaned in bits and pieces from many different sources. There are, however, a few major ritual texts available that serve as significant sources of information. While *Hittite literature contains many sorts of ritual texts, among the most helpful is the *Instructions for the Temple Officials* from the mid-second millennium. This text details the means that should be used to protect the sanctuary from sacrilege and trespass. Mesopotamian sources are also plentiful.

The *maqlu* texts contain eight tablets of incantations as well as one tablet of rituals connected to the incantations. Most of these incantations are attempts to counter the powers of witchcraft. Other important series would include the *shurpu* texts, which concerned purification, the *bit rimki* texts concerning royal ablutions and the *namburbu* rituals of undoing.

Most of these texts assume a background of magic and divination where witchcraft, demonic forces and incantations represented powerful threats in society. Israelite beliefs ideally did not accept this worldview, and their concepts of *purity and *impurity had noticeable differences. Nevertheless, studying this material can expose many facets of the ancient worldview that the Israelites shared. Even though the biblical literature purged the rituals of the magical element, the institutionalized practices and the terminology describing them at times still contained the trappings or vestiges of the broader culture.

Certainly Israelite beliefs and practices were closer to the ancient Near East than they are to our own concepts of ritual, magic and *purity. Since we understand so little concerning these aspects of their worldview, we are often inclined to read very foreign theological concepts or symbolism into some of the practices and rules. This often creates an erroneous view of the nature and teaching of the book. By acquainting ourselves with the ancient Near Eastern worldview, we can

avoid this type of error and understand the text a little more in the way that the Israelites would have understood it.

Numbers

The book of Numbers contains instructions for travel and setting up the camp, as well as records of the events that took place during the nearly forty years the Israelites spent in the wilderness. It also includes a number of ritual and legal passages. Many of the sources that contribute to an understanding of the books of Exodus and Leviticus also provide background for the book of Numbers. In addition, itineraries from Egyptian sources can help in locating various places listed in the Israelites' travels. These itineraries come from a number of different sources, including the *Execration Texts (where the names of certain cities were written on bowls and then shattered in connection with cursing rituals; Twelfth Dynasty, *Middle Bronze period) and the topographical lists carved on the walls of temples such as those at Karnak and Medinet Habu (*Late Bronze period). They preserve maps in a list form as they name each of the cities that would be encountered traveling along certain routes. It is interesting that some biblical sites, which archaeologists have considered suspect because no remains from a given period have been found there, are attested in the Egyptian itineraries for the same period.

Numbers, like several of the other books of the Pentateuch, contains information concerning Israel's ritual calendar. Information about feast days and ritual calendars is abundant in the ancient Near East because calendars were generally regulated by the priesthood. Nevertheless, it is difficult to ferret out many of the critical details of observances and especially to discover what is behind the formation of the traditions that are institutionalized in these calendars. It is a treacherous path that seeks to identify the links between the festivals of differing cultures even though there may be evidence of many areas of cultural exchange or dependence.

Deuteronomy

The book of Deuteronomy follows the format of agreements between nations, as described in the sidebar "The Covenant and Ancient Near Eastern Treaties." In these ancient covenants, the largest section was usually the stipulations section, which detailed the obligations of the vassal. These would include general expectations, such as loyalty, as well as specifics, such as paying tribute and housing garrison troops. There would also be prohibitions against harboring fugitives and making alliances with other nations. There were obligations to contribute to the defense of the suzerain nation and to treat envoys with respect.

In Deuteronomy the stipulations are in the form of laws that detail expectations and prohibitions. Some interpreters believe that the laws in chapters 6-26 (or 12-26) are arranged according to the Ten Commandments. Just as the ancient law collections have a prologue and an epilogue to give them a literary framework (see the introduction to Exodus), it is the covenant that provides the literary framework for the law. The literary framework of *Hammurabi's laws helps us to understand that the collection of laws was not for framing legislation but for demonstrating how just Hammurabi's reign was. Likewise the literary framework of

Deuteronomy gives us an idea of why these laws were collected. Deuteronomy is framing these laws not as legislation but as *covenant.

When the people of the ancient Near East agreed to a treaty and its stipulations, they were obliged to abide by the terms of the treaty. It is the same level of obligation that would be connected to the laws of the land, but it operates differently, not within a legal system. For example, in today's world each country has its own laws, enacted by its legislative bodies, that are binding on its citizens. But there is also international law, which in part has been established by multinational bodies, often by treaty-type agreements. This international law is binding on all of the parties involved in the agreement. The binding nature of Deuteronomy is tied to treaty rather than to law (that is, to the covenant rather than to legislation). What that means is that Israel's obligations were connected to sustaining the relationship outlined in the covenant. If they were to be God's people (covenant), they were expected to conduct themselves in the described ways (stipulations). We should therefore not look at the laws as laws of the land (though they may well have been). The Israelites were not supposed to keep the law because it was the law; they were to keep the law because it reflected something of the nature of God and of what he wanted them to be like in order to remain in relationship with him.

An additional characteristic of Deuteronomy is that it is presented as the exhortations of Moses to the people. In this way Moses is seen as the mediator of the covenant because as God's messenger or envoy he is establishing the terms of the treaty. The *Hittite treaties preserve only the treaties themselves and offer no insight into the envoy who delivered the treaty. Other texts, however, allow us to gain some insight into the role of the envoy. He often presented his message verbally but had a written copy for the documentation and for the records. The words of Moses admonishing the people to be loyal to the terms of the covenant are very much in line with what any royal envoy would have been expected to say. The vassal would have been reminded that it was a privilege to be brought into this agreement and that it would be prudent to refrain from any action that would jeopardize those privileges.

1:1—2:3

Creation

1:1. In the beginning. An Egyptian creation text from Thebes speaks of the god Amun who evolved in the beginning, or "on the first occasion." Egyptologists interpret this not as an abstract idea but as a reference to a first-time event. In the same manner, the Hebrew word translated "beginning" usually refers not to a point in time but to an initial period. This suggests that the beginning period is the seven days of chapter one.

1:2. formless and empty. In Egyptian views of origins there is the concept of the "nonexistent" that may be very close to what is expressed here in Genesis. It is viewed as that which has not yet been differentiated and assigned function. No boundaries or definitions have been established. The Egyptian concept, however, also carries with it the idea of potentiality and a quality of being absolute.

1:2. Spirit of God. Some interpreters have translated this as a supernatural or mighty wind (the Hebrew word translated "Spirit" is sometimes translated "wind" in other passages), which has a parallel in the Babylonian *Enuma Elish.* There the sky god, Anu, creates the four winds that stir up the deep and its goddess, Tiamat. There it is a disruptive wind bringing unrest. The same phenomena can be seen in Daniel's vision of the four beasts where "the four winds of heaven were churning up the great sea" (7:2), a situation that disturbs the beasts there. If this is correct, then the wind would be part of the negative description of verse 2, paralleled by the darkness.

1:1-5. evening and morning. The account of creation does not intend to give a modern scientific explanation of the origin of all natural phenomena, but rather to address the more practical aspects of creation that surround our experiences of living and surviving. In the course of this chapter the author relates how God set up alternating periods of light and darkness—the basis for time. The narrative speaks of evening first because the first time period of light is just coming to a close. The author does not attempt an analysis of the physical properties of light, nor is he concerned about its source or generation. Light is the regulator of time.

1:3-5. light. The people of the ancient world did not believe that all light came from the sun. There was no knowledge that the moon simply reflected the light of the sun. Moreover, there is no hint in the text that "daylight" was caused by sunlight. The sun, moon and stars were all seen as bearers of light, but daylight was present even when the sun was behind a cloud or eclipsed. It made its appearance before the sun rose, and remained after the sun set.

1:6-8. firmament. In a similar way the expanse (sometimes called "the firmament") set up in day two is the regulator of climate. The ancient Near Eastern cultures viewed the cosmos as featuring a three-tiered structure consisting of the heavens, the earth and the underworld. Climate originated from the heavens, and the expanse was seen as the mechanism that regulated moisture and sunlight. Though in the ancient world the expanse was generally viewed as more solid than we would understand it today, it is not the physical composition that is important but the function. In the Babylonian creation epic, *Enuma Elish,* the goddess representing this cosmic ocean, Tiamat, is divided in half by Marduk to make the waters above and the waters below.

1:9-19. function of the cosmos. Just as God is the One who set time in motion and set up the climate, he is likewise responsible for setting up all the other aspects of human existence. The availability of water and the ability of the land to grow vegetation; the laws of agriculture and the seasonal cycles; each of God's creatures, created with a role to play—all of this was ordered by God and was good, not tyrannical or threatening. This reflects the ancient understanding that the gods were responsible for setting up a system of operations. The functioning of the cosmos was much more important to the people of the ancient world than was its physical makeup or chemical composition. They described what they saw and, more important, what they experienced of the world as having been created by God. That it was all "good" reflects God's wisdom and justice. At the same time the text shows subtle ways of disagreeing with the perspective of the ancient Near East. Most notable is the fact that it avoids using names for the sun and moon, which to the neighbors of the Israelites were also the names of the corre-

sponding deities, and refers instead to the greater light and the lesser light.

1:14. signs and seasons. In a prologue to a Sumerian astrological treatise, the major gods, An, Enlil and Enki, put the moon and stars in place to regulate days, months and omens. In the famous Babylonian Hymn to Shamash, the sun god, reference is also made to his role in regulating the seasons and the calendar in general. It is intriguing that he is also the patron of divination. The Hebrew word used for "sign" has a cognate in Akkadian that is used for omens. The Hebrew word, however, has a more neutral sense, and again the author has emptied the elements of the cosmos of their more personal traits.

1:20. great creatures of the sea. In the Babylonian Hymn to Shamash, the sun god is said to receive praise and reverence even from the worst groups. Included in the list are the fearsome monsters of the sea. The hymn thus suggests that there is a total submission of all creatures to Shamash, just as the Genesis creation texts shows all creatures created by, and therefore submitted to, Yahweh. The Labbu Myth records the creation of the sea viper, whose length was sixty leagues.

1:20-25. zoological categories. The zoological categories include various species of (1) sea creatures, (2) birds, (3) land-based creatures, which are divided into domestic and wild animals and "creatures that move along the ground" (perhaps the reptiles and/or amphibians), and (4) humans. Insects and the microscopic world of creatures are not mentioned, but the categories are broad enough to include them.

1:26-31. function of people. While the organizational or functional focus of the account may have similarities with the ancient Near Eastern perspective, the reason for it all is quite different. In the ancient Near East, the gods created for themselves—the world was their environment for their enjoyment and existence. People were created only as an afterthought, when the gods needed slave labor to help provide the conveniences of life (such as irrigation trenches). In the Bible the cosmos was created and organized to function on behalf of the people that God planned as the centerpiece of his creation.

1:26-31. creation of people in ancient Near Eastern myths. In creation accounts from Mesopotamia an entire population of people is created, already civilized, using a mixture of clay and the blood of a slain rebel god. This creation comes about as the result of conflict among the gods, and the god organizing the cosmos had to overcome the forces of chaos to bring order to his created world. The Genesis account portrays God's creation not as part of a conflict with opposing forces but as a serene and controlled process.

1:26-27. image of God. When God created people, he put them in charge of all of his creation. He endowed them with his own image. In the ancient world an image was believed to carry the essence of that which it represented. An idol image of deity, the same terminology as used here, would be used in the worship of that deity because it contained the deity's essence. This would not suggest that the image could do what the deity could do, nor that it looked the same as the deity. Rather, the deity's work was thought to be accomplished through the idol. In similar ways the governing work of God was seen to be accomplished by people. But that is not all there is to the image of God. Genesis 5:1-3 likens the image of God in Adam to the image of Adam in Seth. This goes beyond the comment about plants and animals reproducing after their own kind, though certainly children share physical characteristics and basic nature (genetically) with their parents. What draws the idol imagery and the child imagery together is the concept that the image provides the capacity not only to serve in the place of God (his representative containing his essence) but also to be and act like him. The tools he provided so that we may accomplish that task include conscience, self-awareness and spiritual discernment. Mesopotamian traditions speak of sons being in the image of their fathers (**Enuma Elish*) but do not speak of humans created in the image of God; but the Egyptian *Instructions of Merikare* identifies humankind as the god's images who came from his body. In Mesopotamia a significance of the image can be seen in the practice of kings setting up images of themselves in places where they want to establish their authority. Other than that, it is only other gods who are made in the image of gods. (See comment on 5:3.)

2:1-3. seventh-day rest. In the Egyptian creation account from Memphis, the creator god Ptah rests after the completion of his work. Likewise the creation of humans is followed by rest for the Mesopotamian gods. In Mesopotamia, however, the rest is a result of the fact that people have been created to do the work that the gods were tired of doing. Nonetheless, the desire for rest is one of the motivating elements driv-

ing these creation narratives. The containment or destruction of chaotic cosmic forces that is often a central part of ancient creation narratives leads to rest, peace or repose for the gods. Likewise it is the gods' inability to find rest from the noise and disturbance of humankind that leads to the flood. In all it is clear that ancient ideologies considered rest to be one of the principal objectives of the gods. In Israelite theology, God does not require rest *from* either cosmic or human disturbances but seeks rest *in* a dwelling place (see especially Ps 132:7-8, 13-14).

2:1. sabbath divisions. Dividing time into seven-day periods was a practice that is so far unattested in the other cultures of the ancient Near East, though there were particular days of the month in Mesopotamia that were considered unlucky, and they were often seven days apart (that is, the seventh day of the month, the fourteenth day of the month, etc.). Israel's sabbath was not celebrated on certain days of the month and was not linked to the cycles of the moon or to any other cycle of nature; it was simply observed every seventh day.

2:4-25

Man and Woman in the Garden

2:5. botanical categories. Only the most general descriptions of plants are found. Trees, shrubs and plants are listed, but no specific species. We know, however, that the principal trees found in the Near East were acacia, cedar, Cypress, fig, oak, olive, date palm, pomegranate, tamarisk and willow. Shrubs included the oleander and juniper. The principal cultivated grains were wheat, barley and lentils. The description in this verse differs from day three in that it refers to domesticated or cultivated plants. The reference then is not to a time before day three but to the fact that agriculture was not taking place.

2:5. description of condition. A creation text from Nippur sets the scene for creation by saying that waters did not yet flow through the opening in the earth and that nothing was growing and no furrow had been made.

2:6. watering system. The word used to describe the watering system in verse 6 (NIV: "streams") is difficult to translate. It occurs elsewhere only in Job 36:27. A similar word occurs in *Babylonian vocabulary drawn from early *Sumerian in reference to the system of subterranean waters, the primordial underground river. The Sumerian myth of *Enki and Ninhursag likewise mentions such a watering system.

2:7. man from dust. The creation of the first man out of the dust of the earth is similar to what is found in ancient Near Eastern mythology. The Atrahasis Epic portrays the creation of humankind out of the blood of a slain deity mixed with clay. Just as dust in the Bible represents what the body becomes at death (Gen 3:19), so clay was what the body returned to in *Babylonian thinking. The blood of deity represented the divine essence in mankind, a similar concept to God's bringing Adam into being with the breath of life. In Egyptian thinking it is the tears of the god that are mixed with clay to form man, though the *Instructions of Merikare* also speak of the god's making breath for their noses.

2:8-14. location of Eden. Based on the proximity of the Tigris and Euphrates Rivers and the *Sumerian legend of the mystical, utopian land of *Dilmun, most scholars would identify Eden as a place in or near the northern end of the Persian Gulf. *Dilmun has been identified with the island of Bahrain. The direction that it is "in the east" merely points to the gen-

ANCIENT NEAR EASTERN MYTHOLOGY AND THE OLD TESTAMENT

Mythology in the ancient world was like science in our modern world—it was their explanation of how the world came into being and how it worked. The mythological approach attempted to identify function as a consequence of purpose. The gods had purposes, and their activities were the causes of what humans experienced as effects. In contrast, our modern scientific approach identifies function as a consequence of structure and attempts to understand cause and effect based on natural laws that are linked to the structure, the composite parts, of a phenomenon. Because our scientific worldview is keenly interested in structure, we often go to the biblical account looking for information on structure. In this area, however, the biblical worldview is much more like its ancient Near Eastern counterparts in that it views function as a consequence of purpose. That is what Genesis 1 is all about—it has very little interest in structures. This is only one of many areas where understanding ancient Near Eastern culture, literature and worldview can help us understand the Bible.

Many parallels can be identified between ancient Near Eastern mythology and Old Testament passages and concepts. This is not to suggest that the Old Testament is to be considered simply as another example of ancient mythology or as being dependent on that literature. Mythology is a window to culture. It reflects the worldview and values of the culture that forged it. Many of the writings we find in

eral area of Mesopotamia and is fairly typical of primordial narratives. This, plus the direction of flow of the rivers (the location of the Pishon and Gihon being uncertain), has caused some to look in the Armenia region, near the sources of the Tigris and Euphrates. However, the characteristics of a well-watered garden in which humans do little or no work and in which life springs up without cultivation fits the marshy areas at the base of the Gulf and may even be an area now covered by the waters of the region.

2:8. The "garden of Eden." The word *Eden* refers to a well-watered place, suggesting a luxuriant park. The word translated "garden" does not typically refer to vegetable plots but to orchards or parks containing trees.

2:9. tree of life. The tree of life is portrayed elsewhere in the Bible as offering extension of life (Prov 3:16-18), which sometimes can be viewed as having rejuvenating qualities. Various plants with such qualities are known from the ancient Near East. In the *Gilgamesh Epic there is a plant called "old man becomes young" that grows at the bottom of the cosmic river. Trees often figure prominently in ancient Near Eastern art and on cylinder seals. These have often been interpreted as depicting a tree of life, but more support from the literature would be necessary to confirm such an interpretation.

2:11. Pishon. Analysis of sand patterns in Saudi Arabia and satellite photography have helped identify an old riverbed running northeast through Saudi Arabia from the Hijaz Mountains near Medina to the Persian Gulf in Kuwait near the mouth of the Tigris and Euphrates. This would be a good candidate for the Pishon River.

2:11. Havilah. Perhaps because gold is mentioned in relation to Havilah, it is named in several other passages (Gen 10:7; 25:18; 1 Sam 15:7; 1 Chron 1:9). It has most often been placed in western Saudi Arabia near Medina along the Red Sea, an area that does produce gold, bdellium and onyx. Genesis 10:29 describes Havilah as the "brother" of Ophir, a region also known for its wealth in gold.

2:21-22. rib. The use of Adam's rib for the creation of Eve may find illumination in the *Sumerian language. The Sumerian word for rib is *ti*. Of interest is the fact that *ti* means "life," just as *Eve* does (3:20). Others have suggested that a connection should be seen with the Egyptian word *imw,* which can mean either clay (out of which man was made) or rib.

2:24. man leaving father and mother. This statement is a narrative aside, which provides a comment on the social world of the people in later times. It uses the story of Eve's creation as the basis for the legal principle of separate households. When a marriage was contracted, the wife left her parents' home and joined the household of her husband. New loyalties were established in this way. Furthermore, the consummation of the marriage is associated here with the idea of the couple becoming one flesh again, just as Adam and Eve come from one body. The statement here that the *man* will leave his family does not necessarily refer to a particular sociology, but to the fact that in this chapter it is the man who has been seeking a companion. It also may reflect the fact that wedding ceremonies, including the wedding night, often took place in the house of the bride's parents.

3:1-24
The Fall and the Pronouncement

3:1. significance of serpents in ancient world. From the very earliest evidence in ancient Near Eastern art and literature, the serpent is presented as a significant character. Perhaps

---

the Old Testament performed the same function for ancient Israelite culture that mythology did for other cultures—they provided a literary mechanism for preserving and transmitting their worldview and values. Israel was part of a larger cultural complex that existed across the ancient Near East. There are many aspects of that cultural complex that it shared with its neighbors, though each individual culture had its distinguishing features. When we seek to understand the culture and literature of Israel, we rightly expect to find help in the larger cultural arena, from mythology, wisdom writings, legal documents and royal inscriptions.

The community of faith need not fear the use of such methods to inform us of the common cultural heritage of the Near East. Neither the theological message of the text nor its status as God's Word is jeopardized by these comparative studies. In fact, since revelation involves effective communication, we would expect that whenever possible God would use known and familiar elements to communicate to his people. Identification of similarities as well as differences can provide important background for a proper understanding of the text. This book has only the task of giving information and cannot engage in detailed discussion of how each individual similarity or difference can be explained. Some of that type of discussion can be found in John Walton, *Ancient Israelite Literature in Its Cultural Context* (Grand Rapids: Zondervan, 1987).

because its poison was a threat to life and its lidless eyes provided an enigmatic image, the serpent has been associated with both death and wisdom. The Genesis account evokes both aspects in the wisdom dialogue between the serpent and Eve and with the introduction of death after the expulsion from Eden. Similarly, *Gilgamesh is cheated out of perpetual youth when a serpent consumes a magical plant the hero had retrieved from the sea bottom. The sinister image of the serpent is graphically displayed by the intertwining coils of a snake encompassing a *cult stand found at Beth-Shean. Whether as a representative of primeval chaos (*Tiamat or *Leviathan) or a symbol of sexuality, the serpent harbors mystery for humans. Of particular interest is the *Sumerian god Ningishzida, who was portrayed in serpent shape and whose name means "Lord of the Productive/Steadfast Tree." He was considered a ruler in the nether world and "throne-bearer of the earth." He was one of the deities that offered the bread of life to *Adapa (see next comment). Even when not related to a god, the serpent represented wisdom (occult), *fertility, health, chaos and immortality, and was often worshiped.

3:2-5. temptation to be like God. Aspiration to deity and lost opportunities to become like the gods figure prominently in a few ancient myths. In the tale of *Adapa an offer of the "food of life" is inadvertently refused. Adapa, the first of the seven sages before the flood, is attempting to bring the arts of civilization to the first city, Eridu. As a fisherman, he had an unfortunate escapade with the south wind one day that eventuated in an audience with the chief god, Anu. Under the advice of the god *Ea, when Anu offered him food he refused it, only to discover that it was food that would bring immortality. Eternal life also eludes *Gilgamesh. In the famous epic about him, the death of his friend Enkidu leads him in a search for immortality, which he discovers is unattainable. In both of these accounts, being like the gods is viewed in terms of achieving immortality, whereas in the biblical account it is understood in terms of wisdom.

3:7. fig leaf significance. Fig leaves are the largest found in Canaan and could provide limited covering for the shamed couple. The significance of the fig's use may lie in its symbolism of fertility. By eating the forbidden fruit, the couple have set in motion their future role as parents and as cultivators of fruit trees and grain.

3:8. cool of the day. *Akkadian terminology has demonstrated that the word translated "day" also has the meaning "storm." This meaning can be seen also for the Hebrew word in Zephaniah 2:2. It is often connected to the deity coming in a storm of judgment. If this is the correct rendering of the word in this passage, they heard the thunder (the word translated "sound" is often connected to thunder) of the Lord moving about in the garden in the wind of the storm. In this case it is quite understandable why they are hiding.

3:14. eating dust. The depiction of dust or dirt for food is typical of descriptions of the netherworld in ancient literature. In the Gilgamesh Epic, Enkidu on his deathbed dreams of the netherworld and describes it as a place with no light and where "dust is their food, clay their bread," a description also known from the *Descent of Ishtar.* These are most likely considered characteristic of the netherworld because they describe the grave. Dust fills the mouth of the corpse, but dust will also fill the mouth of the serpent as it crawls along the ground.

3:14-15. curses on serpents. The Egyptian Pyramid Texts (second half of third millennium) contain a number of spells against serpents, but likewise include spells against other creatures considered dangers or pests who threaten the dead. Some of these spells enjoin the serpent to crawl on its belly (keep its face on the path). This is in contrast to raising its head up to strike. The serpent on its belly is nonthreatening, while the one reared up is protecting or attacking. Treading on the serpent is used in these texts as a means of overcoming or defeating it.

3:14-15. all snakes poisonous. While it would have been observable that not all snakes were poisonous, the threat provided by some would, in the haste to protect oneself, attach itself to all. Of thirty-six species of snake known to the area, the viper *(Vipera palaestinae)* is the only poisonous snake in northern and central Israel. Snakes are associated occasionally with fertility and life (bronze serpent in the wilderness). However, they most often are tied to the struggle for life and the inevitability of death. The poisonous snakes would be the most aggressive, so an attack by a snake would always be viewed as a potentially mortal blow.

3:16. labor pains. Perhaps displaying the dual character of life, the joy of motherhood can be gained only through labor pain. Without modern medicine, these pains are described as the worst possible agony for humans (see Is 13:8; 21:3) and gods (note the *Babylonian goddess *Ishtar's cry in the *Gilgamesh flood

epic when she sees the horror of the flood unleashed). *Babylonians associated demons such as Lamashtu with the pain of childbirth and the tenuous condition of life for both mother and child in the birth process.

3:16. husband-wife relationship. Arranged marriages downplayed the role of romantic love in ancient Israelite society. However, in this labor-poor society men and women had to work together as a team. While pregnancy and child care periodically restricted the woman's work in the fields or the shop, a couple's survival was largely based on shared labor and the number of children they produced. Domination of the wife by her husband, while evident in some marriages, was not the ideal in ancient relationships. Both had their roles, although the legal rights with regard to making contracts, owning property and inheritance rights were primarily controlled by males. It is also a fact that concern over female chastity led to restrictions on associations by females and male control of the legal process.

3:17. toil. In Mesopotamian thinking people were created to be slaves and to do the work that the gods had tired of doing for themselves, much of it concerned with the agricultural process. In **Enuma Elish* the entire purpose for creating people was to relieve the gods of their toil, unlike the biblical account, in which people were created to rule and became burdened with toil only as a result of the Fall.

3:18. thorns and thistles. In the Gilgamesh Epic, a paradiselike place is described as featuring plants and trees that grow gems and precious stones instead of thorns and thistles.

3:20. significance of naming. Adam earlier had named the animals, which was a demonstration of his authority over them. Here his naming of Eve suggests Adam's position of rule, as referred to in verse 16. In the ancient world when one king placed a vassal king on the throne, a new name would often be given to demonstrate the overlord's dominion. Likewise, when God enters *covenant relationships with Abram and Jacob, he changes their names. A final example occurs in the *Babylonian account of creation, **Enuma Elish*, which opens with the situation before heaven and earth were named. The account proceeds to give names, just as God names the things he creates in Genesis 1.

3:21. skin garments. The long outer tunic is still the basic garment for many people in the Middle East. This replaces the inadequate fig leaf covering made by Adam and Eve. God provides them with these garments as the type of gift given by a patron to a client. Gifts of clothing are among the most common presents mentioned in the Bible (see Joseph in Gen 41:42) and other ancient texts. It also prepares them for the rigors of weather and work which await them. In the *Tale of Adapa* (see comment on 3:2-5), after *Adapa loses the opportunity to eat from the bread and water of life, he is given clothing by the god Anu before being sent from his presence.

3:24. cherubim. The cherubim are supernatural creatures referred to over ninety times in the Old Testament, where they usually function in the capacity of guardians of God's presence. From the guardian of the tree of life, to the ornamental representation over the mercy seat on the ark of the covenant, to the accompaniment of the chariot/throne in Ezekiel's visions, the cherubim are always closely associated with the person or property of deity. Biblical descriptions (Ezek 1, 10) agree with archaeological finds that suggest they are composite creatures (like griffins or sphinxes). Representations of these creatures are often found flanking the throne of the king. Here in Genesis the cherubim guard the way to the tree of life, now forbidden property of God. An interesting Neo-Assyrian seal depicts what appears to be a fruit tree flanked by two such creatures with deities standing on their backs supporting a winged sun disk.

4:1-16

Cain and Abel

4:1-7. sacrifices of Cain and Abel. The sacrifices of Cain and Abel are not depicted as addressing sin or seeking atonement. The word used designates them very generally as "gifts"—a word that is most closely associated with the grain offering later in Leviticus 2. They appear to be intended to express gratitude to God for his bounty. Therefore it is appropriate that Cain should bring an offering from the produce that he grew, for blood would not be mandatory in such an offering. It should be noted that Genesis does not preserve any record of God requesting such offerings, though he approved of it as a means of expressing thanks. Gratitude is not expressed, however, when the gift is grudgingly given, as is likely the case with Cain.

4:11-12. nomadic lifestyle. The wandering nomadic lifestyle to which Cain is doomed represents one of the principal economic/social divisions in ancient society. Once animals had been domesticated, around 8000 B.C., herding and pastoral nomadism became a major economic pursuit for tribes and villages. General-

ly, herding was part of a mixed village economy, including agriculture and trade. However, some groups concentrated more of their efforts on taking sheep and goats to new pasture as the seasons changed. These semi-nomadic herdsmen followed particular migration routes which provided adequate water for their animals as well as grazing. Contracts were sometimes made with villages along the route for grazing in harvested fields. These herdsmen occasionally clashed with settled communities over water rights or because of raiding. Governments tried to control nomadic groups within their area, but these attempts were not usually successful over long periods of time. The result is the composition of stories which describe the conflict between herders and farmers as they compete for use of the land.

4:14-15. blood vengeance. In areas where the central government had not gained full control, blood feuds between families were common. They were based on the simple principle of "an eye for an eye," which demanded the death of a murderer or the death of a member of his family as restitution. There was also an assumption that kinship ties included the obligation to defend the honor of the household. No hurt could be ignored, or the household would be considered too weak to defend itself and other groups would take advantage of them. Cain's comment assumes that there is a more extensive family in existence and that some from Abel's line would seek revenge.

4:15. mark of Cain. The Hebrew word used here does not denote a tatoo or mutilation inflicted on a felon or slave (referred to in the Laws of *Eshnunna and the Code of *Hammurabi). It best compares to the mark of divine protection placed on the foreheads of the innocents in Jerusalem in Ezekiel 9:4-6. It may be an external marking that would cause others to treat him with respect or caution. However, it may represent a sign from God to Cain that he would not be harmed and people would not attack him.

4:17-26

The Line of Cain

4:17. city building. Because the founding of a city is tied so intimately to the founding of a nation or people in the ancient world, stories about the founder and the circumstances surrounding its founding are a part of the basic heritage of the inhabitants. These stories generally include a description of the natural resources which attracted the builder (water supply, grazing and crop land, natural defenses), the special attributes of the builder (unusual strength and/or wisdom) and the guidance of the patron god. Cities were constructed along or near rivers or springs. They served as focal points for trade, culture and religious activity for a much larger region and thus eventually became political centers or city states. The organization required to build them and then to keep their mud-brick and stone walls in repair helped generate the development of assemblies of elders and monarchies to rule them.

4:19. polygamy. The practice of a man marrying more than one wife is known as polygamy. This custom was based on several factors: (1) an imbalance in the number of males and females, (2) the need to produce large numbers of children to work herds and/or fields, (3) the desire to increase the prestige and wealth of a household through multiple marriage contracts and (4) the high rate of death of females in childbirth. Polygamy was most common among pastoral nomadic groups and in rural farming communities, where it was important that every female be attached to a household and be productive. Monarchs also practiced polygamy, primarily as a means of making alliances with powerful families or other nations. In such situations the wives might also end up as hostages if the political relationship soured.

4:20. animal domestication. Raising livestock is the first stage in animal domestication, which involves human control of breeding, food supply and territory. Sheep and goats were the first livestock to be domesticated, with the evidence extending back to the ninth millennium B.C. Larger cattle came a bit later, and evidence for pig domestication begins in the seventh millennium.

4:21. musical instruments. Musical instruments were among the first inventions of early humans. In Egypt the earliest end-blown flutes date to the fourth millennium B.C. A number of harps and lyres as well as a pair of silver flutes were found in the royal cemetery at *Ur dating to the early part of the third millennium. Flutes made of bone or pottery date back at least to the fourth millennium. Musical instruments provided entertainment as well as background rhythm for dances and *ritual performances, such as processions or *cultic dramas. Other than simple percussion instruments (drums and rattles), the most common instruments used in the ancient Near East were harps and lyres. Examples have been found in excavated tombs and painted on the walls of temples and palaces. They are described in literature as a means of soothing

the spirit, invoking the gods to speak and providing the cadence for a marching army. Musicians had their own guilds and were highly respected.

4:22. ancient metal technology. As part of the account of the emergence of crafts and technology in the genealogy of Cain, it is appropriate that the origin of metalworking would be mentioned. *Assyrian texts mention Tabal and Musku as the early metalworking regions in the Taurus Mountains (of eastern Turkey). Copper tools, weapons and implements began to be smelted and forged in the fourth millennium B.C. Subsequently, alloys of copper, principally bronze, were introduced in the early third millennium as sources of tin were discovered outside the Near East and trade routes expanded to bring them to Egypt and Mesopotamia. Iron, a metal which requires much higher temperatures and skin bellows (portrayed in the Egyptian Beni Hasan tomb paintings) to refine and work, was the last to be introduced, toward the end of the second millennium B.C. *Hittite smiths seem to have been the first to exploit it, and then the technology spread east and south. Meteorite iron was cold-forged for centuries prior to its smelting. That would not represent as large an industry as the forging of terrestrial deposits, but it would explain some of the early references to iron prior to the *Iron Age.

5:1-32

The Line of Seth

5:1. the account of *(toledoth).* This chapter begins by introducing "the written account of Adam's line"—just as 2:4 had referred to the account of the heavens and earth. Genesis uses this label eleven times throughout the book. Earlier translations used the word "generations" in place of "account." In other places in the Bible this word is most often associated with genealogies. Some believe that in Genesis they indicate written sources that the author used in compiling the book. Alternatively, they could simply be understood as introducing the people and events that "eventuated" from the named individual. In any case they serve as convenient division markers between the sections of the book.

5:1-32. importance of genealogies. Genealogies represent continuity and relationship. Often in the ancient Near East they are used for purposes of power and prestige. Linear genealogies start at point A (the creation of Adam and Eve, for example) and end at point B (Noah and the flood). Their intention is to bridge a gap between major events. Alternatively they can be vertical, tracing the descendants of a single family (Esau in Gen 36:1-5, 9-43). In the case of linear genealogies, the actual amount of time represented by these successive generations does not seem to be as important as the sense of completion or adherence to a purpose (such as the charge to be fertile and fill the earth). Vertical genealogies focus on establishing legitimacy for membership in the family or tribe (as in the case of the Levitical genealogies in Ezra 2). Mesopotamian sources do not offer many genealogies, but most of those that are known are linear in nature. Most of these are either of royal or scribal families, and most are only three generations, with none more than twelve. Egyptian genealogies are mostly of priestly families and are likewise linear. They extend to as many as seventeen generations but are not common until the first millennium B.C. Genealogies are often formatted to suit a literary purpose. So, for instance, the genealogies between Adam and Noah, and Noah and Abraham, are each set up to contain ten members, with the last having three sons. Comparing biblical genealogies to one another shows that there are often several generations skipped in any particular presentation. This type of telescoping also occurs in *Assyrian genealogical records. Thus we need not think that the genealogy's purpose is to represent every generation, as our modern family trees attempt to do.

5:3. Adam's son in his likeness and image. This same type of comparison is made in **Enuma Elish* between the generations of the gods. Anshar begets Anu like himself, and Anu begets Nudimmud (Enki) in his likeness.

5:3-32. long lives. Although there is no satisfactory explanation of the long life spans before the flood, there are *Sumerian lists of kings who purportedly reigned before the flood with reigns as long as 43,200 years. The Sumerians used the sexagesimal number system (a combination of base six and base ten), and when the numbers of the Sumerian king list are converted to decimal, they are very much in the range of the age spans of the preflood genealogies of Genesis. The Hebrews, like most other Semitic peoples, used a base-ten decimal system as far back as writing extends.

5:21-24. God took Enoch. Seventh in the line, Enoch was the most outstanding individual in the line of Seth. As a result of walking with God (a phrase expressing piety) he was "taken"—an alternative to dying, the stated fate of all the others in the genealogy. The text does not say *where* he was taken, a possible indication that the author did not profess to know.

We can properly assume that he was believed to have been taken to a better place, for this fate was seen as a reward for his close relationship to God, but the text stops short of saying he went to heaven or to be with God. In the Mesopotamian lists of preflood sages, the seventh in the list, Utuabzu, is said to have ascended to heaven. In the Egyptian Pyramid Texts, Shu, the god of the air, is instructed to take the king to heaven so he does not die on earth. This simply represents the transition from mortality to immortality. Jewish writings after the time of the Old Testament offer extensive speculation about Enoch and portray him as an ancient source of revelation and apocalyptic visions (*1, 2* and *3 Enoch*).

5:29. comfort us. The name Noah means "rest," bringing out again the importance of this motif in the ancient Near East (see comment on 2:1-3). The Mesopotamian gods sent the flood because the disturbances of the human world were preventing them from getting rest. So in that case, the flood provided rest for the gods. Here Noah is rather associated with bringing rest for people from the curse of the gods.

6:1-4
The Sons of God and the Daughters of Men

6:2. sons of God. The term "sons of God" is used elsewhere in the Old Testament to refer to angels, but the idea of sonship to God is also portrayed corporately for the Israelites and individually for kings. In the ancient Near East kings were commonly understood as having a filial relationship to deity and were often considered to have been engendered by deity.

6:2. marrying whom they chose. The practice of marrying "any of them they chose" has been interpreted by some to be a reference to polygamy. While it is not to be doubted that polygamy was practiced, it is difficult to imagine why that would be worthy of note, since polygamy was an acceptable practice even in Israel in Old Testament times. It is more likely that this is a reference to the "right of the first night," cited as one of the oppressive practices of kings in the *Gilgamesh Epic. The king could exercise his right, as representative of the gods, to spend the wedding night with any woman who was being given in marriage. This presumably was construed as a *fertility rite. If this is the practice referred to here, it would offer an explanation of the nature of the offense.

6:3. 120 years. The limitation of 120 years most likely refers to a reduction of the life span of humans, since it is in the context of a statement about mortality. While the verse is notoriously difficult to translate, modern consensus is moving toward translating it "My spirit will not remain in man forever," thus affirming mortality. Just as the offense can be understood in light of information from the Gilgamesh Epic, so this statement may refer to the never-ending quest for immortality; a quest such as is at the core of the Gilgamesh Epic. Though Gilgamesh lived after the flood, these elements of the narrative resonate with universal human experience. A wisdom text from the town of Emar cites 120 years as the most years given to humans by the gods.

6:4. Nephilim. *Nephilim* is not an ethnic designation but a description of a particular type of individual. In Numbers 13:33 they are identified, along with the descendants of Anak, as some of the inhabitants of the land of Canaan. The latter are described as giants, but there is no reason to consider the Nephilim to be giants. It is more likely that the term describes heroic warriors, perhaps the ancient equivalent of knights errant.

6:5—8:22
The Flood

6:13. violence as cause of flood. In the Atrahasis Epic's account of the flood the reason that the gods decide to send the flood is the "noise" of mankind. This is not necessarily different from the biblical reason in that "noise" can be the result of violence. Abel's blood cries out from the ground (4:10) and the outcry against Sodom and Gomorrah is great (Gen 18:20). The noise could be generated either by the number of petitions being made to the gods to respond to the violence and bloodshed or by the victims who cry out in their distress.

6:14. gopher wood. *Gopher* is the Hebrew word translated "cypress wood" in the NIV. This is an unknown type of material, although it undoubtedly refers to some sort of coniferous tree thought to possess great strength and durability. Cypress was often used by shipbuilders in the ancient Near East. Similarly, the cedars of Lebanon were prized by the Egyptians for the construction of their barques for transport on the Nile, for instance in the eleventh century B.C. *Diary of *Wenamon.*

6:14. boats in the ancient world. Prior to the invention of seaworthy vessels that could carry sailors and cargo through the heavy seas of the Mediterranean, most boats were made of skin or reeds and were designed to sail

through marshes or along the river bank. They were used for fishing or hunting and would not have been more than ten feet in length. True sailing ships, with a length of 170 feet, are first depicted in Old Kingdom Egyptian art (c. 2500 B.C.) and are described in *Ugaritic (1600-1200 B.C.) and Phoenician (1000-500 B.C.) texts. Remains of shipwrecks from the mid-second millennium (*Late Bronze Age) have also been found in the Mediterranean. They still generally navigated within sight of land, with trips to Crete and Cyprus as well as the ports along the coasts of Egypt, the Persian Gulf and Asia Minor.

6:14-16. size of the ark. Based on a measurement of one cubit equaling eighteen inches or forty-five centimeters, the ark Noah constructs is approximately 450 feet (135 meters) long, 75 feet (22 meters) wide, and 45 feet (13 meters) deep. If it had a flat bottom, the total surface capacity would be about three times that of the tabernacle (100 by 50 cubits in Ex 27:9-13), with a displacement of 43,000 tons. In comparison, the ark constructed by *Utnapishtim in the *Babylonian version of the *Gilgamesh Epic is either a cube or ziggurat-shaped (120 by 120 by 120 cubits), with a displacement of three or four times that of the Genesis ark. Noah's ark was not designed to be navigated—no rudder or sail is mentioned. Thus the fate of the company aboard was left in the hands of God. Although *Utnapishtim does employ a navigator, the shape of his ark may be magical, since he could not depend on the gods to preserve him.

6:15-16. length measurements. The standard measurement unit for length was the cubit, which was eighteen inches (forty-five centimeters). This was based on the length of a man's forearm, from his fingertips to his elbow. Other units include the span, the handbreadth/palm and the finger. Use of a "four-finger equals one palm" and of a "twenty-four-finger equals one cubit" measure is common throughout the ancient Near East. Some variations do occur, such as seven palms equals one cubit in Egypt and thirty fingers equals one cubit in *Babylonia until the *Chaldean period (perhaps based on their use of a sexagesimal mathematics system).

6:17. archaeological evidences of flood. There is presently no convincing archaeological evidence of the biblical flood. The examination of silt levels at the *Sumerian cities of *Ur, Kish, Shuruppak, *Lagash and *Uruk (all of which have occupation levels at least as early as 2800 B.C.) are from different periods and do not reflect a single massive flood that inundated them all at the same time. Similarly, the city of Jericho, which has been continuously occupied since 7000 B.C., has no flood deposits whatsoever. Climatological studies have indicated that the period from 4500 to 3500 B.C. was significantly wetter in this region, but that offers little to go on. The search for the remains of Noah's ark have centered on the Turkish peak of Agri Dagh (17,000 feet) near Lake Van. However, no one mountain within the Ararat range is mentioned in the biblical account, and fragments of wood that have been carbon-14 dated from this mountain have proven to come from no earlier than the fifth century A.D.

7:2-4. seven of every kind. Though Noah

ANCIENT NEAR EASTERN FLOOD ACCOUNTS

The most significant ancient Near Eastern flood accounts are found in the Atrahasis Epic and the Gilgamesh Epic. In these accounts the chief god, Enlil, becomes angry at mankind (the Atrahasis Epic portrays him as disturbed over the "noise" of mankind, see next comment) and, after trying unsuccessfully to remedy the situation by reducing the population through things like drought and disease, persuades the divine assembly to approve a flood for the total elimination of mankind. The god Ea manages to forewarn one loyal worshipper, a king who is instructed to build a boat that will preserve not only him and his family, but representatives skilled in the various arts of civilization. The other people of the city are told that the gods are angry with the king and he must leave them. The pitch-covered boat has seven stories shaped either as a cube or, more likely, a ziggurat (see comment on 11:4). The storm lasts seven days and nights after which the boat comes to rest on Mt. Nisir. Birds are sent out to determine the time of leaving the ark. Sacrifices are made for which the gods are very thankful since they have been deprived of food (sacrifices) since the flood began.

The Atrahasis Epic is dated to the early second millennium B.C. The Gilgamesh Epic came into its present form during the second half of the second millennium, but used materials that were already in circulation at the end of the third millennium. From the short summary above one can detect a number of similarities as well as a number of differences. There is no reason to doubt that the ancient Near Eastern accounts and Genesis refer to the same flood. This would certainly account for the similarities. The differences exist because each culture is viewing the flood through its own theology and worldview.

takes two each of most animals into the ark, he is instructed in verse 2 to take seven pairs of every clean animal and of every bird. Additional clean animals would be needed both for the sacrifice after the flood and for quicker repopulation for human use. In some sacrificial *rituals seven of each class of designated animal are offered (cf. 2 Chron 29:21), but, of course, Noah is not going to sacrifice all of them.

7:2. clean and unclean before Moses. The distinction between clean and unclean animals was not an innovation established at Sinai but is seen as early as Noah. Evidence from Egypt and Mesopotamia offer no system equivalent to the Israelite system of classification. While there are dietary restrictions in those cultures, they tend to be much more limited, that is, certain animals restricted only to certain classes of people or on certain days of the month. Even here one cannot assume that the classification has implications for their diet. Up to this time no permission had been granted to eat meat (see 1:29). When meat was granted to them as food after the flood (9:2-3), there were no restrictions along the lines of clean and unclean. As a result it appears that the classification concerned sacrifice, not diet, in this period.

7:11. floodgates opened. The text uses the poetic phrase "windows of heaven" to describe the openings through which the rain came down. This is not scientific language but reflects the perspective of the observer, much as we would speak of the sun "setting." The only other occurrence of such a term in ancient Near Eastern literature is in the Canaanite myth of *Baal building his house, where the "window" of his house is described as a rift in the clouds. But even here it is not associated with rain. Alternate terminology occurs in the Mesopotamian texts, where gates of heaven are in the east and west for the sun to use in its rising and setting. Clouds and winds, however, also enter by these gates.

7:11—8:5. time periods of flood. The total elapse of time in the flood narrative can be viewed in different ways depending on how the given information is merged. From the information given in 7:11 and 8:14 it can be determined that Noah and his family were in the ark for twelve months and eleven days. The exact number of days would depend on how many days were counted in a month and whether any adjustments were being made between lunar and solar reckonings. The eleven days has been found interesting by some, since the lunar year of 354 days is eleven days shorter than the solar year.

8:4. Ararat. The mountains of Ararat are located in the Lake Van region of eastern Turkey in the area of Armenia (known as Urartu in *Assyrian inscriptions). This range of mountains (the highest peak reaching 17,000 feet) is also mentioned in 2 Kings 19:37, Isaiah 37:38 and Jeremiah 51:27. The *Gilgamesh epic, however, describes the flood hero's ark coming to rest on a specific mountaintop, Mount Nisir in southern Kurdistan.

8:6-12. use of birds in ancient Near East. One of the enduring pictures of the Noah account is that of Noah sending out the birds to gain information about the conditions outside the ark. The flood stories in the *Gilgamesh Epic and the Atrahasis Epic feature a similar use of birds. Rather than a raven and three missions for the dove, we find a dove, swallow and raven sent out. The dove and swallow return without finding a place, while the raven is pictured, as in 8:7, as flying about cawing and not returning (Gilg. 11.146-54). Ancient navigators were known to use birds to find land, but Noah is not navigating, and he is on land. His use of the birds is not for purposes of finding direction. It is also known that the flight patterns of birds sometimes served as omens, but neither Genesis nor Gilgamesh make observations from the flight of the birds sent out.

8:7. habits of ravens. Unlike pigeons or doves, which will return after being released, a raven's use to seamen is based on its line of flight. By noting the direction it chooses, a sailor may determine where land is located. The most sensible strategy is to release a raven first and then use other birds to determine the depth of the water and the likelihood of a place to land. A raven, by habit, lives on carrion and would therefore have sufficient food available.

8:9. habits of doves. The dove and the pigeon have a limited ability for sustained flight. Thus navigators use them to determine the location of landing sites. As long as they return, no landing is in close range. The dove lives at lower elevations and requires plants for food.

8:11. olive leaf significance. The olive leaf retrieved by the dove suggests the amount of time it would take for an olive tree to leaf out after being submerged—a clue to the current depth of the flood waters. It is also symbolic of new life and fertility to come after the flood. The olive is a difficult tree to kill, even if cut down. This freshly plucked shoot shows Noah that recovery has begun.

8:20-22. use of altars. Altars are a common element in many religions, ancient and modern. In the Bible altars were usually constructed of stone (hewn or unhewn), but in certain cir-

cumstances even a large rock would suffice (Judg 13:19-20; 1 Sam 14:33-34). Many believe that the altar would have been understood as the table for the deity, since sacrifices were popularly understood as providing a meal for the god, though that imagery is not easily recognized in the Old Testament.

8:20. purpose of Noah's sacrifice. The purpose of Noah's sacrifice is not stated. The text calls them "burnt offerings," which served a broad function in the sacrificial system. It may be more important to note what the text does not call the sacrifice. It is not a sin offering, nor specifically designated a thank offering. The burnt offerings are usually associated with petitions or entreaties set before God. In contrast, the sacrifice offered after the flood in the *Gilgamesh Epic and in the earlier *Sumerian version of the flood story feature libations and grain offerings as well as meat sacrifices in order to provide a feast for the gods. The general purpose for sacrifice in the ancient world was to appease the anger of the gods by gifts of food and drink, and that is probably the intention of the flood hero in the Mesopotamian accounts.

8:21. pleasing aroma. Sacrifice here, as well as throughout the Pentateuch, is said to produce a pleasing aroma—terminology that was retained from the ancient contexts in which sacrifice was viewed as food for deity. This account falls far short of the graphic description in the *Gilgamesh Epic, where the famished gods (deprived of food for the duration of the flood) gather around the sacrifice "like flies," glad to find reprieve from starvation.

9:1-17
The Covenant with Noah

9:2-4. meat eating in ancient world. Meat was not a common dish on ancient dinner tables. Animals were kept for their milk, hair and wool, not specifically for their meat. Thus meat was only available when an animal died or was killed as a sacrifice. While meat is now put on the list of acceptable foods, there is still a restriction on eating meat with the blood. In ancient times blood was considered a life force (Deut 12:23). The prohibition does not require that no blood at all be consumed, but only that the blood must be drained. The draining of the blood before eating the meat was a way of returning the life force of the animal to the God who gave it life. This offers recognition that they have taken the life with permission and are partaking of God's bounty as his guests. Its function is not unlike that of the blessing said before a meal in modern practice. No comparable prohibition is known in the ancient world.

9:5-6. capital punishment. Human life, because of the image of God, remains under the protection of God. The accountability to God for preserving human life is put into humanity's hands, thus instituting blood vengeance in the ancient world and capital punishment in modern societies. In Israelite society blood vengeance was in the hands of the family of the victim.

9:8-17. covenant. A *covenant is a formal agreement between two parties. The principal section of a covenant is the stipulations section, which may include requirements for either party or both. In this covenant God takes stipulations upon himself, rather than imposing them on Noah and his family. Unlike the later covenant with Abraham, and those that build on the covenant with Abraham, this covenant does not entail election or a new phase of revelation. It is also made with every living creature, not just people.

9:13. rainbow significance. The designation of the rainbow as a sign of the *covenant does not suggest that this was the first rainbow ever seen. The function of a sign is connected to the significance attached to it. In like manner, *circumcision is designated as a sign of the covenant with Abraham, yet that was an ancient practice, not new with Abraham and his family. In the *Gilgamesh Epic the goddess *Ishtar identified the lapis lazuli (deep blue semiprecious stones with traces of gold-colored pyrite) of her necklace as the basis of an oath by which she would never forget the days of the flood. An eleventh-century *Assyrian relief shows two hands reaching out of the clouds, one hand offering blessing, the other holding a bow. Since the word for rainbow is the same word as that used for the weapon, this is an interesting image.

9:18-28
Noah's Pronouncement Concerning His Sons

9:21. drinking wine. The earliest evidence of winemaking comes from neolithic Iran (Zagros region), where archaeologists discovered a jar dated to the second half of the sixth millennium with a residue of wine in the bottom.

9:24-27. patriarchal pronouncements. When Noah discovered that Ham had been indiscreet, he uttered a curse on Canaan and a blessing on Shem and Japheth. In the biblical material the patriarchal pronouncement generally concerns the destiny of the sons with re-

gard to the fertility of the ground, the fertility of the family and relationships between family members. Other examples in Genesis can be seen in 24:60; 27:27-29, 39-40; 48:15-16; 49:1-28. From this practice we can draw several conclusions concerning this passage. First of all, Ham's indiscreet action need not be seen as the "cause" for the curse, only the occasion that evoked it. Compare, for example, when Isaac asked Esau to prepare a meal so that he could bless him; the meal was not the cause of blessing, it only created a suitable environment for it. Second, we need not be concerned that Canaan appears to be singled out without cause. We could well assume that the pronouncement was much more comprehensive, including some unfavorable statements about Ham. The biblical writer has no need to preserve the whole—he merely chooses those sections that are pertinent to his point and relevant to his readers, since the Canaanites were the Hamites with whom Israel was most familiar. Third, we need not understand these as prophecies originating from God. There is no "Thus says the Lord . . ." They are the patriarch's pronouncement, not God's (cf. the use of the first person in 27:37). Even so, they were taken very seriously and considered to have influence in the unfolding of history and personal destiny.

10:1-32

The Table of Nations

10:1. criteria of division. The genealogy of Noah's family provides information on the future history and geographical distribution of peoples in the ancient Near East. Clues are given about the settlement of the coastal areas, northern Africa, Syria-Palestine and Mesopotamia. All of the major regions are thus represented, as well as most of the nations who will in some way interact with the Israelites, among them Egypt, Canaan, the Philistines, the Jebusites, *Elam and Asshur. This suggests the political division of the "world" at the time this list was written and provides a definite indication that the roots of the Israelites are in Mesopotamia. There is no attempt, however, to link these peoples to racial divisions. Ancient peoples were more concerned with distinctions based on nationality, linguistics and ethnicity.

10:2-29. names: personal, patronymic, political. The names of Noah's descendants listed in the "Table of Nations" are designed to reflect the totality of humanity and to give at least a partial sense of their geopolitical divisions and affiliations. A total of seventy peoples are listed, a number found elsewhere in the text for the number of Jacob's family to enter Egypt (Gen 46:27) and as the representatives of the nation (seventy elders, Ex 24:9; Ezek 8:11). Other examples of seventy representing totality are found in the number of gods in the *Ugaritic pantheon and the number of sons of Gideon (Judg 8:30) and of Ahab (2 Kings 10:1). The kinship ties established in the list of peoples have been considered by some to reflect political affiliation (lord-vassal relationships) rather than blood tie. Kinship language is sometimes used in the Bible to reflect political associations (1 Kings 9:13). Some of the names in the list appear to be the names of tribes or nations rather than of individuals. In *Hammurabi's genealogy a number of the names are tribal or geographical names, so this would not be unusual in an ancient document. As a vertical genealogy, this list is simply trying to establish relationships of various sorts.

10:2-5. Japhethites. Although not all of the descendants of Japheth are tied to contiguous regions, they could all be defined from an Israelite perspective as coming from across the sea (NIV: "maritime peoples" in v. 5). A *Babylonian world map from the seventh or eighth century illustrates the geographical worldview that there were many peoples considered on the outskirts of civilization beyond the sea. Many named here can be identified with sections or peoples in Asia Minor (Magog, Tubal, Meshek, Tyras, Togarmah) or the Ionian islands (Dodanim), as well as Cyprus (Elisha and Kittim). There are also several that seem, based on *Assyrian and *Babylonian records, to originate in the area to the east of the Black Sea and in the Iranian plateau—Cimmerians (Gomer), Scythians (Ashkenaz), Medes (Madai), Paphlagonians (Riphat). Tarshish presents the most problems, since it has generally been identified with Spain and that takes it out of the geographic sphere of the others. However, the theme of Greek or Indo-European peoples for these "nations" would make a tie to Sardinia or perhaps Carthage possible.

10:6-20. Hamites. The common theme in the genealogy of the Hamites is their close geographical, political and economic importance to the people of Israel. These nations serve as major rivals and literally surround Israel (Egypt, Arabia, Mesopotamia, Syro-Palestine). Most important here is the political placement of groups within the Egyptian sphere (Cush, Put, Mizraim and his descendants) and the Canaanite sphere (various peoples like the Jebusites and Hivites), and, interestingly, sever-

al are classified ethnically as Semitic peoples (Canaanites, Phoenicians, *Amorites). The list is also marked by brief narratives (Nimrod and Canaan) which break up the stereotypical genealogical framework and tie in areas (*Babylon, *Nineveh, Sidon, Sodom and Gomorrah) which will be significant in later periods of Israelite history.

10:8-12. Nimrod. Interpreters over the years have attempted to identify Nimrod with known historical figures such as Tukulti-Ninurta I (an *Assyrian king during the period of the biblical judges), or with Mesopotamian deities such as Ninurta, a warrior god and patron of the hunt, who in one myth hunts down a number of fantastic creatures and defeats or kills them. In Genesis, however, Nimrod is clearly a human hero rather than divine or even semidivine. Late Jewish tradition picked up occasionally by church fathers envisioned him as the builder of the Tower of Babel and the originator of idolatry, but these ideas have no basis in the text. The extension of his kingdom from southern Mesopotamia (v. 10) to northern Mesopotamia (v. 11) corresponds to the growth of the first known empire in history, the dynasty of Agade ruled by Sargon and Naram-Sin (about 2300 B.C.), among the greatest of the heroic kings of old. Nimrod's kingdom included Erech (=*Uruk), the city where *Gilgamesh reigned and one of the oldest and greatest centers of *Sumerian culture.

10:21-31. Semites. Even though Shem is the oldest son of Noah, his genealogy appears last, as is typical in Genesis for the son the text seeks to follow most closely. There is a mixture of Semitic and non-Semitic nations (by our ethnic criteria) in this list. For instance, *Elam (east of the Tigris) and Lud (Lydia in southern Asia Minor) are considered non-Semitic, but there are close historical ties to both areas in later periods. Sheba, Ophir and Havilah are all part of the Arabian region, and *Aram originated east of the Tigris and north of Elam but came to be associated with the Aramaeans, who dominated Syria and northwest Mesopotamia at the end of the second millennium B.C.

10:25. dividing of the earth. While this has traditionally been taken to refer to the division of the nations after the Tower of Babel incident (Gen 11:1-9), other possibilities exist. It could, for instance, refer to a division of human communities into sedentary farmers and pastoral nomads; or, possibly a migration of peoples is documented here that drastically transformed the culture of the ancient Near East—perhaps one represented in a break-off group traveling southeast in Genesis 11:2.

11:1-9
The Tower of Babel

11:1. common language tradition. The account of a time when all mankind spoke a single language is preserved in *Sumerian in the epic entitled *Enmerkar and the Lord of Aratta.* It speaks of a time when there were no wild beasts and only harmony among people: "The whole universe in unison spoke to *Enlil in one tongue." It then reports that speech was changed and "contention" was brought into it. There is nothing else in this account that parallels the Tower of Babel, but confusion of language by deity can be seen as an ancient theme.

11:2. Shinar. Shinar is one of the biblical designations for the lower region of the Tigris-Euphrates basin. It has long been identified as linguistically equivalent to "Sumer," the designation for the same region that witnessed the earliest development of civilization. The principal cities of the region in earliest times were *Ur, Eridu, *Uruk and Nippur.

11:3. brick technology. The passage speaks of using kiln-baked bricks in place of stone. In Palestine readily available stone was used for the foundations of important buildings and sun-dried brick for the superstructure. Kiln-fired brick was unnecessary and is not attested in this region. In the southern plains of Mesopotamia, however, stone would have to be quarried some distance away and transported. The technology of baking brick was developed toward the end of the fourth millennium, and the resulting product, using bitumen as a mastic, proved waterproof and as sturdy as stone. Since it was an expensive process, it was used only for important public buildings.

11:4. urbanization. Urbanization in southern Mesopotamia was pioneered by the *Sumerians in the early centuries of the third millennium B.C. The "cities" of this period were not designed for people to live in. They housed the public sector, for the most part religious buildings and storage facilities enclosed by a wall. Since the government of these early cities was made up of elders connected to the temple, there would not even have been separate government buildings, though there may have been residences for these public officials. The determination to build a city suggests a move toward urbanization, which can easily be understood as a course of action that would prevent scattering. The cooperative living available through urbanization would al-

low more people to live together in a defined region, as it would allow for large-scale irrigation and excess grain production. The need for nonurbanized peoples to scatter is well demonstrated in the story of Abraham and Lot in Genesis 13.

11:4. tower. The central feature of these early cities in southern Mesopotamia was the temple complex. Often, the temple complex *was* the city. The temple complex in this period would have been comprised of the temple itself, where the patron deity was worshiped, and, most prominently, by the ziggurat. Ziggurats were structures designed to provide stairways from the heavens (the gate of the gods) to earth so that the gods could come down into their temple and into the town and bring blessing. It was a convenience provided for the deity and his messengers. These stairways were featured in the mythology of the *Sumerians and also are portrayed in Jacob's dream (Gen 28:12). The ziggurats were constructed of a sun-dried brick frame filled with dirt and rubble and finished off with a shell of kiln-baked brick. There were no rooms, chambers or passageways of any sort inside. The structure itself was simply made to hold up the stairway. At the top was a small room for the deity, equipped with a bed and a table supplied regularly with food. In this way the deity could refresh himself during his descent. None of the festivals or *ritual acts suggest that *people* used the ziggurat for any purpose. It was for the gods. The priests certainly would have to go up to provide fresh supplies, but it was holy ground. The ziggurat served as the architectural representation of the pagan religious developments of this period, when deity was transformed into the image of man.

11:4. head in the heavens. This phrase is reserved almost exclusively for the description of ziggurats in Akkadian usage. Additionally, there are some intriguing omens in the series entitled *Summa Alu* ("If a city . . .") that indicate an impending doom that hangs over cities or towers built high. If a city lifts its head to the heaven, it will be abandoned, or there will be a change on the throne. A city that rises like a mountain peak will become a ruin, and if it goes up like a cloud to heaven there will be calamity.

11:4. making a name. The people were interested in making a name for themselves. This is a desire that God recognized as legitimate in other contexts, saying that he will make a name for Abraham and David. Having descendants was one way of making a name. While there need not be anything evil or sinful about wanting to make a name for oneself, we must also acknowledge that this desire may become obsessive or lead one to pursue wicked schemes.

11:4. avoiding scattering. Likewise, it is logical that the people would want to avoid scattering. Though God had blessed them with the privilege of multiplying so much that they would fill the earth, that did not obligate them to scatter. The filling was to be accomplished by multiplying, not by spreading out. Economic conditions would have eventually forced the breakup of any group of people, which was why they embarked on the course of urbanization. God scattered them not because he did not want them to be together, but because their united efforts were causing mischief (as we separate children who misbehave).

11:5. came down to see. The ziggurat would have been built so that God could come down into their midst to be worshiped and bring blessing with him. God indeed "came down" to see. But rather than being pleased at their provision of this convenience, he was distressed by the threshold of paganism that had been crossed in the concepts represented by the ziggurat.

11:8. settlement patterns of *Uruk phase. Many of the features of this account point to the end of the fourth millennium as the setting of the narrative. This is the period when receding water allowed settlement of the southern Tigris-Euphrates basin. Many settlements on native soil show that the occupants brought the northern Mesopotamian culture with them. It is likewise in the period known as the Late *Uruk phase (toward the end of the fourth millennium) that the culture and technology known from these settlements in southern Mesopotamia suddenly starts showing up in settlements throughout the ancient Near East. Thus both the migration referred to in verse 2 and the dispersion of verse 9 find points of contact in the settlement pattern identified by archaeologists for the end of the fourth millennium. Urbanization, ziggurat prototypes and experimentation with kiln-baked brick also fit this time period.

11:9. ancient Babylon. The ancient history of *Babylon is difficult to recover. Excavations at the site cannot go back further than the beginning of the second millennium because the water table of the Euphrates has shifted over time and destroyed the lower levels. In the literature of Mesopotamia there is no significant mention of Babylon until it is made the capital

of the *Old Babylonian empire in the eighteenth century B.C.

11:10-32

The Line of Shem, the Family of Abraham

11:28. Ur of the Chaldees. Abraham's family is from *Ur of the Chaldees. For many generations the only *Ur that has been known to modern scholars is the famous *Sumerian city on the southern Euphrates. It has been somewhat of a mystery why this southern city would be referred to as *Ur of the Chaldees—since at this time the Chaldeans were settled primarily in the northern section of Mesopotamia. An alternative was provided when textual evidence from Mesopotamia began to produce evidence of a smaller town by the name of *Ur in the northern region, not far from Haran (where Terah moves his family). This town could logically be referred to as *Ur of the Chaldees to differentiate it from the well-known *Ur in the south. This would also explain why Abraham's family is always seen as having its homeland in "Paddan *Aram" or "Aram Naharaim" (24:10; 28:2, descriptions of northern Mesopotamia between the Tigris and Euphrates).

11:30. barrenness in the ancient Near East. Failure to produce an heir was a major calamity for a family in the ancient world because it meant a disruption in the generational inheritance pattern and left no one to care for the couple in their old age. Thus legal remedies were developed which allowed a man whose wife had failed to provide him with a son to impregnate a slave girl (Code of *Hammurabi; *Nuzi texts) or a prostitute (Lipit-Ishtar Code). The children from this relationship could then be acknowledged by the father as his heirs (Code of Hammurabi). Abram and Sarai employ the same strategy when they use the slave girl Hagar as a legal surrogate to produce an heir for the aged couple (see comments on Gen 16:1-4).

11:31. Haran. The city of Haran was located 550 miles northwest of the southern *Ur, on the left bank of the Balikh River (a tributary of the upper Euphrates). Today it is in modern Turkey about ten miles from the Syrian-Turkish border. It is mentioned prominently in the *Mari texts (eighteenth century B.C.) as a center of *Amorite population in northern Mesopotamia and an important crossroads. It was known to feature a temple to the moon god, Sin. There has been very limited excavation at the site due to continuing occupation.

12:1-9

Abraham Travels to Canaan

12:1. father's household. A man was identified in the ancient world as a member of his father's household. When the head of the household died, his heir assumed that title and its responsibilities. It is also identified with ancestral lands and property. By leaving his father's household, Abram was thus giving up his inheritance and his right to family property.

12:1. The *covenant promises. Land, family and inheritance were among the most significant elements in ancient society. For farmers and herdsmen land was their livelihood. For city dwellers land represented their political identity. Descendants represented the future. Children provided for their parents in old age and enabled the family line to extend another generation. They gave proper burial to their parents and honored the names of their ancestors. In some of the ancient Near Eastern cultures these were considered essential to maintaining a comfortable existence in the afterlife. When Abram gave up his place in his father's household, he forfeited his security. He was putting his survival, his identity, his future and his security in the hands of the Lord.

12:6. tree of Moreh. Most likely this was a great Tabor oak *(Quercus ithaburensis)*, which served as a landmark at Shechem and perhaps could have functioned as a point where a teacher (the literal meaning of *Moreh*) or judge would come to hear legal cases or provide instruction (such as Deborah's palm tree in Judg 4:5 and Danil's judgment tree in the *Ugaritic epic of *Aqhat). Besides being valued for their shade, such trees also served as evidences of *fertility and were therefore often adopted as places of worship (not often as objects of worship).

12:6. Shechem. The site of Shechem has been identified with Tell Balatah, east of modern Nablus and thirty-five miles north of Jerusalem. Perhaps because of its proximity to two nearby peaks, Mount Gerizim and Mount Ebal, it has had a long history as a sacred site. The strategic position of Shechem, at the east entrance to the pass between these mountains, also made it an important trading center. As early as the *Middle Bronze I period, Shechem is mentioned in the Egyptian texts of Pharaoh Sesostris III (1880-1840 B.C.). Excavations have revealed an apparently unwalled settlement in *Middle Bronze IIA (about 1900 B.C.) with the development of fortifications in Middle Bronze IIB (about 1750).

12:6-9. significance of altars. Altars function as sacrificial platforms. Their construction can also mark the introduction of the worship of a particular god in a new land. Abram's setting up of altars in each place where he camped defines areas to be occupied in the "Promised Land" and establishes these places as religious centers in later periods.

12:10-20
Abraham in Egypt

12:10. famine in the land. Syria-Palestine has a fragile ecology that is based on the rains which come in the winter and spring months. If these rains fail to come at the appropriate time, are less or more than is expected, or fail to come at all, then planting and harvests are negatively affected. It was not uncommon for drought and resulting famine to occur in this region. Egyptian Papyrus Anastasi VI reports of an entire clan going down into Egypt during a drought. Modern archaeologists and geologists have found evidence of a massive three-hundred-year drought cycle that occurred during the end of the third millennium and the beginning of the second millennium—one of the time periods to which Abraham is dated.

12:11-12. wife as sister. The wife/sister theme appears three times in Genesis. It functions as (1) a protective strategy by migrants against local authorities, (2) a contest between God and the god-king Pharaoh in Genesis 12 and (3) a literary motif designed to heighten tension in the story when the promise of an heir to the *covenant is threatened. The logic is possibly that if an individual in power desired to take a woman into his harem he might be inclined to negotiate with a brother, but he would be more likely to eliminate a husband. In each case, the ancestral couple are reunited and enriched and the local ruler is shamed. On a personal level this does not speak well of Abram, but it does make him appear more human than in other stories.

12:11. the beauty of aged Sarah. Sarah is described as a beautiful woman, though by this time she is between sixty-five and seventy years of age. The phrase used to describe Sarah here is sometimes used to describe a woman's beauty (2 Sam 14:27), but it does not necessarily refer strictly to feminine allure or attractiveness. It is sometimes used to describe male good looks (1 Sam 17:42), but it may be important to note that the phrase is also used to describe a fine specimen of cow (Gen 41:2). We need not therefore assume that Sarah has miraculously retained the stunning beauty of youth. Her dignity, her bearing, her countenance, her outfitting could all contribute to the impression that she is a striking woman.

12:10-20. Beni Hasan tomb painting. The Twelfth Dynasty (nineteenth century B.C.) tomb painting of Khnumhotep III at Beni Hasan (near Minya in Middle Egypt) depicts one of many caravans of "Asiatics" that brought raw materials and exotic items (frankincense, lapis lazuli). These traders wear multicolored robes, bring their families with them and travel with their weapons and donkeys laden with "ox-hide," ingots of bronze and other trade goods. Their garb and the ease with which they were able to travel to Egypt may well reflect the look of Abram's household. Egypt served as both a market as well as a source of food and temporary employment for many groups driven by war or famine from the rest of the Near East.

12:17. nature of disease. The assumption in the ancient world is that all disease is a reflection of the displeasure of a god or gods. Infectious disease could be coped with through purification and sacrifice and might be treated with herbal medicines, but the root cause was viewed as divine, not physical. Thus disease was considered the direct result of sin or some violation of custom, so the ancients would seek to determine which god might be responsible and how he might be appeased. Medicinal remedies would be augmented by magical remedies and incantations.

13:1-18
Abraham and Lot

13:1-4. Abram's itinerary. Since the household is depicted as pastoral nomads, they would have had to stop periodically to find pasture and water for the herds and flocks. The Negev was more heavily populated in the early second millennium and might have provided specific staging points for this journey (see Ex 17:1). The return to the vicinity of Bethel marks the resumption of the *covenantal narrative and sets the stage for the separation from Lot. From the border of Egypt to the area of Bethel/Ai would be a journey of about two hundred miles.

13:5-7. herding needs and lifestyle. The primary requirements for a successful herding group are pasturage and water sources. The hot, dry months from April through September require movement of herds to higher elevations where grass remains and streams and springs can be found. In the colder, wet months of October through March, the ani-

mals will be brought back to the plains for grazing. This seasonal movement necessitates long separations of herders from their villages or the establishment of an unconnected, seminomadic lifestyle in which whole families travel with the herds. The knowledge of natural resources along their routes of travel would be their primary lore. Disputes over grazing land and water rights would be the most frequent cause of quarrels between herdsmen.

13:7. Canaanites and Perizzites. See comment on Exodus 3:7-10.

13:10. the plain of the Jordan. It would be possible to get a good view of the Jordan Valley and the northern area of the Dead Sea from the hills around Bethel. While the area around the Dead Sea is not a particularly hospitable region today, this verse makes it clear that prior to the Lord's judgment the area had a far different quality. It should be noted that there are extensive areas along the Jordan Plateau that do provide ample grazing, and this may also be represented in this narrative.

13:12. the boundaries of Canaan. The eastern boundary of Canaan is everywhere identified as the Jordan River (see especially Num 34:1-12 and the comments on it). Thus it becomes clear that by moving to the vicinity of the cities of the plain Lot has gone outside the land of Canaan, leaving it entirely to Abram.

13:18. Hebron. The city of Hebron is located in the Judean hill country (c. 3,300 feet above sea level) approximately nineteen miles southwest of Jerusalem and twenty-three miles northeast of Beersheba. Ancient roadways converge on this site coming east from Lachish and connecting with the road north to Jerusalem, indicating its importance and continuous settlement. Its springs and wells provide ample water for olive and grape production and would have supported a mixed agricultural-pastoral economy such as that described in Genesis 23. Hebron is said to have been founded "seven years before Zoan" (Avaris in Egypt), dating it to the seventeenth century B.C. (see comment on Num 13:22). The construction of an altar here, as at Bethel, transforms this into an important religious site, and its subsequent use as a burial place for the ancestors established its political importance (reflected in the Davidic narrative—2 Sam 2:1-7; 15:7-12).

14:1-16
Abraham Rescues Lot

14:1-4. the kings of the East. The kings of the East have remained stubbornly obscure despite numerous attempts to link them to historically known figures, though the geographical areas they represent can be identified with some confidence. Shinar refers elsewhere in the Bible to the southern Mesopotamian plains known in earliest times as *Sumer and later connected to *Babylonia. Ellasar corresponds to an ancient way of referring to *Assyria (a.la$_5$.sar). *Elam is the usual name for the region, which in this period comprised the whole of the land east of Mesopotamia from the Caspian Sea to the Persian Gulf (modern Iran). Goiim is the most vague, but it is generally associated with the *Hittites (who were located in the eastern section of present-day Turkey), mostly because the king's name, Tidal, is easily associated with the common Hittite royal name, Tudhaliyas. As a reference to a group of people, Goiim would most likely refer to a coalition of "barbaric" peoples (like the *Akkadian designation, *Umman Manda*). In *Mari it is a designation used to refer to the Haneans. While there were many periods in the first half of the second millennium when the Elamites were closely associated with powers in Mesopotamia, it is more difficult to bring the Hittites into the picture. We do know that *Assyrian merchants had a trading colony in the Hittite region, but there is no indication of joint military ventures. Early Hittite history is very sketchy, and we have little information concerning where the Hittites came from or precisely when they moved into Anatolia. The names of the kings of the East are authentic enough, but none of them have been identified or linked to the kings of these respective regions at this period. So, for instance, there is an Arioch who was prince of Mari in the eighteenth century. We certainly have no information of Elamite control of sections of Palestine as suggested in verse 4, but it must be admitted that there are many gaps in our knowledge of the history of this period. None of the five kings of Canaan are known outside the Bible, for even these cities are yet unattested in other ancient records, despite occasional claims of possible references to Sodom.

14:5-7. the itinerary and conquests of the kings of the East. The itinerary of conquest is given as is common in chronographic texts. The route goes from north to south along what is known as the King's Highway, the major north-south artery in Transjordan, just east of the Jordan Valley. Ashtaroth,

neighboring the capital later called Karnaim, was the capital of the region just east of the Sea of Galilee inhabited by the Rephaim. Virtually nothing is known of these peoples, or of the Zuzites and Emites, though all of them are identified with the giants of the land at the time of the conquest under Joshua (cf. Deut 2). The next stop was Ham in northern Gilead. Shaveh, also known as Kiriathaim, was in Reubenite territory when the land was divided among the tribes and bordered on the Moabite region. The Horites were the people living in the region later known as Edom, the next region south. After reaching the area of the gulf of Aqaba (the town of El Paran= Elath?), the invaders turn northwest to confront the Amalekites in the region of Kadesh Barnea (at that time called En Mishpat) and the *Amorites in the southern hill country. This route then brings them around to the cities of the plain in the region south and east of the Dead Sea. The towns of Sodom and Gomorrah have not been located with any certainty, though some think that their remains are beneath part of the Dead Sea (see comments on Gen 19). After the battle in the Valley of Siddim, the four kings traveled along the west side of the Jordan and got as far as Dan, in the very north of the land of Canaan, before being overtaken by Abraham and his men.

14:10. tar pits. Tar pits are common in this area that is so rich in bitumen that large amounts bubble to the surface and even float on the Dead Sea. The word translated "pits" is the same word used for wells of water throughout the Old Testament and therefore generally refers to a spot that has been dug out. The Valley of Siddim, then, had many pits that had been dug to extract bitumen, and these provided refuge for the kings (they "lowered themselves into them" rather than "they fell into them").

14:13. "the Hebrew." Abram is referred to as "Abram the Hebrew." Typically the designation "Hebrew" in early times was used only as a point of reference for foreigners. Besides the use here, it is used to identify Joseph in Egypt (e.g., 39:14-17), the Israelite slaves in reference to the Egyptian masters (Ex 2:11), Jonah to the sailors (Jon 1:9), the Israelites to the Philistines (1 Sam 4:6), and other such situations. Some have thought that "Hebrew" is not in these cases an ethnic reference but a designation of a social class of people known as the "Habiru" in many ancient texts, where they are typically dispossessed peoples.

14:14-16. 318 trained men. Here we discover that Abram has a household of significant size (318 recruits or retainers). The word used to describe these men occurs nowhere else in the Old Testament, but does occur in an *Akkadian letter of the fifteenth century B.C. Whether Abram is placed within the early part of the *Middle Bronze Age, when the area was predominantly occupied by herdsmen and villagers, or within the later *Middle Bronze Age when there were more fortified settlements, this army would have been a match for any other armed force in the region. Even as late as the *Amarna period the armies of any particular city state would not have been much larger.

14:15. battle tactics. Abram caught up to the eastern army at the northern border of the land, Dan. Abram uses the strategy of nighttime ambush, which is attested in texts as

---

THE RELIGION OF ABRAHAM

It is important to notice that Abraham comes from a family that is not monotheistic (see Josh 24:2,14). They would have shared the polytheistic beliefs of the ancient world at that time. In this type of system the gods were connected to the forces of nature and showed themselves through natural phenomena. These gods did not reveal their natures or give any idea of what would bring their favor or wrath. They were worshipped by being flattered, cajoled, humored and appeased. Manipulation is the operative term. They were gods made in the image of man. One of the main reasons that God made a covenant with Abraham was in order to reveal what he was really like—to correct the false view of deity that people had developed. But this was projected to take place in stages, not all at once.

The Lord, Yahweh, is not portrayed as a God that Abraham already worshiped. When he appears to Abraham he does not give him a doctrinal statement or require rituals or issue demands; he makes an offer. Yahweh does not tell Abraham that he is the only God there is, and he does not ask him to stop worshiping whatever gods his family was worshiping. He does not tell him to get rid of his idols nor does he proclaim a coming Messiah or salvation. Instead, he says that he has something to give Abraham if Abraham is willing to give up some things first.

In the massive polytheistic systems of the ancient Near East the great cosmic deities, while respected and worshiped in national and royal contexts, had little personal contact with the common people. Individuals were more inclined to focus their personal or family worship on local or family deities. We can best understand this through an analogy to politics. Though we respect and recognize the

early as the Judges period in Egyptian as well as in *Hittite documents.

14:17-24
Abraham and Melchizedek

14:17-20. Melchizedek. Melchizedek is introduced as the king of Salem and is portrayed as the principal king of the region in that he receives a portion of the booty. Salem is generally considered to be Jerusalem, though early Christian evidence and the Madeba map associate it with Shechem. (The Madeba map is the earliest map of Palestine. It is a mosaic on the floor of a sixth-century A.D. church.) Often one city-state would gain predominance over the others in the region, as is seen in the book of Joshua where kings of Jerusalem and Hazor put the southern and northern coalitions together. Whether Melchizedek is Canaanite, *Amorite or Jebusite cannot be easily determined. The name of God that he uses to bless Abram, *El Elyon* ("God Most High"), is well known as a way of referring to the chief Canaanite god, *El, in Canaanite literature.

14:18-19. meeting of Abraham and Melchizedek. Their meeting takes place in the Valley of Shaveh. The designation of it as the King's Valley connects it to the valley just south of Jerusalem, most likely where the Kidron and Hinnom valleys come together. In a later period, Absalom built a monument here (2 Sam 18:18). The communal meal that they share would typically indicate a peaceful agreement between them. *Hittite treaties refer to the provision of food in wartime by allies. Melchizedek is anxious to make peace with such a proven military force, and Abram submits by paying the tithe, thereby acknowledging Melchizedek's status.

14:21-24. agreement between Abraham and kings of Sodom. The king of Sodom acknowledged that Abram had a right to the booty, but asks that the people be returned to him. Abram refuses the booty with the explanation that he is under oath to *El Elyon (whom he identifies as *Yahweh) not to profit from his military action. It is possible that this agreement would have occasioned the formulation of a document to formalize the terms. Such a document could easily have taken the form that this chapter takes and may have even served as a source for this chapter.

15:1-21
Ratification of the Covenant

15:1. visions. Visions were a means used by God to communicate to people. All of the other visions of this category in the Old Testament were given to prophets (the writing prophets as well as Balaam) and often resulted in prophetic *oracles which were then delivered to the people. Visions may be experienced in dreams but are not the same as dreams. They may be either visual or auditory. They may involve natural or supernatural settings, and the individual having the vision may be either an observer or a participant. Visions are likewise part of the prophetic institution in other cultures in the ancient Near East.

15:2-3. inheritance by servant. In those instances where the head of a household had no male heir, it was possible for a servant to be legally adopted as the heir, as particularly demonstrated in an *Old Babylonian text from *Larsa. This would most likely be a course of last resort, since it would mean transference of property to a person (and his line) who was (1) originally a servant or

---

authority of our national leaders, if we have a problem in our community we would pursue it with our local government rather than write a letter to the president. In Mesopotamia in the first part of the second millennium an important religious development can be observed that parallels this common sense approach to politics. The people began to relate to "personal gods" who were often then adopted as family gods from generation to generation. This was usually the function of minor deities and was at times no more than a personification of luck. The personal god was one that was believed to have taken special interest in the family or an individual and became a source of blessing and good fortune in return for worship and obedience. While the personal god was not worshipped exclusively, most of the worship by the individual and his family would be focused on him.

It is possible that Abraham's first responses to Yahweh may have been along these lines—that Abraham may have viewed Yahweh as a personal god that was willing to become his "divine sponsor." Though we are given no indication that Yahweh explained or demanded a monotheistic belief, nor that Abraham responded with one, it is clear that the worship of Yahweh dominated Abraham's religious experience. By making a break with his land, his family and his inheritance, Abraham is also breaking all of his religious ties, because deities would be associated with geographical, political and ethnic divisions. In his new land Abraham would have no territorial gods; as a new people he would have brought no family gods; having left his country he would have no national or city gods; and it was Yahweh who filled this void becoming the "God of Abraham, Isaac and Jacob."

bondsman, and (2) not a blood relative. It signals the frustration of the childless Abram that he tells God that he has designated Eliezer of Damascus as his heir, though it is not clear whether he has actually adopted Eliezer or is simply referring to that as the only remaining course of action.

15:9-10. the ritual of dividing animals. As in the case in Jeremiah 34:18, where a *covenant *ritual is represented by passage between the severed body of a sacrificial animal, here Abram is given the "sign" of the covenant promise for which he asked. Each "three-year old" animal (calf, goat, ram, dove, pigeon, the same animals featured in the sacrificial system described in Leviticus) is cut in half, although the body sections of the birds are not separated. Second-millennium *Hittite texts use a similar procedure for purification, while some first-millennium *Aramaic treaties use such a ritual for placing a curse on any violation of the treaty. Texts from *Mari and *Alalakh feature the killing of animals as part of the ceremony of making a treaty. Walking through this sacrificial pathway could be seen as a symbolic action enacting both the covenant's promise of land and a curse on the one who violates the promise, though interpreters have wondered what significance a self-curse could possibly have for God. Abram's driving away the birds of prey further symbolizes the future protection from their enemies when they take possession of the land.

15:17. smoking firepot and blazing torch. The firepot is made of earthenware and could be of various sizes. It functioned as an oven principally for baking, including the baking of grain offerings (Lev 2:4). The torch could certainly be used to provide light, but it is also used in military contexts or to speak of God's judgment (Zech 12:6). Mesopotamian *rituals of this period usually featured a sacred torch and censer in the initiation of rites, particularly nocturnal rites of purification. Purification would be accomplished by the torch and censer being moved alongside of someone or something. While in Mesopotamia the torch and oven represented particular deities, here they represent *Yahweh, perhaps as the purifier. This would be one of many instances where the Lord used familiar concepts and motifs to reveal himself.

15:18. river of Egypt. The usual designation of Israel's southwestern border is the "brook [wadi] of Egypt," identified with Wadi el 'Arish in the northeastern Sinai (Num 34:5). It is unlikely that it refers to the Nile River. Another possibility is that it refers to the eastern-most delta tributary that emptied into Lake Sirbonis.

15:19-21. occupants of Canaan. This is the longest (including ten groups) of seventeen such lists of Canaan's pre-Israelite peoples (see Deut 7:1; Josh 3:10; 1 Kings 9:20). Each of these lists, which usually comprise six or seven names, ends with the Jebusites (perhaps tied to David's conquest of Jerusalem), but the list in Genesis 15 is the only one to exclude the Hivites. For the *Hittites, Perizzites, *Amorites, Canaanites and Jebusites, see the comments on Exodus 3:7-10 and Numbers 13. The Kenites are often associated with the Midianites and appear as a seminomadic people from the Sinai and Negev region. The name suggests that they were metalworkers, tinkerers or smiths. The Kenizzites, Kadmonites and Girgashites are little known, though the latter is also attested in the *Ugaritic texts. The Rephaim are considered to be Anakites in Deuteronomy 2:11, who in turn appear as giants in Numbers 13:33. Aside from these associations, nothing is known of this ethnic group.

16:1-16
The Birth of Ishmael

16:1-4. maidservants. Slave women or bondswomen were considered both property and legal extensions of their mistress. As a result it would be possible for Sarai to have Hagar perform a variety of household tasks as well as to use her as a surrogate for her own barren womb.

16:2. contractual arrangements for barrenness. *Concubines did not have the full status of wives but were girls who came to the marriage with no dowry and whose role included childbearing. As a result concubinage would not be viewed as polygamy. In Israel, as in most of the ancient world, monogamy was generally practiced. Polygamy was not contrary to the law or contemporary moral standards but was usually not economically feasible. The main reason for polygamy would be that the first wife was barren. In the Bible most cases of polygamy among commoners occur prior to the period of the monarchy.

16:3-4. surrogate mothers. Surrogate mothers appear only in the ancestral narratives: Hagar and the two maidservants of Rachel and Leah (Gen 30). There is no contract mentioned here, since these women were all legal extensions of their mistress and any children they bore could be designated as the children of their mistress. The eighteenth century B.C. *Babylo-

nian Code of *Hammurabi does contain surrogate contracts for priestesses who were not allowed to conceive children. As in the biblical examples, these surrogates had a lower legal standing than the wife.

16:5-6. relationship of Sarah and Hagar. Women in the ancient world obtained honor through marriage and children. Although Hagar was a servant, the fact that she had conceived a child and Sarai had not gave her cause to hold her mistress in contempt. Sarai's reaction in abusing Hagar may be based on both jealousy and class difference.

16:7-10. angel as messenger. The word translated "angel" simply means "messenger" in Hebrew and can be used for either human or supernatural messengers. Since these messengers represent God, they do not speak for themselves, but only for God. It is therefore not unusual for them to use the first person, "I." Messengers were granted the authority to speak for the one they represented and were treated as if they were the one they represented.

16:13-14. "seeing God." Hagar affirms a supernatural identity for the messenger and may well believe that the messenger was indeed a deity, but the fact that she expresses incredulity about the likelihood of having seen a deity does not mean that she actually has seen one (additionally the text is very difficult to translate and may not even suggest this much). Most likely Hagar is expressing surprise that she has encountered a deity who is inclined to show favor to her in such an unlikely place.

16:13. naming God. The text identifies the deity as the LORD (*Yahweh) but gives no indication that Hagar knew it was Yahweh. This is the only example in the Old Testament of someone assigning a name to deity. Usually naming someone or something is a way of affirming authority over the one named. Here it is more likely that since she does not know the name of the deity that has shown her favor, she assigns a name to him as an identification of his nature and so that she might invoke him in the future.

16:14. Kadesh and Bered. The location of the well of Beer Lahai Roi, where Hagar experienced a *theophany and was told of her son's future, is most likely in the Negev between Kadesh Barnea and Bered. The oasis of Kadesh Barnea is in the northeast section of the Sinai, on the southern border of the Wilderness of Zin (see comment on Num 13). Since Bered does not appear elsewhere in the text, its location is uncertain, though Jebel umm el-Bared to the southeast is as good a guess as any.

17:1-27

Circumcision, the Sign of the Covenant

17:1-2. El Shaddai. *El Shaddai ("God Almighty") in verse 1 is a relatively common name used for the Lord in the Old Testament (48 times), though the conventional translations are little more than guesses. It appears only once outside the Old Testament in the name "Shaddai-Ammi" on an Egyptian statue from the Judges period, though there may be a reference to Shaddai-beings in the Deir Allah inscription. One of the most frequent suggestions understands Shaddai as related to the *Babylonian *sadu,* "steppe, mountain," but evidence is sparse.

17:3-8. name changing. Names had power in the ancient world. By naming the animals, Adam demonstrated his mastery over them. In a similar way, God's changing Abram's name to Abraham and Sarai's name to Sarah signifies both a reiteration of the *covenant promise and the designation of these people as God's chosen servants.

17:4. covenanting with God. There are no parallels in the ancient world to *covenants between deity and mortal, though certainly gods are known to make demands and promise favorable treatment. In most of these cases kings report their care of the sanctuaries of the god and then tell how the deity responded with blessing. But these fall far short of a covenant relationship initiated by deity for his own purposes.

17:9-14. circumcision. *Circumcision was practiced widely in the ancient Near East as a rite of puberty, fertility or marriage. Although the Israelites were not the only people to circumcise their sons, this sign was used to mark them as members of the *covenantal community. When used in relation to marriage, terminology suggests it was performed by the new male in-laws, indicating that the groom was coming under the protection of their family in this new relationship. Performed on infants, it is more a ritual scarring than something done for health reasons. The fact that blood is shed also signifies that this is a sacrificial *ritual and may function as a substitution for human sacrifice, which was practiced by other people. Waiting until the eighth day to perform this ritual may reflect the high infant mortality rate and the desire to determine if the child was viable. The *Hittites also had a ritual for the seventh day of the newborn's life. Circumcision can be seen as one of many cases where God transforms a common practice to a new (though not necessarily unrelated) purpose in

revealing himself and relating to his people.

17:15-22. divine announcement of sons. The divine announcement of a son to be born is a common motif found throughout ancient Near Eastern literature. Perhaps most notable is the announcement by the Canaanite deity *El to King Danil that he would finally have a son in his old age, in the *Ugaritic story of *Aqhat. Additional examples are found in the *Hittite tale where the sun god tells Appu he will have a son, and in Mesopotamian literature where the god Shamash advises *Etana, king of Kish, how to procure a son. Also notable in this text is the statement that Sarah will be the mother of kings. This would be an indication of long survival of the line and great success for the line.

18:1-15
Abraham's Visitors

18:1. entrance to tent at heat of day. The goatskin tents of pastoral nomadic people were designed to hold in heat at night with the flaps down and to allow a breeze to pass through during the day, when the flaps were up. Sitting at the entrance during the heat of the day would provide needed shade while a person enjoyed the breeze and guarded the tent's contents.

18:2-5. hospitality (meals). Hospitality customs required that all strangers who approached a dwelling were to be offered the opportunity to rest, refresh themselves and eat a meal. This was done to transform potential enemies into at least temporary friends. Protocol required that the meal served to the guest exceed what was first offered. Thus Abraham simply offers a meal, but what he orders prepared is freshly baked bread, a calf and a mixture of milk and yogurt. What is particularly generous here is the fresh meat, an item not usually found in their daily diet. This meal is similar to that offered by Danil to the representative of the gods, Kathar-wa-Hasis (when he comes traveling through town), in the Ugaritic epic of Aqhat.

18:4. foot washing. Washing the feet of guests was a standard act of hospitality in the dry, dusty climate that characterized much of the ancient Near East. Open leather sandals were common, as were enclosed soft leather boots. Neither style succeeded in keeping out the dirt of the road.

18:6-8. flour and baking. The three seahs of flour (c. twenty quarts) used to make bread again reflects Abraham's generosity to his guests. The method of baking, since nomadic people lacked ovens, would be placing the dough on the sides of a heated pot or dutch oven. This produced a slightly raised, circular loaf of bread. Curds (yogurt) and milk are served along with the meal as customary side dishes and normal byproducts of the herd. The fact that Sarah remains in the tent may reflect a custom of women not eating with men.

18:16-33
Discussion of God's Justice and Mercy

18:20-21. judge collecting evidence. There is a combination of anthropomorphism (God being given humanlike qualities) and theodicy (explanation of divine action) in this story and in the Tower of Babel episode (Gen 11). In both cases, to demonstrate divine justice and fairness, God "comes down" to investigate a situation before taking action.

18:22-33. Abraham's bargaining. Haggling is a part of all Middle Eastern business transactions. In this case, however, Abraham's determination of the exact number of righteous persons needed to prevent the destruction of Sodom and Gomorrah provides a repeated demonstration of God's just actions. A just God will not destroy the righteous without warning or investigation. Even the unrighteous, in this early period, can be spared for the sake of the righteous. On the other hand, however, justice is not served by overlooking wickedness. The discussion of the number of righteous people may concern not whether they can balance the wickedness of the rest but whether, given time, they might be able to exert a reforming influence.

19:1-29
The Destruction of Sodom and Gomorrah

19:1, 24. Sodom and Gomorrah. The "cities of the plain" along the eastern shore of the Dead Sea have not been positively located. Their association with Zoar (Zoara on the sixth-century A.D. Madaba map) and the bitumen pits "in the Valley of Siddim" (Gen 14:10) both point to the southern end of the Dead Sea. Arguments for their identification with the north end are based on the distance to travel from Hebron (eighteen miles versus forty miles to the southern location) and the mention of the "plain of the Jordan" in Genesis 13:10-12. Cities located in this arid region survived and prospered on the salt, bitumen and potash deposits around the Dead Sea and as trading centers for caravans traveling the road north

and south. There are five sites of *Early Bronze Age cities on the southeast plain of the Dead Sea, demonstrating that fairly large populations once existed here (occupied from 3300 to 2100 B.C.): Bab-edh Dhra' (Sodom?), Safi (Zoar), Numeira (Gomorrah?), Feifa and Khanazir. Only Bab-edh Dhra and Numeira have been excavated, and the destruction of these cities has been set by archaeologists at about 2350 B.C., too early for Abraham (though chronological reckoning of this period is difficult).

19:1-3. sitting at the gate. In ancient cities the gate area functioned as a public square. Its constant flow of people made it the ideal place for businessmen to set up their booths and for judges to hear cases. The fact that Lot is sitting in the gate suggests he was doing business there and had been accepted in the community of Sodom.

19:1. bowing to the ground. One way to show respect to superiors and to demonstrate peaceful intentions was to bow to the ground. Some Egyptian texts from *El Amarna (fourteenth century B.C.) exaggerate this gesture by multiplying it seven times.

19:2. hospitality (lodging). When a host offered a guest the opportunity to spend the night, he was also accepting responsibility for the safety and well-being of his guest. The offer generally extended for a total of three days.

19:3. bread without yeast. As in the case of the unleavened bread eaten on Passover prior to the exodus (Ex 12) from Egypt, Lot's "bread without yeast" was made quickly. It was evening when his guests arrived, and he did not have time to let his bread rise before baking it.

19:4-10. behavior of men at Sodom. The angels' visit to Sodom was to determine if there were ten righteous men there. The legal formula in verse 4 makes it clear that all of the men of the city confronted Lot about his guests. In addition to the fact that homosexuality was considered a capital offense, their refusal to listen to reason and their unanimous insistence on violence as they rushed toward his house confirmed the fate of the city.

19:8. Lot's offer of his daughters. When Lot offers his virgin daughters to the men of Sodom as a substitute for his guests, he is playing the consummate host. He is willing to sacrifice his most precious possessions to uphold his honor by protecting his guests. He was saved from making this sacrifice by the refusal of the mob and the actions of the angels.

19:11. blindness. The word for blindness here is used elsewhere only for the Aramean army at Dothan (2 Kings 6:18). It is a term related to an Akkadian word for day-blindness (pertinent to 2 Kings 6) and also serves in Hebrew (as in Aramaic) to refer to night-blindness. Both of these conditions are seen in Akkadian texts as requiring magical remedies. Day-blindness and night-blindness have vitamin A deficiency as their principal cause, and vitamin B deficiency may contribute to the sense of confusion evident in both passages. It is therefore of interest that liver (rich in vitamin A) figures prominently in the magical procedures to correct the condition.

19:24. burning sulfur. The scene is one of divine retribution. Brimstone appears here and elsewhere as an agent of purification and divine wrath upon the wicked (Ps 11:6; Ezek 38:22). The natural deposits of bitumen and the sulfurous smell attached to some areas around the Dead Sea combine to provide a lasting memory of Sodom and Gomorrah's destruction. One can only speculate about the actual manner of this destruction, but perhaps the combustion of natural tars and sulfur deposits and the release of noxious gases during an earthquake are a part of the story (Deut 29:23).

19:26. pillar of salt. The story of the punishment of Lot's wife is often illustrated by some grotesquely humanlike, salt-encrusted objects that have become landmarks in the Dead Sea area (alluded to in the apocryphal Wisdom of Solomon 10:4). This phenomenon is a result of the salt spray that blows off the Dead Sea. Huge salt nodules still appear in the shallow sections of the lake. The mineral salts of the region include sodium, potash, magnesium, calcium chlorides and bromide. An earthquake in the area could easily have ignited these chemicals, causing them to rain down on the victims of the destruction.

19:30-38. origins of Moabites and Ammonites. One primary intent of the ancestral narrative is to demonstrate the origin of all of the peoples that inhabited Canaan and Transjordan. Archaeological survey of the area indicates a resettlement between the fourteenth and twelfth centuries B.C., and the language of both the Moabites and Ammonites is similar to Hebrew. Although both are considered enemy nations for most of their history, it is unlikely that their "birth" as a result of the incestuous union between Lot and his daughters (see Deut 2:9; Ps 83:5-8) is simply a political or ethnic slur. The initiative taken by Lot's daughters in the face of likely childlessness and the extinction of Lot's household may have appeared to them as the only feasible option in their desperate plight.

20:1-18

Abraham and Abimelech

20:1. Kadesh and Shur. Again a story begins with the itinerary of Abraham's travels, this time taking him south on a line between Kadesh (an oasis forty-six miles south of Beersheba in the northeastern Sinai) and Shur. The latter site probably refers to the "wall" *(shur)* of Egyptian fortresses in the eastern Delta region. The Egyptian story of *Sinuhe (twentieth century B.C.) mentions this "Wall of the Ruler" as a barrier to the incursions of Asiatics into Egypt.

20:1. Gerar. Although it is not within the range of the Kadesh-Shur line, Gerar may not have been too far of a journey for pastoral nomads such as Abraham's household. Its exact location, beyond the general area of the western Negev, is uncertain (Gen 10:19), and it may in fact be the name for a territory rather than a city. Most archaeologists, noting strong Egyptian influence in this region between 1550 and 1200 B.C., point to Tell Haror (Tell Abu Hureireh), fifteen miles northwest of Beersheba, as its probable location.

20:3. God speaking to non-Israelite in dream. There are few instances of messages being given in dreams by the Lord to Israelites, but dreams are one of the most common forms divine revelation was believed to take for the uninitiated. In the *Mari texts it is usually those who are not among the professional temple personnel who receive messages by means of dreams. In most places in the Bible where significant dreams are given to individuals the text does not explicitly state that God spoke to the individual in the dream (Pharaoh, Nebuchadnezzar).

20:7. prophet's intercession. Abraham is identified by God as a prophet who is capable of intercession on Abimelech's behalf. The role of prophet was well understood in the ancient Near East, as evidenced by over fifty texts found in the town of *Mari that report messages given by various prophets. Generally the prophet offered a message from deity, but here Abraham is praying for healing (cf. v. 17). This reflects the broader view of a prophet as one who has powerful connections to deity such that he can initiate curses or remove them. A similar prophetic role can be seen in Scripture in 1 Kings 13:6. In the ancient Near East this role would typically be played by an incantation priest.

20:11-13. relationship of Abraham and Sarah. In this repetition of the wife/sister motif, Abraham reveals that Sarah is actually his half sister. There was no incest taboo against such marriages in the ancestral period, and it was a way of insuring that female children from second marriages were cared for by a household. Abraham's deception of Abimelech is reinforced by Sarah's willingness to repeat the half-truth.

20:16. 1000 shekels. A thousand shekels of silver is a sizable sum. In *Ugaritic literature it is the amount of the bride price paid among the gods. In weight it would equal about twenty-five pounds of silver. In value it would be more than a worker could expect to make in a lifetime. The king's generosity should be understood as his guarantee that Sarah had been untouched, but also as appeasing the deity who had virtually cut off all fertility in his family.

20:17. plague on Abimelech's house. The plague of barrenness or sexual dysfunction is placed on Abimelech's house until he returns Sarah to Abraham. Abraham's intercession causes God to open their wombs. The irony is that Abimelech is denied children as long as Abraham is denied his wife (for information on barrenness in the ancient Near East see comment on 11:30).

21:1-21

The Birth of Isaac and the Expulsion of Ishmael

21:4. 8 days. Initially the eight-day waiting period distinguishes Isaac from Ishmael, who was *circumcised at age thirteen. Subsequently, it serves as a determination of the infant's viability and may be tied to the period of uncleanness after the birth (Lev 12:1-3).

21:14. desert of Beersheba. The southern Negev region around Beersheba, Tell es-Seba', is steppe land and would have been inhospitable enough to be described as a desert. Hagar's wanderings after being expelled from Abraham's camp took her southeast through a relatively flat portion of the Negev toward northern Arabia.

21:8-21. expulsion of wife. There is a contract in the *Nuzi documents that contains a clause prohibiting the expulsion of the children of the secondary wife by the primary wife. The situation in Genesis is different on two counts: first, it is Abraham who sends them away; and second, Hagar is given her freedom, which, according to one ancient law code (Lipit-Ishtar) would mean that her children would forfeit any inheritance rights.

21:20. archer. The expulsion of Hagar and Ishmael and their subsequent life in the desert of Paran would require them to acquire survival skills. As a skilled archer, Ishmael could provide food for his family and perhaps could find occupation as a mercenary (see Is 21:17

for reference to the bowmen of Kedar, Ishmael's son).

21:21. desert of Paran. The arid wilderness of the northeastern Sinai desert was given the name of Paran. Situated west of Edom, it figures prominently in the wilderness period (Num 13:3, 26; Deut 1:1) and is the area where Kadesh is located. Its associations with Egypt are probably based on caravan trade and Egypt's military interest in the Sinai.

21:22-33

Abraham and His Neighbors

21:25-31. wells and water rights. In the semiarid region around Beersheba, water would have been a precious resource. Disputes between herdsmen and farmers over wells and springs would have arisen. To prevent this, treaties like that between Abraham and Abimelech would have established firm ownership or right of usage to wells. Note that Abraham's payment of seven ewe lambs provides the basis for the name Beersheba (well of seven) and serves as a gesture of goodwill toward the people of Gerar.

21:32. land of the Philistines. The first known mention of the Philistines outside the Bible is in the records of Pharaoh Rameses III (1182-1151 B.C.). As part of the invading *Sea Peoples, they settled in five city-states along the southern coast of Canaan and were employed by the Egyptians as mercenaries and trading partners. The picture of Abimelech (a Semitic name) as "king of Gerar" in the land of the Philistines does not match the known history of this people. This story may thus represent contact with an earlier group of Philistines who settled the area prior to the Sea Peoples' invasion, or this may simply be the *anachronistic use of the name Philistines for the area rather than the people Abraham encountered.

21:33. tamarisk tree. The tamarisk grows in sandy soil. It is deciduous and may reach over twenty feet in height, with small leaves that excrete salt. Its bark is used for tanning and its wood for building and making charcoal. Bedouin commonly plant this hearty tree for its shade and the branches which provide grazing for animals. Abraham's action probably signifies the sealing of the treaty with Abimelech—a life-giving plant symbolizing a fertile and prosperous future.

22:1-24

Abraham Requested to Sacrifice Isaac

22:2. region of Moriah. The only indication of Moriah's location given here is that it is three days' journey from Beersheba. That may simply be a conventional number of a completed journey, but in any case no direction is provided. The only other reference to Moriah is in 2 Chronicles 3:1, which refers to the site of the temple in Jerusalem but makes no mention of Abraham or this incident. Since the wooded hills around Jerusalem would not have required the transport of firewood for the sacrifice, it is most likely a coincidence of the same name rather than a reference to the same place.

22:1-2. child sacrifice. In the ancient Near East, the god that provides *fertility (*El) is also entitled to demand a portion of what has been produced. This is expressed in the sacrifice of animals, grain and children. Texts from Phoenician and Punic colonies, like Carthage in North Africa, describe the *ritual of child sacrifice as a means of insuring continued fertility. The biblical prophets and the laws in Deuteronomy and Leviticus expressly forbid this practice, but that also implies that it continued to occur. In fact, the story of Abraham's "sacrifice" of Isaac suggests that Abraham was familiar with human sacrifice and was not surprised by *Yahweh's demand. However, the story also provides a model for the substitute of an animal for a human sacrifice that clearly draws a distinction between Israelite practice and that of other cultures.

22:3. donkey domestication. The wild ass was domesticated about 3500 B.C. Its primary function from the beginning was as a pack animal because of its ability to tolerate heavy loads and to survive for long periods on little water. As a result it was often relied upon for long-distance travel and transport.

22:13-19. sacrifice as replacement. In this section the ram is offered as a sacrifice in the place of Isaac. The concept of substitution in sacrifice is not as common as we might think. In the ancient Near East the sympathetic magic of incantation *rituals would often include substitution of an animal that would be killed to remove a threat to the human subject. But the concept behind the regular institution of sacrifice was generally either to offer a gift to deity or to establish communion with deity. Even in Israel there is little to suggest that the sacrificial institution was understood to have a principally vicarious or substitutionary element. Redemption of the firstborn and Passover would be notable exceptions on the fringe of the sacrificial institution.

22:19. Beersheba. This important city, often identified as the southern limit of Israel's territory (Judg 20:1; 1 Sam 3:20), is traditionally lo-

cated in the northern Negev at Tell es-Seba' (three miles east of the modern city). Its name derives from its association with the wells dug to provide water for the people and flocks in this area (see Gen 26:23-33). Archaeological evidence has been found of occupation during the monarchy through the Persian periods. The lack of archaeological evidence for the patriarchal period may suggest that the city by this name changed location, but more important is the observation that there is no suggestion here in the text that there was a walled settlement at Beersheba. There are evidences of early settlement under the modern town (Bir es-Saba') about two miles from the *tell, where some now suspect the ancient city of Beersheba was located.

23:1-20

Sarah's Death and Burial

23:2. variant place names. Place names change as new people enter a region or events occur which provide the reason to memorialize them with a name change (see Jebus and Jerusalem, 1 Chron 11:4; Luz and Bethel, Gen 28:19). Hebron's association with the name Kiriath Arba ("village of four") is unclear, but it may be related to either the joining of four villages into a single settlement or the convergence of roads at the site.

23:3-20. Hittites in Palestine. The origin of the *Hittite presence in Canaan is uncertain, although Genesis 10:15 identifies them as descendants of Canaan through their eponymous ancestor Heth. The use of Semitic names and the ease with which Abraham deals with them in Genesis 23 suggest that this particular group of Hittites was either part of the indigenous population or a trading colony that had partially assimilated to the Canaanite culture (see Gen 26:34). The Hittite empire of Asia Minor (Anatolia, modern Turkey) was destroyed during the invasion of the *Sea Peoples around 1200 B.C. A successor kingdom of Neo-Hittites continued to exist in Syria until the seventh century B.C. and is mentioned in *Assyrian and *Babylonian records. These records often refer to Palestine as the "Land of Hatti," confirming an association with these people. The groups known as Hittites occupying sections of Syria and Canaan may or may not be related to these well-known Hittites. The Hittites in Canaan have Semitic names, while the Hittites of Anatolia were Indo-European.

23:4-5. burial practices. Burial practices vary in the ancient Near East. Nomadic groups often practiced secondary burial—transporting the skeletal remains to a traditional site long after death. Burial chambers were used by village cultures. These could be natural or hand-carved caves, or subterranean, multichambered tombs. Most often these tombs were used by several generations. A body would be laid in a prepared shelf, along with grave goods (food, pottery, weapons, tools), and then the skeletal remains were removed and placed in another chamber or an ossuary box or simply swept to the rear of the tomb to accommodate the next burial.

23:7-20. ownership of land. Arable land was so precious a possession that it was not supposed to be sold to anyone outside the kinship group. The lack of a buyer within the family and/or the practicalities of business sometimes required a sale to an unrelated person. This could be legally sidestepped through the adoption of the buyer or the intercession of village elders on his behalf with the owner. The designation of Abraham as "a prince" suggests he would be a desirable neighbor. The offer to receive the land as a gift was refused by Abraham because that would have enabled Ephron's heirs to reclaim the land after Ephron's death.

23:14. 400 shekels of silver. Four hundred shekels of silver was a substantial price. It would be equal to about seven and a quarter pounds of silver. In comparison, Omri bought the site of Samaria for six thousand shekels (1 Kings 16:24), and David bought the site of the temple for six hundred gold shekels (1 Chron 21:25), with the threshing floor itself fetching fifty shekels (2 Sam 24:24). Jeremiah bought property, at greatly deflated prices, for seventeen shekels (Jer 32:7). Abraham's payment would be more likely viewed as exorbitant rather than discounted, for rather than negotiating, he paid the inflated initial quote. It is likely that he was anxious to pay full price because a discounted price could be later connected to family debt problems that would allow the heirs of Ephron to reclaim the land. A laborer or artisan at ten shekels per year would not expect to make this much in a lifetime.

23:5-16. bargaining procedures. Haggling and staged bargaining are typical business procedures in the Middle East. They are both entertaining and competitive. However, when it is clear that the potential buyer is in a situation where a purchase is necessary or highly desired, the seller will use the bargaining to his advantage.

23:16. weight current among merchants. Terminology from roughly contemporary Old Assyrian trade letters suggests that this phrase concerns conformity to the standard for silver that was used in overland trade.

24:1-67

A Wife for Isaac

24:1-9. swearing oaths. An oath is always sworn in the name of a god. This places a heavy responsibility on the one who swears such an oath to carry out its stipulations, since he would be liable to divine as well as human retribution if he did not. Sometimes, as in this case, a gesture is added to the oath. The gesture usually is symbolic of the task to be performed by the oath taker. For instance, by placing his hand inside Abraham's thigh (in the vicinity of or on the genitals), the servant ties his oath of obedience to the acquisition of a wife for Isaac and thus the perpetuation of Abraham's line.

24:4. marrying from same tribe. The practice of marrying within one's own tribe or family is called endogamy. Endogamy could be the result of religious, social or ethnic concerns. In this text it appears to be ethnic in that there are no suggestions that the family of Laban, Rebekah and Rachel shares the religious beliefs of Abraham and his family. Likewise social standing is usually an issue only when nobility and commoners are involved or certain classes of urban society are seen as necessarily distinct. Ethnic concerns usually center around clan traditions or family land holdings. At times they represent long-established hostilities between two groups. In this text the endogamy seems motivated by the *covenant that seeks to prevent Abraham and his family from simply being assimilated into the ethnic melting pot in Canaan.

24:10-11. camel domestication. Although camel remains in Arabia date back to 2600 B.C., domesticated camels were not common in Palestine until 1200 B.C. The occasional references to them in Genesis are authenticated by evidence of domestication in an *Old Babylonian text from *Ugarit from the early second millennium. Evidence that the camel was used as a beast of burden in Arabia dates to the end of the third millennium. The stages of domestication may be traced by the development of the saddles. Camels were extremely valuable animals capable of carrying heavy loads through hostile desert terrains. Thus they were seldom used for food and would have been a sign of wealth.

24:10. Aram Naharaim. *Aram Naharaim (Aram of the two rivers), containing Haran on the Balikh River, includes the general area between the Euphrates River and the Habur River triangle in northern Mesopotamia. The name also appears in Deuteronomy 23:4, in the superscription of Psalm 60 and in 1 Chronicles 19:6. It may be the same as *Nahrima* in the fourteenth-century B.C. *El Amarna letters between the Egyptian Pharaoh and the rulers of Canaanite city-states.

24:11. well at evening time outside of town. The cool of the early morning and evening would have been the best times for women to go to the village well for water. Since the well was often outside the town to accommodate watering of animals, women would normally travel in groups for protection. Strangers could be expected to use the well, but it may be assumed that they would ask permission of the villagers. Hospitality custom would have necessitated offering them a drink.

24:12-21. mechanistic oracle. Abraham's servant is using an *oracular approach to identifying Isaac's bride-to-be. In an oracle a yes-no question is posed to deity, and a mechanism of some binary nature is used so that deity can provide the answer. In post-Sinai Israel the priest carried the Urim and Thummim to use in oracular situations. Abraham's servant must be more creative and uses a natural mechanism for the oracle. His yes-no question is whether the girl that he is about to approach is the right wife for Isaac. His oracular mechanism is based on a question that he will pose to the girl. When asking for a drink, one would normally expect that a drink would be offered. That would be normal behavior in the context of etiquette and hospitality. In this case such a response would indicate a "no" answer to his oracular question. For the alternative the servant chooses something far out of the range of expectation: that prompted by such a common, unimposing request, the girl would volunteer to water all his camels. This unbelievable offer would indicate a "yes" answer to his oracular question. The thought behind this process is that if deity is providing the answer, he can alter normal behavior and override natural instinct in order to communicate his answer. For similar mechanistic oracles, see Judges 6:36-40 and 1 Samuel 6:7-12. The prophets occasionally approach this type of oracular situation from the other side when they provide signs to verify that they represent God, as in Numbers 16:28-30 or 1 Samuel 12:16-17.

24:11, 13. spring versus well. The difference in terminology between verse 11 ("well") and verse 13 ("spring") may reflect a variety of water sources available. There are examples where a water source originated from a spring but as the water table shrank it became necessary to dig down, thereby forming a well. This is the case at Arad, where a deep well now replaces the original spring.

24:19-20. how much camels drink. Camels drink only as much water as they have lost and do not store it in the hump. The concentration of fat and the coat of hair allows dissipation of heat, less sweating and a wider range of body temperature during the day and night. The camel also is able to maintain a constant amount of water in its blood plasma and thus sustain higher water loss than most animals. A camel that has gone a few days without water could drink as much as twenty-five gallons. In contrast, the jars that were used for water would usually hold no more than three gallons.

24:22. nose rings. Nose rings were especially popular during the *Iron Age (1200-600 B.C.), though there are examples from earlier periods. Made of silver, bronze and gold, and often tubular in design, they were round with two ends for insertion and sometimes included a tiny pendant. The beka is the half-shekel measure of weight, equal to one-fifth of an ounce.

24:22. jewelry. The bracelets would have been bands worn around the wrist as bangles. They were very popular items and are often found on the arms and wrist of females in tombs. By placing them on her arms, the servant may be symbolizing the marriage contract. A ten-shekel bracelet would weigh about four ounces. Legal materials from the first half of the second millennium suggest a worker might expect to make at most ten shekels per year and often less. These would typically be shekels of silver—gold would be more valuable.

24:28. mother's household. It would be natural for a young, unmarried woman to refer to her home as her mother's house until she was wed (see Song 3:4).

24:50-59. presents of betrothal. For a marriage to be arranged, the groom's family must provide a bride price, while the bride's family provided a dowry. The silver and gold objects and the garments presented to Rebekah are part of her transformation into a member of Abraham's household. The word used in the text denotes metal worked into useful items, whether jewelry or plates and other utensils. The presents given to her brother Laban and her mother demonstrate Abraham's wealth and the desirability of the marriage.

24:57-58. Rebekah making decision. It was unusual in the ancient world for the woman to have any part in major decisions. Rebekah was not consulted with regard to the marriage (vv. 50-51), but when the servant asked to leave right away the men looked to Rebekah for consent. Marriage contracts of this general period show a great concern for maintaining the woman's security within her husband's family. The presence of her family was one of the guarantees that she would be cared for and treated properly. The ten days that Rebekah's family requested (v. 55) would have given them a little more opportunity to make sure that everything was as it appeared to be. It is likely that she was consulted because of the substantial risk that was involved in leaving the family protection under such unusual circumstances.

24:59. accompanying nurse. It would have been suitable for a woman betrothed to a wealthy man to have an entourage of servants. The nurse, however, would have higher status as the nurturer of the child who would now remain as part of her new household and serve as a chaperon on the return journey.

24:62. Beer Lahai Roi. The place name means "well of the living who sees me" and is first associated with Hagar's *theophany in Genesis 16:14. It would have been southwest of Hebron in the Negev. Either Isaac and Abraham have moved their encampment south or Isaac is now living separately.

24:62-66. use of veil. Since she had gone unveiled during the journey, Rebekah's veiling herself once Isaac is identified to her suggests that this is her way of demonstrating to him that she is his bride. Brides were veiled during the wedding but went unveiled as married women. Veil customs differed in various locations and times. Asiatic women on the Beni Hasan tomb painting (early second millennium) are not veiled, but in the Middle *Assyrian laws (late second millennium) all respectable ladies went about veiled in public.

24:67. tent of his mother. Sarah's tent, due to her status of mistress of the household, would have been empty since her death. By taking Rebekah into his mother's tent, Isaac demonstrates that she is now the mistress of the household. This is similar to the importance placed on entering the house of the bridegroom in *Ugaritic texts.

25:1-11

The Death of Abraham

25:1-4. descendants of Abraham from Keturah. Not all of these sixteen names can be identified, although most are associated with the Syro-Arabian desert to the east of the Jordan and may represent a confederation of tribes involved in the lucrative spice trade. Of the six sons born to Abraham and Keturah, the name of Midian is the most prominent in later narrative as a people living on the fringe of Israelite territory in the Negev and Sinai re-

gion. Some of the names appear in the *Assyrian annals (Medan is Badana, south of Tema; Ishbak is the northern Syrian tribe of Iasbuq; Sheba is in the southwestern part of Arabia). Shuah also appears in *cuneiform texts as a site on the middle Euphrates near the mouth of the Habur River (see Job 2:11).

25:1-4. concubines. The *concubines, or secondary wives, of Abraham were Hagar and Keturah. Concubines were usually women who did not possess a dowry, and thus their children did not have primary rights to inheritance. The father may choose to designate one of them as his heir if his primary wife has not produced a son. However, if he does not do so, then any claims they may have on his property would be based on the stipulations of the marriage contracts.

25:2, 4. Midianite origins. Midian is one of the children born to Abraham and Keturah, and the reference to him shows the writer's continued interest in establishing links between Abraham and all of the peoples of Palestine, Transjordan and Arabia. The Midianites are most frequently mentioned as a pastoral nomadic group of tribes living in the Negev and the Sinai deserts. Midianite traders carry Joseph to Egypt (Gen 37:28). Moses marries the daughter of Jethro, the priest of Midian, after fleeing Egypt (Ex 2:16-21). During the conquest narrative, Midianites are allied with Moab and are targeted as enemies of the Israelites (Num 25:6-18). There is no extrabiblical information about their history or origins.

25:5-6. giving gifts. It is the prerogative of the father to designate his heir. However, he must also provide for his other children. Thus by giving his other sons gifts and sending them away he shares his wealth with them but also protects Isaac's position as heir of the household.

25:6. land of the east. The Hebrew *qedem* in this unique phrase may indicate a direction, "east," or an actual place name. The twentieth-century B.C. Egyptian story of the political exile *Sinuhe mentions the land of Qedem as lying near Byblos. In other biblical texts it refers to the peoples who inhabit the desert region on the eastern edges of Israel (Judg 6:3; 7:12; Is 11:14).

25:8. gathered to his people. In the worldview of ancient peoples the past was less like a train moving toward them and more like a village spread out in the valley. They saw themselves as facing the past (rather than the future). Being gathered to their ancestors not only expressed the idea of being buried in the family tomb but of joining the ranks of the ancestors in the "ancestral village" that comprised the past. This is more a view of history than of the afterlife per se.

25:12-18
Ishmael's Line

25:12-16. Ishmael's descendants. Continuing the listing of those descendants of Abraham who inhabited neighboring regions are the sons of Ishmael. The term son sometimes represents political affiliation rather than blood ties, but whatever the case, this list comprises a confederation of tribes living in the Syro-Arabian desert. The occurrence of these names in *Assyrian records, intermixed with names from the Keturah list, suggests both shifts in tribal affiliation and allegiance. Most prominent among the names are Nebaioth, probably the Nabaiati of Ashurbanipal's campaigns against the Arab tribes and possibly to be associated with the later Nabateans of Petra; Tema, an oasis northeast of Dedan on the caravan route between southern Arabia and Mesopotamia; and Kedar, a people mentioned elsewhere as pastoral nomads (Ps 120:5; Is 42:11, 60:7).

25:18. area of Ishmael's descendants. The region from Havilah (see Gen 2:11; 10:7) to Shur (see Gen 16:7) probably represents migration and caravan routes for the descendants of Ishmael. This area is not suitable for large, sedentary populations, but it could support pastoral nomadic groups, and it was the center of the spice trade from southern Arabia traveling west to Egypt and east to Mesopotamia and Syria. Asshur, in this context, would not be the Mesopotamian kingdom of the upper Tigris region, but rather one of the northern Arabian areas (see Gen 10:22; 25:3).

25:19-26
The Birth of Jacob and Esau

25:21. barrenness. Barrenness is used in the ancestral narratives to heighten tension, as the element of the *covenantal promise of descendants (12:2) is thereby endangered. It also marks the son who is eventually born as special, because only God could relieve this infertility.

25:22-23. oracular response. Rebekah's concern about her pregnancy leads her to ask for an *oracle. The text gives no indication of what means Rebekah uses to inquire of the Lord. She is not using a mechanistic oracular device, for that only provides yes/no answers. There is no mention of a prophet, oracular priest, or angel delivering the oracle. In Egypt and Mesopotamia oracles such as this

were almost always provided by a priest. Another alternative is that the oracle could be sought in a dream. This usually involved sleeping in a holy place. The text is less interested in the means and more concerned about the content of the oracle. The oracle does not concern the children themselves as much as it addresses the ultimate destiny of the family lines that each will establish. Such an oracle would not have suggested any particular treatment of the children by the parents.

25:24-26. naming children. The giving of names in the ancient world was a significant act. A name was believed to affect a person's destiny; so the person giving the name was exercising some degree of control over the person's future. Often names expressed hopes or blessings. At other times they preserved some detail of the occasion of the birth, especially if the occasion appeared significant. Here Esau is named by a physical characteristic, whereas Jacob is named for his peculiar behavior during birth. The names need not mean the word associated with them, but are often linked by wordplay. So the Hebrew word Jacob does not mean "heel"—it only sounds like the word for heel. The name was expected to play a role in the unfolding destiny of the individual and to take on additional significance and appropriateness throughout his life, though the direction of that appropriateness was impossible to foresee.

25:27-34

Esau Trades His Birthright

25:28. mother's role in inheritance decisions. A Canaanite contract from *Ugarit contains a situation in which the father allows the mother to choose which son receives preferential treatment in the inheritance.

25:29-30. Jacob cooking stew. The incident with the stew appears to take place away from home, otherwise Esau could have appealed to his parents. Jacob is not the hunting type, so it would be unusual for him to be out in the countryside alone. He has been described as a man "staying among the tents," which may indicate he was more closely associated with the shepherding business. The shepherds moved their camps over a broad area of land in order to find water and grazing for the flocks. It is most likely that Jacob would be out supervising some of the shepherds at such a camp when Esau stumbled upon them. Jacob would be the one in charge at the camp, so the decision would be his, and there would therefore be witnesses to the agreement made between Jacob and Esau.

25:31-34. birthright. The birthright concerned only the material inheritance from the parents. The inheritance was divided into the number of sons plus one. The eldest son then received a double share. This was a customary practice throughout the ancient Near East. The stew buys from Esau that additional share (probably not his entire inheritance). There are no examples in the known literature from the ancient Near East of such a deal being made. The closest is in the legal materials from *Nuzi, where one brother sells some already inherited property to one of his brothers.

26:1-16

Isaac and Abimelech

26:1-6. recurrent famine. The uncertainties of rainfall in season and in the proper amount made drought and famine fairly common occurrences in ancient Palestine. The writer here notes this frequent disaster and differentiates between the famine in Abraham's day (Gen 12) and that of Isaac.

26:1. Philistines in Palestine. Large numbers of Philistines entered Canaan after the invasion of the *Sea Peoples (1200 B.C.) broke Egyptian control over the area. In this context they are mentioned in the records of Ramses III (1182-1151 B.C.). They established a pentapolis of five major city-states (Gaza, Gath, Ashdod, Ekron, Ashkelon) along the southern coastal plain and quickly gained political control over nearby regions as well (Judg 15:11). Their mention in Genesis may reflect an earlier group that settled in Canaan prior to 1200 B.C., or it may be an *anachronism based on their presence in the Gerar region in later periods (see Gen 21:32), earlier people of the vicinity being referred to by the name known to later readers. Archaeological evidence of their presence is found in the introduction of new pottery types, grave goods (such as the sarcophagi with human features) and new architectural designs.

26:7-11. wife as sister. The wife/sister theme is used three times in the ancestral narratives (see also chaps. 12 and 20). Here Abimelech (either a throne name or a dynastic name meaning "My father is king") is tricked by Isaac and Rebekah. The result is their obtaining royal protection and the right to farm and to graze his herds in Gerar.

26:12-16. planting crops. It is not unusual for pastoral nomadic tribes to plant a crop or to harvest date palms along their usual line of march. This may be a step toward settling into a village life, but that is not necessarily the case. Generally sedentarism (settling of no-

mads) is more directly related to the actions of governments or changes in the political boundaries through which they drive their herds. Wealth may also cause them to settle down, but this is not a major factor.

26:17-35

Isaac's Wells

26:17-22. well rights and disputes. Wells are generally dug and protected by villages. The likelihood that they will silt up or collapse requires at least occasional oversight. The labor involved and the necessity of water for humans, crops and animals makes it likely that disputes will arise between villages and/or herdsmen who also wish to claim and use the wells.

26:20. naming wells. One way to designate ownership of a well or other natural resource is to give it a name. Once this has become its traditional name, title is not difficult to establish. It thus prevents later disputes or settles any that may arise. Naming is also part of the traditional lore of a tribe which is passed on to later generations.

26:23-25. build altar, call, pitch tent, dig well. The three acts of verse 25 are all related to possession of the land and are therefore a suitable response to the *covenant promise of verse 24. The altar gave recognition to the holiness of the place where the Lord spoke to him. Pitching a tent and digging a well are generally accepted means by which to establish a right to unclaimed land.

26:26-33. peace treaty. The peace treaty of verses 28-30 would constitute recognition by Isaac's neighbors that his presence in that area was acceptable. The agreement was validated by the sharing of a meal and by the swearing of oaths. Just as Abraham had built altars (chap. 12) and established recognized rights to land (chap. 23), so Isaac is now doing the same.

26:33. folk etymology of town names. Beersheba was named earlier by Abraham (in 21:31). The designation of significance to a name is not necessarily a suggestion that the name originated at that time. Just as people's names can be reinterpreted (for instance, Jacob in 27:36), so a place name can be reinterpreted. The ancients were less concerned with the origin of a name than they were with the significance the name acquired. This town at the southern extreme of the land becomes the home base for Isaac. The site identified by archaeologists as Beersheba has no remains prior to the Judges period (*Iron Age, 1200), but there is no suggestion in the story of Isaac that there was a town on the site in his day, so this is not a problem.

27:1-40

Isaac's Pronouncement on His Sons

27:1-4. deathbed blessings. Blessings or curses pronounced by the patriarch of the family were always taken seriously and considered binding. Such pronouncements from a patriarch's deathbed would be even more momentous. In this text, however, Isaac is not portrayed as being on his deathbed, merely aged enough that he wants to put his house in order by providing the traditional blessing.

27:4. proper atmosphere for blessings. While the feast that Esau is to prepare may provide a pleasant atmosphere and appropriate mood for the blessing, it also provides the context of celebration that would accompany significant events, much as we might go out to dinner at a fancy restaurant.

27:11-13. curse appropriation. Rebekah responds to Jacob's fears of bringing a a curse on himself by appropriating to herself any curse that may result. Can she do that? As this chapter demonstrates, a blessing is not transferable, and neither is the pronouncement of a curse. But in this case Rebekah is most likely referring to the consequences of the curse rather than the curse itself. Since deity is the enforcer of the curse, this acknowledgment that she has forced Jacob to deceive his father would target her if a curse was to result.

27:14. food preparation. Food preparation was done by both men and women. One way to provide variation of taste to meals (which were often monotonous and meatless) was to hunt wild game. This meat might be tough and gamey-tasting, and thus it would be stewed to tenderize it and mixed with herbs to improve the flavor.

27:27-29. nature of blessing. The blessing that Isaac bestows on Jacob (whom he mistakes for Esau) grants him fertility of the ground, dominion over other nations, including those descended from siblings, and a boomerang effect for curses and blessings. These are typical elements for the patriarchal blessing and have no relationship to either material inheritance or to the *covenant, though some of these features are also present in the covenant benefits that the Lord promises to Israel. They constitute the foundational elements of survival and prosperity.

27:34-40. no negation of blessing. The power of the spoken word was such that it could not be "unsaid"—this is true even outside the realm of superstition in that many words spoken do the benefit or damage they intend re-

gardless of any second thoughts the speaker may have. The pronouncement regarding Esau's destiny thus reflects the realities of the previously uttered blessing on Jacob. It would not be considered a curse because it assumes continuing existence and eventual freedom.

27:37. "I have made." Isaac explains to Esau, "I have made him lord . . . I have sustained him." The first-person forms show that Isaac is not suggesting that this blessing is a prophetic proclamation from deity. Neither does Isaac call on deity to perform it. Similar formulas in Mesopotamia regularly invoke deity in such blessings and curses.

27:41-46

The Outcome of the Deception

27:45. lose both in one day. Rebekah expresses the concern that she might lose both in one day. This could either refer to losing both Isaac and Jacob, that is, Isaac dies and Jacob is killed by Esau; or losing both Jacob and Esau, that is, Jacob would be killed and Esau, as his murderer, would either have to flee or end up the victim of blood vengeance.

27:46. Hittite women. The *Hittite women that Esau married were part of the indigenous culture of Canaan at this time. While it is possible that this group is related to the well-known Hittites of Anatolia, our knowledge of the culture and history of the Canaanite Hittites in the patriarchal period is insufficient to allow informed conclusions. There is a well-established Anatolian Hittite presence in Canaan during the monarchy period, and even as early as the middle of the second millennium the *Amarna texts contain Hittite and *Hurrian personal names.

28:1-22

Jacob's Dream and Vow

28:2. Paddan Aram. This place name only appears in Genesis. It is either a designation for the general area of northern Mesopotamia (= *Aram Naharaim in 24:10) or perhaps another name for Haran. In *Akkadian, both *padanu* and *harranu* mean "path" or "road." In either case, Jacob is instructed to return to his ancestors' homeland to seek a bride as part of their practice of endogamy (marrying within a select group).

28:5. Aramean. The origin of the *Arameans is problematic. They do not actually appear in Mesopotamian records until the end of the second-millennium *Assyrian annals of Tiglath-Pileser I (1114-1076 B.C.). In the ninth century Shalmaneser III mentions kings of Aram in Damascus (including Hazael and Ben-Hadad III). However, this is many centuries after the setting of the ancestor narratives. The mention of Arameans in relation to Abraham and Jacob is likely a reference to scattered tribes of peoples in upper Mesopotamia who had not yet coalesced in the nation of Aram, which appears in later texts. Based on other examples from *cuneiform literature, the name Aram may in fact have originally been that of a region (cf. Sippar-Amnantum of the *Old Babylonian period) and was later applied to people living there. Current evidence suggests that the Arameans inhabited the upper Euphrates throughout the second millennium, first as villagers and pastoralists, then as a political, national coalition.

28:10-12. Jacob's itinerary. Jacob takes the central ridge road that goes through the hill country from Beersheba through Hebron, Bethel and Shechem to join the main artery, the Great Trunk road, in Beth Shan. It would have taken a couple of days to get from Beersheba to Bethel (about 60 miles), and the trip to Haran would have taken over a month (about 550 miles).

28:13-15. stairway. The ladder or stairway that Jacob sees in his dream is the passageway between heaven and earth. The comparable word in *Akkadian is used in Mesopotamian mythology to describe what the messenger of the gods uses when he wants to pass from one realm to another. It is this mythological stairway that the *Babylonians sought to represent in the architecture of the ziggurats. These had been built to provide a way for the deity to descend to the temple and the town. Jacob's background would have given him familiarity with this concept, and thus he would conclude that he was in a sacred spot where there was a portal opened between worlds. Though he sees the stairway in his dream, and the messengers (angels) are using it to pass between realms (embarking on and returning from missions, not a procession or parade), the Lord is not portrayed as having used it, but as standing beside it (this is the proper translation of the Hebrew idiom).

28:16-17. house of God, gate of heaven. When Jacob awakes he identifies the sacred place as the house of God *(beth-el)* and the gate of heaven. In *Akkadian mythology the stairway used by the messengers went up to the gate of the gods, while the temple of the deity was located at the bottom. In this way the patron deity could leave the assembly of the gods and descend to the place of worship.

28:18-19. pillars and anointing. The sacred pillars or standing stones are well known in

the religious practice of the ancient Near East predating the fourth millennium B.C. They are featured prominently in Canaanite *cultic installations such as the high place at Gezer and were also used in the Israelite temple at Arad. Other standing stones were simply set up as memorials. From basins sometimes found near the foot of such pillars, it is inferred that libations (liquid offerings) were poured over them, as we see Jacob doing in 35:14. The anointing of the pillar would constitute the dedication of it.

28:19. Bethel/Luz. As noted in Genesis 23:2, place names change based on the appearance of new peoples or significant events. Bethel was an important town located in the central hill country just north of Jerusalem. An important east-west road lay just south of the town, making it a crossroads for travelers and a likely place for the establishment of a *cultic site. There is some speculation that Luz was the original city site and that Bethel (literally "house of God") was a separate cultic site located outside the town. Once the Israelites had established themselves in the region, however, the site's association with Abraham (12:8) and Jacob would have caused the older name to be superseded.

28:20-22. vows. Vows are promises with conditions attached, almost always made to God. In the ancient world the most common context for a vow was when a request was being made to deity. The condition would typically involve God's provision or protection, while that which was vowed was usually a gift to deity. This would most commonly take the form of a sacrifice but could refer to other types of gifts to the sanctuary or priests. Fulfillment of a vow could usually be accomplished at the sanctuary and was a public act. In Jacob's vow the conditions actually extend through the end of verse 21. Jacob promises a tithe upon the fulfillment of the conditions.

28:22. tithe. In the ancient world tithing was often a means of taxation. There were tithes paid to the temple as well as those paid to the king. Since income and personal wealth was often not primarily in money, all goods were included in the calculations of the tithe, as indicated here by Jacob in the phrase "all that you give me." Jacob's tithe is clearly voluntary rather than imposed and therefore would not be associated with taxation of any sort. There is no temple or priesthood at Bethel, so to whom would Jacob give his tithe? It is likely that Jacob anticipates that any wealth coming to him would be in the form of flocks and herds. In such a case the tithe would be represented in sacrifices at Bethel.

29:1-14

Jacob Finds Laban and His Family

29:2, 3, 10. stone over well mouth. The stone served a double function, as a guard against contamination or poisoning of the well and as a social control mechanism, preventing any of the herdsmen in the area from drawing more water than was their right. Apparently water was scarce in this "open country" and thus the right to use the well was a jealously guarded one. Bedouin herders seldom wish to even divulge the location of wells within their territory, so this degree of security is not out of place. The stone may even have served to disguise the location of the well from the casual passerby. Wells of this time were not surrounded by protective walls, so the stone would also have prevented animals (or people) from inadvertently stumbling into it.

29:3. watering agreements. In regions where water sources were scarce, it would have been necessary to make agreements between herdsmen for use of the local well or spring. A lack of trust, however, could result in a scene like the one in the text, where all of the herds had to be assembled before any could drink.

29:6. female shepherd. While it is not uncommon today for women and small children to herd Bedouin flocks, in antiquity women would have done so only when the household had no sons. It was a dangerous practice since they might be molested, but it was also a way of attracting a husband.

29:11. kiss of greeting. The traditional form of greeting for friends and relatives in the Middle East is a warm hug and a kiss on each cheek. This is done with both male and female relatives.

29:15-30

Jacob Works for His Wives

29:17. Leah's eyes. In the comparative description of Rachel and Leah, the only comment about Leah concerns her eyes. The term used is generally considered positive and speaks of fragility, vulnerability, tenderness or a delicate quality (NIV note). Although eyes were a principal component of beauty in the ancient world, Leah's positive features paled in comparison to Rachel's loveliness.

29:18-20. seven years' labor. Typical marriage customs would have included a payment made to the bride's family by the groom or his family. This could provide a sort of trust fund to provide for the wife should the husband die, desert her or divorce her. Alternatively it was at times used by the family to pay the

bride price for the bride's brothers. In some cases it was even returned to the bride in the form of an indirect dowry. In the *Nuzi texts a typical bride price is thirty or forty shekels of silver. Since ten shekels of silver is a typical annual wage for a shepherd, Jacob is paying a higher price. That can be understood, however, given the circumstances: Jacob is in no position to negotiate, and the payment is being made in labor.

29:21-24. wedding feast. Since a wedding is based on a contract between two families, it is similar to treaties and to business transactions. Like them, the marriage would have been consummated with a *ritual meal (a sign of peace between the parties). There would also be a procession to a designated "first home" (usually within the house or tent of the groom's father, although not in Gen 29) and sexual intercourse between the couple. The bride would be veiled during these public festivities, and it may be assumed that the high spirits would have led to drunkenness, both factors in Jacob's inability to recognize the substitution of Leah for Rachel at the feast.

29:24. gift of maidservant. It was quite common for the bride to receive a gift of a maidservant on the occasion of her marriage. In this way she obtained her own personal household or entourage, providing her with both greater prestige and help in performing her duties.

29:26-30. custom of older married first. It is the practice of people of the ancient Near East, and still a tradition today in that area, for the oldest daughter to be married first. This prevents a younger sibling from shaming a sister who may not be as beautiful and also prevents the financial drain on the family caused by spinsters. Females were used, through marriage contracts, to obtain wealth and prestige for the family. If an older sister was bypassed and then never married, her family would be left with the responsibility to support her.

29:27. bridal week. The relationship between the seven-day story of creation and the idea of creating new life through marriage may be the origin of the bridal week. Diverting the bride and groom from other tasks was also designed to insure a pregnancy early in the marriage.

29:31—30:24
Jacob's Children

29:33. naming of children. The naming of children was a significant act and typically represented some circumstance or sentiment at the time of birth. It rarely addressed the supposed fate or destiny of the child directly and was not thought to determine the child's destiny, but it was believed that the name was directly related to a person's essential self and therefore could be expected to find significant associations with the person's nature and experiences.

30:3-13. maidservant as surrogate wife. Just as Sarah gave Abraham her maid Hagar as a surrogate wife (16:1-4), so too the wives of Jacob give him their maids. The object is for a barren (or unloved) wife to have children by means of this legal surrogacy. Provision for this custom is also found in the *Lipit-Ishtar Code and in the Code of *Hammurabi from Mesopotamia.

30:14-15. mandrake plants. *Mandragora officinarum* is a stemless, perennial root in the potato family found growing in stony ground. It resembles the human figure and has narcotic and purgative properties, which explain its medicinal use. Its shape and pungent fragrance may be the origin of its use in *fertility rites and as an aphrodisiac (see Song 7:13-14). It has dark green, wrinkled leaves from which rise a violet, bell-shaped flower. Its fruit is a yellowish berry, approximately the size of a small tomato, which can be consumed. The mandrake is native to the Mediterranean region but is not common in Mesopotamia.

30:25-43
Jacob Employed by Laban

30:22-25. Jacob's request. A woman's status in the family would be very tenuous if she had not borne children. A barren woman could be and often was discarded, ostracized or given a lower status and would find protection in her relatives. Now that Rachel's status in Jacob's family is established, Jacob feels free to request permission to leave.

30:27. divination of Laban. An Israelite reader would have been struck by Laban's suggestion that *Yahweh has given information by means of *divination. There is no mention of what type of divination Laban used, but all divination was later forbidden under the law. Divination assumed that there was knowledge to be gained about the activities and motives of the gods through the use of various indicators (such as entrails of sacrificed animals). It operated in a worldview that was contrary to that promoted in the Bible. Nevertheless, God occasionally chooses to use such methods, as the Bethlehem star attests.

30:32-33. sheep breeding. The coloring chosen by Jacob (dark lambs and variegated goats) generally made up a very small proportion of

the herd. Jacob seems to be settling for a share that was far smaller than usual, in that contracts of the day designated sometimes as much as 20 percent of new births for the shepherd (Bedouin studies today suggest that 10 percent is common). Byproducts (wool, milk products) are not mentioned here, but a percentage of those were also often part of the shepherd's compensation.

30:37-43. use of rods. Jacob's solution to Laban's treachery contains elements of scientific breeding and folklore tradition. Clearly, shepherds would have been aware of the estrus cycle of their sheep (which runs from June to September), and observation would have demonstrated that breeding healthy animals would produce vigorous lambs. What is not scientific, however, is the principle that certain characteristics (coloration in this case) can be bred for through visual aids. The stripped rods which Jacob places before the troughs of the sheep cannot genetically affect the sheep. This type of sympathetic magic is found in many folk traditions (including modern tales of colors worn by a mother determining the sex of her child). It plays a part in the trickster theme of this narrative and is reflective of a culture which depended on a mixture of magical and commonsense methods to produce results.

31:1-21

Jacob's Flight

31:1. Laban's sons' complaint. Jacob's success in Laban's employ would naturally result in the reduction of Laban's assets and therefore the depletion of the inheritance his sons could expect to receive. It is no wonder then that they nurse a grudge against their brother-in-law.

31:13. God of Bethel. By identifying himself as the God of Bethel, the Lord has reminded Jacob of the vow of Jacob in 28:20-22. Though it is true that Canaanites would have viewed sacred sites as each having their own separate deities, there is no suggestion in the text that Jacob considers the God of Bethel to be distinct from *Yahweh, and certainly the author of the Pentateuch sees them as one (compare vv. 3 and 13).

31:14-16. Rachel and Leah's complaint. Rachel and Leah express willingness to leave with Jacob because of the way Laban has treated them in his financial dealings. It has been suggested that they are referring to assets that were generally held in escrow for the care of the woman should her husband die or divorce her. Such assets would have been part of the bride price, which, in this case, Jacob had paid in labor rather than tangible assets. If Laban never put aside the value of Jacob's fourteen years of labor, there would be nothing in reserve to provide for the women. As a result they would not enjoy any additional protection in economic terms by staying in the vicinity of their family. They identify this as treating them as foreigners, because Laban had gained from Jacob's labor but had not passed the gain on to them—it is therefore just as if he had sold them.

31:18. Paddan Aram. Paddan Aram seems to refer to the region of northern Mesopotamia and northeast Syria (see comment on 28:2). The inclusion of *Aram suggests connections with the Arameans (see comment on 28:5).

31:19-20. sheep shearing. Shearing domestic sheep of their woolly fleece occurs in the spring a few weeks prior to lambing. This allows wool to grow back during the summer to help protect against extreme temperatures. Shepherds would bring their animals to a central location where the wool was also processed, dyed and woven into cloth. Archaeological excavations at Timnah (see 38:12) have produced large numbers of loom weights, suggesting that this was a center for shearing and weaving. Because this involved a journey, provisions would have had to be made to protect the villagers left behind. There would also be a celebration associated with the event after the hard work of shearing was completed.

31:19. household gods. The *teraphim* or "household gods" were associated with luck and prosperity of the family. One suggestion is that, like the *lares* and *penates* of Roman tradition, these small images guarded the threshold and hearth. They were passed from one generation to the next as part of the inheritance. The fact that Rachel was able to hide them under a saddle suggests their tiny size, though some were larger (see 1 Sam 19:13). Many of these small figurines have been found in Mesopotamia and Syro-Palestine. They were a part of the popular or local religion, not associated with temples or national *cults for the major deities. One recent study has suggested they were figurines of the ancestors, but others see them as more generally related to the family's patron deity. Laban's frantic desire to retrieve these images suggests their importance to his family, in contrast to Jacob's disposal of them before he departs for Canaan.

31:21. hill country of Gilead. Jacob's departure from the area of Haran takes him south and west across the Euphrates River and into the Transjordanian region known as Gilead.

This area comprises most of the Jordanian plateau between the Yarmuk River near the Sea of Galilee and the northern end of the Dead Sea.

31:22-55

The Settlement of Jacob and Laban

31:27. musical instruments. Tambourines and harps were the common musical instruments associated with celebrations in the village culture. They were used to mark major events, such as military victories (Ex 15:20), celebratory and religious dances (1 Sam 10:5), and, as in this case, feasts of departure.

31:35. Rachel's excuse. Rachel's excuse that she had her period would have been sufficient to warn off Laban, for in the ancient world a woman in menstruation was considered a danger because menstrual blood was widely believed to be a habitat for demons.

31:38-42. shepherd's responsibility. Herding contracts have been discovered in excavations in Mesopotamia which spell out the responsibilities and the wages of herdsmen. They describe activities in much the same way as in this passage: taking animals to proper grazing areas and water sources, birthing of lambs, treatment of sick and injured animals, protection from wild predators and retrieval of lost sheep. It was expected that losses through neglect or failure to protect the flock would be deducted from the shepherds' wages. Plus, only animals that had been killed or died of natural causes could be eaten by the shepherds.

31:42. ancestral Deity. Jacob's use of the terms the "God of my father, the God of Abraham" and the "Fear of Isaac" provide a sense of kinship based on the worship of an ancestral deity by these tribal people (see 28:12; Ex 3:6; 4:5). "The Fear of Isaac" appears only in Genesis and may represent a cognomen (nickname) for the patron God as well as an implied threat against any violence by Laban (see 31:29). The reference to divine patrons, "Ashur, the god of your fathers," is also found in Old *Assyrian texts (early second millennium B.C.).

31:45-53. pillar as witness. The use of a heap of stones as a boundary marker or a memorial to an event or to bear witness to a *covenant appears several places in the biblical text (see 28:18; 35:20; Josh 24:27). In Canaanite religion, the massebah, or standing stone, was erected and considered as a guardian or a dwelling place of a god (see Deut 16:21-22; 1 Kings 14:23). The fact that two are erected here and each is given a name is suggestive of an invoking *ritual in which the god(s) of each party are called to witness the treaty-making ceremony and to enforce its stipulations. One possible parallel to this may be the twin pillars, Jachin and Boaz, placed in front of Solomon's temple in Jerusalem (1 Kings 7:15-22).

31:48-53. nature of agreement. Like other treaty documents in the ancient Near East (such as the seventh-century B.C. *Assyrian vassal treaties of Esarhaddon and the thirteenth-century B.C. treaty between Rameses II and Hattusilis III), the gods of each party are invoked as witnesses, a set of exact stipulations is spelled out and a sacrifice and *ritual meal conclude the agreement. While the only explicit charge here is that Jacob not take any more wives, it is suggested by the setting up of the pillars that this is also a boundary agreement and territory is now marked. Parallels to this restriction on taking another wife are found in *Nuzi legal documents (fifteenth century B.C.). The stipulation is intended to protect the rights and status of the current wife/wives, especially in this context where the wives' family would not be there to assure fair and equitable treatment.

31:54. sacrificial meal. It was apparently standard procedure to use a meal to seal an agreement (see 14:18; 26:30; Ex 24:5-11). Just as food is a part of the hospitality *ritual (18:2-5), here it functions as a means of drawing each party into a familial, nonhostile relationship. By adding the element of sacrifice, it also insures the participation of the gods and heightens the solemnity of the occasion.

32:1-21

Jacob's Return to Canaan

32:1. met by angels. Just as Jacob experienced an angelic *theophany as he left the Promised Land (28:12), so too he is met by angels on his return. This forms an *inclusio* (a literary device in which the same events or lines occur at the beginning and the end of a literary segment) in the narrative and signals both divine sanction for the treaty just concluded and a reestablishment of direct contact with the *covenantal heir.

32:2. naming places. Applying names to sites where specific events occur, especially *theophanies, is fairly common in the ancestral narratives (see 16:14; 21:31; 26:20, 33; 28:19). In this way the presence of the deity is established at that site. For instance, Bethel, the location of one of Abraham's altars and the place where Jacob experienced a theophany, later became a major religious site. The name of the place in this passage, Mahanaim, means "two camps," but the reference is ob-

scure. Although it has not been located, this is a fairly important city in the tribal territory of Gad (see Josh 13:26; 21:38; 2 Sam 2:8-9).

32:3. Seir. The land of Seir is generally considered to be the mountainous central region of Edom (elevations generally over 5,000 feet) between Wadi al-Ghuwayr on the north and Ras en-Naqb on the south.

32:3-5. Jacob's communication. Jacob's communication to Esau is intended to make several points. First, he has not been in hiding or sneaking around the land behind Esau's back. Second, and more importantly, he has not come to lay claim to inheritance rights. By describing his success and wealth, he insinuates that he has not returned because he is broke and looking to demand what is due him.

32:13-21. gifts for Esau. The generosity of Jacob's gifts can be understood when compared to tribute paid by one nation to another. So, for instance, in the ninth century B.C. the town of Hindanu paid to *Assyrian king Tukulti-Ninurta II some silver, bread, beer, thirty camels, fifty oxen and thirty donkeys. This gift would be sufficient for Esau to get a good start on a herding operation of his own or, alternatively, to reward any mercenaries in his employ who may have been anticipating booty.

32:13-21. Jacob's strategy. Jacob's gifts to Esau demonstrate that he is as shrewd as ever. Besides being an attempt to gain Esau's favor through generosity, the continuous arrival of the herds of animals will wear out any schemes for ambush and deflate any degree of military readiness that Esau might be planning in his encounter with Jacob. Additionally, traveling with the animals will slow Esau down and make his company much noisier. Finally, the plan adds Jacob's servants to Esau's retinue—a decided advantage if there is to be fighting.

32:22. river fords. River crossings or fords function in much the same way as gates. Both are entranceways giving access in and out of territory. Both have strategic value for armies (see Judg 3:28; 12:5; Jer 51:32). As such, they are tied to power, both physical and supernatural. Thus it is not difficult to imagine a link between Jacob's entrance into the Promised Land and a struggle with a supernatural being beside the fast flowing waters at the ford of the Jabbok River.

32:24-26. detaining for blessing. A *Hittite *ritual text envisions a struggle between the goddess Khebat and the king in which the goddess is detained and there is discussion of who will prevail over whom, leading to a request for blessing by the king.

32:24. leaving at daybreak. The reference to time indicates both the length of the struggle between Jacob and the divine being and serves as an indicator of Jacob's lack of perception during the fight. Daybreak or "cock's crow" are often found in folklore as the moment when powers and creatures of the dark lose their power to affect humans, though this is not a familiar element in ancient Near Eastern literature. In this case the issue is not one of potency, but one of supremacy (as indicated by the naming) and discernment (see v. 29).

32:28-30. name changing. There is, of course, an etiological (explaining how things came to be) aspect to name changes (e. g., Abram to Abraham in 17:5, which reenforces the *covenantal promise of fathering many nations). When the angel asks Jacob his name, this provides the opportunity to highlight the change to Israel. Thus the change serves both an etiological purpose (memorializing this event at Peniel), but it also marks the Jacob/Israel shift from an outcast and usurper to the heir of the covenant and the chosen leader of God's people. Name changing was also a way to exercise authority over an individual. When a suzerain put a vassal on the throne, he sometimes gave him a new name, demonstrating his power over that vassal.

32:31-32. etiological comments. An etiological comment is one that provides an origin for a name, characteristic or practice. In folklore etiological comments are often fanciful (how the camel got its hump), while in ethnic or national traditions they tend to be legendary. While such fanciful or legendary accounts can often be entirely fabricated, etiological comments need not be only the consequence of a creative imagination but may preserve an accurate story of a tradition. The naming of the place where Jacob/Israel wrestled with God draws its name from his exclamation of surprise at "seeing God face to face" (a clear parallel to his earlier encounter at Bethel, 28:16-19). The final notation in this episode provides an explanation for a unique dietary law, which does not appear elsewhere in Jewish law. However, the legal value in forbidding the consumption of the "tendon attached to the socket of the hip" (possibly the sciatic nerve) is found in its memorializing of Jacob/Israel's struggle at the Jabbok—in that sense comparable to the institution of *circumcision (17:9-14)—marking a significant *covenantal reaffirmation.

33:1-20
Jacob's Reunion with Esau

33:1-3. bowing seven times. One way that a

person showed respect for a superior in the ancient world was by bowing to the ground. To magnify the honor being given and the subservience of the person who bowed, this gesture could be repeated seven times. Some Egyptian texts from El Amarna (fourteenth century B.C.) portray vassals bowing seven times to Pharaoh.

33:16. Seir. This region comprises the hill country stretching to the southeast of the Arabah, between the Dead Sea and the Gulf of Aqabah, in territory later inhabited by the Edomites (see 36:20; Judg 5:4). Because of its relatively high annual rainfall and elevation, the area has sufficient water and snow melt to support scrub forests and brushes. This may be the origin of the name Seir, which means "hairy."

33:17. Succoth. A town situated east of the Jordan River near its confluence with the Jabbok River (Judg 8:5). A number of archaeologists have identified it with the site of Tell Deir 'Alla, based on Egyptian records (the stele of Shishak) and cultural remains which date from the *Chalcolithic to *Iron Age II. The name, which means "booths," would be appropriate for the temporary housing of this region's mixed population of pastoral nomads and miners (evidence of smelting has been found in Iron I levels).

33:18-19. Shechem. Identified with Tell Balata in the central highlands, about thirty-five miles north of Jerusalem, Shechem is known from many ancient sources, including the Egyptian records of Sen-Usert III (nineteenth century B.C.) and the *El Amarna tablets (fourteenth century B.C.). Nearly continuous occupation is evidenced through the second and first millennia, demonstrating the importance of this strategic city on the highway network running north from Egypt through Beersheba, Jerusalem and on to Damascus. It was Abram's first stop in Canaan (see comment on 12:6). The fertile soil in this area promoted agriculture as well as good grazing.

33:19. purchase of land. As in the case in Genesis 23, this land transaction includes an exact price (one hundred pieces of silver), thereby marking this as a deeded sale rather than a fee for usage of the property. Since he is settling within the landed territory of the town, Jacob must purchase the property he settles on. The amount he pays is uncertain because the value of the unit of money referred to here is unknown. As in Genesis 23 the eventual use of this land is for burial (see Josh 24:32).

33:20. altar significance. Altars function as sacrificial platforms. Their construction can also mark the introduction of the worship of a particular god in a new land. One tie between the generations of *covenantal leaders is their construction of altars in order to worship *Yahweh in the Promised Land (12:7-8; 13:18; 26:25). The name given to Jacob/Israel's altar, "El Elohe Israel," is an acknowledgment of his own name change and his acceptance of the role of covenantal heir that had been promised at Bethel (28:13-15). For another example of naming an altar, see Exodus 17:15.

34:1-31

Dinah and Shechem

34:2. Hivites. Based on their appearance in various narratives, the Hivites apparently inhabited an area in the central hill country of Canaan, ranging from Gibeon, near Jerusalem (Josh 9:1-7), to Shechem and on north to Mount Hermon (Josh 11:3; Judg 3:3). The origin of the Hivites is unknown (descendant of Ham in Gen 10:17), but it is possible that they are related to either *Hurrian or *Hittite peoples settling in Canaan during the period from the mid-second to early first millennium B.C.

34:2. ravishing women. Rape as a means of obtaining a marriage contract was apparently one stratagem used in the ancient Near East. Laws regulating this practice are found in Exodus 22:16-17, Deuteronomy 22:28-29, the Middle *Assyrian Laws and the *Hittite laws. These often require the rapist to pay an especially high bride price and sometimes forbid any possibility of divorce. *Sumerian Law 7, like Genesis 34, deals with a case where a young, unbetrothed woman leaves her parents' home without permission and is raped. The result is an option by the parents to marry her to the rapist without her consent.

34:7. concept of universal law. Ancient Near Eastern literature contains law collections of this time and earlier that make it clear that prohibitions concerning illicit and violent sexual behavior were not innovations at Sinai. The codes of conduct by which people lived in this time show great similarity to the laws enshrined at Sinai and demonstrate a common universal sense of morality and justice. Laws and less formal standards often sought to protect the honor and integrity of the family, the dignity of the individual and security within society.

34:11-12. bride price and gift. The bride price and gift paid by the groom's family was often dependent on the desirability of the marriage. A higher price could be expected if the bride's family was socially superior to that of the groom or there were other factors (such as the bride's beauty) which made her value rise. In

the *Nuzi texts a typical bride price is thirty to forty shekels of silver.

34:13-17. circumcision. At the time that *circumcision was introduced (Gen 17), adult males as well as infants underwent this procedure as a mark of their membership in the community. Circumcision was practiced widely in the ancient Near East as a rite of puberty, fertility or marriage, but was not practiced by all peoples. The men of Shechem agree to submit to this in order to become acceptable as husbands to Jacob's daughters. The procedure performed on adults is quite painful and would have virtually debilitated the adult male population for several days.

34:20. gate of the city. The city gate was a place of assembly for legal and business transactions. It could also be used for public meetings that affected all of the city's citizens. In the small towns that were the ancient cities the houses were close together and the streets were narrow. The only open areas would be the market place (if the town had one) and the area of the gate. The former would have been unsuitable for matters of public business.

34:25-29. plundering the city. The negotiation between the parties had concerned appropriate recompense (bride price) for Dinah in the circumstances of her having been taken forcibly. As it turns out, the compensation that Dinah's brothers considered appropriate was the forfeiture of the life and goods of the entire city. Such was also attempted by the Greeks in the *Iliad* as they laid siege to Troy to recover Helen.

35:1-15

Jacob's Return to Bethel

35:1. building an altar. When Abram built altars during his journeys (12:6-8), it was not for the purpose of sacrifice but for calling on the name of the Lord. This also seems to be the case with Jacob, since no reference is made to offering sacrifices on the altar. Some have suggested that the altars served to mark the territory of the deity. Alternatively they were memorials to the name of the Lord.

35:2-5. ridding of foreign gods. The call to rid themselves of foreign gods is a call to commit themselves exclusively to *Yahweh. This does not mean that they understood or accepted philosophical monotheism, but that they accepted Yahweh as their family patron deity. The belief in a personal god who gave protection and provision to the family was common in early second-millennium Mesopotamia. This deity was not understood to replace the great cosmic gods but was the principal object of worship and religious devotion for the individual.

35:2. purification. Purification would have accompanied *ritual procedures but also may be a response to the bloodshed of chapter 34. It typically involved bathing and changing garments. Preparation for worship and *ritual also includes the disposal of any signs of loyalty to other gods. All of this took place at Shechem, where the events of chapter 34 took place, some twenty miles north of Bethel. The worship act is portrayed as a pilgrimage, as indicated by the terminology of verse 1. The relationship of earrings to worship of other gods is unclear. While the use of earrings to fashion idols is attested (Ex 32:2; Judg 8:24), and they are often part of the plunder of looted cities, neither of these appear to offer an explanation. It has been suggested that perhaps the earrings were *amulets of some sort, even stamped with an image of deity, though there is no evidence of earrings serving such a purpose. There is, however, an earring with an inscription of dedication to a goddess from the *Ur III period (about 2000 B.C.).

35:4. buried under the oak. The objects were buried under a special tree in Shechem, which possibly figures also in 12:6, Joshua 24:23-27 and Judges 9:6, 37. Sacred trees played a significant role in popular religion of the day, which would have viewed stone and tree as potential divine dwellings. In Canaanite religion they are believed to be symbols of *fertility (see Deut 12:2; Jer 3:9; Hos 4:13), though there is very little in the archaeological or literary remains of the Canaanites that would clarify the role of sacred trees.

35:14. anointed pillar. Just as Jacob had set up a stone at Bethel and anointed it in 28:18, so now another is set up and a libation (liquid offering) performed to commemorate the *theophany (God's appearance). It would not be unusual to have several standing stones erected in the same vicinity.

35:16-29

The Deaths of Rachel and Isaac

35:16-18. midwifing. Midwives, who were generally older women, served as resources to teach young women about sexual activity and to aid in the birth of children. They were also a part of the naming *ritual and may have helped teach new mothers about nursing and child care.

35:16-18. death in childbirth. Death in childbirth was not an uncommon occurrence in the ancient world. The incantation literature of *Babylon contains a number of examples of

spells to protect the mother and child in the birthing process; particularly incantations against Lamashtu, the demon who was believed to attack women and children.

35:18. naming children. Rachel names her child as she dies, giving a name that reflects her misery. It was customary for circumstances surrounding the birth to serve as the occasion for the name. In this case Jacob changes the name, as was the father's right. *Benjamin* can mean either son of the right (hand), signifying a place of protection, or son of the south (since Israelites oriented themselves toward the east, the south was on their right).

35:19-20. Rachel's tomb. Rachel's death in childbirth is placed on the way to Ephrath, north of Bethlehem, on the border of the later tribal territories of Judah and Benjamin (see 1 Sam 10:2), some twelve miles north of Bethlehem. Another example of raising a memorial pillar for the dead is found in 2 Samuel 18:18. The late mention of Rachel's tomb in Jeremiah 31 suggests that it was a well-known pilgrimage site down to the end of the monarchy period. More recent traditions demonstrate some confusion between a site for Rachel's tomb in Bethlehem and another north of Jerusalem.

35:21. Migdal Eder. The name of this place means "herding tower," a installation used by pastoralists to protect their animals from predators. Based on Jacob's itinerary, journeying south after burying Rachel, Migdal Eder would be near Jerusalem. This identification may be strengthened by mention in Micah 4:8 of "watchtower of the flock." Later traditions, however, place it closer to Bethlehem.

35:21-22. son with father's concubine. *Concubines are women without dowry who include among their duties providing children to the family. Childbearing was an important function in the ancient world, where survival of the family, and often survival at all, was tenuous at best. Since a concubine has been a sexual partner, a son who used his father's concubine was seen not only as incestuous but as attempting to usurp the authority of the family patriarch.

36:1-30
The Line of Esau

36:1-43. Esau's descendants. The genealogy of Esau unfolds in stages, beginning with his first three wives (two *Hittite and one the daughter of Ishmael). In the subsequent levels of the list twelve tribal names are identified (vv. 9-14, excluding Amalek, who is the son of a *concubine), which matches the genealogical lists of Nahor (22:20-24), Ishmael (25:13-16) and Israel. A third tier of descendants (vv. 15-19) appear to be clan names, with some repetition from the previous level. The final grouping contains the names of eight kings who reigned in Edom prior to the establishment of the Israelite monarchy (vv. 31-39). Among the best known of the names in the entire genealogy are Teman, identified with the southern region of Edom, and Uz, named as the homeland of Job.

36:12. Amalekite origins. The Amalekites wandered through vast stretches of land in the Negev, Transjordan and Sinai peninsula. They are unattested outside the Bible, and no archaeological remains can be positively linked to them. However, archaeological surveys of the region have turned up ample evidence of nomadic and seminomadic groups like the Amalekites during this period.

36:15-30. chiefs. The inclusion of many chiefs of different regions makes this list as much a king list as a genealogy in that these Bedouin groups had a chieftain form of government. The *Sumerian king list similarly features brief lines of kings connected to various geographical regions.

36:24. hot springs. One way of distinguishing persons with the same name in a genealogy is to provide a brief comment based on their career (see Lamech in 4:19-24; 5:25-31). Here Anah is distinguished from his uncle by the additional information that he discovered a "hot springs"—a natural phenomenon that could have benefited the clan. The translation here is based solely on the Vulgate. Jewish tradition translates it as "mules" and gives Anah credit for learning to crossbreed horses and donkeys.

37:1-11
Joseph's Dreams

37:3. Joseph's coat. The special coat provided to Joseph by his father signified a position of authority and favor. Though such coats may have been colorful, they were often distinguished by material, weave or length (of either hem or sleeve). Since the Hebrew word describing it is used only here, it is difficult to be certain which type of quality characterizes the coat. Egyptian paintings of this period depict well-dressed Canaanites as wearing long-sleeved, embroidered garments with a fringed scarf wrapped diagonally from waist to knee.

37:5-11. importance of dreams. Dreams in the ancient world were thought to offer information from the divine realm and were therefore taken very seriously. Some dreams, given to prophets and kings, were considered a means

of divine revelation. Most dreams, however, even the ordinary dreams of common people, were believed to contain omens that communicated information about what the gods were doing. Those that were revelation usually identified the deity and often involved the deity. The dreams that were omens usually made no reference to deity. Dreams were often filled with symbolism necessitating an interpreter, though at times the symbols were reasonably self-evident. The information that came through dreams was not believed to be irreversible. Dreams of a rise to power like the ones Joseph had are known in the ancient Near East, notably one concerning Sargon, king of Akkad, half a millennium earlier than Joseph.

37:12-36

Joseph Sold into Slavery

37:12-13. shepherds grazing. The lush vegetation produced by the winter rains would have allowed shepherds to remain in pastures near their villages and camps. Once the rains ended, the herds would graze in harvested fields and then would be taken into the hill country, where vegetation remained through the summer months.

37:17. Dothan. Located at Tell Dothan, this is an imposing site covering twenty-five acres. It is situated fourteen miles north of Shechem, on the main route used by merchants and herdsmen going north to the Jezreel Valley. It developed into a major city site in the *Early Bronze Age (3200-2400 B.C.) and would have served as a natural landmark for travelers. The area around the city provided choice pasture land, thus explaining the presence of Joseph's brothers.

37:19-24. cisterns. Cisterns were hollowed out of the limestone bedrock or were dug and then lined with plaster to store rain water. They provided water for humans and animals through most of the dry months. When they were empty, they sometimes served as temporary cells for prisoners (see Jer 38:6).

37:25-28. slave trade. The slave trade existed from earliest times in the ancient Near East. Slaves were generally war captives or persons taken in raids. Traders often accepted slaves, whom they transported to new areas and sold. These persons seldom obtained their freedom.

37:25. spice trade and caravan routes. Caravans brought incense from south Arabia to Gaza on the Palestinian coast and to Egypt, using various routes through the Sinai Peninsula. It would have been along one of these northern Sinai routes that the Midianites met Joseph's brothers and purchased him for resale in Egypt along with the rest of their trade goods.

37:25-36. Midianite/Ishmaelite. The interchange of these two names in the story probably reflects a close affinity between the two groups. Some suggest that the Ishmaelites were considered a subtribe of the Midianites. Others suggest the Midianites simply purchased Joseph from the Ishmaelites. However, based on the intermingling of the names in Judges 8:24, it would appear that the biblical writer either assumed they were related or is reflecting a known kin tie between them.

37:28. twenty shekels. The twenty shekels paid for Joseph was about normal for a slave in this time period, as attested in other literature of this time (for instance, the laws of *Hammurabi). It would constitute approximately two years of wages.

37:34-35. mourning practices. Mourning practices generally included tearing one's robe, weeping, putting dust and ashes in the hair and wearing sackcloth. Sackcloth was made of goat or camel hair and was coarse and uncomfortable. In many cases the sackcloth was only a loin covering. The official period of mourning was thirty days but could continue for as long as the mourner chose to continue to grieve.

38:1-30

Judah's Sons

38:1. Adullam. Located in the Shephelah, Adullam has been identified with Tell esh Sheikh Madhkur northwest of Hebron (see 1 Sam 22:1; Mic 1:15). It would have been at a lower elevation than Hebron (3,040 feet above sea level), and thus the statement that Judah "went down" is appropriate.

38:6-26. levirate marriage. One remedy for the disruption of inheritance caused by the premature death of a man before he had produced an heir was the custom of levirate marriage. As outlined in Genesis 38, the dead man's brother was required to impregnate the widow so that his brother's name (his inheritance share) would be passed on to the child born of this obligatory act. A similar statute is found in *Hittite Law 193 and some form of it may be represented in Ruth 4. The law is detailed in Deuteronomy 25:5-10, where the levir is allowed to refuse his obligation by participating in a public ceremony in which the widow shames him. This was probably made necessary by situations like the one Judah faces here, in which

a greedy brother (Onan) refuses to impregnate Tamar because it would decrease his eventual inheritance share.

38:11. widows. In a society that is subject to disease and warfare, it is not uncommon to find widows. Ancient Israel dealt with this problem through levirate marriage (to insure an heir for the deceased husband) and remarriage of young widows as soon as possible after the mourning period. They wore special garments which designated them as widows. Since a widow had no inheritance rights, special provisions were made for widows under the law allowing them to glean in harvested fields (Ruth 2) and protecting them from being oppressed (Deut 14:29; Ps 94:1-7). Only the widowed daughter of a priest could honorably return to her father's house (Lev 22:13).

38:13. Timnah. The exact location of the town in this narrative is uncertain. It is a fairly common place name in the allotment list and in the Samson epic (see Josh 15:10, 56; Judg 14:1-2; 2 Chron 28:18), with connections to the tribal territory of Judah in the southern hill country (possibly Tell el-Batashi, three and a half miles east of Tel Miqne-Ekron).

38:13-14. widow's clothes. A widow, like a married woman, did not wear a veil. She did wear a special garment which set her apart as a widow. These clothes entitled her to the privileges provided for widows in the law, such as gleaning and a portion of the tithe.

38:14, 21. Enaim. The two references to this place in the narrative argue for a place name rather than the more traditional translations of "an open place" (KJV) or "a fork in the road" (Vulgate, Targums). It may be the same as Enam (Josh 15:34) and may take its name from local springs. However, other than a general reference to the territory of Judah, its exact location is unknown.

38:15-23. prostitution. The Canaanite culture utilized *cult prostitution as a way of promoting *fertility. Devotees of the mother goddess *Ishtar or *Anat would reside at or near shrines and would dress in a veil, as the symbolic bride of the god *Baal or *El. Men would visit the shrine and use the services of the cult prostitutes prior to planting their fields or during other important seasons such as shearing or the period of lambing. In this way they gave honor to the gods and reenacted the divine marriage in an attempt to insure fertility and prosperity for their fields and herds.

38:18, 25. seal, cord and staff. One distinctive means of signing a document in the ancient Near East was to use a cylinder seal, which contained a mirror-image incision that could be rolled onto a clay tablet or pressed into sealing wax or clay bullae. Cylinder seals, many carved from precious and semiprecious stones, have been discovered from nearly every period post-*Early Bronze by archaeologists. The seal was often threaded onto a leather cord and worn around the neck of the owner. In Palestine it is more common to find stamp seals engraved on the flat side. Another form of identification mentioned here is the staff, an aid to walking as well as an animal goad and weapon. Since this was a personal item, it may well have been carved and polished, and thus known to belong to a particular person.

38:24. prostitution as capital crime. Prostitution or harlotry was generally punished by stoning to death (Deut 22:23-24). Tamar's sentence of death by fire is exceptional. This sentence is prescribed elsewhere only in cases

MAJOR TRADE ROUTES IN THE ANCIENT NEAR EAST

Trade was the lifeblood of the major cultures of the ancient Near East. As early as 5000 B.C. there is evidence of trade in obsidian from northern Anatolia throughout the Near East. Although land travel was time consuming (fifteen to twenty miles a day) and dangerous, the desire for exotic as well as functional products was so great that merchants and governments were willing to take the risk in order to obtain the very high profits involved (a minimum of 100 percent). For instance, business documents from the Old Assyrian period (2100-1900 B.C.) and from the Mari archive (1800-1700 B.C.) mention commercial caravans of as many as 200-300 donkeys traveling in Asia Minor and northern Syria. They followed the trade route from the Assyrian capital at Asshur on the Tigris River west to Habur region to the Taurus mountains and on to the commercial center of Kanish in west central Asia Minor. The route then continued west through Cilicia to Antioch in Pisidia, Philadelphia, Sardis, Pergamum and Troy on the Ionian coast. Each city provided shelter, supplies, and a ready market for these enterprising merchants.

The actual routes taken were dictated by the topography of the various regions (avoiding disease-infected swamps, uneven and deeply cut hill country) as well as political situations and potential markets. They radiated out from major population centers. Thus from Egypt the major trade route, known as the Great Trunk Road, started in Memphis on the Nile, crossed the northern Sinai Peninsula, turned north up the coastal plain of Canaan, the jogged east through the Valley ofJezreel at Megiddo and

where a daughter of a priest engages in harlotry and in cases of incest (Lev 20:14).

39:1-23

Joseph in Potiphar's House

39:1-20. Egyptian tale of two brothers. The Nineteenth Dynasty (c. 1225 B.C.) Egyptian tale of Anubis and Bata has many similarities to the story of Joseph and Potiphar's wife. In both cases a younger man is seduced by his master's wife and then falsely accused of rape when he refuses to give in to her desires. What may have made this Egyptian story so popular (the surviving papyrus is written in a cursive style [hieratic] rather than the more formal *hieroglyphic characters) is the common tale of rivalry between brothers (like Jacob and Esau), the high suspense and the use of folklore techniques (talking animals, intervention of the gods). Aside from the common general setting, the Joseph story has little else in common with this Egyptian tale.

39:16. keeping the cloak. Besides the interesting parallel to Joseph's brothers' taking his cloak, it should be noted that here again the cloak is to serve to identify Joseph. Garments often contained indications of status, rank or office and therefore could be used in such ways.

39:20. imprisoned with the king's prisoners. One indication of Potiphar's understanding of the affair between Joseph and his wife may be in the choice of prison. Rather than being executed for rape (as dictated in, for instance, the Middle *Assyrian laws), Joseph was put into a royal prison holding political prisoners. This may have been a bit more comfortable (as prisons go), but more importantly it will put him in contact with members of Pharaoh's court (Gen 40:1-23).

40:1-23

Pharaoh's Cupbearer and Baker

40:1-4. cupbearer's role. The cupbearer was a high-ranking member of a monarch's court (see Neh 1:11). He would have to be a trusted individual, since his primary responsibility was to taste all of his lord's food and drink and thus prevent his lord from being poisoned.

40:1-2. offenses against Pharaoh. Offenses against Pharaoh certainly could have taken many forms. Whether these officials were suspected of involvement in a conspiracy or just guilty of displeasing Pharaoh in the disposition of their duties is impossible to tell. It may be that they are under house arrest awaiting the investigation of charges against them.

40:5-18. interpretation of dreams. Dream interpretations were usually carried out by experts who had been trained in the available dream literature. More information is available from Mesopotamia than from Egypt. Both the Egyptians and the *Babylonians compiled what we call dream books, which contain sample dreams along with the key to their interpretation. Since dreams often depended on symbolism, the interpreter would have to have access to these documents preserving the empirical data concerning past dreams and interpretations. It was believed that the gods communicated through dreams but not that they revealed the meanings of dreams. If they were going to reveal the meaning, why use a dream in the first place? But Joseph held a different view. He did not consult any "scientific" literature, but consulted God. Nevertheless, he interprets along the same lines as some of the dream literature would have suggested. As in Mesopotamian literature he draws a time indication from a number that

---

then north to Hazor. From there the route went northeast to Damasca passed Ebla and Aleppo in Syria and then came to the northwestern spur of the Euphrates River, which then served as a guide southward into the major cities of Mesopotamia. The other major route, known as the King's Highway, joined by the caravans coming north through Arabia, traversed the Transjordanian region from the Red Sea port of Ezion-geber north through Edom, Moab, and Ammon and joining the Trunk Road at Damascus.

Since the northern and central deserts of Arabia were so inhospitable, trade routes skirted them to the north, traveling up the Tigris and Euphrates river valleys, west to Palmyra and Damascus, and then south along either the coastal highway through Palestine or down the King's Highway in Transjordan. Caravans transporting spices (myrrh, frankincense) and indigo traced the western coast of Arabia, transshipped to Ethiopia and further north to Egypt and traveled up the Nile. Eventually these merchants reached deep water sea ports (various ports used between 2500-100 B.C.: Byblos, Tyre, Sidon, Acco, Ugarit, Aqaba, Alexandria), which gave them access to markets and sources of natural resources (such as the copper mines of Cyprus) in the Mediterranean (Crete, Cyprus, the Aegean and Ionian Islands, the coast of Turkey and North Africa) as well as along the Arabian Peninsula and East Africa. The carrying trade was dominated by Ugarit (1600-1200 B.C.) and by the Phoenicians (1100-600). The fleets would have hugged the coasts or navigated between islands in the Mediterranean or Red Sea, traveling about forty miles a day.

features in the dream. The symbols in these dreams are similar to some of those found in the dream books. A full goblet, for instance, is indicative of having a name and offspring. Carrying fruit on one's head is indicative of sorrow.

40:22. execution. Hanging was a way of dishonoring the corpse of an executed person (see Josh 8:29; 2 Sam 4:12). It may involve suspension from a rope by the neck or impalement on a stake. The actual form of execution may be stoning or beheading.

41:1-32

Joseph Interprets Pharaoh's Dreams

41:1-55. the identity of Pharaoh. The name of the Pharaoh of the Joseph story is unknown. Elements of the story have suggested to some a setting in either the *Hyksos period (1750-1550 B.C.) or the *Amarna Age (fourteenth century B.C.), when large numbers of Semites were either settled in Egypt or mentioned in Egyptian sources as serving in government positions. Our current knowledge of Egyptian history and practice would support this as the most logical and feasible choice. Biblical chronological information, however, suggests to some an earlier time in the Middle Kingdom Twelfth Dynasty (1963-1786). Without specific, historical references in the story it is impossible to associate the narrative with a particular reigning king. It is the practice of the author(s) of the book of Genesis to not mention any Pharaoh by name. This may have been intentional, since the Pharaoh was considered by his people to be a god and the Israelites did not wish to invoke that name.

41:1-7. double dreams. In the ancient Near East, dreams were generally assumed to be communications from the gods. Some were quite simple and straightforward (see Jacob's dream at Bethel, 28:10-22), but in cases where the king or Pharaoh was involved special emphasis was sometimes added through the experience of a double dream. Thus here Pharaoh has two visions that warn of the coming famine in Egypt. Similarly, the *Sumerian king Gudea is said to have had a double dream in which he was instructed to build a temple. In both cases their dreams were interpreted by magicians or representatives of a god. In a Mari text the same dream on consecutive nights added weight to the message of the dream. In both the Gilgamesh Epic and a poem about a righteous sufferer, a threefold repetition of a dream confirms its reliability.

41:8-16. magicians and wise men. Egypt, as well as the Mesopotamian and *Hittite kingdoms, developed guilds of magicians whose task was to interpret signs and dreams and to concoct remedies for various types of medical problems through magical means. These specialists used *exorcism to frighten away demons and gods and incantations and curses to transmit evil into some one or some place (seen in the Egyptian *execration texts and Jer 19:10-13). Thousands of texts have been discovered throughout the ancient Near East which contain protection spells as well as recipes for the manufacture of *amulets to ward off evil and for the construction of dolls, incantation bowls and miniature figures designed to bring destruction on one's enemies. Mesopotamian magic distinguished between black and white magic, and thus practitioners were divided into sorcerers and magicians or wise men. Egypt, however, did not draw this distinction among its guild of magicians. Although their major task was medical, Egyptian magicians seemed to have employed a less respectful manner toward the gods, including providing spells for souls to escape punishment in the underworld (Book of the Dead). It is very unusual in Egypt for the Pharaoh to be in need of an interpreter of his dreams. Since the Pharaoh was considered divine, the gods would communicate to him through dreams, and the meaning was typically presented as transparent to him. The Hebrew word used to describe the specialists Pharaoh sends for is from a technical Egyptian term sometimes thought to describe dream interpreters. It is used to describe the famous official Imhotep in a late inscription (second century B.C.) where he is portrayed giving advice to Pharaoh concerning a seven-year famine.

41:14. shaved. As a way of making himself more presentable to the Pharaoh, Joseph shaves. This may have involved shaving the head (Num 6:9) as well as the face (Jer 41:5). He would have thereby changed his appearance to look more like an Egyptian. Egyptian wall paintings demonstrate that the Egyptians were typically clean-shaven.

41:27-32. famine in Egypt. Although Egypt was one of the most consistent grain-producing areas in the ancient Near East because of the regularity of the Nile floods, it was occasionally plagued with famine. Such a disaster is mentioned in *Visions of Neferti*, an Egyptian document dating to the reign of Amenemhet I (1991-1962 B.C.). Here, as in Joseph's narration, a vision is interpreted and a national calamity predicted.

41:33-57

Joseph's Advice and Elevation

41:33-40. food rationing. In the face of the coming famine, Joseph's advice is to store one-fifth of the grain from each of the years of good harvest, which can then be distributed to the people when it becomes necessary. The building of storehouses accompanies this sensible advice (see Ex 1:11; 1 Kings 9:19).

41:35. storage cities. Egypt's management of the Nile River and its predictability made that land a breadbasket for the rest of the ancient Near East. Storage cities were a hallmark of a prosperous people who thought in terms of the long run and realized that famine was always a possibility that needed to be planned for. There would typically be storage cities centrally located in each geographical region.

41:40. second to Pharaoh. Many Egyptian nobles could make the claim of being second only to Pharaoh, and several different titles imply this position: "Great Favorite of the Lord of the Two Lands," and "Foremost among his Courtiers" are two that have been identified from inscriptions.

41:41-45. Joseph's position. The job description and investiture ceremony detailed here give Joseph a position in Egyptian government comparable to "Grand Vizier" or "Overseer of the Royal Estates," both of which appear in Egyptian documents (see 1 Kings 16:9; Is 22:15, 19-21, for use of this latter title in Israel's bureaucracy). Such a position is detailed in Egyptian tomb paintings, showing the entire sequence of events from the granting of the title to the placing of robes and rings on the appointee by the Pharaoh. Joseph functions much the same as the "Overseer of the Granaries of Upper and Lower Egypt" would have done. Such a position for a non-Egyptian is uncommon prior to the *Hyksos period (1750-1550 B.C.), when a greater number of Semites served in Egypt. From the *El Amarna reign of Akhenaten comes a tomb of the Semitic official Tutu, who was appointed "highest mouth in the whole country," a position with powers comparable to Joseph's. Biographies in Egyptian tombs and literature from Egypt such as the *Story of *Sinuhe* give us ample information about the details of the life of officials of Pharaoh. It is not unusual to find accounts of officials who were elevated from lowly status to high positions of authority. In Sinuhe's story he fled the royal court and lived in exile for many years, finally returning and being honored. As a result the description of Joseph's elevation and honors can be seen as typical against the Egyptian background of the time.

41:42. signet ring. Kings and royal administrators used a signet ring to seal official documents. This ring would have been distinctive and would have contained the name (cartouche in Egypt) of the king. Anyone using it thus acted in the name of the king (see Num 31:50; Esther 3:10; Tobit 1:20; 1 Maccabees 6:15). The chains and linen garment are given in a ceremony of investiture providing him with the accessories that will signify his status, rank and office.

41:43-44. Joseph's perquisites. Riding in a chariot with a set of guardsmen to clear his path and proclaim his position as "second in command" gave Joseph extremely high status (see 2 Sam 15:1; Esther 6:7-9). The title of second only to Pharaoh, or viceroy (*Akkadian *terdennu*; Is 20:1 *tartan*), gave Joseph extraordinary powers and would have required all but the king to bow to him. Furthermore, since Joseph had been given the king's favor or protection, no one was permitted to "raise a hand or foot" against him or oppose his orders (compare the powers granted in Ezra 7:21-26).

41:45. Egyptian name. The intent of giving Joseph an Egyptian name is to complete the transformation process of the investiture ceremony. Egyptianized, he is more likely to be accepted at court and by the Egyptian people (see the Egyptian tale of *Sinuhe's return to Egypt and his consignment of his barbarian clothing to the "sand crawlers"). This practice of renaming a Semite official is also found in the reign of Pharaoh Merenptah (1224-1208 B.C.). The meaning of Joseph's Egyptian name is uncertain, but may be "the God has spoken and he will live" or "the one who knows."

41:45. priest of On. The marriage arranged for Joseph allied him with one of the most powerful priestly families in Egypt. During the period from 1600 to 1100 B.C., only the priests of Ptah of Memphis were more influential. The priest of On officiated at all major festivals and supervised lesser priests who served the sun god Re in the temple city of Heliopolis (ten miles northeast of Cairo).

42:1-38

The Brothers' First Encounter with Joseph

42:6-17. spying. Just as the Israelites later send out spies to reconnoiter the land of Canaan, so

Joseph's brothers are accused of working on behalf of another country. Traders and merchants would have been commonly employed for such business, as they could move around the country unnoticed or unsuspected. Some governments are naturally suspicious of foreigners, and the charge of spying is always difficult to disprove.

42:25-28. trading of silver. Coined money was not invented and put into common use until the sixth century B.C. Thus precious metals, gems, spices, incense and other luxury items were bartered by weight. Their relative value would also depend on scarcity. Silver was used throughout antiquity as a common item of exchange. Since Egypt lacked native silver deposits, this metal was particularly desirable as a standard for business transactions

43:1-34

The Brothers' Second Encounter with Joseph

43:11. products of the land. The gifts that were sent by Jacob to Joseph represent the costliest and thus the most pleasing items available. Only the balm, honey/syrup and nuts would have been actual products of Canaan. The spices and myrrh were imported and thus were precious gifts intended to buy favorable treatment from Pharaoh's representative.

43:16. steward of the house. A high status and large household, such as Joseph's, would have required a staff of servants headed by a chief butler or steward. This person would have been in charge of the maintenance of the house, kept track of financial obligations and supervised the other servants. Joseph's use of this man as his confidant (see Gen 44:1, 4) suggests it was a position of high trust. Apparently, he was also a person to whom supplicants could go to intercede with his master (see Gen 43:19-23).

43:26. bowing to honor. The standard method of demonstrating obeisance in the ancient Near East was to bow to the ground. Egyptian tomb art is filled with examples of servants and royal officials prostrating themselves before the Pharaoh. In the *El Amarna tablets (fourteenth century B.C.), the format of each letter contains a greeting, followed by a set formula of honoring the Pharaoh by bowing seven times forward and backwards.

43:32. eating procedures. The Egyptians considered all other peoples barbarians. Thus they would not associate with them directly by eating at the same table. Joseph's meal was also separated from both the Egyptians and the sons of Jacob because of his high rank.

44:1-34

Joseph's Plot Is Hatched

44:5. divination cup. The cup that Joseph plants in Benjamin's sack is identified as being used for *divination. Just as tea leaves are read today, the ancients read omens by means of liquid in cups. One mechanism involved the pouring of oil onto water to see what shapes it would take (called lecanomancy). More popular methods of divination used everyday occurrences, configurations of the entrails of sacrificed animals or the movements of the heavenly bodies. Lecanomancy was used in the time of Joseph, as is attested by several *Old Babylonian omen texts concerned with the various possible configurations of the oil and their interpretations. Another technique, hydromancy, made its observations from the reflections in the water itself. Not enough is known about Egyptian divination techniques to offer more specific information, but in these early periods typically only people of status had access to divination procedures.

45:1-28

Joseph Reveals His Identity

45:8. titles of Joseph. The use of the title "father of Pharaoh" most likely is related to the Egyptian title *it-ntr,* "father of the god," used to refer to a variety of officials and priests who serve in the Pharaoh's court. "Father" represents an advisory relationship, perhaps to be equated with the role of the priest hired by Micah in Judges 17:10 or the role of Elisha as the king of Israel's counselor in 2 Kings 6:21.

45:10. Goshen. This Semitic place name most likely refers to the delta region of Lower Egypt in the area of the Wadi Tumeilat (from the eastern arm of the Nile River to the Great Bitter Lake). Egyptian texts from *Hyksos period make reference to Semites in this region, and it is an area which provides excellent pasturage for herds. Also arguing in favor of its location in Egypt proper is the use of the phrase "in the district of Rameses" (47:11) as an equation for Goshen.

45:19. carts. The provision of carts does not contrast Egyptian carts to Canaanite carts but is simply a thoughtful gesture so that the women and children will not have to walk, for seminomadic people would not usually keep carts.

45:22. provision for Benjamin. Joseph's role as administrator of Egypt was to ration out food and clothing to the people (a common feature in ancient Near Eastern texts from

*Babylon and *Mari). He does this with his family as well (an ironic turn of events, since his story begins with his receiving a piece of clothing, 37:3). Just as Jacob has singled out Joseph for special favor, now Joseph shows his favor to his full brother Benjamin by giving him five times the amount as his other half brothers, as well as a large quantity of silver.

46:1-34

Jacob and His Family Travel to Egypt

46:1. sacrifice at Beersheba. Though the patriarchs build many altars, there is little reference to their offering sacrifices. The only previous one mentioned was connected to Jacob's agreement with Laban (31:54). Isaac had built an altar at Beersheba (26:25), but no record is made of his offering of sacrifices on that altar. Jacob is taking advantage of this trip to the south to make a pilgrimage to the place where he grew up and the shrine where his father worshiped.

46:29. chariots. Chariots in Egypt during this period were light, constructed of wooden frames and leather with two spoked wheels. The ornamental chariots of pharaohs (and undoubtedly their high officials) are often depicted in the art of the New Kingdom period.

46:34. shepherds in Egypt. It is unlikely that native Egyptian herdsmen would be detested by other Egyptians. Joseph's advice to his father is both a warning about Egyptian attitudes toward strangers and a piece of diplomacy in that they would claim independent status (they had their own herds to support them) and show they were not an ambitious group who wished to rise above their occupation as shepherds.

47:1-12

Jacob's Family Settles in Egypt

47:11. district of Rameses. An equation is made here between the "district of Rameses" and the land of Goshen (see 45:10). This northeastern section of the Delta region was known to be inhabited by Semites and it is the center of *Hyksos activity during the eighteenth to sixteenth centuries B.C. It will also be equated with the Tanis district, where the storehouse cities of Pithom and Rameses were said to be constructed by the Hebrew slaves (Ex 1:11). Pharaoh Rameses II, who did build and expand cities in this region during the mid-thirteenth century B.C., may be *anachronistically referred to in this phrase.

47:13-31

Joseph's Economic and Agrarian Strategies

47:16-17. bartering. Bartering has been a means of exchange from earliest times. The mutually beneficial exchange of property, goods or manufactured items was the basis of the ancient nonmonetary economy. In this case, livestock is used as payment for grain during the famine.

47:20-26. government ownership of land. Government acquires land through forfeiture of debt, through failure to pay taxes and because a family lacks an heir. With nothing else to pay for grain during the famine, the Egyptians must sell their land to the government and become tenant farmers for Pharaoh.

47:21-25. debt slavery. Debt slavery was fairly common throughout the ancient Near East. Peasants who had lost their land and would sell themselves into short-term servitude to support themselves and their families. This might be for a day (Ex 22:26-27) or a period of years. In Israel the term of debt servitude could not exceed six years (Ex 21:2). The Egyptian example in this text, however, suggests perpetual servitude as tenant farmers for Pharaoh. Their rent was paid with one-fifth of the harvest.

47:22. priests' exemption. The observation that the priests had an allotment of food from Pharaoh and therefore did not have to sell their land reflects a common situation of priestly privileges in Egypt. The priesthood often accumulated significant political power to itself and used its sometimes extensive economic resources to wield that power. Many pharaohs found it advantageous to curry favor with them. In contrast, the Israelite system granted no land holdings to the tribe of Levi.

47:24. 20 percent to Pharaoh. Taxation of 20 percent would not be unusual in the ancient world, but too little is known of taxation in Egypt to shed specific light on the levy imposed by Joseph.

47:28-31. burials of ancestors. Once a family tomb was established, it would have become traditional for each family member to be entombed with all of the others. This tied the generations together and further strengthened a family's claim to the land where the tomb was located.

48:1-22

Jacob's Blessing on Ephraim and Manasseh

48:5-6. Ephraim and Manasseh as firstborn. While Jacob does not disinherit Reuben and

Simeon, he adopts Joseph's sons, Ephraim and Manasseh, and gives them prioritized standing in inheritance. The adoption practice and formula here are very similar to those attested in the Code of *Hammurabi. Additionally, one *Ugaritic text features a grandfather adopting his grandson. In one sense this adoption could be seen as the means by which Joseph is given the double portion of the inheritance due to the firstborn, since two of his sons receive shares from Jacob's inheritance.

48:7. Rachel's tomb. Jacob's reminiscence about the death of his wife Rachel places her tomb in the vicinity of Bethlehem and Ephrath (see the discussion of this in 35:19-20).

48:12-19. reversed blessing. The younger son has received privileged treatment in each generation of the patriarchal narratives. Isaac received inheritance over Ishmael, and Jacob over Esau; Joseph was favored over his brothers, and now Ephraim is favored over Manasseh. In most ancient civilizations the firstborn had certain privileges in the division of the inheritance, and Israel was no different. Nevertheless, exceptions could be made for various reasons. For comments about deathbed pronouncements see 27:1-4.

48:22. the land of the Amorites. It appears that **Amorite* is being used here as a generic term for all of the peoples of presettlement Canaan (see 15:19-21) and specifically those in the vicinity of Shechem where Jacob had purchased a piece of land (33:18-19). Although this does not detail the ethnic diversity of that region, certainly the Amorites, whose primary area of influence was in northern Mesopotamia and Syria, had a profound effect on the customs and religious practices of Canaan.

49:1-33

Jacob's Pronouncement Concerning His Sons

49:1. patriarchal blessing. In the biblical material the patriarchal pronouncement generally concerns the destiny of the sons with regard to fertility of the ground, fertility of the family and relationships between family members. Blessings or curses pronounced by the patriarch of the family were always taken seriously and considered binding, even though they were not presented as prophetic messages from God.

49:8-12. hand on the neck. Jacob's blessing of his son Judah is reflective of the great importance attached to the tribe of Judah in later history. One sign of its power is found in the phrase "your hand will be on the neck of your enemies," which signifies control or subjugation of Judah's foes. The difficult term *Shiloh* in the third line of verse 10 (NIV: "to whom it belongs") has been most plausibly explained as reference to a gift offering (Hebrew *shay*) paid in tribute, thus "until one brings him tribute."

49:11. washing robes in wine. In this blessing of Judah, the future prosperity of that tribe is symbolized by abundant fertility. Wine will be so plentiful that they will be able to wash their clothes in it. It is also possible this is a reference to the dyeing industry, but that would figure into future economic prosperity.

49:13. haven for ships. As the coastline was lacking natural harbors, the sea was generally little more than a boundary to Israelites. Only in the northern coastal regions would there have been any inclination to develop seafaring skills.

49:14-15. donkey habits. The blessing of Issachar contains this characterization of a strong animal, which is sometimes stubborn and lazy and may sit down unexpectedly in an inconvenient place. The idea may also be suggestive of a tribe that allies itself with outsiders or is forced to serve others (contra Judg 5:15).

49:17. horse domestication. Reference to a rider on the horse assumes an advanced level of domestication of the horse. This was achieved in the third millennium. In Mesopotamia horseback riders are depicted in the middle of the third millennium, but in Egyptian materials not until a millennium later. Horses were usually used for pulling chariots, and horseback riding was not common.

50:1-14

Jacob's Burial

50:1-3. embalming. Although it was the usual practice in Egypt for everyone who could afford it, embalming of Israelites is found only in this passage. This was an elaborate and *ritual-filled procedure performed by a trained group of mortuary priests. It involved removing the internal organs and placing of the body in embalming fluids for forty days. The idea behind this is based on the Egyptian belief that the body had to be preserved as a repository for the soul after death. The bodies of Jacob and Joseph are embalmed, and while this may have been done to soothe the feelings of the Egyptians, it also served the purpose of preserving their bodies for later burial in Canaan.

50:3. mourning period. This period of mourning may include the forty days required to embalm the body plus the traditional thirty-day mourning period (see Deut

34:8). Since the Egyptians are also described as mourning Jacob's death, it would appear he was accorded royal honors as a visiting dignitary.

50:10-11. threshing floor of Atad. No exact location has been identified for this site, said to be east of the Jordan. It is strange that Jacob's remains would be taken east through Transjordan instead of on a more direct route to Hebron. Having the seven-day mourning ceremony on a threshing floor is quite appropriate. This is a place associated with business, law and life and thus suitable as a place for memorializing a tribal leader (see Num 15:20; Ruth 3; 2 Sam 24:16-24).

50:11. Abel-mizraim. The renaming of the threshing floor of Atad provides a lasting memorial to Jacob and the remarkable seven-day mourning ceremony conducted there. The name itself contains a familiar element: abel means "stream" and appears in several other place names (Num 33:49—Abel Shittim; Judg 11:33—Abel Keramim). Here, however, there is a pun on the Hebrew word ebel, "mourning."

50:15-26

The Last Years of Joseph

50:26. Joseph's age. Joseph dies at the age of 110, considered the ideal age for an Egyptian. Examination of mummies has demonstrated that the average life expectancy in Egypt was between forty and fifty years. The use of the coffin or sarcophagus in mummification was an Egyptian, not an Israelite, practice.

EXODUS

1:1-22

Israelite Slavery in Egypt

1:8-14. king who didn't know Joseph. The book of Exodus maintains the anonymity of the Pharaohs who have dealings with the Israelites. Since Egyptian records have preserved no accounts of the Israelite presence, enslavement or exodus, identifying these Pharaohs can only be attempted by using the vague hints contained in the narrative. In the sixteenth and seventeenth centuries B.C. a group known as the Hyksos, who were not native Egyptians, ruled the land. It is usually thought that the Pharaoh referred to in this verse represents either the first of the *Hyksos rulers or the first of the native Egyptian rulers after the *Hyksos were driven out. The difference would be at least one hundred years (c. 1650 or 1550 B.C.), or up to two hundred years if some of the early *Hyksos rulers with only partial control subjected the Israelites to slavery.

1:10. reason for enslaving Israel. The argument for enslaving the Israelites is that if they are not enslaved they will join the enemy and leave the country. This would suggest the period when the *Hyksos are being driven from the land. The Egyptians would have wanted to keep the Israelite presence for economic reasons.

1:11. forced labor. The sheer number of man-hours needed for the massive engineering and construction projects undertaken in the ancient world made the use of forced labor not infrequent. It was used as a form of taxation (for instance, the common people might work one month out of the year without pay on government building projects). When the government projects proved too ambitious to staff with native people and prisoners of war, and too expensive to hire labor for, vulnerable groups of people would be targeted for forced labor.

1:11. Pithom. Pithom has been identified as the Egyptian Pi(r)-Atum, "real-estate of Atum," currently known as Tell el-Rataba, along the Ismalia Canal, approximately sixty miles northeast of Cairo. The text's identification of the building projects as store cities does not suggest they were only for storage of grain. The store cities were centrally located hubs in the region and could be capital cities.

1:11. Rameses. The location of the city of Rameses, disputed for many years, has now been positively identified as Tell ed-Dab'a, about twenty miles north of Pithom. The site has been extensively excavated by M. Bietak. It served as the *Hyksos capital, Avaris, and was rebuilt by Rameses II as his capital, Pi-Ramesse, in the thirteenth century. It was dismantled to build Tanis (about twelve miles to the north) as the Delta capital in the Twentieth Dynasty during the twelfth century B.C. (Judges period). Rameses II used various peoples as slave labor for building the city, including the

Apiru (a term used in the second millennium to describe dispossessed peoples), a designation that would have been applied to the Hebrews as well as to other people.

1:14. brick making. The ancient records agree that brick makers had a filthy job. A work known as the *Satire on the Trades* attests to an existence that is perpetually muddy and miserable. Houses, public buildings, walls around cities and even pyramids were at times constructed of brick. Literally millions of bricks were needed, and daily individual quotas would vary depending on how many were assigned to a crew. Crews operated by division of labor, with tasks such as fetching and breaking up straw, hauling mud and water, shaping the bricks by hand or using molds, setting the bricks to dry in the sun and several days later hauling them to the building site. The bricks for a large building would be over a foot long and half as wide, and perhaps six inches thick.

1:15-22. delivery stools. In the ancient world women normally gave birth in a crouching or kneeling position. Small stools, stones or bricks could be used to support the mother's weight as she gave birth. Midwives did not just aid in parturition but were advisers through the whole process of conception, pregnancy, birth and child care.

2:1-10
The Birth of Moses

2:1-10. heroes spared at birth. In the ancient world there are other accounts of heroes being miraculously spared at birth or being raised in unlikely circumstances. The most intriguing such literary work is the *Legend of Sargon's Birth* (probably eighth century B.C.). Rather than sacrificing her child (as priestesses were supposed to do), Sargon's mother hid him in a reed basket by the bank of the Euphrates. After being carried down the river, he was found and raised by the royal gardener. He grew up to become the founder of the dynasty of *Akkad in the twenty-fourth century B.C. But there are important differences. Most of these stories feature a royal personage discarded to his fate and raised by commoners, while Moses, under careful supervision, is rescued by royalty and raised in privileged circumstances. There is no reason to assume that this daughter of Pharaoh would have been in a position of power or influence. Harem children by the score existed in every court, and daughters were considered less highly than sons.

2:3. reed basket coated with tar. The Hebrew word used for Moses' basket is the same as that used for Noah's ark. The papyrus used to make the floating cradle was also used in the construction of light boats in Egypt and Mesopotamia, a practice the biblical writers were aware of (Is 18:2). The reed bundles overlapped in three layers, and the pitch would make it watertight (Gen 6:14 uses a different word but shows the same concept). In a Hittite myth titled *A Tale of Two Cities: Kanesh and Zalpa,* the queen of Kanesh is said to have given birth to thirty sons in a single year and placed them in caulked baskets and sent them down the river. The myth reports that the gods took them out of the sea and raised them.

2:8. wet nurse. Procurement of a wet nurse to nurse and care for the child until it was weaned was a normal procedure in wealthy or aristocratic households. Though Egyptian literature has provided little information, Mesopotamian legal texts speak of the adoption procedures for an abandoned child who has been found. The wet nurse serves as the paid legal guardian, with adoption taking place after weaning.

2:10. the name Moses. The name Moses is from the Egyptian *ms(w),* meaning "to beget." It is a common element in names, often connected to a god's name, so Thutmosis ("Thoth begets" or "Thoth is born") or Rameses ("Ra begets" or "Ra is born"). Alternatively, since *ms* in Egyptian means "boy," Moses may simply have been called by a generic name. Wordplay occurs in that the closest Hebrew root means "to draw out."

2:10. growing up in Pharaoh's court. Growing up in the household of Pharaoh would have involved certain privileges in terms of education and training. This would have included training in literature and scribal arts as well as in warfare. Foreign languages would have been important for any work in diplomacy and probably were included. One of the qualities that Egyptians prized most was rhetoric (eloquence in speech and argumentation). Literary works such as *The Eloquent Peasant* show how impressed they were with someone who could speak well. Though Moses would have been trained in rhetoric, he did not consider himself skilled in this area (4:10-12).

2:11-25
Moses' Flight from Egypt to Midian

2:12-15. Moses' crime. Egyptians maintained a substantial sense of ethnic pride that caused them to consider foreigners inferior. For a foreigner to kill an Egyptian was a great crime.

2:15. flight from Egypt: Sinuhe. In one of the most well-known Egyptian tales, *The Story of *Sinuhe,* the main character fears disfavor from a new pharaoh early in the second millennium B.C. and flees through Canaan to Syria. There he marries the daughter of a Bedouin chieftain and becomes a powerful leader among those people.

2:15. Midian. The Midianites were a seminomadic people who are located in various regions in different stories and sources, from the Transjordan and the Negev in the region of Palestine to the northern Sinai. But the region east of the Gulf of Aqaba in northwest Arabia has the strongest claim to being the central location of the Midianite people.

2:16-19. shepherdesses. Normally women would have been shepherdesses only when there were no sons in the family. The disadvantages of this situation are highlighted in this account, where the other shepherds bully the girls.

2:23. Pharaoh's identity. Again the identity of this Pharaoh is not given. Most conclude that he is either Thutmose III or Rameses II.

3:1—4:17
The Burning Bush and the Call of Moses

3:1. name differences: Reuel (2:18); Jethro (3:1). In the previous chapter Moses' father-in-law was called Reuel, while here he is referred to as Jethro and in Numbers 10:29 as Hobab (see Judg 4:11). The difficulty can be resolved once the ambiguity of the terminology is recognized. The term designating male in-laws is nonspecific. The term referred to a woman's male relatives and could be used for her father, brother or even grandfather. Most solutions take account of this. Perhaps Reuel is the grandfather head of the clan, Jethro is the father of Zipporah and technically the father-in-law of Moses, and Hobab is the brother-in-law of Moses, Jethro's son. Alternatively, Jethro and Hobab could both be brothers-in-law, and Reuel the father.

3:1. mountain of God. The mountain of God is here designated Horeb and elsewhere Sinai, though either one of those names could refer to the general area, a particular range or a single peak. Moses most likely calls it the mountain of God in recognition of the status it is going to achieve in the following chapters rather than because of any prior occurrences or superstitions. In the ancient and classical world deities normally were believed to have their dwelling places on mountains.

3:2-4. burning bush. Natural explanations for the burning bush have been plentiful, from bushes that exude flammable gas to those covered with brightly colored leaves or berries. In the late Egyptian Horus texts at the temple of Edfu the sky god is envisioned as a flame manifest in a particular type of bush, but this is a full millennium after Moses.

3:2-7. Yahweh, God of your father. God's identification of himself with the "God of your father" suggests that the concept of patron deity may still provide the most accurate understanding of how the Israelites thought about *Yahweh. This title ceases to be used once Yahweh becomes the national deity at Sinai. It also serves to identify him as the God of the *covenant.

3:5-6. taking off sandals. It was common practice for priests to enter temples barefoot to prevent bringing in dust or impurities of any sort.

3:7-10. land of milk and honey. The land of Canaan is described as a land "flowing with milk and honey." This refers to the bounty of the land for a pastoral lifestyle, but not necessarily in terms of agriculture. Milk is the product of herds, while honey represents a natural resource, probably the syrup of the date rather than bees' honey. A similar expression to this is found in the *Ugaritic epic of *Baal and Mot that describes the return of fertility to the land in terms of the wadis flowing with honey. Egyptian texts as early as the *Story of *Sinuhe* describe the land of Canaan as rich in natural resources as well as in cultivated produce.

3:8. peoples of Canaan. In the list of the six people groups that inhabited Canaan, the first three are well known while the latter three are barely known at all. Canaan is mentioned as early as the Ebla tablets (twenty-fourth century B.C.), and the Canaanite people were the principal inhabitants of the fortified cities of the land, though they do not seem to have been native to the land. The *Hittites were from Anatolia, modern Turkey, but groups had migrated south and occupied sections of Syria and Canaan. *Amorites (known in Mesopotamia as *Amurru* or *Martu*) are known from written documents as early as the middle third millennium B.C. Most scholars think that they occupied many areas in the Near East from their roots in Syria. There is still debate as to whether the term *Perizzites* is ethnic or sociological (those living in unwalled settlements). The Hivites are sometimes connected to the Horites, in which case they may be *Hurrians. The Jebusites occupied the region later associated with the tribe of Benjamin, notably the city of Jerusalem, and are often related to the Perizzites who were located in the

same region. There is no mention of the Perizzites, Hivites or Jebusites outside the Bible.

3:11. Moses' objection. Moses' objection carried little persuasiveness, given the training provided for him in the household of Pharaoh (see comment on 2:10).

3:13. revelation of divine name. Names in the ancient world were believed to be intimately connected to the essence of the individual. Knowledge of a person's name gave knowledge of their nature and, potentially, power over them. As a result, the names of gods were at times carefully guarded. For instance, Egypt's sun god, Re, had a secret, hidden name that only Isis, his daughter, knew. See comment on 20:7.

3:13-15. I AM. The personal name of Israel's God, *Yahweh (usually rendered LORD, v. 15), is built from the Hebrew verb "to be." Verse 14 uses an alternate form of the verb in the first person, "I am." The name Yahweh for the Israelite God is attested outside the Old Testament in the Mesha Inscription, the Arad Ostraca, the Lachish letters and inscriptions from Khirbet el-Qom and Kuntillat Ajrud, to name a few of the more prominent places. There are a number of possible occurrences of Yahweh or Yah as a deity's name outside of Israel, though all are debatable. One of the most intriguing is the reference to "*Yhw* in the land of the Shasu," mentioned in some Egyptian inscriptions in Nubia (modern Sudan) from the mid-second millennium. The Shasu are Bedouins related in the same inscriptions to the area of Seir (see Deut 33:2; Judg 5:4). This might find confirmation in the biblical indication that Jethro the Midianite was a worshiper of Yahweh (chap. 18). We must remember, however, that Midian was also a descendant of Abraham (Gen 25:2-4), so this may not be unrelated to the Israelite God.

3:16-17. elders. The elders here are the clan leaders of Israel. Elders typically served as a ruling assembly overseeing the leadership of a village or community. The people would look for the endorsement of Moses by the elders before they would accept his leadership.

3:18-20. God of the Hebrews. "God of the Hebrews" is a title that is used only in the context of the exodus. Since the Israelites generally only refer to themselves as Hebrews to foreigners, some have related the term *Hebrew* to the Apiru/*Habiru known from ancient texts from this period. Apiru/Habiru is not an ethnic designation but a sociological one, referring to displaced peoples.

3:18. three-day journey to sacrifice. The request to Pharaoh is for a three-day religious pilgrimage into the wilderness. This would generally consist of one day for travel each way and one full day for the religious ceremonies. The refusal adds religious oppression to the crimes of Pharaoh.

3:19-20. mighty hand of God. The image of an outstretched or mighty hand or arm is common in Egyptian inscriptions to describe the power of Pharaoh. It is used throughout the exodus narratives to describe God's power over Pharaoh. See comment on Deuteronomy 26:8.

4:1-9. the three signs of Moses. The three signs the Lord gave to Moses each most likely had symbolic significance. The rod was the symbol of authority in Egypt, and Pharaoh was represented by the serpent figure, the uraeus, featured prominently on his crown. The first sign then suggests that Pharaoh and his authority are completely in the power of God. The second sign inflicts a skin disease, often translated "leprosy," on Moses' hand. In fact, however, the Hebrew term used describes many dermatological conditions, most far less severe than Hansen's disease (leprosy; see comment on Lev 13). Nonetheless, when inflicted in the Bible it is consistently a punishment for hubris—when an individual in pride presumptuously assumes a divinely appointed role (Num 12:1-12; 2 Kings 5:22-27; 2 Chron 26:16-21), thus demonstrating God's intention to punish Pharaoh. Its result is to drive the individual from God's presence, since it rendered the afflicted unclean. The third, turning water to blood, shows God's control of the prosperity of Egypt, which was entirely dependent on the waters of the Nile. It also anticipates the plagues that God will send.

4:17. Moses' staff. Moses' staff becomes the symbol of God's power and presence with Moses. It is carefully distinguished from instruments of magic in that Moses never uses it in connection with incantations or words of power. It is not used to manipulate God so, except in one unfortunate incident (Num 20), Moses does not wield it but only employs it as instructed.

4:18-26
Moses' Bloodguilt

4:19. Moses' standing. The fact that Egyptians are no longer seeking to kill Moses for his act of murder does not mean that he has been absolved of all guilt in the matter.

4:20-23. hardening Pharaoh's heart. This section contains the first reference to the hardening of Pharaoh's heart—a motif that occurs twenty times over the next ten chapters (during the plagues and up to the crossing of the

sea). Several different verbs are used, and Pharaoh sometimes hardens his own heart, while other times it is hardened by the Lord. The concept has parallels to similar Egyptian expressions that convey perseverance, stubbornness, persistence and an unyielding nature. These can be good qualities or bad, depending on what type of behavior or attitude one is persisting in.

4:22. Israel, the firstborn of God. The passage artfully develops the issue of jeopardy to the firstborn: God's first-born, Israel; Pharaoh's firstborn; and Moses' firstborn. Israel is God's first-born in the sense that they are the first nation to enter into a relationship with him.

4:24-26. the Lord was about to kill him. The text has told us that there was no one in Egypt seeking to kill Moses (v. 19), but Moses still stood guilty of bloodshed before God. Later, cities of refuge were established to provide shelter for someone who felt there were mitigating circumstances in a homicide, but Moses had sought refuge in Midian. By leaving his place of refuge, Moses became vulnerable to being called to account for his crime. Others in the Old Testament whom the Lord called on to go somewhere but then accosted on the way include Jacob (Gen 31—32) and Balaam (Num 22). In each instance God did indeed want the individual to make the journey but had an issue to settle before he could proceed.

4:25. flint knife. A flint flake was used for to perform *circumcision in Israel and Egypt even after metal tools and weapons were readily available. They were very sharp, easily accessible and the traditional instrument for age-old *rituals.

4:25. bridegroom of blood. One recent study has plausibly suggested that *circumcision in many cultures was done by the man's in-laws and extended the protection of the family over the man and his children. If such was the Midianite practice, this could serve as an extension of the refuge that Moses had in Midian. From the Israelite side, the dabbing of the blood (v. 25) is seen also in the Passover *ritual (12:7) and offers protection from the slaughtering angel (12:44-48). Zipporah's comment that Moses was a bridegroom of bloodshed would indicate both his need for protection by the family and his need for expiating blood.

4:27-31
Moses' Return to Egypt

4:29. elders. The elders here are the clan leaders of Israel. Elders typically served as a ruling assembly overseeing the leadership of a village or community. The elders here accept the legitimacy of Moses' role and mission and acknowledge that he carries the authority of God.

5:1-21
Moses Confronts Pharaoh

5:1-5. festival in the desert. Festivals in the ancient world centered around cycles of nature (new year's or *fertility festivals), mythological events (enthronement or deity conquering chaos), agricultural events (harvest), or historical memorials (dedications or deliverances). They celebrate what deity has done and seek to perpetuate deity's action on their behalf. Often these elements were combined. They usually are celebrated at a holy place and therefore often require pilgrimage.

5:6-14. straw for bricks. Straw serves as a bonding agent in the brick as it is heated. Without sufficient straw or with poor-quality stubble, the bricks would not form as easily and a higher proportion would fall apart, thus making the quota harder to achieve. Quotas found in Egyptian literature often do not clarify the number in the crew or the time period involved, but we do know that the quotas were often not met.

5:22—6:12
God's Determination to Deliver

6:3-8. LORD. A casual reading of verse 3 might lead one to conclude that the name *Yahweh (LORD) was unfamiliar to the patriarchs, though Genesis 15:7 and 28:13 clearly suggest otherwise. It is true that El-Shaddai (God Almighty) was known to the patriarchs, and in Genesis 17:1 and 35:11 it is El-Shaddai who is connected to the aspects of the *covenant that were realized during the lifetimes of the patriarchs. In contrast, "Yahweh" is connected to the long-term promises, particularly that of the land, so it can rightfully be said that the patriarchs did not experience him (that is, he did not make himself known in that way). The patriarchs probably did not worship God by the name Yahweh, but the text does not require the conclusion that the name was foreign to them.

6:6. outstretched arm. The Egyptians were used to hearing of the outstretched arm of Pharaoh accomplishing mighty deeds. Now Yahweh's outstretched arm is going to overwhelm Pharaoh. He is confirming this in fulfillment of the oath he made to Abraham, represented by the gesture of raising a hand (toward heaven). Here we can see that naming

the gesture is simply another way of referring to the oath, for there is no higher power for God to swear by. See comment on Deuteronomy 26:8.

6:28—7:13
Moses and Aaron Before Pharaoh

7:9. serpent. The serpent was considered a wise and magical creature in Egypt. Wadjet, the patron goddess of lower Egypt, is represented as a snake (uraeus) on Pharaoh's crown. This came to symbolize the power of Pharaoh. But additionally Apopis, the enemy of the gods, in the form of a snake, represented the forces of chaos. It is therefore not arbitrary that the sign featured a serpent (whether cobra or crocodile, see below), for in Egyptian thinking there was no other creature so ominous.

7:11-13. magicians of Pharaoh. Pharaoh's magicians would have been specialists in spells and incantations as well as being familiar with the literature for omens and dreams. They would have practiced sympathetic magic (based on the idea that there is an association between an object and that which it symbolizes; for example, that what is done to a person's picture will happen to the person) and would have used their arts to command the gods and spirits. Magic was the thread that held creation together, and it was used both defensively and offensively by its practitioners, human or divine.

7:11-12. staffs turning into serpents. Some have reported that there is a type of cobra that can be immobilized in rigid form if pressure is applied in a certain way to the neck, perhaps allowing the Egyptian magicians to appear to have rods that turned into snakes. This procedure is portrayed on Egyptian scarab *amulets and is practiced even today. It must be noted, though, that the word translated "serpent" in this section is not the same as the one used in 4:3-4. The creature referred to here is usually considered a sizable monster (see Gen 1:21), though it is used parallel to "cobra" in two places (Deut 32:33; Ps 91:13). This same creature is equated to Pharaoh in Ezekiel 29:3 and is thought by some to be a crocodile. There is no need to attribute a mere sleight of hand to Pharaoh's magicians—these were masters of the occult.

7:12. Aaron's staff swallowing magicians' staffs. When Aaron's serpent swallowed the magicians' serpents, the symbolism would clearly imply an Israelite triumph over Egypt. So, for instance, an Old Kingdom Pyramid Text uses the portrayal of one crown swallowing another to tell of Upper Egypt's conquest of Lower Egypt. In Egyptian Coffin Texts swallowing is a magical act that signifies absorption of the magical powers of that which was swallowed. Thus the Egyptian magicians would have concluded that the power of their rods had been absorbed into the rod of Moses.

7:13. hardening of heart. This second mention of Pharaoh's hardened heart (see comment on 4:20-23) reflects his resolve to pursue the course he has chosen.

7:14—11:10
The Ten Plagues

7:14—11:10. plagues as attack on Egypt's gods and as natural occurrences. The plagues have been viewed by many as specific attacks on the gods of Egypt (see 12:12). This is certainly true in the sense that the Egyptians' gods were unable to protect them and that areas supposedly under the jurisdiction of their gods were used to attack them. Whether individual gods were being singled out is difficult to confirm. In another vein, some have suggested that a sequence of natural occurrences can explain the plagues from a scientific point of view, all originating from an overflooding in the summer months and proceeding through a cause-and-effect process into March. Those who maintain such a position will still sometimes admit to the miraculous nature of the plagues in terms of timing, discrimination between Egyptians and Israelites, prior announcement and severity. For each plague we will cite the natural explanations that have been offered as well as indicating which gods have been considered targets of the plague. It will be for the reader to decide what role either of these explanations should play in the understanding of the text.

7:14-24. water to blood. The Nile was the lifeblood of Egypt. Agriculture and ultimately survival were dependent on the periodic flooding that deposited fertile soils along the river's 4,132 miles. The obese Hapi, one of the children of Horus, was technically not the god of the Nile but the personification of the inundation of the Nile. The blood-red coloring has been attributed to an excess of both red earth and the bright red algae and its bacteria, both of which accompany a heavier than usual flooding. Rather than the abundant life usually brought by the river, this brought death to the fish and detriment to the soil. Such an occurrence is paralleled in an observation in the *Admonitions of Ipuwer* (a few centuries before Moses) that the Nile had turned to blood and was undrinkable. The biblical comment about

the Egyptians digging down (v. 24) would be explained as an attempt to reach water that had been filtered through the soil.

7:19. buckets and jars. In verse 19 most translations make reference to wood and stone vessels, suggesting that water in such vessels was also changed. The Hebrew text says nothing of vessels. The combination of "sticks and stones" is used in *Ugaritic literature to refer to outlying, barren regions. The text also includes canals, which suggests the artificial channels used for irrigation.

8:1-15. frog plague. It is natural that the frogs would desert the waters and banks clogged with decomposing fish. The goddess Heqet was envisioned as a frog and assisted with childbirth, but it is difficult to imagine how this was seen as a victory over her. The Egyptian magicians could not remove the plague, only make it worse.

8:11. hardening heart. Here a different verb is used than in the previous references (see comments on 4:20-23; 7:13). This verb means "to make heavy" and therefore is associated with very familiar Egyptian imagery. In the judgment scene from the Book of the Dead, the heart of the deceased is weighed in the balance against a feather (representing Maat, truth and justice) to determine whether the individual will be ushered into an afterlife of happiness or be devoured. Increasing the weight of Pharaoh's heart is a way of expressing that his afterlife doom is being sealed. The expression is most similar to the English cliche "driving another nail into his coffin." It represents simply accelerating the inevitable.

8:16-19. gnat plague. The type of insect (NIV: "gnats") involved in this plague is not clear, since the Hebrew word is used only in this context. Most studies have favored either the mosquito or the tick as the likeliest identification. The former would breed in all the stagnant pools of water left from the flooding. "Finger of God" may be an Egyptian expression referring to Aaron's rod. The failure of the magicians and their admission that God is at work begins to fulfill the Lord's purpose: They will know that I am *Yahweh.

8:20-32. land ruined by flies. The insect featured in the fourth plague is not named. Instead the text speaks of swarms, using a word known only in relation to this context. Flies are logical both to the climate and to the conditions that exist with rotting fish and frogs and decaying vegetation. Because it is a carrier of skin anthrax (associated with later plagues), the species *Stomoxys calcitrans* has been the most popular identification. As both pests and carriers, these insects brought ruination on the land.

8:22. Goshen. This is the first plague that does not afflict the Israelites living in Goshen. The precise location of Goshen is still unknown, though it is certainly in the eastern part of the Delta region of the Nile.

8:26. sacrifice detestable to Egyptians. When Pharaoh offers to let them make their sacrifices in the land, Moses does not claim the need to conduct the *rituals at a holy site but objects that their rituals are unacceptable because they sacrifice that which is detestable to the Egyptians. Slaughter of animals to provide food for the gods was prevalent in Egyptian religious practice, as many reliefs portray, but blood sacrifices of animals played little role in the sun worship, king worship and *funerary observances that constituted much of Egyptian religion. Often the animal being slaughtered was considered to represent an enemy of the god.

9:1-7. livestock plague. The plague on the cattle is regularly identified as anthrax that was contracted from the bacteria that had come down the Nile and infected the fish, the frogs and the flies. The Egyptian goddess of love, Hathor, took the form of a cow, and the sacred Apis bull was so highly venerated that it was embalmed and buried in a necropolis with its own sarcophagus at death.

9:8-12. handful of soot. While some have concluded the ashes are taken from a brick kiln (symbolizing the labor of the Israelites), the Egyptians generally used sun-dried brick rather than kiln-fired. The furnace spoken of here is sizable and alternatively could be viewed as the place where the carcasses of the dead animals have been burned. The scattering of ashes is sometimes used as a magical *ritual in Egypt to bring an end to pestilence. Here it may bring an end to the cattle plague, but it translates into human misery.

9:10-12. boils plague. Skin anthrax would be carried by the bites of the flies which had had contact with the frogs and cattle, and would produce sores, particularly on the hands and feet.

9:13-35. effects of hail. Hail is destructive to crops as well as to humans and animals. The text's designation of which crops were affected (vv. 31-32) indicates that it was January or February.

10:1-20. locust plague. Locusts were all too common in the ancient Near East and were notorious for the devastation and havoc they brought. The locusts breed in the region of the Sudan and would have been more plentiful than usual in the wet climate that initiated the entire sequence. Their migration would strike

in February or March and would follow the prevailing winds to either Egypt or Palestine. The east wind (v. 13) would bring them into Egypt. A locust will consume its own weight each day. Locust swarms have been known to cover as many as four hundred square miles, and even one square mile could teem with over one hundred million insects. Certainly anything that had survived the hail was now destroyed, and if they laid their eggs before being blown out to sea, the problem would recur in cycles. The economy in Egypt was destroyed, but the principal gods had yet to be humiliated.

10:19. west wind. The plague was ended by a "wind from the sea." In Israel this is a west wind, but in Egypt it would come from the north or northwest and therefore drive the locusts back to the sea.

10:21-29. darkness plague (that can be felt). The comment that it was darkness that could be felt (v. 21) suggests that the darkness was caused by something airborne, namely, the *khamsin* dust storms known in the region. There would be excessive dust from all of the red earth that had been brought down and deposited by the Nile, as well as from the barren earth left behind in the wake of the hail and locusts. The three-day duration is typical for this type of storm, which is most likely to occur between March and May. The fact that the text emphasizes the darkness rather than the dust storm may indicate that the sun god, Amon-Re, the national god of Egypt, the divine father of Pharaoh, is being specifically targeted.

11:1-10. tenth plague and Pharaoh. In Egypt Pharaoh was also considered a deity, and this last plague is directed at him. In the ninth plague his "father," the sun god, was defeated, and now his son, presumably the heir to the throne, will be slaughtered. This is a blow to Pharaoh's person, his kingship and his divinity.

11:2. ask for gold and silver. The instructions for the Israelites to ask for gold and silver articles and clothing (mentioned in other passages) from the Egyptians would most likely have correlated with the idea that the Israelites were going to have a feast for their God. Finery would be natural for such occasions, and it would not be odd to think that the Israelite slaves would not possess such luxuries. By now the people of Egypt would have been in despair from the plagues, and the thought that Israel's God might be appeased by a feast would make them very cooperative.

11:4. the Lord going throughout Egypt. In Egypt the most notable and anticipated event of the major festivals was the god coming forth among the people. Here, however, the going forth of Israel's God throughout the land will be for the purposes of judgment.

11:4. hand mill. The slave girl at her hand mill is portrayed as the lowest on the social ladder. The hand mill, or saddle-quern, was made up of two stones: a lower stone with a concave surface and a loaf-shaped upper stone. The daily chore of grinding grain into flour involved sliding the upper stone over the grain spread on the lower stone.

11:7. not a dog will bark. Dogs were not kept as pets but were considered undesirable and a general nuisance, perhaps as a rat would be viewed today. The statement that no dog would bark suggests unusual calm, for these roaming curs were easily antagonized by the slightest irregularity.

12:1-28
Passover

12:1-28. roots of Passover. According to the biblical account the Feast of Passover is instituted in association with the tenth plague, but that does not mean that its institution did not build on a previously existing festival of some sort. We should recall that God instituted *circumcision as a sign of the *covenant using a practice that previously existed with other purposes. Many elements of the Passover *ritual suggest that it may be adapted from a nomadic *ritual that sought to protect herdsmen from demonic attack and insure the *fertility of the herd. Even if this is so, each of the elements is suitably "converted" to the new context of the tenth plague and the exodus from Egypt. If such a conversion of a nomadic festival took place, it would be similar to the early western European Christians' superimposing Christmas on their pagan winter solstice festivals, with tokens such as holly, mistletoe and evergreen trees carried over.

12:1-11. calendar. This event established Abib (later called Nisan) as the first month in the religious calendar of Israel. By the civil calendar, Tishri, six months later, was the first month, and thus the month that "New Year's Day" was celebrated. The Israelite calendar was a lunar calendar with periodic adjustments to the solar year. Abib began with the first new moon after the spring equinox, generally mid-March, and went through mid-April.

12:5. year-old males without defect. As a yearling, the male would have survived the vulnerable period of early life (mortality rates were between 20 and 50 percent) and would be preparing to take on its role as a productive member of the flock. A flock needs fewer male

members, however, and particularly among goats many of the males were slaughtered as yearlings for their coats and their meat. The females were kept until about age eight for bearing young and producing milk.

12:6. slaughtered at twilight. In Egypt's civil calendar each month was thirty days in length and divided into three periods of ten days each. The Egyptian religious calendar, including festivals, remained in a lunar sequence. The occurrence of the feast and the plague corresponded to the eve of what Egyptians called "half-month day." More importantly, since the month in lunar reckoning began at the new moon, the feast occurred at the time of the full moon, always the first after the spring equinox. The slaughter would take place at twilight, when the first full moon of the Israelite year rose.

12:7. function of blood. In primitive religions blood is often used to ward off evil powers, whereas in Israelite *ritual the blood served as a purifying element. While the former could certainly have been superstitiously believed by Israelites who retained these primitive elements in their religious thought and practice, the latter was the intended function. Door frames of Mesopotamian houses were often painted red because the color was believed to ward off demons.

12:8. menu. The menu for the Passover meal is one that would have been common in nomadic herding communities. The prohibition of yeast may additionally carry symbolic value. In later rabbinic literature and the New Testament it is associated with *impurity or *pollution. It is difficult to discern whether it carried such a connotation this early. The bitter herbs are identified in later rabbinic literature as lettuce, chicory, eryngo, horseradish and sow thistle, all easily prepared. It is uncertain, however, whether these are the ones included in the biblical terminology. Lettuce is known to have been cultivated in Egypt, and the Hebrew word translated "bitter herbs" corresponds to an *Akkadian (Babylonian) word for lettuce. The command to roast avoids two other possibilities. On the one hand, it has been thought to contrast to pagan spring feasts that sometimes included raw meat. On the other hand, those in haste would not boil the meat, for that would necessitate greater preparation time to butcher, gut and dress the meat. Since this is a sacral meal, the meat, may not be eaten at any other time and must be properly disposed of.

12:11. Passover. The English translation "Passover" does not do justice to the Hebrew terminology *(pesah)*. That the verb has to do with protection can be seen in Isaiah 31:5, where it is parallel to shielding and delivering. The Lord is not portrayed as "passing over" the door but as protecting the entrance from the slaughtering angel (see 12:23). The blood on the doorposts and lintel can now be seen as purifying the doorway in preparation for the Lord's presence.

12:12-30

The Tenth Plague

12:12-13. Egyptian kingship festival. There may be some echo here of the famous Egyptian Sed festival, which represented a renewal of royal authority. Its celebration was intended for all the gods to affirm the kingship of Pharaoh, while here, as a result of the plagues, all the gods must acknowledge the kingship of *Yahweh—not a new enthronement, but a recognition of his ongoing power. In the Sed festival the king asserted his dominance of the land by going throughout the land (symbolically) as he desired. Pharaoh's kingship is being mocked even as Yahweh's is being asserted, for God goes throughout the land to establish his dominance by the plague.

12:14-20. Feast of Unleavened Bread. The Feast of Unleavened Bread is celebrated during the seven days after Passover. As a commemoration of the exodus from Egypt, it conveys that in their haste the Israelites were not able to bring any leaven and therefore had to bake their bread without it. Leaven was produced from the barley content of the dough that fermented and served as yeast. Small amounts would be kept from one batch, allowed to ferment, then used in another. With no "starter" set aside to ferment, the process would have to begin again, taking seven to twelve days to reach the necessary level of fermentation.

12:16. sacred assembly. Sacred assemblies or proclamations were an important part of most religious practice in the ancient world. They were local or national gatherings for public, corporate worship. The people were summoned together away from their normal occupations.

12:19. unleavened bread and barley harvest. The Feast of Unleavened Bread also coincided with the barley harvest and is the beginning of the harvest season. In this context the significance of the unleavened bread is that a new beginning is being made, and the first fruits of the barley harvest are eaten without waiting for fermentation.

12:22. use of hyssop. The blood is spread on the door frame with hyssop, a marjoram plant that came to be associated with purification,

probably because of its use in *rituals such as these. Its consistency made it very adaptable for brushes and brooms.

12:23. the destroyer. The blood on the door frame would signal the Lord to protect those in that house from the destroyer. In Mesopotamia the demon Lamashtu (female) was seen as responsible for the death of children, while Namtaru (male) was responsible for plague. Egyptians likewise believed in a host of demons who threatened life and health at every level. In this passage, however, this is no demon operating independently of the gods, but a messenger of God's judgment. In Jeremiah the same term is used for a destroyer and plunderer of the nations (Jer 4:7).

12:29-30. firstborn. In Israel the dedication of the firstborn was a means of acknowledging the Lord as the provider of life, fertility and prosperity. By taking the firstborn of both man and beast, Yahweh is again asserting his rights to be viewed as the deity responsible for life in Egypt—a role usually attributed to Pharaoh.

12:31-42
Leaving Egypt

12:34. kneading troughs. The easiest way to transport the dough already mixed for the next day's bread was, as described, in the troughs used for kneading, covered with a cloth to keep the dust out.

12:37. route of journey. Rameses is Tell el-Dab'a in the eastern Delta (see comment on 1:8-14), where the Israelites were working to build a city for Pharaoh. Succoth has been identified as Tell el-Maskhuta toward the eastern end of the Wadi Tumilat. This would be a normal route to take to leave Egypt going east, as several Egyptian documents demonstrate. It is approximately one day's journey from Rameses to Succoth. (For the route of "The Exodus," see map 1 on p. 87.)

12:37. number of Israelites. The size of the Israelite population has been considered problematic for several reasons. If there were six hundred thousand men, the total group would have numbered over two million. It is contended that the Delta region of Egypt could not have supported a population of that size (estimates suggest the entire population of Egypt at this time was only four or five million). The modern population of the area of the Wadi Tumilat is under twenty thousand. Egyptian armies of this time period comprised under twenty thousand. Indeed, for the battle of Qadesh (thirteenth century) the *Hittites amassed an army of thirty-seven thou-

---

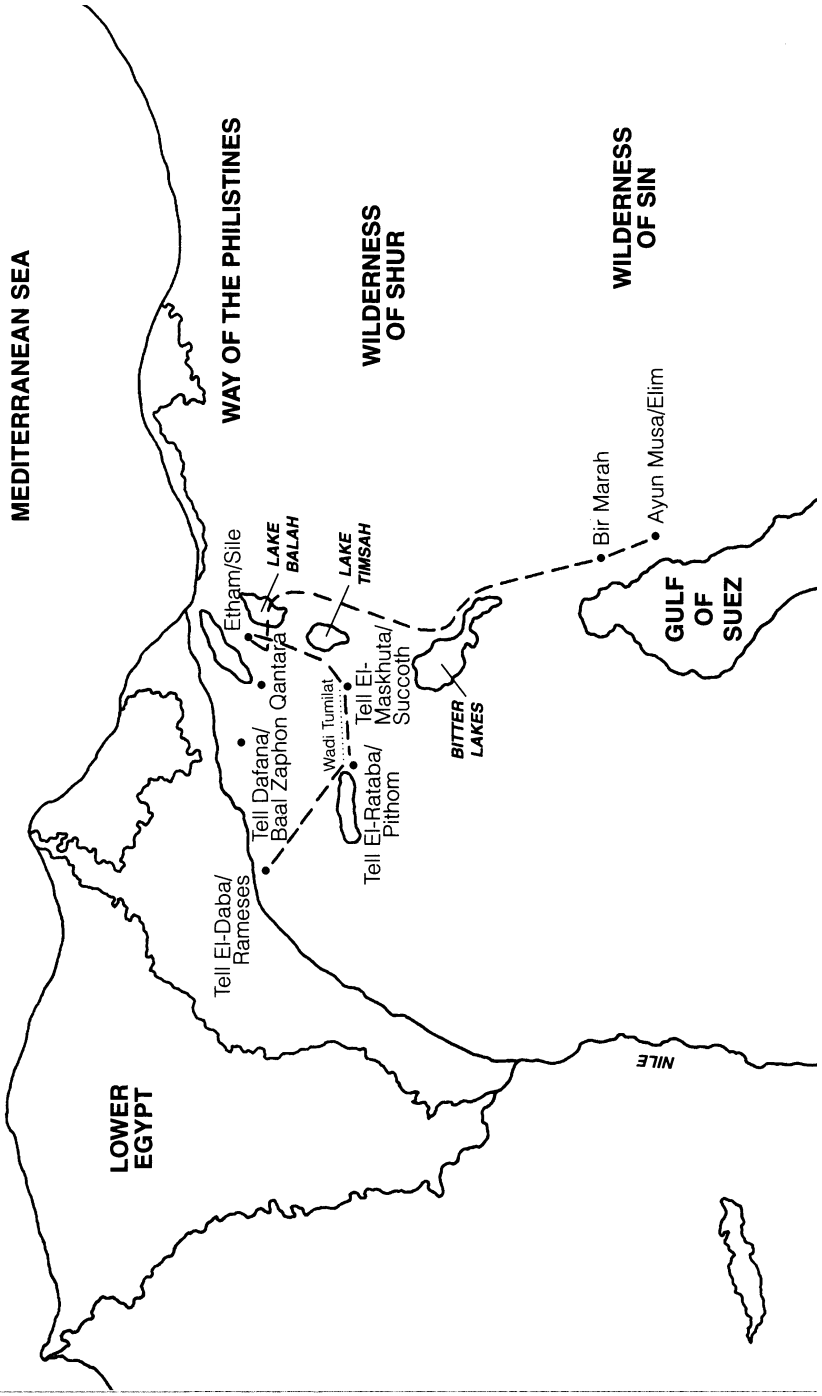
THE DATE OF THE EXODUS

Assigning a date to the exodus has proven to be a difficult task over the years. Since neither of the Pharaohs in the account are named, scholars have had to seek out other more circumstantial pieces of data in order to make a case. These pieces of data can be divided into *internal* data (from the biblical text) and *external data* (pieced together from archaeological and historical research).

The internal evidence, comprised primarily of genealogical or chronological time spans given in the text (e.g., 1 Kings 6:1), suggests a date in the middle of the fifteenth century B.C. If this date is adopted as having the support of the biblical text, it can be defended in historical/archaeological terms, but has to assume that a number of the conclusions that archaeologists have reached are either suffering from lack of data or are the result of misinterpretation of the data. For instance, if the Exodus took place around 1450, the conquest would be assigned to the Late Bronze Age in Canaan. Unfortunately, archaeologists excavating the sites of the Israelite conquest have found no remains of walled cities in Late Bronze Age Canaan. Many of the sites show no evidence of occupation at all in the Late Bronze Age. In response it has been suggested that the destruction of the great fortified cities of Middle Bronze Age Canaan should be associated with the Conquest. However, archaeologists have usually dated the end of the Middle Bronze to about 1550, and it is quite complex to try to shift the whole system of dating one hundred years.

The external evidence is usually considered to be more supportive of a thirteenth century date, during the time of Rameses the Great. This view has to assume that some of the numbers given in the biblical text need to be read differently. For instance, the 480 years of 1 Kings 6:1 would have to be viewed as suggesting twelve generations (12x40) which may be significantly less than 480 years. Additionally, while it has been claimed that the historical/archaeological data of the thirteenth century fits better with the Exodus, there are a number of difficulties that remain. Among them is the inscription of Pharaoh Merenptah toward the end of the thirteenth century that mentions Israel as a people group in Canaan.

Both dates have their difficulties and it is likely that there are still certain presuppositions that are being held that prevent us from seeing how all the pieces fit together. It is likely that historical and archaeological research will eventually be able to bring greater clarity to the issue. Until that time we will have to be content with our uncertainty.



Map 1. The Exodus
This map traces the possible route of the exodus from Egypt.

sand (thought to be exaggerated) that was believed to be one of the largest fighting forces ever assembled. Shamshi-Adad (1800 B.C. Assyria) claimed to have amassed an army of sixty thousand for the siege of Nurrugum. If Israel had a fighting force of six hundred thousand, what would they have to fear?

As it traveled, the line of people would stretch for over two hundred miles. Even without animals, children and the elderly, travelers would not expect to make twenty miles a day (though caravans could make twenty to twenty-three). When families and animals move camp, the average would be only six miles per day. Whatever the case, the back of the line would be at least a couple of weeks behind the front of the line. This would create some difficulties in the crossing of the sea which seems to have been accomplished overnight, though certainly some have calculated how it could be done. The line, however, would be long enough to stretch from the crossing of the sea to Mount Sinai.

Furthermore, if a couple of million people lived in the wilderness for forty years and half of them died there, archaeologists expect they would find more traces of them—especially in places like Kadesh Barnea where they stayed for some time. When we turn our attention to their arrival in Canaan, the situation is no better. The population of Canaan during this period was far less than this Israelite force, and all archaeological evidence suggests there was a sharp decline in the population of the region in the *Late Bronze Age, when the Israelites took possession. Some estimates for the eighth century B.C. suggest there were still not a million people in the entire land of Israel even by that time. The modern population of Israel, even given the extensive metropolitan regions, is only about twice what the exodus population would have been. Yet the text is consistent in its reports of the size of the group (see Num 1:32; 11:21; 26:51). Many solutions have been offered, but all have problems. All of the above suggests that it is unlikely the numbers should be read the way that they traditionally have been. Studies of the use of numbers in Assyrian inscriptions have suggested the possibility that numbers were understood and used within an ideological framework rather than to offer a strict accounting. But it is very difficult to step out of our own cultural expectations. The most promising approach comes through a recognition that the Hebrew word translated "thousand" can also be translated "military troop," in which case there would be six hundred military troops. For more information see comments on Joshua 8:3 and Numbers 2:3-32.

12:40. 430 years. The chronology of this period is very difficult. First Kings 6:1 reports that 480 years separated the exodus from the dedication of the temple in 966. This would place the exodus in the mid-1400s. Adding the 430 years of this verse would suggest that the Israelites came to Egypt in the first half of the nineteenth century B.C. All sorts of variations exist, and several different options are defensible from both biblical and archaeological evidence. For a longer discussion see "The Date of the Exodus," p. 86.

12:43-51

Passover Regulations

12:43. Passover regulations. Verse 38 mentions many non-Israelites who have joined the exodus, and so three additional regulations for the Passover are addressed in this section. First, only those who have been circumcised may participate. This indicates that it is a festival only for the community of Israel. Second is the command that none of the meat be taken outside the house, and third is that no bones be broken. Both of these concern ways that the meal might be shared with other noncommunity members, which is disallowed. The lamb must be cooked whole, in the house.

13:1-16

The Firstborn

13:1-3. consecration. The first male offspring born to any mother is considered as belonging to deity. In the ancient Near East this concept sometimes led to child sacrifice to insure *fertility. Alternatively, in ancestor worship the firstborn would have inherited the priestly function for the family. In Israel it leads to consecration—transferring the firstborn to the domain of deity for cultic service or to the temple for holy use. From that status the son may be redeemed, and Israelite law sees his place being taken by the Levites (Num 3:11-13).

13:4. Abib. The month of Abib spans our March and April. It is the ancient name for what was later called Nisan in the Israelite calendar.

13:5. peoples of Canaan and land of milk and honey. For the peoples of Canaan and the land flowing with milk and honey, see comments on 3:7-10 and 3:8.

13:6-10. Feast of Unleavened Bread. See comment on 12:14-20.

13:9. amulets. *Amulets were often worn in the ancient Near East as protection to ward off evil spirits. Precious metals and gems were considered particularly effective. At times amulets would include magical words or spells. Israelite practice disapproved of amulets, but the concept was converted to reminders of the law (such as this feast served), or at other places (see Deut 6:8) consisted of physical reminders that contained prayers or blessings such as the small silver scrolls that were found in a preexilic tomb just outside Jerusalem in 1979. These contain the blessing of Numbers 6:24-26 and represent the oldest copy of any biblical text now extant.

13:11-16. sacrifice of firstborn. First-born livestock were sacrificed in thanks to the Lord, but donkeys were not approved for sacrifice. In Canaanite practice donkeys were occasionally sacrificed and a covenant confirmation ceremony in the *Mari texts also features the sacrifice of a donkey. The importance of the donkey as a pack animal is probably responsible for this exclusion. Therefore donkeys, like sons, were to be redeemed—that is, another offering given in their place.

13:17—14:31

The Crossing of the Sea

13:17. road to the Philistines. The road through the Philistine country is a reference to the major route that ran through the Fertile Crescent from Egypt to Babylonia and is known as the Great Trunk road. It went along the coast of the Mediterranean, which took it through Philistine territory in southern Palestine before moving inland through the valley of Jezreel just south of the Carmel range. Along the north of the Sinai peninsula the Egyptians referred to it as the Way of Horus, and it was heavily defended since it was the route used by armies as well as trade caravans.

13:18. Red Sea. The body of water referred to in translations as the "Red Sea" is termed in Hebrew the "Reed Sea"—a term that can be used for a number of different bodies of water. The reeds it refers to are probably papyrus, which used to proliferate along the marshy section that extended from the Gulf of Suez to the Mediterranean, now largely obliterated by the Suez Canal. Such reeds grow only in fresh water. Proceeding north from the Gulf of Suez, one would have encountered the Bitter Lakes, Lake Timsah, Lake Balah and finally, right by the Mediterranean, Lake Menzaleh. The Wadi Tumilat through which Israel is traveling would have led to Lake Timsah, so that is often identified as the Sea of Reeds in this context, though each of the other lakes has its supporters. If the Israelites originally headed northwest, they may have turned back and found themselves by Lake Balah. If they were heading toward the region of Sinai, they certainly would not have gone down the west side of the Gulf of Suez, and, in any case, that is further away than the narrative suggests (about 120 miles from Succoth). So though the translation "Red Sea" has led to that being the popular identification, it is the least likely. An alternative to "Reed Sea" as a geographical distinction is the suggestion that the translation should be "Sea of Extinction." In this case the waters that are being parted are identified by imagery referring to a common ancient Near Eastern creation motif of the waters of chaos being harnessed and the enemies of God being overthrown.

13:20. Succoth. Succoth is generally identified as Tell el-Maskhuta toward the eastern end of the Wadi Tumilat. In Egyptian literature this is the area known as *Tjeku,* the Egyptian equivalent of Hebrew *succoth.* Etham is the equivalent of Egyptian *htm,* "fort," and could refer to any number of fortresses in this area. Since God turns them back in 14:2, they may still be following the way of the Philistines on this first leg. If so, Etham would most likely be Sile, modern Tell Abu Sefa, where the first fortress guarding the passage onto the frontier was located in ancient times. It was the normal point of departure for expeditions to Canaan. In this case, 13:17-18 is described in detail in 14:1-3. The problem is that this is some fifty miles from Succoth and would have taken several days to reach. There is also a fortress of Pharaoh Merenptah (end of thirteenth century) mentioned near Tjeku in Papyrus Anastasi VI. (For a possible route of the exodus, see map 1 on p. 87.)

13:21-22. pillar of cloud/fire. Some have thought the pillar of cloud and fire is best explained as the result of volcanic activity. An eruption on the Island of Thera (six hundred miles northwest) in 1628 B.C. brought an end to Minoan civilization, and it is possible that its effects could have been seen in the delta. But the date is far too early (see "The Date of the Exodus," p. 86), and this theory would offer no explanation of the movements of the pillar nor of the location described for it in the biblical account (they are moving southeast). The text does not suggest that the pillar was supernaturally generated, only that it was the means of supernatural guidance. For this reason some have suggested that it was the result of a brazier of some sort carried on a pole that

would be used by the vanguard scouts. This was a method often used by caravans. On the other hand, the pillar is always portrayed as acting (coming down, moving) rather than being operated (no human is ever said to move it), so the vanguard theory is difficult to support. In the ancient world a bright or flaming aura surrounding deity is the norm. In Egyptian literature it is depicted as the winged sun disk accompanied by storm clouds. *Akkadian uses the term *melammu* to describe this visible representation of the glory of deity, which in turn is enshrouded in smoke or cloud. In Canaanite mythology it has been suggested the *melammu* concept is expressed by the word *anan,* the same Hebrew word here translated "cloud," but the occurrences are too few and obscure for confidence. In any case, the pillar here would then be one: smoke being visible in the daytime, while the inner flame it covered would glow through at night.

14:1-4. Pi Hahiroth. Pi Hahiroth is not otherwise known, but many interpret it as meaning "mouth of the diggings," possibly referring to canal work. It is known that a north-south canal was being constructed during this period (Seti I) and that it passed through the region near Qantara, a few miles west of Sile.

14:2. Migdol. *Migdol* means "tower" or "fort" in Hebrew and was a term borrowed from Semitic languages into Egyptian. There were several locations so designated, and one is known near Succoth in this period.

14:2. Baal Zephon. Baal Zephon is connected to Tahpanhes in Jeremiah 44:1; 46:14, in turn identified as Tell Dafana, about twenty miles west of Sile. If they camped near here, Lake Balah would be the closest sea.

14:5-9. Egypt's army. Most chariot units of this period range between 10 and 150, so 600 is a large muster, and this represents only Pharaoh's unit. When Rameses II fought the *Hittites at the battle of Qadesh, his enemy boasted 2,500 chariots.

14:19-20. hidden by cloud. Annals from the *Hittite king Murshili report that the storm god provided a cloud to hide them from their enemy, a claim also made by Priam, king of Troy, as well as others in Homer's *Iliad*.

14:21-22. sea driven back with east wind. Any sea shallow enough to be dried up by an east wind and shifting tides would not be sufficient to drown the Egyptians or to make walls of water. It is therefore difficult to devise any natural scenario to account for the facts reported by the text. This wind would not be the same as the *khamsin* (sirocco) that we associated with the ninth plague. That is a phenomenon drawn by a strong low-pressure system in North Africa, usually accompanied by thermal inversion. The east wind referred to here drives out of a high-pressure system over Mesopotamia and—opposite to a tornado, which rotates around a low-pressure system—features a sharp rise in barometric pressure.

14:23-25. the morning watch. The morning watch was from two to six a.m. The image of deity as flaming brilliance in the midst of a cloud is common throughout the Near East as well as in Greek mythology as early as Homer's *Iliad*, where Zeus sends forth lightning and causes horses to stumble and chariots to break. The Mesopotamian warrior god, Nergal, and the Canaanite *Baal each asserts his superiority in combat by means of his dazzling brilliance and fire.

15:1-21

The Song of Moses and Miriam

15:3. the Lord as warrior. The book of Exodus has been developing the idea of *Yahweh fighting for the Israelites against the Egyptians and their gods, so here the Lord is praised as a warrior. This is a concept that remains significant throughout the Old Testament and even into the New Testament. It is especially prominent in the books of Samuel, where the title "Yahweh of Armies" (Lord of Hosts) is common. Yahweh is the king and champion of the Israelites and will lead them forth victoriously in battle. Ancient mythologies often portrayed gods in battle, but these depictions generally concerned the harnessing and organizing of the cosmos. Both *Marduk (Babylonian) and *Baal (Canaanite) subdue the sea, which is personified in their divine foe (*Tiamat and Yamm respectively). In contrast, this hymn recognizes how Yahweh harnessed the natural sea (not representing a supernatural being) to overcome his historical, human foes. Nevertheless, bringing secure order out of conflict, being proclaimed king and establishing a dwelling are common themes both here and in the ancient Near Eastern literatures concerning cosmic battle.

15:4. Red Sea. Here the reference to the Reed Sea does not suggest further discussion of its identity (see comment on 13:18) but may well include a pun. The Hebrew word *suph* not only means "reed" but also means "end" as a noun and "swept away" as a verb (see Ps 73:19).

15:6-12. right hand. The right hand is the one that holds the weapon, so that it is the one that brings victory. In verse 12 the right hand is not

seen as literally causing the earth to open up. In Hebrew the term for earth can occasionally also mean "netherworld," and that seems likely here. To say that the netherworld swallowed them is to say that they were sent to their graves. It should also be remembered that in Egyptian concepts of afterlife the wicked are devoured by the "Swallower" when they fail to convince the judges of their goodness.

15:13-16. terrified peoples. The terror of the peoples becomes a standard theme in the account of the conquest. While the peoples of Canaan may have previously been terrified of the Egyptians (as the *Amarna correspondence from this period suggest some were), it is now not the arm of Pharaoh, but the arm of Yahweh, who has defeated Pharaoh, that poses a threat to them.

15:17-18. mountain of your inheritance. The combination of mountain, inheritance, dwelling and sanctuary suggests that Mount Zion (Jerusalem) is being referred to.

15:18. Yahweh as king. *Yahweh is not portrayed as a mythological king, a king of the gods who has subdued the cosmos and reigns over the subordinate gods of the pantheon. Rather he rules in the historical realm over his people, whom he has delivered by means of the forces of nature that he controls. This hymn does not exalt his defeat of other gods or of chaotic cosmic forces but his power over historical peoples.

15:20-21. prophetess. Miriam, here hailed as a prophetess and sister of Aaron (no mention of Moses), takes up the song. This is the only mention of Miriam by name in the book, and the only place she is referred to as a prophetess. The only other account that she is named in is the challenge to Moses' authority in Numbers 12. Other prominent prophetesses in the Old Testament include Deborah (Judg 4) and Huldah (2 Kings 22). There is no reason to think that it was odd for women to be found in this role. In fact, the prophetic texts from *Mari feature women in this role as often as men. It was also common for musical troupes to feature women. Music and prophecy also were associated, since music was commonly used to induce the trances from which prophetic utterances proceeded (1 Sam 10:5; 2 Kings 3:15).

15:22—17:7
God's Provision in the Wilderness

15:22-27. Desert of Shur. The wilderness of Shur is located in the northwest region of the Sinai peninsula. An east-west route runs through the region that connects Egypt to the King's Highway in Transjordan at Bozrah, or leads up into Palestine through Beersheba, but the Israelites did not take this route. Shur means "wall" in Hebrew, so it is possible that this term refers to the well-known Egyptian line of fortresses in this region. This is supported by Numbers 33:8, where it is called the wilderness of Etham (*etham* means "fort"). Built a few centuries earlier to protect the northeastern frontiers of Egypt, this series of garrisons was known as the Wall of the Ruler. This marked *Sinuhe's point of departure as he fled from Egypt in the *Story of Sinuhe.*

15:22. archaeological evidence in the Sinai. Although archaeological remains from the Bedouin population that has inhabited Sinai for ten thousand years have been found throughout the peninsula, archaeology has produced no evidence of the Israelites' passage through this region.

15:23. Marah. They traveled for three days before reaching Marah ("bitter"). If they crossed at Lake Balah, this would place them by what are well known today as the Bitter Lakes. If they crossed further south, Marah could be identified with an oasis called Bir Marah, where the water is saline with heavy mineral content.

15:25. wood turning water sweet. It is not uncommon for commentators to cite local traditions about a type of thorn bush native to the region that will absorb salinity, but no scientific investigation has provided identification or confirmed the existence of such a bush. In a later period Pliny reported that there was a type of barley that could neutralize saline content.

15:27. Elim oasis. The oasis at Elim with twelve springs and seventy palm trees is often identified as Wadi Gharandal, about sixty miles down the coast of the Gulf of Suez. It features tamarisks *(elim)* as well as palms and springs. It remains a major resting place for modern Bedouin. Closer to Marah is the site of Ayun Musa, just a few miles south of the tip of the Gulf of Suez. Besides having the appropriate groves of tamarisks and palms, it also features twelve springs and is probably to be preferred.

16:1-3. Desert of Sin. The Desert of Sin is an area in the west-central region of the peninsula. Here the main route moves inland five to ten miles for about the next seventy-five miles until it rejoins the coast at Abu Zenimah and the El Markha plain. This may be where they camped by the sea (Num 33:10-11). From there they moved east and northeast across the wilderness of Sin by way of the Wadi Ba'ba and

Rod el 'Air to the region of Serabit el-Khadim, which is likely where Dophkah was (Num 33:11).

16:1. time of journey. Thus far the journey has taken about a month (the Israelites came out the fifteenth day of the first month).

16:3. pots of meat. In their exaggerated recollection of the situation in Egypt they refer to large pots filled with meat—we might say "meat by the bucketload."

16:4-9. bread from heaven/manna. The bread from heaven was called "manna" in verse 31, where it is described (see also Num 11:7). The fact that it came with the dew (v. 4) suggests that God's miraculous provision used a natural process. The most frequent identification is with the secretion of small aphids that feed on the sap of tamarisk trees. When it hardens and falls to the ground, it can be collected and used for a sweetener. The problem is that this occurs only during certain seasons (May to July) and only where there are tamarisk trees. A full season would normally produce only about five hundred pounds, in contrast to the biblical account that has the people gathering about half a pound per person per day. Alternatively, some would favor the sweet liquid of the hammada plant, common in southern Sinai, which is used to sweeten cakes. As with the plagues, it is not necessarily the occurrence of this phenomenon that is unnatural but the timing and magnitude. Nevertheless, these natural explanations seem to fall far short of the biblical data. The comparison to what most translations identify as the seed of the coriander (rarely found in the desert) is more likely to refer to a wider generic category of desert plants with white seeds.

16:10-11. glory of the Lord in the cloud. "The glory of the LORD" refers to the brightness that was evidence of his presence. The concept of deity appearing in this way was not limited to Israelite theology, for in Mesopotamia the gods displayed their power through their *melammu*, their divine brilliance.

16:13. quail. Small, plump migratory quail often come through the Sinai on their way north from the Sudan to Europe, generally in the months of March and April. They generally fly with the wind and are driven to ground (or water) if caught in a crosswind. In their exhaustion it is not unusual for them to fly so low that they can be easily caught. Quail looking for a place to land and rest have been known to sink small boats, and in the Sinai they have been noted to cover the ground so densely that some landed on the tops of others.

16:14-36. omer. An omer is a daily ration of bread or grain and represents about two quarts.

16:20. spoilage. If manna is the secretion of aphids (see above on 16:4-9), ants are responsible for carrying it off each day once the temperature rises. They would also be the bugs that got into any additional manna the people tried to collect and save. The Hebrew word translated "maggots" can refer to any number of scale insects, but there is a different word for ants. Furthermore, the insect secretions are not subject to spoilage.

16:34. in front of the testimony. The testimony in verse 34 can only refer to the ark of the covenant, which has not been built at this point in the narrative. This appendix (vv. 31-36) is from the end of the wilderness wanderings (see v. 35), and therefore the manna sample was put in the ark later in the wilderness experience.

17:1. Rephidim. If the theory that Mount Sinai is toward the south of the peninsula is accepted, the journey to Rephidim begins the move inland to follow the most attractive route to the mountain. Wadi Refayid intersects Wadi Feiran a few miles north of the mountain and has been often identified as the site of Rephidim.

17:5-7. rock at Horeb. The location of this provision of water is identified with the rock at Horeb, but Horeb most likely refers to the region in the vicinity of Mount Sinai (Mount Horeb) rather than to a specific location.

17:6. water from rock. Sedimentary rock is known to feature pockets where water can collect just below the surface. If there is some seepage, one can see where these pockets exist and by breaking through the surface can release the collected water. Again, however, we are dealing with a quantity of water beyond what this explanation affords.

17:7. Massah and Meribah. Massah and Meribah do not represent new places but refer to this particular site at Rephidim.

17:8-15
The Attack of the Amalekites

17:8. Amalekites. The Amalekites, who were descended from Abraham through Esau (Gen 36:15), were a nomadic or seminomadic people who inhabited the general region of the Negev and the Sinai during the second half of the second millennium B.C.

17:11-12. battle signals. Signals were often used to deploy the various divisions in battle. It is possible that Moses used the staff in just such a way. When he was unable to relay divine guidance through the signals, the Israel-

ites were not able to succeed. Alternatively, it has been noticed that Egyptian texts speak of the uplifted arms of Pharaoh to bring protection as well as to signal the attack.

17:15. altar: "Lord my banner." The altar Moses builds is one of commemoration of the victory. The name given it, "Yahweh is my standard," reflects the theology of Yahweh as the leader of the armies of Israel. In the Egyptian army the divisions were named for various gods (e.g., the division of Amun, division of Seth) and the standards would identify the division by means of some representation of the god.

18:1-27

Jethro and Moses

18:1-2. priest of what god? Jethro is identified as a priest of Midian rather than as a priest of a particular deity. Little is known of which god or gods the Midianites of this period worshiped. Priests were not necessarily affiliated to only one god, and therefore Jethro's recognition of *Yahweh's superiority does not suggest he was a priest or worshiper of Yahweh. Priests serving a sanctuary would be viewed as servants of the god of that sanctuary, but even these individuals were not monotheistic, so they would acknowledge the power of other deities when manifested.

18:5. mountain of God. "Mountain of God" is used to describe Mount Sinai. At Rephidim they are in the general vicinity of Sinai, but this chapter probably records events that took place after they had set up camp at the foot of the mountain itself.

18:7. respectful greeting. Moses' greeting of Jethro follows standard practice. Bowing down is a greeting to one who is of higher social standing and is an act of respect. The kiss on the cheek is the greeting of friendship. This is the only recorded incident where both are performed.

18:9-12. Yahweh and the gods. Jethro's acknowledgment of the superiority of *Yahweh does not suggest that he was a worshiper of Yahweh or that he became a worshiper of Yahweh. The polytheism of the ancient world allowed for the recognition of the relative strengths of various deities and would expect each deity to be praised in superlative terms when there was evidence of his activity or displays of his power. Regardless of Jethro's religious persuasions, Yahweh was accomplishing his purpose that through his mighty acts "all the world will know that I am Yahweh."

18:12. sacrificial meal. Sacrifices in the ancient world were often opportunities for communal meals. Though communal meals were used to ratify formal agreements, they were also a part of offerings of thanksgiving, more suitable to this context. This is like a banquet with *Yahweh as the guest of honor.

18:13-27. Moses' seat. The seat of the judge is a designated seat of authority when the judge's "court" was "in session." In cities this seat was usually at the entrance to the gate. Jethro advises Moses to establish a hierarchical judiciary with Moses at the top, as a king would have been in a monarchy, and as a priest or family patriarch would have been in tribal societies. In this structure it is recognized that some disputes can be settled on point of law or by objective discretion (for information concerning the judiciary system in the ancient Near East, see comment on Deut 1:9-18). Such cases can be settled in the lower levels. In the absence of sufficient evidence in complex or serious cases, the matter was handled "prophetically"—that is, it was brought before God. This was where Moses' involvement was essential. It separates the "civil" aspects of the judiciary, in which Moses did not have to be involved, from the "religious" aspects. This system is not unlike that found in Egypt, where Pharaoh guaranteed justice but set up a system headed by the vizier, who was the "Prophet of Ma'at" (Ma'at is the goddess of truth and justice) and occupied the judgment chair. The establishment of this system formalized a sociological, if not political, role for Moses that moved Israel beyond being a purely tribal society to being a quasi-centralized government.

19:1-25

The Israelites at Mount Sinai

19:1-2. desert of Sinai. The Israelites reach the wilderness surrounding Sinai three months after leaving Egypt, though it is unclear whether "to the day" refers to the new moon or the full moon. Nevertheless, it is in the month of June. The location of Mount Sinai is far from certain, and at least a dozen different alternatives have been suggested. The three strongest contenders are Jebel Musa and Jebel Serbal in the south, and Jebel Sin Bishar in the north. Jebel Musa (7,486 feet) is in the cluster of mountains in central southern Sinai. As one of the highest peaks in the range it has enjoyed traditional support as far back as the fourth century A.D. It also features the er-Raha plain to its north that would have been suitable for the Israelite camp (providing about four hundred acres), though it lacks ready access to water. Jebel Serbal (6,791 feet) is about

twenty miles northwest of Jebel Musa and separated from the range so that it rises isolated above the Wadi Feiran. Its location near an oasis and on the main road passing through the region makes it an attractive choice, though the area available for the camp is much smaller than that at Jebel Musa. Some have favored a northern location, assuming that Moses' initial request of Pharaoh for a three-day pilgrimage (5:3) would take them to Mount Sinai. They also point out that a northern route is more directly linked to Kadesh Barnea and the vicinity of Moses' time in Midian.

19:4. carried on eagles' wings. Though the eagle cannot be ruled out, the bird named here is more usually taken to be the griffin vulture, with a wingspan of eight to ten feet. While Bible reference books often report how the eagle carries its young on its wings when they grow weary of flying, or catches them on their wings when they are fluttering in failure (see Deut 32:11), this behavior has been difficult for naturalists to confirm through observation. In fact most eagles and vultures do not take their first flight until they are three or four months old, at which time they are nearly full grown. Furthermore, observations by naturalists have consistently confirmed that the first flight is usually taken while the parents are away from the nest. Alternatively, if the metaphor here concerns a vulture, it may be political in nature. In Egypt the goddess Nekhbet is the vulture goddess who represented Upper Egypt and served as a protecting deity for Pharaoh and the land. Israel was protected in Egypt until Yahweh brought them to himself.

19:5-6. kingdom of priests. The phrase "treasured possession" uses a word common in other languages of the ancient Near East to describe accumulated assets, whether through division of spoils or inheritance from estate. That people can be so described is evident in a royal seal from *Alalakh, where the king identifies himself as the "treasured possession" of the god Hadad. Likewise in a *Ugaritic text the king of Ugarit's favored status as a vassal is noted by naming him a "treasured possession" of his *Hittite overlord. Additionally, the Israelites are identified as a "kingdom of priests," which identifies the nation as serving a priestly role among the nations, as intermediary between the peoples and God. Additionally there is a well-attested concept in the ancient Near East that a city or group of people may be freed from being subject to a king and placed in direct subjection to a deity. So Israel, freed from Egypt, is now given sacred status (see Is 61:5).

19:7. elders. The elders here are the clan leaders of Israel. Elders typically served as a ruling assembly overseeing the leadership of a village or community. They represent the people in accepting a *covenant arrangement, now a national agreement with commitment expected beyond the family covenant made with Abraham centuries earlier.

19:10-15. consecration. Consecration consisted of steps taken to make oneself ritually pure. This process primarily entailed washing and avoiding contact with objects that would render one unclean. The mountain was designated holy ground, so much so that even touching it would constitute desecration punishable by death. Stoning was the most common means of execution. In this way the entire community took responsibility for the penalty, though no single individual could be considered to have brought about the death of the criminal.

19:13. ram's horn. The ram's horn in verse 13 is referred to by a different word from that used for the shofar (trumpet) in verse 16, though it may be used for the same instrument. The shofar is capable of a variety of tones but cannot play a tune, so it is used primarily for signals either in worship or in warfare. The ram's horn was softened in hot water, bent and flattened to produce its distinctive shape.

20:1-17
The Ten Commandments

20:1-17. apodictic law. A number of collections of legal material have been found from ancient times, including *Sumerian, *Babylonian, *Hittite and *Assyrian collections. The most famous is the Code of *Hammurabi, dating from several hundred years earlier than Moses. These collections consist primarily of sample rulings in particular types of cases. As case law they present what penalties were assigned to a wide range of offenses, rather than indicating certain behavior to be right or wrong or telling people what they should or should not do. The type of law found in the Ten Commandments that prohibits or requires certain types of behavior is called *apodictic law and is rarely found in the legal collections of the ancient Near East.

20:1-17. Decalogue as covenant (not law). The Ten Commandments not only are connected to law but are also a part of the *covenant. The literary formulation of the covenant is quite similar to the formulations of international treaties in the ancient Near East. In the stipu-

lations of these treaties, one often finds certain behavior either required or prohibited. In this sense it could be understood that the *apodictic form of the Ten Commandments puts them more in the category of covenant than in the category of law.

20:3. first commandment. When the text says that there should be no other god "before me," it does not refer to others having a higher position than *Yahweh. The introduction in verse 2 has already indicated as a preexisting assumption that *Yahweh is their God. The phrase "before me" means "in my presence" and therefore prohibits other gods from being considered to be in the presence of Yahweh. This prohibits several concepts that were a standard part of ancient beliefs. Most religions of that day had a pantheon, a divine assembly that ruled the realm of the gods, the supernatural, and, ultimately, the human world. There would typically be a deity who was designated head of the pantheon, and he, like the other gods, would have at least one consort (female partner). This commandment forbids Israel to think in these terms. Yahweh is not the head of a pantheon, and he does not have a consort—there are no gods in his presence. The only divine assembly that is legitimate for their thinking is made up of angels (as in 1 Kings 22:19-20), not gods. This commandment also then effectively bans much mythology that deals with the interactions of the gods with one another.

20:4. second commandment. The second commandment concerns how *Yahweh is to be worshiped, for the idols that it prohibits are idols of him (the previous commandment already dismissed the thought of other gods). The commandment has nothing to do with art, though the graven images of the ancient world were indeed works of art. They were typically carved of wood and overlaid with hammered sheets of silver or gold, then clothed in the finest attire. But the prohibition is more concerned with how they are employed, and here the issue is power. Images of deity in the ancient Near East were where the deity became present in a special way, to the extent that the *cult statue became the god (when the god so favored his worshipers), even though it was not the only manifestation of the god. As a result of this linkage, spells, incantations and other magical acts could be performed on the image in order to threaten, bind or compel the deity. In contrast, other rites related to the image were intended to aid the deity or care for the deity. The images then represent a worldview, a concept of deity that was not consistent with how Yahweh had revealed himself. The commandment also prohibits images of anything in heaven, earth or under the earth. In contrast to Egypt, it was not the practice in Syria-Palestine to worship animals or to have gods in the form of animals. Nevertheless, there were animals that were believed to represent the attributes of deity, such as bulls and horses, that would be portrayed in art and sculpture to stand in the place of deity.

20:5-6. punishing third and fourth generations. Punishment to the third or fourth generation is not granted to human judges but to God. It expresses the fact that *covenant violation brings guilt on the entire family. The third and fourth generation is then a way to refer to all living members of the family. But there is also a contrast here in the loyalty that extends over thousands of generations as over against the punishment that extends only three or four.

20:6. corporate solidarity. In the ancient Near East a person found his or her identity within a group such as the clan or family. Integration and interdependence were important values, and the group was bound together as a unit. As a result, individual behavior would not be viewed in isolation from the group. When there was sin in a family, all members shared the responsibility. This concept is known as *corporate identity.

20:7. third commandment. As the second commandment concerned the issue of exercising power over God, the third turns its attention to exercising God's power over others. This commandment does not refer to blasphemy or foul language. Rather it is intended to prevent the exploitation of the name of Yahweh for magical purposes or hexing. It also continues the concerns of the second commandment in that someone's name was believed to be intimately connected to that person's being and essence. The giving of one's name was an act of favor, trust and, in human terms, vulnerability. Israel was not to attempt to use Yahweh's name in magical ways to manipulate him. The commandment was also intended to insure that the use of Yahweh's name in oaths, vows and treaties was taken seriously.

20:8-11. fourth commandment. Sabbath observation has no known parallel in any of the cultures of the ancient Near East and is distinctive in that it is independent of any of the patterns or rhythms of nature. A similar term was used in *Babylonian texts as a full moon day when the king officiated at rites of reconciliation with deity, but it was not a work-free day and has little in common with the Israelite

sabbath. The legislation does not require rest as much as it stipulates cessation, interrupting the normal activities of one's occupation.

20:12. fifth commandment. Honoring and respecting parents consists of respecting their instruction in the *covenant. This assumes that a religious heritage is being passed on. The home was seen as an important and necessary link for the covenant instruction of each successive generation. Honor is given to them as representatives of God's authority for the sake of covenant preservation. If parents are not heeded or their authority is repudiated, the covenant is in jeopardy. In this connection, notice that this commandment comes with covenant promise: living long in the land. In the ancient Near East it is not the religious heritage but the fabric of society that is threatened when there is no respect for parental authority and filial obligations are neglected. Violations would include striking parents, cursing parents, neglecting the care of elderly parents and failing to provide adequate burial.

20:12-17. commandments and community. Commandments five to nine all deal with issues of *covenant in community. They affect the transmission of the covenant in the community and the standing of individuals within the covenant community. Injunctions concern those things that would jeopardize the covenant's continuity from generation to generation or that would jeopardize the family line or reputation. The covenant must be passed on in the family, and the family must be preserved. In the ancient Near East the concerns were similar, but the focus on preservation of the community was viewed more in social and civil terms. Lists of ethical violations are found in Egypt in the Book of the Dead, where the individual denies that he has committed any of a long list of crimes. In Mesopotamia the incantation series known as *Shurpu* contains a list of crimes the individual confesses to in order to absolve himself of unknown offenses and thus appease an angry deity. But in neither of these works are these actions prohibited. They also include a wide range of other types of offenses.

20:13. sixth commandment. The word used here is not technically restricted to murder, but it does assume a person as both subject and object. It has been observed that it is used only in the context of homicide (whether accidental or intentional, premeditated or not, judicial, political or otherwise) within the *covenant community. Because of the nature of the term used, this verse cannot easily be brought into discussions of pacifism, capital punishments or vegetarianism. Some law collections of the ancient Near East do not treat murder, while in others the punishment only entails monetary compensation. Nevertheless the murderer still ran the risk of being targeted for execution by the victim's family in a blood feud.

20:14. seventh commandment. The purpose of the legislation was to protect the husband's name by assuring him that his children would be his own. The law does not insure marital fidelity; its focus is paternity, not sexual ethics. The integrity of the family is protected rather than the integrity of the marriage. If a married man had an affair with an unmarried woman, it was not considered adultery. The offender had to pay damages to the father (22:16-17). This is a natural result of a polygamous society. Promiscuous behavior is not acceptable (Deut 22:21; 23:2), but it is not called adultery if the woman is not married. In the Bible the wife is an extension of the husband, and his name is damaged through adultery. In other cultures the wife was considered property, and this would merely have been a case of damaged goods. Nonetheless, in Egypt (marriage contracts), Mesopotamia (hymns to Ninurta and Shamash) and Canaan (king of *Ugarit extradites and executes his wife), adultery was regularly referred to as "the great sin" and was considered extremely detrimental to society in that it was characteristic of anarchy. *Hittite laws, Middle *Assyrian laws and the Code of *Hammurabi all contain legislation against adultery. The protection of the integrity of the family unit was important because the family was the foundation of society. Compromise or collapse of the family meant compromise or collapse of society.

20:15. eighth commandment. Property theft is prevented by the tenth commandment one step before the act. Though the verb used here in the eighth commandment can be used of stealing property, the command is much broader in its focus. Issues such as kidnapping (cf. Deut 24:7) as well as stealing intangibles (dignity, self-respect, freedom, rights) are all important. The word is also used for stealing in the sense of cheating—by cheating someone out of something, you are stealing from him.

20:16. ninth commandment. The terminology indicates the main focus is on formal slander and libel and is concerned primarily with the legal setting. The maintenance of justice was dependent on the reliability of the witness. Nevertheless, character assassination in any of its forms, legal or casual, would constitute false witness and would

be a violation of this commandment.

20:17. tenth commandment. In the ancient Near East the concept of coveting occurs in expressions such as "to lift the eyes"—but it is a crime that can be detected and punished only when the desire is translated into action. Ancient Near Eastern literature shows that offenses such as theft and adultery can be described generally in terms of the desire that triggered the chain of events. Whatever action it spawns, this illegitimate desire for something that belongs to someone else is the core of the problem and a threat to the community; any action taken to fulfil such a desire is sin.

20:18. thunder and lightning. Thunder and lightning were considered to regularly accompany the presence of a deity in the ancient Near East, though that is often in a battle setting, not a revelation setting, since the gods of the ancient Near East were not accustomed to revealing themselves.

20:24-26

Altars

20:24. altar of earth. Some altars of this period were made of mud bricks, and that is perhaps what the text refers to when it speaks of altars of earth. Another possibility is that it refers to altars that had outer walls of stone but were filled with earth. No altars in the Bible are said to have been built of earth, and no altars of earth have been found by archaeologists.

20:25. altar of stones. Stones, if used, were not to be hewn. Unhewn stone was used for the Israelite altar uncovered by archaeologists at Arad, though altars at sites such as Dan and Beersheba feature ashlar masonry (a type of worked stone).

20:26. priestly modesty. Ritual nudity was widespread in the ancient Near East, whereas here every precaution is taken to assure modesty. Early Canaanite altars with steps are known from sites such as Megiddo. Israelite law also preserved modesty by legislating longer tunics and prescribing undergarments for the priests.

21:1—23:19

The Book of the Covenant

21:1—23:19. casuistic law. The principal form of law found throughout the ancient Near East was case or *casuistic law. It is characterized by an "if . . . then" clause, which is based on the idea of cause and effect. In the Israelite law codes, case law assumes the equality of all citizens, and thus punishment for crime is not hindered or magnified by class or wealth. This is not the case, however, in ancient Mesopotamia, where in *Hammurabi's code (c. 1750 B.C.) different degrees of punishments (from fines to execution) were prescribed for slaves, citizens and members of the nobility. Case law can be traced in its origins to *apodictic (command) laws, such as those found in the Ten Commandments. As persons committed crimes under varying circumstances, it became necessary to go beyond the simple statute "Do not steal" to take into account such things as time of day and the value of what had been stolen.

21:1—23:19. nature of the book of the covenant. The law code found in Exodus 21—23 is referred to as the "book of the *covenant" and is probably the oldest example of *casuistic law in the Bible. It deals with a wide variety of legal situations (slavery, theft, adultery) and tends to impose fairly harsh sentences (nine require execution), many of which are based on the principle of lex talionis, "an eye for an eye." The laws anticipate the range of life situations that would be faced in the village culture of the settlement and early monarchy period. They regulate business, marriage practice and personal responsibility. Their tone is less theological than the law collections in Leviticus and Deuteronomy.

21:2. Hebrew. The term *Hebrew* is used to designate an Israelite who has become landless and destitute. Although this person may be forced to sell himself or his family into debt slavery, he retains his rights as a member of the community and cannot be held in perpetual servitude. He is to be released, debt-free, after six years of labor.

21:2-6. debt slavery. Because of the fragile nature of the environment in much of the ancient Near East, farmers and small landowners often found themselves in debt. Their problems could magnify if a drought and resulting poor harvests continued over more than one year, and they could be forced to sell their land and property and eventually even their family and themselves. Israelite law takes this situation into account by providing a fair period of labor service to the creditor as well as a time limit on servitude for the debt slave. No one could serve more than six years, and when they were freed they went out debt-free. This would have been a good solution for some, but without their land to return to, many may have chosen to remain in the service of their creditor or to move to the cities to find jobs or join the military.

21:2-6. slave laws compared to ancient Near East. Israelite slave laws tend to be more hu-

mane than those found elsewhere in the ancient Near East. For instance, no slave could be kept in perpetual servitude without the permission of the slave. Escaped slaves did not have to be returned to their masters. In Mesopotamia a slave (generally obtained through warfare) could be freed by his master or he could purchase his freedom. Hammurabi's laws set a time limit of three years on a debt slave, compared to six years in Exodus 21:2. Slaves were not given equal rights, and their punishment for injuring a free man was much more severe than if a free man injured him.

21:5-6. ear pierced on doorpost. Entrance ways are sacred and legally significant spots. When a slave chose to remain in slavery in order to preserve a family that he had established while in servitude, it would be appropriate to bring him to his master's doorway and then symbolically attach the slave to that place by driving an awl through his earlobe into the doorpost. It is possible that a ring was then placed on the ear to mark him as a perpetual slave.

21:7-11. sale of daughter into slavery. When a daughter was sold into slavery by her father, this was intended both as a payment of debt and as a way of obtaining a husband for her without a dowry. She has more rights than a male in the sense that she can be freed from slavery if her master does not provide her with food, clothing and marital rights. Selling children into slavery is attested across Mesopotamia in nearly every time period.

21:10. minimum provision. Since perpetual slavery was generally reserved for foreigners and prisoners of war, those persons who sold themselves into slavery because of debt were protected by law from being abused by their creditors. The law determines that six years is sufficient to pay off any debts and that the debt slave is to be released in the seventh year (a clear parallel with the seven-day creation cycle). *Hammurabi's law requires that a debt slave be released after three years of service, thus providing a Mesopotamian precedent for this procedure.

21:10-11. wife's provisions. Provision for a woman in one's charge throughout the ancient Near East consisted of food, clothing and oil. The third in the series here (NIV: "marital rights") is an attempt to translate a word that occurs only here in the Old Testament. The frequent occurrence of "oil" in that position in numerous ancient Near Eastern documents has led some to suspect that the word in the Hebrew text might also be an obscure term for oil (compare Hos 2:7; Eccles 9:7-9).

21:12. capital punishment. Capital punishment is required in those cases where the culprit is a threat to the well-being and the safety of the community. Thus murder, disrespect for parents (abuse), adultery and false worship are capital crimes, because they injure persons and corrupt the fabric of society. The principle involved assumes that leniency would encourage others to commit these crimes. Stoning is the usual form of execution. In this way no one person is responsible for the culprit's death, but the entire community has participated in the elimination of evil.

21:13. place of sanctuary. In those instances where unintentional homicide is committed, the person involved is given a chance to claim sanctuary in an appointed place, usually an altar or a shrine (see Num 35:12; Deut 4:41-43; 19:1-13; Josh 20). This protects him from the deceased's family and gives the authorities time to hear witnesses and make a judgment. The continued grant of sanctuary would then depend on whether the killing was judged a murder or an accidental death. Eventually, the number of places of sanctuary had to be increased as the size of the nation grew.

21:15, 17. cursing parents. Contrary to the NIV translation, studies have demonstrated that the infraction here is not cursing but treating with contempt. This is a more general category and would certainly include the prohibition of 21:15 that forbids striking a parent and would be the opposite of the fifth commandment to "honor your father and your mother" (20:12). Each injunction is designed to protect the cohesion of the family unit as well as insure that each subsequent generation provide their parents with the respect, food and protection they deserve (see Deut 21:18-21). Mesopotamian law codes and legal documents are also clear on the issue of treating parents with contempt. The *Sumerian laws allow a son who disowns his parents to be sold as a slave. *Hammurabi requires the amputation of the hand of a man who strikes his father. A will from *Ugarit describes a son's behavior using the same verb used in this verse and stipulates disinheritance.

21:16. kidnapping (slave trade). Kidnapping occasionally occurred because of the failure to pay a debt, but more often it was simply a part of the illicit slave trade. Mesopotamian and biblical law both require the death penalty for this crime. Such a harsh penalty reflects concern for individual freedom as well as protection against the raiding of weak households.

21:18-19. personal injury laws compared to ancient Near East. Liability for personal injury done as a result of a quarrel and not due to

premeditated action is similar in the Bible and the codes of the ancient Near East. In both cases the injured party is entitled to compensation for medical expenses. There are some additions to this provision in each of the codes. The Exodus passage hinges on whether the injured person recovers enough to walk without a staff. *Hammurabi deals with the subsequent death of the injured person and the fine to be paid, based on social status. The *Hittite code requires that a man be sent to manage the injured person's house until he recovers.

21:20-21. human rights (slave as property). The basic human right to life means that no death can go unpunished. Thus when a slave's owner beats him to death, an unspecified penalty is imposed. Such an assurance of punishment is designed to prevent such extreme abuse. However, there is no penalty if the slave recovers from his beating. The assumption is that the owner has the right to discipline his slaves, since they are his property. Their human rights are restricted, in this respect, because of their status.

21:22. miscarriage. Several ancient law codes include this statute penalizing a man for causing a woman to have a miscarriage. The variation between them generally depends on the status of the woman (*Hammurabi's laws indicate a small fine for injuring a slave woman; *Middle Assyrian laws specify a large fine, fifty lashes and a month's labor service for injuring a citizen's daughter), or the intent behind the injury (*Sumerian laws prescribe a fine for accidental injury and impose a much larger fine for deliberate injury). The Exodus law hinges on whether there is any further harm to the mother beyond the loss of the fetus and imposes a fine based on the claim of the husband and the pronouncement of the judges. The object of the fine is to compensate for the injury to the mother rather than the death of the fetus. However, Middle Assyrian law demands compensation for the death of the fetus with another life.

21:23-25. lex talionis. The legal principle of lex talionis, "an eye for an eye," is based on the idea of reciprocity and appropriate retaliation (see Lev 24:10-20). Ideally, when an injury is done to another person, the way to provide true justice is to cause an equal injury to the culprit. Although this may seem extreme, it in fact limits the punishment which can be inflicted on the person accused of the injury. It cannot exceed the damage done. Since most personal liability laws involve the payment of a fine rather than a retaliatory body injury, it is most likely that the talion statement is a designated limit on compensation, with a value assigned to each item injured (see the laws of *Eshnunna, which set fines for the nose, finger, hand and foot). The talion is also found in its basic form in *Hammurabi's code 196-97, but the laws following that section contain variations based on the social status (free or slave or member of nobility) of the persons involved. In most cases the talion is applied when there is premeditated intent to do harm.

21:22-36. personal liability. There is a great emphasis placed on personal liability in the ancient Near East. In order to protect the person and that person's ability to work, very detailed statutes are written to deal with every conceivable injury done by human hand or by a person's property. The classic example is the case of the goring ox. In addition to Exodus, it is found in the laws of *Eshnunna and *Hammurabi, where the penalty for allowing a known gorer to run loose is a fine. The biblical example, however, requires that both the ox and his owner be stoned to death. Similar laws involving failure of an owner to deal with a known danger, include vicious dogs (Eshnunna), building code violations (Eshnunna; Ex 21:33-34), and injury to valuable animals by another animal or a human (*Lipit-Ishtar; Hammurabi—veterinary malpractice). Generally, these crimes are punishable by fines based on the degree of injury and the value of person or animal injured.

21:26-36. penalties for personal liability. The penalties imposed in cases of personal liability generally depend on who or what was injured. If a slave owner abuses his slaves to the point that he mutilates them—destroying an eye or knocking out a tooth—then the slave is freed in compensation. In cases where a death occurs, the circumstances decide the punishment. If an owner is aware of a dangerous situation and fails to do anything, then his life is forfeited if someone is killed due to his negligence. Similarly, if valuable animals are harmed or destroyed, then the owner who is responsible must provide equal compensation. There is latitude in the law, however, in cases where an owner is unaware of a potential danger and is thus not fully responsible for loss or injury.

22:1-4. theft in the ancient Near East. Theft can be defined as appropriation of goods or real property without legal consent. The number and specificity of the laws regarding theft in the ancient Near East suggest that it was a real problem. There are cases of burglary (22:2-3; *Hammurabi), robbery (Hammurabi), looting during a fire (Hammurabi), and use of property or natural resources without permis-

sion (e.g., illegal grazing in 22:5 and Hammurabi). The "paperwork-oriented" Mesopotamian culture placed a great deal of importance on contracts, bills of sale and the corroboration of witnesses to the sale (Hammurabi). These business practices, which were designed to prevent fraud, are also mentioned in the biblical text, but more often in narrative (Gen 23:16; Jer 32:8-15) than in the law codes. There are also instances where an oath is taken in cases where physical evidence is unavailable or responsibility for loss is uncertain (22:10-13; Hammurabi). In this way, God is solicited as a witness and the person taking the oath is laying himself open to divine justice.

22:1-4. penalties for theft. Prescribed punishments for theft vary based on the identity of the owner and the value of the property stolen. In *Hammurabi's laws the death penalty is required for persons who steal from the temple or the palace. However, this is reduced to a fine of thirty times the value of the property stolen if the victim is a government or temple official and ten times the value for property of a citizen. This same law imposes the death penalty for a thief who fails to pay the fine. Exodus 22:3 tempers this by having the thief sold as a slave to compensate for the loss. These penalties, with their heavy fines or death sentences, suggest how seriously the society took this crime.

22:2-3. burglary. It is assumed that people have a right to defend themselves and their property from theft. Thus when a burglar enters a house at night and is killed by the homeowner, this is considered a case of self-defense (for instance in *Ur-Nammu's laws). That changes, however, if the break-in occurs during the day, because the homeowner could more clearly see the degree of threat and could call for help. *Hammurabi's laws add a symbolic deterrent to its burglary injunction by having the body of an executed burglar walled up in the hole he had dug in the mud-brick wall of his intended victim.

22:5-15. property liability. In most cases, liability for property damage or loss was based on circumstances or contracts. Restitution was generally based on the loss of real property (animals, grain, fruit) or the loss of productivity, if fields or orchards were damaged or taken out of production. There was also a clear sense of responsibility in cases based on negligence. Examples include the unchecked spread of fire, rampaging animals or the failure to maintain dams or irrigation systems. In each of these cases the person who allowed dangerous defects to persist or who did not keep a rein on the movement of his animals was required to pay restitution for any loses incurred (as in *Hammurabi and *Ur-Nammu). Not all loss was covered, however. In some cases, claims for loss were dismissed due to unforeseeable events or because they were included in rental agreements (22:13, 15).

22:5-15. penalties for property liability. Since loss of or damage to property can be computed in real terms, penalties in cases involving property liability were designed to provide just restitution of monetary value. According to the biblical statutes, this would sometimes be left up to the judges to determine. In other cases a set amount of double the value of the lost item is imposed. There is more specificity in the Mesopotamian codes, where the exact nature of the damage to a rental animal is listed with the appropriate compensation (as in *Lipit-Ishtar) and the exact amount of grain per acre in a flooded field is prescribed (*Hammurabi).

22:16. marriage pledge. Families negotiated marriage contracts that provided a bride price from the groom's family and a dowry from the bride's household. Once the couple was betrothed or pledged to each other, they were considered legally bound to the contract. Thus the penalty for rape depended on whether the woman was (1) a virgin and (2) pledged to be married.

22:16-17. bride price. The groom's household paid the bride price as part of the marriage agreement. This price would vary based on whether the woman was a virgin or had been married before. In this case the price for a virgin is required even though she has been raped.

22:16-17. premarital sex perspective. Premarital sex was discouraged for several reasons: (1) it usurped the authority of the father to arrange the marriage contract, (2) it diminished the potential value of the bride price, and (3) it prevented the husband from being assured that his first child was indeed his offspring. This law regulated illicit premarital sex by imposing a forced marriage on the culprit and/or a fine equal to the bride price for a virgin. In this way the father would be spared the embarrassment and loss of revenue when negotiating a contract for a daughter who is no longer a virgin.

22:18. sorceress. Practitioners of magic were outlawed on pain of death within the Israelite community (see Lev 19:31; 20:27). Each law concerning them is in *apodictic or command form. This total intolerance may be due to their association with Canaanite religion or simply because their arts represented a challenge to God's supremacy over creation.

22:19. bestiality. Also written in command form are the laws forbidding sexual relations with animals (see Lev 21:15-16; Deut 17:21). Bestiality, like homosexuality, violates the basic injunction to be fruitful and multiply (Gen 1:28; 9:1). It also blurs the categories of creation by intermixing species. Such acts are also forbidden in the *Hittite laws.

22:21. vulnerability of aliens. The injunction to protect the "alien" is always based on the remembrance of the exodus and the alien status of the Israelites before they settled in Palestine (see Deut 24:17-22). It is also based on the image of God as the ultimate protector of the weak—whether that be the entire nation or the most vulnerable members of society. Humane treatment of aliens follows the spirit of the hospitality code, but it also recognizes a class of persons who are not citizens and who could be subject to discrimination or abuse if special provision were not made for them.

22:22-24. vulnerability of orphans. Orphans, aliens and widows formed the three classes of powerless persons in ancient society. God took special care of these people because of their basic vulnerability, requiring that they not be oppressed and cursing those who did oppress with the threat of becoming orphans themselves. The frequency of war, famine and disease insured that there would always be a large number of orphans. Although they could contribute to the general work force, they would have had to be adopted for them to inherit property or to learn a skill as an apprentice (as in *Hammurabi's laws).

22:22-24. vulnerability of widows. Like aliens and orphans, widows were often dependent on charity for survival. All three groups needed protection under the law because they were powerless to protect themselves. They were allowed to glean in fields, orchards and vineyards (Deut 24:19-21), and they retained their dignity as a protected class through divine statute. They could not inherit their husband's property, and their dowry would have been used to support their children (as in *Hammurabi's laws). In some cases they were owed levirate obligation by their deceased husband's family (see Deut 25:5-10; *Hittite laws), but otherwise they would be forced to seek employment or attempt to arrange a new marriage (see Ruth).

22:22-24. treatment of vulnerable classes. Based on the statements in the prologues of the *Ur-Nammu code and the Code of *Hammurabi, it is clear that kings considered it part of their role as "wise rulers" to protect the rights of the poor, the widow and the orphan. Similarly, in the Egyptian *Tale of the Eloquent Peasant,* the plaintiff begins by identifying his judge as "the father of the orphan, the husband of the widow." Individual statutes (seen in several Middle *Assyrian laws) protect a widow's right to remarry and provide for her when her husband is taken prisoner and presumed dead. In this way the vulnerable classes are provided for throughout the ancient Near East. Only the "alien" is not specifically mentioned outside the Bible. This is not to say that hospitality codes did not apply elsewhere, but this category is tied in the Bible to the unique exodus experience.

22:25. charging interest. Two principles are evident in the restriction on charging interest on loans: (1) a village-based, agricultural people realize they must depend on each other to survive, and (2) interest payments are a phenomenon of the city-based merchants with whom farmers sometimes had to deal and who were not concerned with the village community (see Hos 12:7-8). Thus to maintain their sense of the equality of all Israelites and to prevent growing antagonism between rural and urban citizens (see Neh 5:7, 10-11 and Ezek 22:12 for violations of the law), charging interest of Israelites had to be outlawed (see Lev 25:35-38; Deut 23:19). Only loans to non-Israelites could accrue interest (Deut 23:20). This stands in contrast to the more familiar business practices employed elsewhere and to the systematic listing of interest that can be charged on loans in the laws of *Eshnunna and *Hammurabi.

22:25. moneylending practices. Just as is the case today, farmers, craftsmen and businessmen borrowed amounts from moneylenders to finance the next year's planting, an expanded working area or a new business venture. All of these loans were made at interest, and, if the law codes are to be taken as community standards, the interest rates were set by law. The laws of *Eshnunna provide technical details on the rate of exchange on interest payments in either barley or silver. The produce of a field could be given as collateral on a loan (*Hammurabi), but if a natural disaster occurred, provision was made to cancel interest payments (Hammurabi). To prevent fraudulent practices, moneylenders were not allowed to harvest fields or orchards to claim what was owed to them. Instead the owner did the harvesting and thus insured that only the proper amount was paid; interest could not exceed 20 percent (Hammurabi).

22:26-27. cloak as pledge. Day laborers regularly pledged their garment as collateral against a full day's work. In many cases it was their only extra covering besides their loin-

cloth. Thus the law requires it to be returned at the end of the day so that they are not left without protection against the night's chill (see Deut 24:12-13; Amos 2:8). If it were not returned to them, they would have to give up their free status and sell themselves as slaves. A late-seventh-century B.C. Hebrew inscription from Yavneh-Yam contains a plea by a field worker that his garment had been unjustly taken. He asks that his rights and his free status be returned to him along with the robe.

22:28. blasphemy of God or ruler. The Hebrew here allows for a translation of either "God" or "the judges," neither of whom should be ignored or slighted. Both judges and rulers (a chieftain was elected by the elders and certified in the position by God prior to the monarchy) were to be respected. Failure to do so cast doubt on the authority of the elders and God to chose a ruler and thus was punishable by death (see 2 Sam 19:9; 1 Kings 21:10). Blasphemy, the rejection of God's divine presence and power, is also a capital offense (Lev 24:15-16).

22:29. offerings from granaries. Cities stored the harvest in huge, stone-lined granary pits, and villagers had smaller versions cut out of the native limestone near their houses. A portion of every harvest was to be set aside as an offering to God. This injunction reminds the people to provide that offering before they filled and sealed their storage containers.

22:29. sacrifice of firstborn. The common belief was that fertility could be assured only if the firstborn of the flock and of every family was sacrificed to God (see 13:2; Lev 27:26). Israelite religion forbade human sacrifice, substituting an animal in place of the child (see Gen 22), and the service of the Levites in place of the dedicated firstborn (Num 3:12-13).

22:30. eighth day. The requirement that animals not be taken from their mothers and sacrificed until the eighth day after birth (see Lev 22:27) may be (1) a parallel with the *circumcision of sons on the eighth day (Gen 17:12), (2) a sign of humane treatment of animals or (3) an attempt to key sacrifice to the completion of a seven-day creation cycle.

22:31. meat from dead animal. As a sign that they are "set apart" as a people of God, the Israelites are restricted from eating food which may ritually contaminate them. Thus an animal that has been killed by other beasts may not be eaten because of the contact of the flesh with predators, which may be impure, and the uncertainty that its blood has been completely drained (see Lev 17:15).

22:31. dogs. Packs of feral dogs are often associated with eating carrion (Ps 59:6; 1 Kings 14:11). They scavenged in the streets and in the refuge piles on the outskirts of towns and villages. Dogs are often identified as impure, and the word is used in taunting an enemy or taking an oath (1 Sam 17:43; 2 Sam 16:9).

23:1-9. preserving integrity in justice system. Any justice system is subject to abuse when its officials are corrupt. To preserve the integrity of the legal process in Israel, judges are admonished to provide equal justice to all, not execute judgment on the guiltless and not take bribes. Witnesses are warned against giving false testimony and thus contributing to the conviction of the innocent. All Israelites are reminded of their responsibility to help their neighbor and to treat the alien with hospitality and fairness. In this way persons will feel confident in speaking to judges and can be assured of getting a fair hearing. Additionally everyone can rest easier knowing that their person and their property are the concern of all citizens.

23:1-9. vulnerability of the poor in ancient Near East. Because most cultures of the ancient Near East were class conscious, the poor were not always treated with the same equity as the rich and powerful. *Hammurabi did describe himself as a "devout, god-fearing prince" who brought justice to the land and protected the weak, but there are sufficient suggestions of abuse in the law codes and in wisdom literature to suggest that all was not well. The Egyptian *Teachings of Amenemope* includes admonitions against stealing from the poor, cheating the cripple and poaching on a widow's field. The speech of the "eloquent peasant" (Middle Kingdom Egypt, 2134-1786 B.C.) reminds a magistrate that he is to be a father to the orphan and a husband to the widow.

23:8. bribes in ancient world. Bribes include any income which is acquired by government officials and judges through illegal means. They are generally received in support of a legal claim and are designed to influence the decision on that claim. Because this is a subversion of justice, this practice is universally and officially condemned in the ancient world. The Code of *Hammurabi disbars a judge who changes a sealed judgment, and Hammurabi's royal correspondence refers to the punishment of an official who received a bribe. The biblical text includes legal prohibitions (23:8; Deut 16:19), and bribery of judges is condemned in the prophets (Is 1:23; Mic 3:11).

23:10-11. fallow year. Leaving the land fallow in the seventh year follows the pattern of the

creation story and God's rest on the seventh day. It is likely that Israelite farmers set aside as fallow one-seventh of their fields each year rather than leaving all of their land fallow for an entire year. In Mesopotamia fields were left fallow even more frequently to limit the impact of the salt in the water used for irrigation. The practice also helps to prevent exhaustion of the nutrients in the soil. The social welfare aspect of the law (more directly explained in Lev 25:1-7, 18-22; see comments there) provides one more expression of concern for the poor.

23:13. invoking the names of other gods. In making sacrifices and participating in everyday activities like plowing or building a house, it was common practice in the ancient Near East to invoke the name of a god to bless their actions. To prevent the Israelites from practicing polytheism, it was necessary to ban the use of the names of other gods or to acknowledge their existence (see 20:3). Only Yahweh could be called upon for help and blessing.

23:15. Feast of Unleavened Bread. The Feast of Unleavened Bread signals the beginning of the barley harvest (March-April). Unleavened bread was made from the newly harvested grain and celebrated as the first sign of coming harvests that year. What was probably originally a Canaanite agricultural celebration was associated with the exodus and the Passover festival by the Israelites.

23:16. Feast of Harvest. This second of the three harvest festivals comes seven weeks after the harvest of the early grain (34:22; Deut 16:9-12) and is better known as the Feast of Weeks or Pentecost. In the agricultural cycle it marks the end of the wheat harvest season, and by tradition it is tied to the giving of the law on Mount Sinai. It is also associated with *covenant renewal and pilgrimage. Celebration includes the bringing of a "wave offering" of two loaves of bread and a basket of ripe fruit in thanksgiving for a good harvest.

23:16. Feast of Ingathering. The final harvest of the year occurred in the autumn prior to the onset of the rainy season and marked the beginning of a new agricultural year. At this time the last of the ripening grain and fruits were gathered and stored. The seven-day event is also known as the Feast of Tabernacles and is symbolized by the construction of booths for the harvesters. The festival was tied into Israelite tradition as a commemoration of the wilderness wanderings. It was also the occasion for the dedication of Solomon's temple in Jerusalem (1 Kings 8:65).

23:17. pilgrimage obligation. The requirement that all Israelite families (see Deut 16:11, 14) appear before God at the temple three times a year is tied to the agricultural calendar and the three major harvest festivals: Feast of Unleavened Bread, Feast of Harvest and Feast of Ingathering. This religious obligation would have been the occasion for fairs, the adjudication of legal disputes, the contracting of marriages and the rites of purification for those who had been physically or spiritually contaminated.

23:18. no yeast mixed in blood sacrifice. Yeast and leavened dough were strictly prohibited from use in animal sacrifice. This is based on the association of yeast with the process of corruption. Sacrificial blood, associated with life, might therefore be debased or corrupted if brought into contact with leaven.

23:18. handling of fat. The fatty portions of the animal sacrifice which were attached to the stomach and intestines were reserved for God's portion (29:12-13; Lev 3:16-17). They were not to be saved or put aside for the night, because they, like blood, contained the essence of life.

23:19. first fruits. The first produce of the harvest, associated with the Feast of Harvest, was to be brought to God as a sacrifice. This represented both thanksgiving as well as a symbolic portion of what was to come in the autumnal harvest (see Deut 26:2-11).

23:19. goat in mother's milk. The prohibition against cooking a young goat (perhaps symbolic of all young animals) in its mother's milk has been interpreted as a reaction against Canaanite or other foreign religious practices (see 34:26 and Deut 14:21). The regular birth of goats near the Feast of Ingathering and their inclusion in celebratory meals may be the basis of this law. It may also be based on an injunction to treat animals humanely, since an animal still nursing may have mother's milk in its stomach. There is also the consideration that mother's milk contains blood and would therefore corrupt either sacrificial meat or meals.

23:20-33
Bringing Israel to the Land

23:20. angel preparing way. The promise of an angel preparing the way for the people follows the narrative pattern of divine presence and guidance that is first set by the pillar of cloud and the pillar of fire in the exodus event (13:21-22).

23:21. my Name is in him. The "messenger" or angel sent by God is an extension of God himself, representing a continuous presence

with the people of Israel. Since names and naming (see Gen 2:19; 17:5) were considered powerful in the ancient world (see 9:16; Lev 19:12), to say that Yahweh has invested his Name in this angel is to say that it is to be obeyed just as God is to be obeyed. All of God's presence and power is to be found in this messenger. He is to be trusted to do what God has promised.

23:23. peoples of Canaan. The list of peoples who inhabit Canaan is representative of the diverse ethnic character of that area. Because Canaan serves as a land bridge between Mesopotamia and Egypt, it has always attracted settlers from many different groups.

23:24. sacred stones. Among the objects that were erected at cultic sites in Canaan were altars, sacred poles and sacred stones. The latter were huge standing stones that represented the power of a local god. They occur alone as well as in groups.

23:28. hornet. The term which is translated "hornet" (see Deut 7:20; Josh 24:12) may be a form of divine "terror" like the plagues in Egypt. Egyptian and *Assyrian texts and reliefs portray the god as a winged disk terrifying the enemy before the arrival of their own armies. It may also be a pun based on its similarity to the word for Egypt *(zirah* and *mizraim)* and thus reflect Yahweh's use of Egyptian military campaigns in Canaan that weakened the area and made the Israelite settlement possible.

23:31. borders of the land. The limits of the Promised Land are set at the Red Sea (Gulf of Aqaba) or the border of Egypt to the southwest, the coast of the Mediterranean Sea on the west, and the Euphrates River and Mesopotamia on the east. At no time, even during Solomon's reign, did the nation actually include this much territory. However, given an ideal image, which includes all of the land between the two superpowers of the time, these borders are logical.

24:1-18

Ratification of Covenant

24:1. seventy elders. These men are the appointed representatives of the tribes. Their place here with Moses, Aaron and Aaron's sons is as *covenantal representatives. Their voice, like their number (seventy), stands for the nation as a whole accepting the covenant.

24:4. writing. Evidence of writing systems does not appear until about 3100 B.C. in the ancient Near East. Both Egyptian hieroglyphic and Mesopotamian *cuneiform scripts were syllabic and complex, thus creating the need for professional scribes who would read and write for the illiterate majority. The earliest examples of alphabetic script in the world are found in the region of Sinai (Serabit el-Khadim) during the mid-second millennium (these inscriptions are designated proto-Sinaitic; the Canaanite counterparts are called proto-Canaanite). Every alphabet in the world derives from this early script. The invention of alphabetic writing dramatically increased the literacy rate. Writing was used from its inception for business documents, treaties, histories, literature and religious works. The medium for writing was baked clay tablets in Mesopotamia and papyrus scrolls in Egypt. Monumental inscriptions were carved into stone in both areas. Unfortunately most of the documents written on papyrus or animal skins have decayed or been destroyed over the centuries. Writing something down was not only a way of preserving the memory of a transaction but also represented the conclusion of a treaty or *covenant (as in the case of this verse), and the act itself initiated the terms of the agreement.

24:4. altar and twelve pillars. The erection of an altar and pillars is part of the *covenant-making ceremony. They represent the presence of God and the twelve Israelite tribes who have come together to solemnly pledge their allegiance to each other through written treaty and sacrificial act (see Gen 31:45-54 and Josh 24:27 for similar commemorative pillars).

24:5. fellowship offering. This type of offering fits well into a *covenant ceremony, since it is designed to be shared with the participants. Only a portion was completely burned on the altar while the rest served as a meal consummating the treaty agreement between the people and God.

24:6. sprinkling blood on the altar. Blood, as the essence of the life force, belongs to God the Creator. Thus the blood drained from sacrificial animals was nearly always poured back on the altar. In this way the people were reminded of the sanctity of life and the giver of life.

24:7. book of the covenant. A public reading of the terms of the *covenant was a part of every covenant-renewal ceremony (see Josh 24:25-27; 2 Kings 23:2; Neh 8:5-9). In this way the law which had been given to them was recited, acknowledged and put into effect from that point on for the people of Israel. A number of *Hittite treaties from this time also stipulate that the agreement should be read aloud periodically.

24:8. sprinkling blood on the people. The use

of sacrificial blood to sprinkle the people is unusual and occurs elsewhere only in the ordination ceremony of Aaron and his sons (Lev 8). A special bond is established through these symbolic acts marking the people as God's own. It may be that the twelve standing stones actually received the shower of blood, since they represented the people and could all be sprinkled at once.

24:10. saw the God of Israel. Seeing God face to face (a *theophany) is always described as dangerous (Gen 16:7-13; 28:16-17; 32:24-30; Judg 6:22-23). Here the representatives of the Israelites conclude the *covenant ceremony with a meal. God's presence, in this instance, however, raises no danger to them. They are there at God's bidding and under divine protection.

24:10. sapphire pavement. Since the blue gemstone sapphire was unknown in the ancient Near East, this richly decorated pavement was most likely made of lapis lazuli (brought by traders from Afghanistan). It was used to trim royal audience chambers and thrones (see Ezek 1:26). Some first-millennium Mesopotamian texts whose traditions are thought to go back to the Kassite period speak of three heavens. Each level of heaven is described as having a particular type of stone as its pavement. The middle heavens are said to be paved with *saggilmud*-stone, which has the appearance of lapis lazuli. This was believed to give the sky its blue color. The middle heavens were where most of the gods had their residence.

24:12. tablets of stone. It was common practice in the ancient Near East to record important documents, law codes and the heroic military campaign annals of kings on stone (see comment on 32:15-16 for more on stone tablets). The stone tablets given to Moses by God on Mount Sinai follow this pattern. Unfortunately, there is no certainty about what was written on them, although the tradition that it is the Ten Commandments is very old. The original tablets are destroyed (32:19) and then replaced by God (34:1). The second set were housed in the ark of the *covenant (Deut 10:5).

24:18. 40 as approximation? The number forty appears many times as a number of completion, signifying the passage of the appropriate amount of time: a generation (Gen 25:20), the age of a mature man (2:11), the period in the wilderness (16:35; Num 14:33), the rule of a judge or chief (Judg 3:11; 13:1). The regularity with which this symbolic number is used suggests it has both cultural and literary significance and is therefore not to be taken precisely in most instances.

25:1—27:21

The Tabernacle and Its Furniture

25:3. precious metals. Gold, silver and bronze represent the most important metals and alloys available to the Israelites in the premonarchic period. They were commodities of exchange and were used to fashion jewelry, cultic objects and incense altars. In this instance they represent the willingness of the people to contribute their most precious items to the construction and furnishing of the tabernacle.

25:4. colored yarns. Only the most precious items were to be used to decorate the tabernacle. Dyes, some made from the glandular fluid of sea mollusks and certain plants, were extremely expensive and were generally imported. The colors listed here are in descending order of expense and desirability: blue, purple, scarlet.

25:4. linen. Like other fabrics, the linen made from beaten flax was produced in various grades of fineness. Coarser linen was used for sailcloth, headgear and tunics. The term used here is for the "finest linen," which was used to garb Egyptian officials (Joseph in Gen 41:42) and in this case is to be used to furnish the tabernacle (see 26:31, 36; 38:9).

25:5. red dye. The tanning process is not often mentioned in the biblical text. It involved the use of lime, tree bark and plant juices, and required a ready water supply. In this case, it is possible that the ram skins were either tanned or dyed red or both through the manufacturing process.

25:5. sea cows (dolphins?). Both sea cows (a herbivorous mammal—dugong) and dolphins are found in the Red Sea, and their hides could have been tanned and used for decoration. These creatures had been hunted for their hides along the Arabian Gulf for millennia. This word may also be compared to an *Akkadian word which refers to a semiprecious yellow or orange stone and thus to the color of dye used.

25:5. acacia wood. A variety of desert tree found in the Sinai with extremely hard wood, suitable for use in the construction of the tabernacle and its furnishings. The word used here may be an Egyptian loan word, since acacia was widely used in Egypt.

25:6. anointing oil. The spices which were to be used for anointing purposes were myrrh, cinnamon, cane and cassia (see recipe in 30:23-25). Their purpose was to remove all trace of secular odors and to transform the interior of the tabernacle into a sanctuary suitable for worship and God's presence.

25:7. onyx stones. Although translated "onyx" here, the exact identity of this precious gemstone is unknown. It is also mentioned in Genesis 2:12 as native to the land of Havilah near or in the Garden of Eden. Among the possibilities for this engravable stone are lapis lazuli and onyx, a chalcedony with milky-white bands alternating with black.

25:7. ephod. A priestly vestment reserved for the high priest (see chap. 28). It is constructed of gold and elaborately decorated with gemstones and is attached to the breastplate and one of the priest's outer garments (28:25, 31). It is associated with both the authority of the high priest and the presence of Yahweh.

25:8. temple ideology. The temple was not a structure for corporate worship but a place for God to dwell in the midst of the people. It had to be maintained in holiness and purity so that God's continuing presence could be vouchsafed. The priests existed to maintain that purity and to control access. The temple idea was not invented so that there would be a place to offer sacrifices. Rather, several of the sacrifices existed as a means of maintaining the temple. God's presence was the most important element to preserve. The sacrifices such as the purification offering (see comment on Lev 4:1-3) and the reparation offering (see comment on Lev 5:14-16) were designed for that purpose.

25:10-22. the ark (size, design, function). The ark was a wooden box, open at the top, approximately 3 feet in length and 2 feet in both width and height based on eighteen inches to the cubit. It was overlaid inside and out with sheets of the finest gold and had four rings (also gold-covered) attached to the sides for the insertion of two gold-encrusted poles, which were used to carry the ark and to protect it from the touch of all but the high priest. A golden cover, decorated with two winged cherubim, sealed the ark, securing the tablets of the law within it. Its primary function was to store the tablets and to serve as a "footstool" for God's throne, thereby providing an earthly link between God and the Israelites. In Egypt it was common for important documents that were confirmed by oath (e.g., international treaties) to be deposited beneath the feet of the deity. The Book of the Dead even speaks of a formula written on a metal brick by the hand of the god being deposited beneath the feet of the god. Therefore the footstool/receptacle combination follows known Egyptian practice. In Egyptian festivals the images of the gods were often carried in procession on portable barques. Paintings portray these as boxes about the size of the ark carried on poles and decorated with or flanked by guardian creatures. A similar-sized chest with rings (for carrying with poles) was found in Tutankhamen's tomb.

25:10. cubit. The standard dimension for the Israelite cubit was measured from the elbow to the tip of the middle finger. Using the measure of the Siloam tunnel, which is described as 1,200 cubits, and its actual length of 1,732.6 feet, this places the length of the cubit as between 17.5 and 18 inches. Since no cubit markers have been discovered by archaeologists, the actual length of a cubit is still uncertain.

25:16. the testimony. This term refers to the tablets of the law which were given to Moses. It was common practice in the ancient Near East to house law codes in specially constructed containers to represent their presentation before deity.

25:17. the kapporet (size, design, function). The kapporet, "atonement cover," is a sheet of solid gold which served as the lid of the ark (with the same dimensions specified in the text), but because it appears as a separate item from the ark, it has special significance. Decorating the kapporet were two facing cherubim, whose uplifted wings nearly met above the ark and served to symbolically uphold the invisible throne of God. Thus with the ark as the "footstool" and the kapporet as the support for the throne, God's presence is demonstrated to the people.

25:18-20. cherubim. Biblical descriptions as well as archaeological discoveries (including some fine ivory pieces from Nimrud in Mesopotamia, Arslan Tash in Syria and Samaria in Israel) suggest the cherubim are composite creatures (having features of a number of different creatures, like the Egyptian sphinx), often four-legged animal-bodies with wings. The cherubim appear in ancient art with some regularity flanking the thrones of kings and deities. The combination of cherubim as throne guardians, chests as footstools and statements in the Old Testament concerning Yahweh being enthroned on the cherubim (e.g., 1 Sam 4:4) supports the concept of the ark as representing the invisible throne of Yahweh. The use of empty thrones was widespread in the ancient world. They were provided for use by deities or royal personages when they were present.

25:23-30. table of bread of the Presence. The table of the Presence was a gold-encrusted, four-legged table, also carried by poles slipped through rings on each side. It held the twelve loaves of "show bread" (see Lev 24:5-9), which were perpetually displayed and replaced at the end of each week.

25:31-40. lampstand. The seven-branched golden menorah, or lampstand, stood in the outer sanctum of the tabernacle opposite the table of the Presence. Although its dimensions are not given, the lampstand was to be hammered from a single block of gold. Its function was to illumine the sacred precinct, and only Aaron and his sons were allowed to tend it. Numerous reliefs and even mosaics of menorahs have been found from New Testament times, when it had come to be used as a symbol for Judaism and for eternal life, but it is generally believed that these do not take the same form as the menorah of the Old Testament period. The earliest representation of the menorah is on a coin from the first century B.C., which depicts a very plain-looking seven-branched lampstand with a sloping base. Some believe that the lampstand represented the Tree of Life—a popular symbol in artistic work.

26:1-6. linen curtains with cherub design. Of the four layers which cover the tabernacle, this is the innermost. It consists of ten multicolored sheets of fine linen, decorated with a cherubim design. Each sheet measures twenty-eight cubits by four cubits (42 feet by 6 feet). They are sewn together in paired sets of five, producing two longer sheets, which are in turn clipped together with blue loops and gold clasps (total measurement, 60 feet by 42 feet).

26:7-13. goat-hair curtains. The layer of goat-hair curtains served as a protective covering over the linen curtains that cover the tabernacle. Like the linen curtains, they consisted of eleven separate sheets sewn together and then connected with loops and bronze clasps (measuring 66 feet by 45 feet).

26:14. ram-skin covering. No measurement is given for this third layer covering the top of the tabernacle, which was made of tanned ram's skin. These two middle layers may serve the dual purpose of protecting the tabernacle and of symbolizing the two animals most important to the economy (sheep and goats).

26:14. sea cow covering. The progression of coverings over the tabernacle is from finest fabric to strongest leather, thus providing an impermeable seal to the sacred precinct within. No measurements are given for the fourth layer of "sea cow" or dolphin hide (this would have served best as waterproofing; see 25:5).

26:15-30. the frame. The skeletal structure which held up the drapes screening the tabernacle was made of acacia wood. It consisted of three walls of upright planks connected by tenons and crossbars, which were inserted into gold or silver-lined slots. The entire structure measured thirty cubits (45 feet) in length and ten cubits (15 feet) in height and width.

26:31-35. the veil. The veil curtained off a cube-shaped section of the tabernacle, creating an inner sanctum known as the Holy of Holies where the ark of the covenant was housed. It measured ten cubits (15 feet) on each side, was hung from four gold-inlaid posts standing in silver bases and was made of multicolored yarns and fine linen. A cherubim design was stitched into it, as on the innermost hanging over the tabernacle.

26:1-36. design, size and layout of tabernacle. The tabernacle was a rectangular structure (50 cubits wide and 100 cubits long, or 75 feet by 150 feet) divided into two equal, sacred squares (75 feet by 75 feet), comprising three separate zones of holiness: the holy of holies containing the ark; the holy place, outside the veil, which housed the lampstand, the altar of incense and the table of the bread of presence; and the outer court, where the sacrificial altar was placed. Both the ark and the sacrificial altar were located at the exact center of their respective sacred squares. The entrance to the outer court was located at the eastern end and was 20 cubits (30 feet) wide. The most sacred zones of the tabernacle (oriented on an east-west axis) could only be reached through the outer court. Portable structures of similar design (curtains hung over gold-gilded beams or poles) are found in Egypt as early as the mid-third millennium in both sacred and secular use. Egyptian royal tents of the nineteenth dynasty were a two-roomed tent with the outer chamber twice the length of the inner.

26:1-36. portable sanctuaries in ancient Near East. Although there is no evidence of a portable sanctuary quite as elaborate as the tabernacle, it is clear that Bedouin groups (both ancient and modern) do carry sacred objects and portable altars with them from one encampment to another. Ancient Near Eastern texts also describe the itineraries of priestly processions that took the images of gods, along with their various divine accoutrements, from one town to another within a kingdom. This allowed the god to visit shrines, make inspection tours of facilities owned by the principal temple community and participate in annual festivals outside the capital. Canaanite religious texts also speak of pavilions used for the dwelling of the gods. Archaeologists have found the remains of a Midianite tent shrine at Timnah that dates to the twelfth century B.C. It too was composed of curtains draped over poles, though it was not portable.

26:1-36. direct axis design of sanctuaries. The architectural symmetry of ancient sanctuaries suggests the importance placed in antiquity on the geometry of sacred space. The divine being was considered the center of power in the universe. Therefore the sanctuary, at least symbolically, should reflect this central role by mapping the sacred precinct into zones of progressive holiness and placing both the altar and the object associated with the god's presence at the exact center of the most holy spot within the sanctuary. In this way a nexus of power and majesty was created that made the prayers, sacrifices and invocations to the god more effective. Temples are typically classified by archaeologists on the basis of the arrangement of the chambers through which one gains access to the inner recesses and by the orientation of the main chamber, where the presence of the god is represented. "Direct axis" architecture allowed one to walk in a straight line from the altar to the inner shrine (cella). "Bent axis" required a ninety-degree turn between the altar and the place where the image stood. The door through which one entered the rectangular cella in the direct access arrangement could either be on the short wall ("long room") or the long wall ("broad room"). The tabernacle was of the "direct axis" style, but it was neither long room nor broad room because the holy of holies (cella) was square, not rectangular.

27:1-8. altar. The altar was the place for the burning of sacrifices. Because it had to be portable, it was constructed as a hollow square (5 cubits by 5 cubits; 3 cubits high) made from acacia logs, with horns at each corner, and overlaid with a bronze sheath and a bronze grate. A variety of utensils (firepans, shovels, meat forks and sprinkling bowls) were used in dealing with sacrificial meat and ash. Like the ark it had attached rings and poles for easy transport. Although not as sacred as the ark, the altar also served as a touch point with God, placed at the I-axis of the outer court of the tabernacle. Its service was restricted to Aaron's priestly family, and its function tied the people to the *covenant promise of fertility and the Promised Land. Through sacrifice the people acknowledged the bounty provided by God. Thus the altar brought them into communion with the power that protected and blessed them.

27:9-19. courtyard. Temple architecture demands that the most sacred precincts be separated from the profane world of everyday life by an area of enclosed space—in the case of the tabernacle, by the courtyard. This area was marked off by linen screen walls (7 feet high), enclosing an area of approximately 11,250 square feet (100 cubits by 50 cubits). Since the inner portion of the tabernacle was fifteen feet high, these walls only screened the view from ground level and left the symbol of God's presence clearly visible. The draperies of the courtyard were held up by fifty-six columns placed in copper sockets. The use of these less valuable materials is reflective of the progression from precious to commonplace in the construction of the tabernacle.

27:21. the tent of meeting. Aaron and his sons are to place olive oil lamps before the "tent of meeting," which was the "holy place" immediately outside the veil separating that area from the Holy of Holies. Here God's presence was to be made manifest to Moses, and instruction was to be given to the people through these oracular messages (see 39:32; 40:2, 6, 29). The function of this space is therefore symbolic as well as utilitarian. The presence of God is acknowledged with the perpetually burning lamps. Aaron's servicing of the lamps provides a role for the priestly community here, and the assumption of guidance, first promised to Moses and thus to the people, is implicit in its name.

27:20-21. continually burning lamps. The clearest refined olive oil was to be used to provide a perpetual light before the entrance to the Holy of Holies. These lamps, serviced by Aaron and his sons, symbolized the presence of God. The continuation of this priestly function is seen in 1 Samuel 3:3.

28:1-43

The Priests' Garments

28:1. priesthood. The creation of a professional priesthood is a mark of a maturing religious system. By singling out Aaron and his sons, God designates who is worthy to serve in the tabernacle and establishes a hereditary succession for future generations of high priests in Israel. Their lineage derives from the tribe of Levi and specifically through Aaron. Because their task will be to perform sacrifices for the people and officiate at major religious festivals, the priests have certain rights and responsibilities that no other Israelite will have. Special garments are worn only by priests. A portion of the sacrifice is set aside for them. They are not allowed to own land or to perform nonpriestly functions. They are held to a higher standard of obedience and are subject to swift punishment for failure to perform their duties or to provide the proper example to the people.

28:1. priests in ancient Near East. Every cul-

ture in the ancient Near East developed a priesthood. Only the Bedouin tribes did not set these individuals aside to perform priestly duties exclusively. Their role was to function as a part of a priestly community, serving temples, performing sacrifices, conducting religious services and staging festivals. Priests would have been educated within the temple from an early age, and their position in the priestly class was hereditary in some cases. They would have been among the few literate persons in their society and thus were relied upon to keep records of major events and tie them to the will of the gods. This process was known as *divination, and it, along with *ritual sacrifice, was the chief source of priestly power and authority. There was a distinctive hierarchy among priests—ranging from a chief priest, who sometimes rivaled the king in power, to midlevel individuals who performed daily *rituals and sacrifices, to musicians, and on down to temple servants, who performed the mundane housekeeping and custodial tasks necessary in any large community.

28:6-14. ephod. The most important of Aaron's priestly garments is the ephod, which was either a linen robe covering the upper body or a frontal piece attached to the shoulders and sashed at the waist. The use of all five colored yarns indicates its importance, as does the use of gold filigree and engraved stones. Placing the names of six tribes on each stone provided a continual reminder to all that he was representing the nation before God. The fact that the ephod is related to idols and false worship in later passages (Judg 17:5 and 8:24-27) suggests that it was a garment borrowed from Mesopotamian society—perhaps worn by priests or used to clothe idols. The breastpiece (28:15), the Urim and Thummim (28:30), and the ephod are used in *divination (1 Sam 23:9-11). Thus the high priest is clothed in garments that aid in the discernment of God's will.

28:15-30. breastpiece. Using a piece of the same multicolored linen as in the ephod, a nine-inch square pouch is created by doubling it over. This breastpiece is then securely attached to the ephod by means of gold braid and blue cords which attach to the rings on the breastpiece, the shoulder pieces of the ephod and the sash of the ephod. Embedded in gold settings on the breastpiece are twelve semiprecious stones in four rows of three stones (compare the list of precious stones in Ezek 28:13). Each stone is engraved with the name of one of the tribes of Israel and thus provides an additional reminder to all (including God) of the priest's responsibility as the people's representative. In the pouch, lying against the priest's heart, are placed the Urim and Thummim. Both these objects and the breastpiece itself are to be used as oracular devices to discern God's will. In the ancient Near East stones (including gemstones of various sorts) were believed to have *apotropaic value (offering protection from spirit forces). A seventh-century B.C. *Assyrian handbook preserves a list of various stones and what they "do"—possibilities range from appeasing divine anger to preventing migraine headaches. One ritual text lists twelve precious and semiprecious stones that are to be used to make a phylactery to be worn as a necklace.

28:30. Urim and Thummim. Unlike most of the other objects in this passage, there is no mention of "making" the Urim and Thummim. This suggests that they were already in use prior to this time and now were to be housed in the breastpiece and used by the high priest (see Lev 8:8 and Deut 33:8). No description of these objects is found in Scripture, although traditions from the Hellenistic and later periods suggest they were markers whose appearance and presentation when cast like lots would determine God's will (see Num 27:21; 1 Sam 14:37-41 and 28:6). There is no negative character attached to the Urim and Thummim as there are to other divinatory practices, and they are never mentioned in passages describing non-Israelite worship or *ritual. Nevertheless the practice of posing yes-no questions to the gods (asking *oracles) is known throughout the ancient Near East. Particularly of interest are the *Babylonian *tamitu* texts, which preserve the answers to many oracular questions. Positive and negative stones (thought to be bright stones and dark stones) were also used widely in Mesopotamia in a procedure called psephomancy. In one *Assyrian text alabaster and hematite are specifically mentioned. The yes-no question would be posed and then a stone drawn out. The same color stone would have to be drawn out three times consecutively for the answer to be confirmed. *Urim* is the Hebrew word for "lights" and therefore would logically be associated with bright or white stones. One recent study has pointed out that hematite, because of its use for weights and seals, was termed the "truth stone" in *Sumerian. The Hebrew word Thummim could have a similar meaning.

28:31-35. robe. Under the ephod, the high priest was to wear a loose-fitting, pullover blue robe that fell almost to the ankles. The collar was reinforced to prevent tearing, and

there were only armholes, no sleeves. The hem was richly decorated with embroidered pomegranates, and bells were attached between the pomegranates.

28:33-34. pomegranates. Pomegranates were embroidered around the hem of the priest's robe in blue, purple and scarlet thread. This fruit is commonly mentioned in narrative and songs (Num 13:23, 20:5; Song 4:3, 6:7) and was used in decorating Solomon's temple (1 Kings 7:18). They generally are symbolic of the fertility of the Promised Land. Pomegranates were also used for decoration of ritual accessories in *Ugarit.

28:33-35. gold bells. Tiny gold bells were attached to the priest's robe between the embroidered pomegranates. Their function was to signal the high priest's movements within the Holy of Holies. They reminded the priest to perform his duties exactly according to the law and indicated to the people that he was within the holy precinct.

28:36-38. engraved plate. As a continuous reminder of his special role as priest, an engraved golden plate with the words "Holy to the LORD" is attached to his turban. It would parallel the diadem in the king's crown as symbolizing his authority. The plate of office also placed responsibility for infractions on the person in charge of all *rituals.

28:38. bearing guilt. As the person in charge of all religious *rituals, it was important that the high priest took his office seriously. Thus an engraved plate was attached to his turban as a sign of his authority and as a signal to him that he would bear the blame and the punishment for any failure to obey the laws of *ritual and sacrifice.

28:39-41. tunic. The standard garment worn by both men and women in the biblical period was a linen tunic. Worn next to the skin, ankle length, with long sleeves, it provided protection from the sun and sometimes was embroidered or given a fancy hem by the wealthy (Gen 37:3 and 2 Sam 13:18-19) or by priests.

28:39. turban. The turban was made of linen and, according to Josephus, was nonconical in shape (*Antiquities of the Jews* 3.7.6). It may be assumed that the turban of the high priest would have been more elaborate then that of ordinary priests (28:40). It had the engraved plate attached to it and would have been more colorful.

28:42-43. linen undergarments. Unlike the common people, the priests were required to wear linen undergarments beneath their tunics in order to cover their genitals. Thus they would not expose their nakedness when climbing the altar stairs or cleaning around it. Nudity, although common among Mesopotamian priests, was prohibited in Israelite practice.

29:1-46
Ordination Instructions

29:1-46. consecration ceremony. Having ordered the manufacture of the tabernacle, the ark, the altar and all the associated utensils and decorations, Moses now gives instruction about their consecration, and that of the priesthood, to the service of God. Moses functions as priest in orchestrating and performing the rituals of consecration, which will hereafter be handled by Aaron and his descendants. This is a seven-day *ritual designed to set precedents for the use of tabernacle and altar, the types of sacrifices that are to be made in these sacred precincts, and the role and privileges attached to the priests. One of the most significant items in the ritual is blood, which is the symbol of life and is sprinkled both on the altar and on the garments of the priests. Sacrificial items (wheat, cakes and oil) as well as animals are presented and burnt on the altar. In this way the tabernacle and altar are purified, preparing them for use. Some pieces of the meat are used for a wave offering and then set aside as the portion reserved for the priests. Throughout the ceremony the sense of continuity is drawn between the first consecration and all future priestly action.

29:2-3. fine wheat flour. The items used to consecrate the tabernacle, altar and priests are representative of the fertility of the land, the gifts of God to the people. The wheat flour used to make unleavened bread and cakes would be of finest quality and thus a fitting sacrifice by a people who were dependent on farming for most of their food.

29:2-3. cakes with oil. Wheat and olive oil were the chief cash crops of ancient Israel. By mixing them into a sacrificial cake, the people recognized the role of God in providing them with fertility each year. The sequence of offerings also signifies the seasonal events of planting and harvest and the agricultural festivals.

29:2-3. wafers spread with oil. The presentation of grain and meat offerings together signify the people's acceptance of the *covenant and the acknowledgment of God's role as the provider of fertility. While the significance of providing unleavened bread, cakes and wafers is not clear, it may represent either the standard baked goods of the time or items set aside for *ritual use.

29:4. wash with water. It would not be appropriate for the new priests to clothe themselves

in their new sacral garments without first taking a ritual bath. They were to be fully immersed as a part of the consecration ceremony. After this only their hands and feet had to be washed before performing their duties (30:17-21).

29:5. waistband. Only the high priest has a specially designed and woven waistband to sash his garments. The lesser priests use ordinary sashes (29:9). This would be a mark of rank and would also serve the utilitarian function of keeping his robes bound when he had to bow or make sacrifices.

29:7. anointing. In this passage and in Leviticus 8:12, only the high priest was consecrated in his office by having his head anointed with oil. However, both Aaron and his sons are anointed in Exodus 30:30 and 40:15. Anointing their heads with oil would compare with the anointing of kings in later periods (1 Sam 10:1; 16:13). In both cases the oil would symbolize the gifts of God to the people and the responsibilities now laid on their leaders through this ceremony. In Israelite practice anointing was a sign of election and was often closely related to endowment by the Spirit. See the comment on Leviticus 8:1-9.

29:8-9. tunics, headbands, sashes. Aaron's sons, who will serve as lesser priests under their father, have less elaborate priestly garments. They have distinctive clothing which sets them aside from other Israelites, but their consecration does not involve as much ceremony, just as their duties will be less important than those of the high priest.

29:10, 15, 19. laying hands on animals. As each sacrificial animal is brought to the altar, it is necessary for the priests to examine it to make sure it is suitable. Once that is done, a symbolic certification *ritual is performed in which the priests lay their hands on the animal, taking responsibility for its death and the purpose for which it is sacrificed. Some would also suggest that this constitutes an affirmation of ownership. See comment on Leviticus 1:3-4 for discussion of various possibilities.

29:12. blood on the horns of the altar. The horns of the altar are specifically symbolic of the presence of God in any sacrificial act. By placing the blood of the sacrificed bull on the horns, the priests are acknowledging that presence, the power of the God who gives life, and purifying themselves of their sin (see comment on Lev 4:7).

29:12. blood at the base of the altar. The altar is the focal point of animal sacrifice. It is the platform associated with giving God his due. For it to be fully consecrated to this service its very roots (base) must be purified with the blood of the sin offering (v. 14).

29:13. fat parts burned. No portion of the bull was to be saved, since this was a sin offering. Thus the fatty parts as well as the kidneys and liver, which might have been used for *divination (as was the practice in Mesopotamia) or given to the participants, were instead to be burned on the altar.

29:14. other parts outside the camp. Impurities and waste were to be disposed of outside of the camp (see Deut 23:12-14). Since this bull had been used for a sin offering, its meat, hide and offal had become contaminated and thus could not be consumed or used in any way (see Lev 4:12).

29:14. sin offering. There are various kinds of sacrifices and offerings performed by the Israelites: generally for thanksgiving or expiation. A sin offering was designed to purify a person who had become unclean through contact with *impurity (physical or spiritual) or because of some event (nocturnal emission in Deut 23:10). It was also used in consecrating priests, since they were required to maintain an even higher standard of *purity than ordinary Israelites. The animals which were used in these *rituals received the sin and *impurity of the persons for whom they were sacrificed. Thus their entire substance was contaminated and could not be consumed or used to produce anything. Every portion of the sacrificed animal must be disposed of, with the organs and fat burnt on the altar and the flesh, hide and bones burned to ash outside the camp. This latter act prevented the people's habitation from becoming polluted. For more information see comment on Leviticus 4:1-3.

29:15-18. ram as a burnt offering. The first ram sacrificed in the *ritual of consecration is to be completely consumed by fire on the altar. Its carcass is cut up and washed so that it fits on top of the altar and retains no contaminating offal. Meat was precious to these pastoral people, but the ram and the bull, both symbols of fertility, must be totally destroyed so that the sacrificial offering to God is complete. There can be no holding back when the sacrifice is made in honor of God's power.

29:18. pleasing aroma. The gods of Mesopotamia could also be attracted to the smell of sacrifices (as in the *Gilgamesh flood story). However, additionally they had to consume the sacrifice to sustain themselves. In Israelite tradition, a "pleasing aroma" signified a proper sacrifice that would please God (see Gen 8:21). It becomes a technical term for a sacrifice acceptable to and accepted by God (compare Lev 26:31), not something he eats.

29:20. blood on earlobe, thumb, big toe. Just

as blood is used to make the altar fit for service, so too it is used to designate the faculties of the priest: to hear the word of God, perform sacrifices with his hands and lead the people to worship with his feet. There is also an element of purification of each of these abilities through the blood of expiation (compare Lev 14:14).

29:20. blood on sides of altar. The blood of the three sacrificial animals is used to care for the sins of the newly consecrated priests. By sprinkling the first ram's blood on the altar, they also acknowledge God's power to grant life and the significance attached to their service as well as their commitment as God's servants (compare 24:5-6).

29:21. sprinkling priests with blood and oil. Blood and oil are the chief elements of the sacrificial process. By sprinkling the priests and their garments with these items, the ordination ceremony is completed, and the priests are physically marked for service (compare the marking of the people as guarantors of the *covenant in 24:8) as well as purified.

29:22-25. wave offering. In the third stage of sacrificial *ritual, portions from the basket of cereal offerings and the ram of ordination are to be elevated as a "wave offering." It is more likely that the ungainly pile of sacrificial gifts was elevated rather than actually waved, since that act would be less likely to unbalance and/or drop the sacred items. The terminology used in the text is more appropriately rendered "elevation offering" and such treatment of offerings is likewise depicted in Egyptian reliefs. This gesture physically signifies that all sacrificial items derive from and belong to God. In this case the cakes and wafers are elevated and then burnt on the altar. However, the meat from the ram will be used as the basis for a *covenantal feast that Aaron and his sons will consume, unlike the first ram, which was totally burned. A precedent is also set here regarding which portions of the sacrifice belong to the priests (note that Moses takes his share since he serves as the officiating priest—v. 26).

29:26-28. parts of sacrifice as food for priests. Since the priests were restricted entirely to religious duties and they did not own land, they were sustained through a portion of the sacrifices brought to the altar. Certain portions, the breast and the leg of the ram, were set aside specifically for the priests. Because this food had been presented for sacrifice and offered up to God, only the priests were allowed to consume it. What they did not consume was for the same reason to be destroyed.

29:29-30. priestly garments hereditary. In this section, which interrupts the discussion of sacrificial meat, provision is made for the ordination of future generations of priests. The original high priestly vestments created for Aaron were to be passed on to his successor at Aaron's death. Thus when Aaron dies Moses strips his body of all of his sacral garments and in a seven-day *ritual invests them on Aaron's son Eleazer (Num 20:22-29).

29:31. cooked in a sacred place. Since the meat of the wave offering and presentation offering was now sacred, it could not be prepared in ordinary precincts. Thus it is taken into the courtyard of the tabernacle to be cooked. In this way sacred items retain their power and authority by only being used or dealt with in similarly sacred areas.

29:34. burning leftovers. Because of its sacred nature, the sacrificial meat which has been set aside for the nourishment of priests cannot be used for any other purpose or consumed by ordinary individuals. Thus the portion which is not immediately consumed must be destroyed by fire to prevent any misuse of sacred substance.

29:36-37. making atonement. Basic to the transformation process that the sacrificial altar undergoes is the idea of purification. No item made by humans can, by definition, be pure enough to be used for God's service. Only through a lengthy (twice a day for seven days) and prescribed *ritual of daily sacrifices of valuable animals (bulls) can the altar be sufficiently purified to become holy and sacred itself. Through this process the inherent sin of the men who built the altar and the contaminated materials (in the sense that they are not holy) of which it is constructed become usable for God's service. Hereafter everything that comes in contact with the altar must be pure (both priests and sacrifices). If the level of *purity is maintained, then the sacrifices will be accepted and the people will benefit from their service. See comment on Leviticus 1:4.

29:37. whatever touches it will be holy. Because of the superior quality of the sacrificial altar's level of holiness (second only to the Holy of Holies in the tabernacle), anything that touches it becomes holy. Similarly, it is important that the altar be guarded from those persons or things which are impure so that the holiness is not lost or corrupted.

29:38. daily offerings. Caring for sin and the giving of thank offerings by the people are required daily, not just on special occasions (such as ordination). Thus the priests are to sacrifice two year-old lambs each day (known as the tamid, "perpetual" offering), one in the morning and the other in the evening. This

daily *ritual signals to the people the continual presence of God among them as well as their constant obligation to obey the *covenant. The constant flow of movement to the sacrificial altar also maintains its holiness and reinforces the role of the priests as religious professionals.

29:40. tenth of an ephah. The principal dry measure in Israel was the homer, which equaled the load carried by a donkey. This weight varies in the sources from 3.8 bushels to 6.5 bushels. The ephah (an Egyptian loan word) equaled one-tenth of a homer (Ezek 45:11), or three-eighths to two-thirds of a bushel. One-tenth of an ephah (about 1.6 quarts) of fine flour was part of the daily sacrificial offering.

29:40. fourth of a hin. The hin (an Egyptian loan word) was a liquid measure equal to about a gallon. One-fourth of a hin (one quart) of olive oil was to be mixed with the flour as part of the daily sacrificial offering. In addition, a drink offering of a quart of wine was to be given daily.

29:40-41. drink offering. A libation or drink offering was part of the daily sacrifices in the tabernacle. They were presented with the lamb and the mixture of flour and oil in the morning and in the evening to signify God's protection and favor throughout the day. The pouring out of libations was a common household practice before meals, and that *ritual is carried over in the daily sacrifices as part of a communal, *covenant meal between God and the people.

30:1-38

Incense, Oil and Water

30:1-10. incense altar. Once the tabernacle was furnished and cleansed and the priesthood was ordained, the Presence of God entered the Holy of Holies to meet regularly with Moses (29:42-43). An additional object was therefore needed that would both represent the Presence and protect humans by veiling the Presence from their eyes. This was the incense altar, a small table (18 inches square and 3 feet high) constructed of acacia wood, with horns like the sacrificial altar, and covered with gold. It was placed in the area immediately outside the veil closing off the Holy of Holies. Like the ark, this inner altar had rings for carrying it with poles. A special blend of incense was burned on this altar every morning and evening. On the Day of Atonement blood from the sacrifice was to be daubed on each of its horns as a yearly repurification process.

30:7-8. burning of incense. The use of incense has been attested archaeologically from the earliest periods in Israelite history, although few incense altars have yet been excavated *in situ in Israelite shrines (Arad is the exception). The incense used probably consisted of a mixture of frankincense and other aromatic gums. The practice of burning incense has both practical and religious purposes. The smell of burning flesh from the sacrificial altar would have been unpleasant, and incense would have helped to mask that odor. The smoke from incense was also used to fumigate sacred precincts and to cast a veil of mystery within them to represent the presence of God or to mask God's presence from human eyes. It is also possible that the billowing of incense smoke signified the prayers of the people rising to God.

30:10. yearly atonement. The Day of Atonement was a special day set aside each year to remove the contamination from the sins of the past year. According to Leviticus 23:27-32 it fell ten days after the opening of the new year. On that day the high priest was to enter the inner precincts of the tabernacle and burn incense on the golden incense altar. Blood from the special sacrifice of the day was also to be daubed on the horns of the incense altar to tie this holiest of altars and its flow of incense to the need for cleansing of the nation's sins. A more elaborate description of this yearly *ritual, including the casting of the people's sins on the scapegoat, is found in Leviticus 16.

30:11-16. census temple tax. Every male aged twenty years and older was to pay a per capita tax of one-half shekel to help support the tabernacle. There is a sense of equality in this that no distinction is made between rich and poor—all pay the same amount. However, there is also a darker image here based on the threat of a plague and divine displeasure if they do not all submit to this census. Comparison with other such countings (Num 1 and 2 Sam 24) suggest that there is a real fear of taking a census because of its use for drafting men into the military and in the levying of taxes. However, in this case, at least, the "passing over" of the men as they paid their fee and were counted seemed to signify their acceptance of their responsibility to provide support for the construction and maintenance of the tabernacle.

30:11-16. census superstition. Taking a census was a practical measure utilized by governments in the ancient Near East as early as the Ebla tablets of around 2500 B.C. The benefits derived from this practice were not necessarily appreciated by the people since they led to increased tax levies as well as military or

forced labor service. Viewed in this light, it is not surprising that popular notions existed that the census was a source of bad luck or the basis of divine displeasure. *Mari texts (eighteenth century B.C.) from Mesopotamia describe men fleeing to the mountains to avoid being counted. In 2 Samuel 24 God punishes David and Israel with a plague after a census is taken. The explanation for such a calamity could be that the census was motivated by human pride.

30:13. shekels. The half-shekel payment made by each Israelite male as temple tax, at least until the sixth century B.C., would have been made in a measure of precious metal, not coined money. The average shekel weighed 11.4 grams, but this text refers to a "sanctuary shekel," which is believed to be a smaller fraction of the common shekel. Weights discovered in archaeological finds evidence a shekel weighing 9.3-10.5 grams. The sanctuary weight listed here may also refer to a shekel of more standard value and weight than the "marketplace" shekel.

30:13. gerah. The gerah (an *Akkadian loan word) is the smallest of the Israelite measures of weight. It weighed approximately half a gram and was equivalent to one-twentieth of a shekel.

30:17-21. bronze basin. A water-filled bronze basin was to be placed near the entrance to the courtyard between the sacrificial altar and the tabernacle proper. It was to be used by the priests to wash their hands and feet each time they entered this holy precinct, in preparation for their holy service. In this way they washed the impurities of the outside world from their hands before making sacrifices and cleaned their feet so that they did not track in the dust and grime of the street. This item is added to the list of tabernacle utensils after the ordination and consecration since it was to be used daily, not just on special occasions.

30:22-33. anointing oil. A special formula is prescribed for the mixture of precious spices (myrrh, cinnamon, cane, cassia) with olive oil into a substance for anointing the tabernacle and all of its furnishing as well as the priests. The process involved soaking the spices in water, boiling the water, then aging the concoction with the oil until the fragrance permeated the whole. To insure its exclusivity, the anointing oil is to be concocted by a professional perfumer and is designed to mark the sacred precincts and priests as holy.

30:23-24. spices. Since all of the spices listed in the anointing oil are imported products, they would have been expensive and extremely precious. They came from southern Arabia (myrrh), India or Sri Lanka (cinnamon), and other distant lands (see Jer 6:20 for fragrant cane) by sea and by way of the established caravan routes. They were mixed into aromatic oils by guilds of professional perfumers and were used for personal enhancement as well as to anoint priests and sacred places.

30:30-33. sacred recipe. The recipe for the anointing oil was reserved for sacred use. The special fragrance of the holy substance was only for the tabernacle and its personnel and was not to be used for secular purposes.

30:34-38. incense recipe. The incense burned on the golden incense altar in the tabernacle was mixed according to a special recipe that was not to be duplicated or used for other purposes. The recipe includes four specific items: gum or resin, perhaps from balsam trees; onycha from the glands of mollusks; galbanum, a resin native to Persia which adds pungency to other scents; and frankincense from southern Arabia.

31:1-18
Preparation for Construction of the Tabernacle and Its Furnishings

31:1-11. wood and metal craftsmanship. Having given instructions on how to construct the tabernacle and its furnishings, Moses now singles out craftsmen to carry out the task. They are said to have been given by God great skill in metalworking, engraving and carpentry. The idea of a deity lending expertise to the craftsmen involved in a sacred task is also attested in the god Ea guiding the skills of the experts who produced the cult statue of Sippar (ninth century). These two will then supervise the team of trained workers who will shape the various pieces of the tabernacle; cover many of its sacred objects with bronze and gold, stitch the fabrics used for the canopy, veil, and vestments of the priests; and engrave the stones for the ephah and breastplate.

31:12-17. sabbath as a sign of the covenant. While the individual's sign of participation in the *covenant is *circumcision, the sign of Israel's corporate participation in the covenant is the keeping of the sabbath. Like circumcision, the keeping of the sabbath is a continuous obligation required of each generation. Unlike circumcision, it is not a single act but an attitude to be consistently maintained and periodically expressed in action. With instruction given for construction of the tabernacle and workmen chosen to perform the task, it is now necessary to tie even this sacred work to the law of sabbath. Even this work must cease

every seventh day as a sign of respect for God's role as the Creator and in acceptance of the covenantal promise to obey God's command (see 20:8-11). Although refraining from work may be an economic burden, this is counterbalanced by the rejuvenation of the spirit and the body through rest. The commandment to rest on the sabbath is so important that the death penalty is imposed on all violators.

31:14-15. work as criterion (profane vs. holy). The sign of obedience to the *covenant is the willingness to cease work on the sabbath. Neither profane nor holy work may be done on this day of total rest. No specific examples are given here, but the text cites both exclusion from the community and execution as punishment for violators. This may mean that each individual case would have to be examined to determine if the act performed was to be defined as "work" (see examples in Num 15:32-26 and Jer 17:21).

31:18. two tablets of the testimony. This statement in which God gives Moses the two stone tablets returns the narrative to the point where it was broken off at 24:18. It also provides the narrative indicator that the parenthetical material on the construction of the tabernacle and the consecration of the priesthood is at an end and that the storyteller is about to resume the narrative of the events on Mount Sinai. The term "tablets of the testimony" also appears in 32:15 and is the basis for the name "ark of the testimony" (25:16-22).

32:1-35
The Golden Calf

32:1. make us gods who will go before. Moses was the Israelites' sole contact with Yahweh and was the mediator of Yahweh's power and guidance, and, for all the people knew, he might be dead. With him gone it was believed that contact with Yahweh was lost and that they therefore needed a replacement mediator to serve the role of "going before them." This role is filled by an angel in 33:2. The calf is formed to likewise fill the role of Yahweh's representative.

32:2-4. calf idol. Bull or calf figurines, made either of bronze or of a combination of metals, have been found in several archaeological excavations (Mount Gilboa, Hazor and Ashkelon), but they are only three to seven inches long. The calf symbol was well known in the Canaanite context of the second millennium and represented fertility and strength. The gods were typically not depicted in the form of bulls or calves but portrayed standing on the back of the animal. Nevertheless worship of the animal image was not unknown, and there is little in the biblical text to suggest the Israelites understood the figure merely as a pedestal (not unlike the ark). The fact that the calf is worshiped in the context of a feast to Yahweh suggests that this may be a violation of the second commandment rather than the first.

32:4. manufacture of calf. When the heated gold was pliable enough, Aaron began to shape it, probably around a carved wooden figure.

32:4. these are your gods. The proclamation "These are your gods" implies that the calf is in some way representative of Yahweh—history is not being rewritten to suggest that a different deity was responsible for the deliverance.

32:5-6. altar for festival to Yahweh. Since the altar was built for the celebration of a sacred feast, it may be concluded that the altar was for sacrificial use, as verse 6 states. But just as the worship of Yahweh had been corrupted by introducing an image to represent him, so it was also corrupted in the conduct of the Israelites in worship. Their coarse and excessive carousing was a typical feature of pagan *fertility festivals.

32:9-14. anger of God. In ancient Near Eastern religions it was believed that gods habitually became angry with their worshipers (for both unknown and unknowable reasons) and lashed out at them. Moses' plea is thus focused on preserving the distinctiveness of Yahweh's reputation.

32:15-16. inscribed front and back. The use of two tablets probably indicates that Moses was given two copies, not that some of the commandments were on one tablet and some on the other. The fact that they were stone suggests a larger size than clay tablets would have been, though inscribed stone tablets such as the Gezer calendar were small enough to fit in the palm of the hand. The Egyptian practice of this period was to use flakes of stone chipped from rocks. Inscription on front and back was not unusual. When the writing reached the bottom of one side, the scribe would often continue around the bottom edge and move onto the second side. Even flakes that fit in the palm of the hand could contain fifteen to twenty lines.

32:19-20. dancing. Dancing was often connected with cultic festivals in the ancient world and, especially in *fertility contexts, was often sensual in nature, though not necessarily so. Dancing is also known in the context of celebration of military victories, which would fit

with this being a celebration of the deity who brought them out of Egypt.

32:19. breaking of tablets. The breaking of the tablets, though a result of Moses' anger, is not a fit of temper. The severance of a *covenant was typically symbolized by the breaking of the tablets on which the terms of the agreement were inscribed.

32:20. drinking idol-dust brew. The sequence of burn-grind-scatter-eat is also found in a *Ugaritic text to indicate total destruction of a deity. That gold does not burn is insignificant (the gold was probably shaped around a wooden figure; see comment on 32:4)—a very destructive action is being carried out. The forced drinking by the Israelites is not specified as punishment against them but represents the final, irreversible destruction of the calf.

32:30-35. the book. The concept of divine ledgers is well known from Mesopotamia, where the ledgers concern both the decrees of one's destiny and one's rewards and punishments. For further information see comment on Psalm 69:28.

32:35. the plague. Epidemic disease is known from numerous sources throughout the ancient Near East, but specific identification is impossible in the absence of symptoms.

33:1-6

Preparing to Leave Sinai

33:2. peoples of the land, flowing with milk and honey. For the peoples of the land see the comment on 3:8, and for the description of Canaan as "flowing with milk and honey" see the comment on 3:7-10.

33:7-23

Moses' Meeting with the Lord

33:7-10. tent of meeting. The system prescribed in the law (chaps. 25-30) was for a sanctuary to be built so that the Lord could dwell in their midst. Given the present situation, however, the Lord is not going to dwell in their midst, but the tent of meeting was to be set up outside the camp where Moses would receive guidance. Nothing is said to take place inside this tent, but the Lord meets with Moses at the door of the tent when the pillar of cloud descends. There are no sacrifices offered there, and it contains no altar. It is a place for prophetic, not priestly, activity. Once the tabernacle is constructed and takes its place in the middle of the camp, it also serves as a tent of meeting.

33:11. speaking face to face. Speaking face to face is an idiom suggesting an honest and open relationship. It does not contradict 33:20-23. Numbers 12:8 uses a different expression with the same meaning, "mouth to mouth."

33:18-23. God's glory, God's back, God's face. Moses' request to see the glory of God is not a request for God to do what he has never done before. In 16:7 the people were told they would see God's glory (see also Lev 9:23). Moses has negotiated for God's presence to accompany them (actually, to precede them). Moses requests that he might see the presence/glory of God taking his place in the lead. God agrees but warns that his face may not be seen. The concept of deity having an awesome, unapproachable appearance was not limited to Israelite theology, for in Mesopotamia the gods displayed their power through their *melammu,* their divine brilliance.

34:1-35

New Tablets and More Laws

34:6-7. God's attributes and willingness to punish to third and fourth generation. Moses had asked to "know" God's ways (33:13), and this list of the thirteen attributes of God (according to Jewish tradition) serve as his answer. It is not unusual in the ancient world to find lists of various deities' attributes. While mercy and justice figure prominently among them, many lists are more interested in attributes of power, while this one focuses on the benevolent graciousness of God. This list is quoted many times in the Scriptures (Num 14:18; Neh 9:17; Ps 86:15; 103:8; 145:8; Joel 2:13; Jonah 4:2; Nah 1:3) and forms a sort of confessional statement. The litany of God's characteristics is still used in Jewish liturgy today and was probably an established part of the temple worship prior to the exile. Although compassion, constancy and the reliability of God's love are stressed, the conse-quences of failure to obey God's command are made perfectly clear by the magnification of punishment on future generations (see Deut 5:9). Punishment to the third or fourth generation expresses the fact that *covenant violation brings guilt on the entire family. "The third and fourth generation" thus refers to all living members of the family. This is a stark reminder of communal guilt after the incident of the golden calf (32:19-35).

34:12-13. destruction of pagan worship objects. In this section, which reiterates the importance of obedience to the commandments, special attention is given to the destruction of all forms of pagan worship, especially *cult objects and idols. This may be another re-

sponse to the golden calf incident (32:19-35). It is clear that the inhabitants of the Promised Land will have other gods and other ways of worshiping them. The Israelites are warned not to be enticed into alliance with these people or into worshiping their gods. Thus they are not to leave any sign of foreign worship intact. Carrying out this command would be evidence of great faith, for the destruction of sacred objects was considered a grave offense to a deity and was believed to result in the severest of punishments. The obedience of the Israelites would be tangible expression of their confidence that God could protect them from reprisals.

34:13. Asherah poles. The goddess *Asherah (under various related names) appears to be the divine consort of the principal male deity in a number of Mesopotamian and Syro-Palestinian pantheons: the *Babylonian storm god Amurru; the *Ugaritic god *El; and perhaps even the Canaanite god *Baal. She was often represented in the Bible by sacred poles erected near an altar. Her popularity among Israelites still tainted by a polytheistic worldview may be suggested by the inscription from Kuntillet ʿAjrud in the northwest part of the Sinai, "Yahweh and his Asherah." The order to cut down these cultic poles signified the need to purify the nation of foreign influence. It also follows the theme in this section of obedience to the commandments of a "jealous God" who would not countenance the worship or the symbols of rival deities (20:4-5).

34:16. sacred prostitution. One can distinguish between several different categories. In "sacred" prostitution, the proceeds go to the temple. In "cultic" prostitution, the intent is to insure *fertility through sexual *ritual. We must also differentiate between occasional sacred/cultic prostitution (as in Gen 38) and professional sacred/cultic prostitution (as in 2 Kings 23:7). The evidence for cultic prostitution in ancient Israel or elsewhere in the ancient Near East is not conclusive. Canaanite texts list prostitutes among the temple personnel, and *Akkadian literature attests those who were dedicated for life to serve the temple in this way. Although the Hebrew word used here is related to an Akkadian word for prostitute, this does not prove that any religious ritual or cultic practice is involved. It is quite possible for prostitutes to be employed by temples as a means of raising funds without their having any official status as priestesses. Furthermore, since women often did not have personal assets, sometimes the only way of earning money by which to pay a vow appeared to be prostitution. The injunction against bringing the wages of a prostitute to the temple may, however, be a reaction against practices like that of the *Ishtar temple servants in the Neo-Babylonian period, who hired out female members of their community as prostitutes. Their wages would have been placed in the temple treasury. All of this demonstrates the existence of sacred prostitution, both occasional and professional, in Israel and the ancient Near East. But the existence of cultic prostitution on either level is more difficult to prove. Cultic prostitution is not easily confirmed in Mesopotamia, unless one includes the annual sacred marriage ritual. But it is hard to imagine that prostitutes serving at the temple of Ishtar (who personified sexual force) were not viewed as playing a sacred role in the fertility cult.

34:17. cast idols. It was a fairly common practice (attested by archaeological data) to mass produce images of many of the gods of the ancient Near East using cast molds. They could thus be manufactured in a variety of metals or clay and sold to individuals, who would in turn establish private shrines in their homes (see Judg 17:4-5). The prohibition here is a specific example further clarifying the commandment in 20:4 and speaks to the case of the casting of the golden calf in 32:2-4.

34:18. Feast of Unleavened Bread. This is a reiteration of the commandment in 23:15. It gains greater authority here by being included in the ritual version of the Ten Commandments (see 34:28).

34:19-20. first-born offerings. This commandment in the ritual version of the Ten Commandments is a repetition of the injunction given during the exodus narrative to redeem the first-born sons and the first-born of their livestock (13:11-13).

34:21. sabbath. This command to rest on the sabbath is a repetition of 20:9 (see comment there).

34:22. Feast of Weeks. This is the same wheat-harvest festival that is described as the Feast of Harvest in 23:16, one of the three major festivals of the agricultural year. It gains extra authority from its inclusion in the ritual version of the Ten Commandments.

34:22. Feast of Ingathering. This is the same spring-harvest festival that is described in 23:17. These major agricultural festivals are also mentioned in Deuteronomy 16:9-17. The additional promise to protect the harvesters from attack by neighboring peoples is a further incentive to the people to comply with the commandment to bring their harvest offerings three times a year.

34:23-24. pilgrimages. This is the same com-

mand to come with their harvest offerings that is set out in 23:17 and Deuteronomy 16:11, 14. Every male is required to appear before the Lord three times a year with the fruits of his labor in order to insure the future fertility of the land and to demonstrate compliance with the *covenant.

34:25. no blood with yeast. This command in the ritual version of the Ten Commandments is a repetition of the law in 23:18. Yeast allows bread to rise but is also associated with the corruption or spoiling of food and so must not be mixed with the blood, a symbol of life.

34:25. Passover leftovers. This command regarding the Passover meal first appears in 12:8-10 and is reiterated in 23:18. Its inclusion here follows the sequence established of laws concerning the major agricultural festivals and reinforces the tie between this group of laws and the exodus event. The prohibition of keeping leftovers is a sign of the sacred character of the feast.

34:26 first fruits. This command is a repetition of the law in 23:19. Just as the first-born son is redeemed through sacrifice, so too is the cereal and fruit harvest redeemed for the people's use by bringing the first of the harvest to God as a sacrifice.

34:26. kid in mother's milk. This command is a repetition of the law in 23:19. It is the basis for the prohibition against the mixture of milk and meat in cooking and in sacrifice. It may also reflect a reaction against such practices in Canaanite worship.

34:28. Ten Commandments, ritual version. The first set of Ten Commandments, which were written on two stone tablets by God, was destroyed by Moses in his disgust over the unfaithfulness of the people in the golden calf incident (32:19). Thus a second set of tablets is inscribed in 34:28, but the laws do not exactly correspond to those found in Exodus 20 and Deuteronomy 5. There is a greater emphasis on the exodus event in the laws included in this second list. It is also much more heavily balanced toward proper worship practices (including nearly verbatim sections from chap. 23) than the first set of the commandments.

34:29. Moses' "horns." The radiance of God is reflected in the shining texture of Moses' face when he returns with the tablets of the law. Although he is at first unaware of this phenomenon, Moses and the people recognize it as evidence that Moses has had direct contact with God. Subsequently, he wears a veil over his face to hide the radiance of his skin from the people. Jerome used the word *cornuta,* "horns," in translating Hebrew *qaran,* "radiant," in the Vulgate (c. A.D. 400) because the Hebrew term often refers to horns. Consequently tradition held that Moses grew horns as a result of this experience. The mistake is graphically portrayed in the horned statue of Moses sculpted by Michelangelo in the sixteenth century. The relatedness of horns and radiance can be seen in the ancient Near Eastern iconography that depicts rays or horns as symbols of power on the crowns of deities. These are related to the divine glory (Akkadian *melammu*) that emanated from the gods, especially from their heads or crowns. So, for instance, the goddess Inanna in a *Sumerian hymn is portrayed as having a terrible countenance that glows radiantly and intimidates all those around her. A closer parallel may be found in the instance of Samsuiluna (son of *Hammurabi), who receives messengers from the god *Enlil whose faces are radiant. One text makes reference to the god Enlil "whose horns gleam like the rays of the sun."

35:1-4
Sabbath

35:2-3. lighting a fire on the sabbath. This command repeats the injunction against any form of sabbath labor found in 31:15, with the additional statement prohibiting the lighting of a fire on the sabbath. It is another expansion on the theme of those types of work that could not be performed on the sabbath (see 34:21). Later rabbinic pronouncement required the kindling of a light prior to the sabbath so that the house would not be left in darkness. However, no further fueling of the fire was allowed on the sabbath.

35:4—39:31
Carrying Out the Instructions

These chapters discuss the actual construction of the tabernacle. They include the gathering of the materials (35:4-29) and the introduction of Bezalel and Oholiab as the chief craftsmen and the selection of their crew (35:30—36:7; cf. 31:1-10). Exodus 36:8-38 describes the building of the tabernacle to the exact dimensions outlined in 26:1-36. This is followed by the construction of the ark (37:1-9; see 25:10-22), the lampstand (37:17-24; see 25:31-40), the altar of incense (37:25-29; see 30:1-10), the altar of burnt offering (38:1-8; see 27:1-8) and the courtyard (38:9-20; see 27:9-19), and a summary of the materials used by the craftsmen (38:21-31). The final section describes the creation of the vestments for the priests: the ephod (39:2-7; see 28:6-14), the breastpiece (39:8-21; see 28:15-30) and the other priestly garments (39:22-31; see 28:31-43).

Moses then inspects everything, certifies it is correct and according to God's command, and gives it his blessing (39:32-43).

38:8. women who served at the entrance. In the ancient Near East there are many examples of women serving temples in various capacities. From menial tasks to priestly duties, from celibacy to prostitution, from short-term vows to lifelong dedication, examples of all sorts are available. It is therefore difficult to identify the nature of the service that the women mentioned here are performing. In 1 Samuel 2:22 the indictment of the sexual misconduct of Eli's sons suggests that the women either were involved in some duty of piety or were virgins. It must be noted, however, that there is no evidence of religiously motivated celibacy in Israel, and the text does not describe the women as virgins.

38:24. gold from the wave offering. The metals used in the construction of the tabernacle are listed in descending order of their value. As was done with the sacrificial meat set aside for the use of the priests (29:27), these materials were first presented as a wave offering to God as a way of consecrating them to their purpose.

38:24. 29 talents, 730 shekels of gold. The total amount of gold used in the decoration of the tabernacle's furnishings is described in talents (the largest unit of Israelite weight measure, equaling 3,000 shekels). The talent weighed 75.6 pounds, while the shekel weighed 0.4 ounces. Thus the total weight of gold used was 2,210.65 pounds.

38:25. 100 talents, 1775 shekels of silver. The total amount of silver given and used for the embellishment of the tabernacle's furnishings was 7,601 pounds (based on 3,000 shekels at 0.4 ounces equaling one talent and weighing 75.6 pounds). This amount is also linked to the total atonement tax (30:11-16) collected from each Israelite male.

38:26. beka. The beka is a weight of measure equal to one half of a shekel, that is, 0.2 ounces. This was the amount of the atonement tax exacted from every man twenty years old and above to provide funds for the construction and maintenance of the tabernacle (see 30:11-16).

38:26. number of Israelites. The number of men counted in the census and paying the atonement tax (see 30:11-16) of one-half shekel of silver is 603,550. This is the same number listed in the census in Numbers 1:46, which was used to determine the number of males who were twenty years old and thus able to serve in the military.

38:29-31. 70 talents, 2,400 shekels of bronze. With the equation of 3,000 shekels (0.4 ounces) per talent (75.6 pounds), the total amount of bronze presented as a wave offering and used in the construction of the tabernacle was 5,350 pounds. This more durable metal was used for the bases of the entranceway, the bronze altar and its grating, and the altar utensils, as well as the bases for each of the poles supporting the tent and the tent pegs.

39:32—40:38
Completion of the Tabernacle

40:17. timing. The tabernacle was erected on New Year's Day, two weeks short of the anniversary of the exodus event and exactly nine months after the people arrived at Mount Sinai. The construction process had been carried out with no deviation from the instructions given by God. It was only appropriate that a new era in the manner of worship should begin on New Year's Day.

LEVITICUS

1:1-17
The Burnt Offering

1:1-2. tent of meeting. Prior to the construction of the tabernacle in Exodus the tent of meeting was outside the camp and served as aplace of revelation (see the comment on Ex 33:7-10). However, now that the tabernacle is in operation, it also is referred to as the tent of meeting.

1:1-2. revelation of rituals. In the ancient Near East the priests undoubtedly claimed deity to be the source of the ritual procedures they used, though documents preserving such rituals do not present themselves as divine revelation as here. Some ritual procedures were prescribed through divination or by prophetic oracle, but they were not permanently established by those mechanisms. Early Sumerian literature portrays the mother goddess giving instructions for purification, petition and appeasement.

1:2. animal sacrifice. There have been many

theories about what thinking was represented in the sacrificial system. In some cultures sacrifice was viewed as a means of caring for the deity by providing food. Others saw the sacrifice as a gift to please the god and request his aid. In other contexts the sacrifices have been viewed as a means of entering into relationship with deity or maintaining that relationship. These are only a few of over a dozen possibilities. The history of animal sacrifice is difficult to trace. Earliest *Sumerian literature, specifically the Lugalbanda Epic, attests that sacrifices (better considered "ritual slaughter") originated as a means of permitting meat consumption. Sharing the meat with the deity allowed people to slaughter the animal for their food. Earliest archaeological evidence for sacrifice comes from the altars of the Ubaid period in fourth millennium B.C. Mesopotamia. Through most of *Assyrian and *Babylonian history, *ritual slaughter was carried out in order to obtain the entrails, believed to provide omens.

1:3-4. burnt offering. The burnt offering is always a male animal that is completely burned on the altar, except for the skin. This is the type of sacrifice that was offered by Noah and the type that Isaac was supposed to be. Other peoples are portrayed in the Bible as making burnt offerings (e.g., Num 23:14-15), and texts from Syria (*Ugarit and *Alalakh) and Anatolia (the *Hittites) testify to the practice in Syro-Palestine. In contrast there is not yet any evidence of this type of sacrifice in Egypt or Mesopotamia. The burnt offering serves as a means to approach the Lord with a plea. The plea could concern victory, mercy, forgiveness, purification, favor or any number of other things. The purpose of the offering is to entreat the deity's response. At least one each day was offered up on behalf of the people of Israel. Special ceremonies and festival days also generally featured burnt offerings.

1:3. male. Male animals were both more valuable and more expendable. A herd could be sustained with only a few males in proportion to the many females needed to bear the young. This would mean that a large percentage of the males that were born could be used for food or sacrifice. On the other hand, the good strong males were desirable because their genetic traits would be reflected in a large portion of the herd.

1:4. laying hand on the head. The laying on of the hand is an important part of the sacrificial *ritual. It is not designed to transfer sin, for it is used in sacrifices that do not deal with sin. Other possibilities are that the offerer in some way identifies with the animal, perhaps as his substitute, or identifies the animal as belonging to him. Most occurrences of the ritual confirm that either transferring or designating is taking place (or both), but it is not always clear what is being transferred or designated, and it may vary from one situation to another.

1:4. atonement. The function of this sacrifice as well as others is "to make atonement" (NIV). Many scholars now agree, however, that "atonement" is not the best translation for the concept on either the *ritual or the theological level. Perhaps most convincing is the fact that in the ritual texts the object of "atonement" is neither the sin nor the person, but a holy object connected with God's presence, such as the ark or the altar. A second important observation is that in a number of cases this "atonement" is necessary even though no sin has been committed (for instance, the ritual *impurity of women each month). For these and other reasons recent scholars have preferred "purification" or, more technically, "purgation," as the translation. So the altar would be purged on behalf of the offerer whose sin or *impurity had ritually tarnished it. The purpose was to maintain the sanctity of God's presence in their midst. The ritual, like a disinfectant, is normally remedial, but it can be preventative. The agent is usually blood, but not always. This decontamination of the sanctuary renders the offerer clean and paves the way for his reconciliation with God. The purging of objects (including cities, houses, temples and persons) from ritual contamination or evil influence by wiping or rubbing on a substance is also known in ancient Near Eastern practice, though these are mainly magical rites.

1:5-9. role of priests. Some aspects of the *ritual were performed by the priests, because only the priests had access to the altar and the holy place. (See comment on Exodus 28:1 for general information.) The priests of the ancient Near East were involved not only in sacrificial rituals but also in *divination and other magical rites. Incantations and general advice concerning appeasement of the gods were also under the jurisdiction of the priests. Priests were expected to be skilled in the knowledge of which rituals were to be used for any desired results and in the appropriate performance of the rituals.

1:5. importance of blood. Blood serves as the mechanism for ritual cleansing in Israel—a concept not shared by its ancient Near Eastern neighbors. The blood represented the life or life force of the animal, so the animal had to be killed for the blood to have efficacy. See the comment on 17:11 for more information.

1:5. sprinkling on the altar. The sprinkling of the blood on all sides of the altar is the symbolic means of applying the death of the animal to the purging of any contamination that might interfere with the entreaty that is being made on the occasion of the sacrifice. The blood represents the life/death of the animal, and the altar represents the sanctuary (God's presence) and is specifically the place where a request before God would be made.

1:8-9. parts. The pieces include the head as well as the suet (the fat that surrounds the internal organs). The only parts washed are the entrails (intestines) and the legs, both so that no dung is present on the altar.

1:9. pleasing aroma. It is typical for sacrifices to yield what is identified as the pleasing aroma of roasting meat. While it is certainly anthropomorphic (picturing God in human terms) to phrase it this way, cooked meat would have generally been used only for communal meals and special occasions, so important concepts of community were associated with the scent (like the smell of a Thanksgiving meal). It would be no different from God's being pleased by a sight or sound. In surrounding ancient Near Eastern thought the anthropomorphism is much stronger, for there the gods need and receive sustenance from food, and the smell is associated with their anticipation of a meal.

1:10-13. north side of altar. The north side of the altar is indicated, most likely because that is where there was the most room for this work to be done.

1:14-17. birds as offering. Birds, mainly domesticated doves, were the offering used by those who were too poor to own or to give up one of the larger herd animals. Texts from *Alalakh and Anatolia show that birds were also suitable sacrifices in surrounding cultures. Recent study has suggested it is not the crop that was removed but the crissum, including the tail, anus and intestines. Again, then, this is a matter of cleaning the animal in preparation for sacrifice.

1:16. east side where the ashes are. As early as the rabbis, it was suggested that the ash heap was on the east side because that was farthest away from the sanctuary, but the text never offers a reason.

2:1-16
The Grain Offering

2:1-3. grain offering. The rabbis considered the grain offering to be a substitute for the burnt offering for poor people. Mesopotamian practice is known to have made similar provision for the poor. The word used to describe this offering means "gift" or tribute. The offering is used in situations where respect or honor are intended. The same term is used the same way in *Ugaritic and *Akkadian (Canaan and Mesopotamia). It is typically found on occasions of celebration rather than the context of sadness or mourning. Generally a small portion was burned on the altar as a token of the gift to the Lord, while the remainder was given to the officiating priest. Sometimes it was offered in conjunction with other offerings.

2:1. fine flour with oil and incense. The ingredients of this offering were grain, oil and incense. The grain was the grits or semolina left in the sieve after wheat was ground into flour. The oil was olive oil. The best-quality oil was extracted by crushing the olives. But for the grain offerings the lower quality was acceptable; this was extracted through pressing and grinding. Oil was used as shortening in cooking and was easily combustible. The incense was frankincense, which was made from the gum resin of a type of tree found only in southern Arabia and Somaliland, on either side of the Gulf of Aden. This *Boswellia* tree will grow only where there is a very particular combination of rainfall, temperature and soil condition. Its fragrant aroma made the demand for frankincense high throughout the Near East, where it was used widely in both Mesopotamia and Egypt (some was found in Tutankhamen's tomb). This demand, along with its rarity, made it very expensive and one of the staples of the camel caravan trade. The grain offerings used a small amount that was entirely burned in a slow smolder.

2:3. the portion of the priests. As was the case with many offerings, the priest received a portion of the grain offering to eat. This was a means of providing for the needs of the priesthood. For fuller discussion of this practice, see comment on 6:14-18.

2:4-10. baked grain offering; cakes, no yeast, with oil. The grain offering that is for the priests' consumption can be prepared in oven, griddle or pan. The same oil and semolina are used, but no incense. Here it is specified that no yeast is to be used. Sacred use typically prohibited yeast of any sort, perhaps because it introduced a principle of spoilage (fermentation).

2:11-13. honey. Honey represents a natural resource, probably the syrup of the date rather than bees' honey. There is no evidence of bee domestication in Israel, though the *Hittites had accomplished that and used bee honey in their sacrifices (as did the Canaanites). In the

Bible honey occurs in lists with other agricultural products (see 2 Chron 31:5).

2:13. salt. Salt was used widely as symbolic of preservation. When treaties or alliances were made, salt was employed to symbolize that the terms would be preserved for a long time. *Babylonian, Persian, Arabic and Greek contexts all testify to this symbolic usage. In the Bible, likewise, the *covenant between the Lord and Israel is identified as a covenant of salt—a long-preserved covenant. Allies entering into such an agreement would generally share a communal meal where salted meat was featured. Thus the use of salt in the sacrifices was an appropriate reminder of the covenant relationship. Additionally, salt impedes the action of yeast (leaven), and since leaven was a symbol of rebellion, salt could easily represent that which inhibited rebellion. Finally, salt is symbolic for that which is infertile and therefore is used in curse pronouncements in treaties. In a Hittite treaty, the testator pronounces a curse: if the treaty is broken may he and his family and his lands, like salt that has no seed, likewise have no progeny.

2:14-16. first-fruits grain offering. Besides the grain offerings that substituted for burnt offerings and those that accompanied other sacrifices, some grain offerings were made in connection with the first fruits of the harvest. This grain has not undergone any processing but involves roasting from the sheaf in the green stage of ripening. It is likely that this offering used barley rather than wheat.

3:1-17
The Fellowship Offering

3:1-5. fellowship offering. The fellowship offering often accompanies the burnt offering and also involves an animal sacrifice. It is often present in conjunction with shared *covenantal meals (Ex 24:5; Josh 8:31) and, once kingship is instituted, often recognizes the role of the king in relation to either God or the people. A similar word referring to a gift between dignitaries also occurs in conjunction with festive meals from *Ugarit and *El Amarna (Canaanite). The three types of sacrifices in this category are the freewill offering, the vow offering and the thanksgiving offering. The common ground between them is that they provide the occasion for a meal with the offerer and his family and friends. The suet was burned on the altar, but all the meat became part of the meal.

3:4. fat covering the inner parts. The suet is the layer of fat around the internal organs, mainly the intestines, liver and kidneys. This can easily be peeled off and is inedible. Mesopotamians did not include the suet in their sacrifices, but many other cultures of the ancient Near East did. The description in the text is quite technical. J. Milgrom translates it in his commentary as follows: "The suet that covers the entrails and all the suet that is around the entrails; the two kidneys and the suet that is around them, that is on the sinews [not "loins" as in NIV]; and the caudate lobe of the liver, which he shall remove with the kidneys."

3:6-11. fat tail. When a flock animal is offered, the "fat tail" is included in the sacrifice. The sheep of this region had long tails, as long as four or five feet, weighing up to fifty pounds.

3:11. burned "as food." The language here again shows that the sacrificial terms used in Israel were influenced by non-Israelite notions of sacrifice. It is clear from passages such as Psalm 50:12-13 that the Israelites were not to consider sacrifices as food needed by God. Since the terminology is used only in this particular offering, perhaps it represents God's inclusion in the communal meal more than the meeting of any need for nourishment.

3:12-17. fat is the Lord's. The suet is grouped with the blood as the portion belonging to the Lord. Just as the blood is a token of the life of the animal, the suet is a token of the meat of the sacrifice.

4:1—5:13
The Purification Offering

4:1-3. sin offering. The purification offering has traditionally been called the "sin offering." The terminology has shifted as it has been recognized that the offering did not deal just with moral offenses but also with purification in cases of significant ritual uncleanness. In personal circumstances as well as in public services of consecration and in connection with certain festivals, the offering purified or purged the sanctuary (not the offerer) from the effects of the offense or condition. In the ancient Near East the purification of temples was a constant need, because the people felt that *impurity made the temple vulnerable to destructive demons. In Israel the preservation of the *purity of the sanctuary had to do with the holiness of God. If the Lord was to remain in their midst, the holiness of his sanctuary must be maintained.

4:4-12. laying on of the hands. The laying on of the hand is an important part of the sacrificial *ritual. It is not designed to transfer sin, for it is used in sacrifices that do not deal with sin. Other possibilities are that the offerer in

some way identifies with the animal, perhaps as his substitute, or identifies the animal as belonging to him. Most occurrences of the ritual confirm that either transferring or designating is taking place (or both), but it is not always clear what is being transferred or designated, and it may vary from one situation to another.

4:6. sprinkling seven times. The sevenfold sprinkling is a means of purifying all the parts of the sanctuary without going to each one individually. The sprinkling is directed toward the veil that separated the outer sanctuary from the Holy of Holies.

4:7. horns of the altar. The horns at the four corners of the altar were part of altar design throughout the ancient Near East. Research has suggested that they are emblems of the gods, though their function is unknown. Both the incense altar inside the sanctuary and the altar for sacrifice outside the sanctuary had horns.

4:7. incense altar. In this sacrifice the blood is spread on the horns of the incense altar. Incense altars were a typical piece of furniture in both Israelite and Canaanite sanctuaries. The incense offered on these altars was a mixture of spices featuring most prominently frankincense, but also gum resin, onycha and galbanum. Later Jewish tradition included a dozen spices in the mixture. The smoke of the incense represented the prayers of the people going up to God.

4:12. burning of extra parts outside the camp. Once the blood and fat are offered, the rest of the animal (including the meat) is burned outside the camp, so that none of it benefits the human offerers. There is no meal connected to this sacrifice. The ash pile from the second-temple period was just north of the wall in Jerusalem. Analysis of its contents has confirmed that it contained animal remains.

4:13-32. forgiveness. Forgiveness is the intended result of the purification and reparation offerings. The verb *forgive* has only God as the subject, never humans, and does not rule out punishment (see Num 14:19-24). We must therefore conclude that the concept concerns relationship rather than the judicial issue of punishment. The one who is offering these sacrifices seeks reconciliation with God, not pardon from punishment.

5:1-4. public charge to testify. The first case concerns one who does not respond to a public proclamation requesting information concerning a court case. It was common in the ancient Near East for such public requests to be made. The second and third cases concern contact with *impurity. The fourth concerns an impulsive oath. *Hittite texts also connect oath breaking with *impurity.

5:5-10. actions classified as "sins." These cases constitute a separate category because they are neither inadvertent nor defiant. Whether through carelessness or weakness an offense has been committed, and time has passed either because of a memory lapse or perhaps unwillingness to pay the price. This offering is unlike that of chapter 4 in that it required confession but resembles it in that it results in purification of the sanctuary and reconciliation to God.

5:11-13. no oil or incense. The offering to be brought was determined by the means one had. Even a grain offering could be used by the very poor. Oil and incense are omitted because they were associated with celebration, and this was not a festive occasion.

5:14—6:7
The Reparation Offering

5:14-16. reparation offering. The reparation offering was traditionally termed the guilt offering. Though the term that is used is often appropriately translated as guilt, the term serves a more technical function within the sacrificial system. This offering is designed to address a particular category of offense—understood to represent a breach of faith or an act of sacrilege. "Breach of faith" would appropriately describe the violation of a *covenant, while "sacrilege" refers generally to desecration of sacred areas or objects. Both of these crimes were well known in the ancient Near East, and examples can be found from the *Assyrians, *Babylonians, Egyptians, *Hittites and *Aramaeans. The Hittite *Instructions for Temple Officials* is particularly helpful in its identification of a number of categories of sacrilege, including (1) priests taking portions of sacrifices that do not belong to them, or taking valuables given to the temple for their families' use, and (2) laypeople failing to deliver offerings that belong to deity in a timely manner. The crime addressed by the purification offering (previous chapter) was contaminating the holy place with that which was unholy. The crime addressed by the reparation offering was appropriating that which was holy into the realm of that which was profane. Neither of these offerings existed in the other sacrificial systems of the ancient Near East.

5:18. ram, one fifth surcharge, sanctuary shekel. While the purification offering for a leader of Israel required a male goat, the male sheep (ram) of the reparation offering distinguishes this sacrifice from any that could be brought for purification. In addition to the

ram, the offender had to pay in silver the value of what he had desecrated and add one-fifth of the value for restitution. The sanctuary shekel used for the valuation is generally considered to be a fraction of the regular shekel, but precise information is not available. Archaeological finds do attest shekel pieces weighing 9.3-10.5 grams.

6:1-7. comparison of crimes. In the cases listed here the innocence or guilt of the supposed offender can be determined only by resort to an oath, because in most cases the evidence is not available or identifiable. While the previous section of the text concerned sacrilege with regard to sacred objects, this section refers to the sacrilege committed by swearing falsely. Fines are imposed here to deal with the offense on the civil level, where it would be classified as a misdemeanor rather than as a felony. In many of the ancient law collections, however, monetary reimbursement was used even in felony cases.

6:8-13

The Burnt Offering

6:9. burnt offering kept burning through the night. This section begins the instructions to the priests concerning the sacrifices that have been described in the previous chapters. The burnt offering was the last sacrifice to be offered for the day, and the regulations here specify that it should burn all night, with cleaning of the altar to take place in the morning. In this way petition on behalf of Israel can continue throughout the nighttime hours.

6:10. linen garments. The linen for the clothing worn by the priests was imported from Egypt, where it was also distinctively used for priests' garments. Angels, too, are said to be dressed in linen (for example, Dan 10:5).

6:14-23

The Grain Offering

6:16. provision for the priests. Whether or not the worshiper ate a portion of the sacrifice, a number of the sacrifices provided an opportunity for the priests to eat. This was also true in *Babylonian practice, where the king, the priest and other temple personnel received portions of the sacrifices. As early as the *Sumerian period, texts show that it was considered a grievous crime to eat that which had been set apart as holy.

6:16. courtyard of the tent of meeting. The Israelite temple that was discovered at Arad has the courtyard divided into two, the area closer to the sanctuary being more private. Ezekiel's description of the temple features special rooms adjoining the temple for the priests to eat their portions. It is likely, then, that the courtyard mentioned here, whether a partitioned open-air section or adjoining rooms in an area still considered the courtyard, would have been a private area.

6:18. holiness by touch. There was a contagion to various of the sacred objects that could be transmitted directly, but not secondarily (Hag 2:12). Tortuous analysis has led some experts to conclude that only objects, not persons, became holy by contact with something holy, but not all are convinced that such a distinction existed. Mesopotamian regulations likewise forbade the touching of sacred objects, but there is no discussion of contagion. An object that "contracted" holiness was confiscated by the priests and thereafter restricted to sacred use.

6:20. tenth of an ephah. This is about five cups of flour for two offerings, each one making a flat cake of eight to ten inches in diameter.

6:24-30

The Purification Offering

6:27. laundering a blood-spattered garment. Since the blood in this sacrifice has absorbed *impurity, the garment is now rendered impure and must be washed.

6:28. treatment of pottery vessels and metal vessels. Earthenware vessels retain their porosity and therefore absorb the *impurity of what they contain. Bronze or copper containers, in contrast, can easily be rinsed and thereby be purified for further use.

7:1-10

The Reparation Offering

7:2. blood sprinkled on all sides. The sprinkling of the blood on all sides of the altar is the symbolic means of applying the death of the animal to the purging of any contamination that might interfere with the entreaty that is being made. The blood represents the life and death of the animal, and the altar represents the sanctuary (God's presence).

7:3. fat parts. The suet is the layer of fat around the internal organs, mainly the intestines, liver and kidneys. This can easily be peeled off and is inedible. See 3:1-5 for more information.

7:6. eaten in a holy place. There were areas in the tabernacle compound provided for such occasions. See 6:14-23.

7:6. priestly shares. The concept of priestly

portions was discussed above in 6:14-23. Here the hide also belongs to the priest, a practice attested in *Babylon as well as in the larger Mediterranean context.

7:11-21
The Fellowship Offerings

7:12. preparation of thanksgiving offering. One each of four different breads are presented to the priest. The "cakes" are probably braided ring-bread perforated in the baking process, while the "wafers" are the thin disk-shaped variety, perhaps half an inch thick.

7:14. contribution. This term is traditionally rendered "heave offering" and refers to a dedicated gift. Cognate terms are attested in *Akkadian (Babylonian) and *Ugaritic. Being put in this category transfers ownership from the individual to the deity using informal procedures, generally not within the confines of the sanctuary.

7:15. difference between thanksgiving offering and other fellowship offerings. Unlike the other fellowship offerings, the thanksgiving offering was often made in places other than the sanctuary. As a result there is a stricter rule about eating it the day of the sacrifice, perhaps to avoid situations where *impurity could be contracted. This would not be as big a problem in the sanctuary precincts.

7:19-21. cutting off of those eating unclean food. The penalty cited here is not something that people carry out but refers to the action of God. Such a penalty is generally reserved for those encroaching on that which is sacred.

7:22-27
Eating of Fat (Suet) and Blood

7:22-27. prohibition against eating fat or blood. The suet is grouped with the blood as the portion belonging to the Lord. Just as the blood is a token of the life of the animal, the suet is a token of the meat of the sacrifice. The suet of nonsacrificial animals may be eaten, but the blood of any animal may not.

7:28-36
Priestly Portions

7:30-34. wave offering. Close textual analysis has demonstrated that nothing is "waved" in these offerings, though it is possible that the offering is lifted up before God in dedication (a practice attested in Egyptian "elevation offerings"). It is different from the "contribution" (v. 14) in that it is always in the presence of the Lord, that is, at the sanctuary. Most agree that it represents a special dedication ceremony. There are waving ceremonies attested in Mesopotamian and *Hittite rituals, but these are in quite different contexts from this Israelite ritual.

7:31-34. use of the breast and thigh. Since there is no mention of which breast, it is assumed that the animal is not quartered lengthwise but across the middle below the ribs, leaving the whole breast intact, a large piece of choice meat to be shared among the priests. The thigh is the choice individual portion and is reserved for the officiating priest.

8:1-36
The Consecration of Aaron and His Sons

8:1-9. anointing and anointing oil. The spices which were to be used for anointing purposes were myrrh, cinnamon, cane and cassia (see recipe in Ex 30:23-25). Oil symbolizes the gifts of God to the people and the responsibilities now laid on their leaders through this ceremony. In Israelite practice anointing was a sign of election and was often closely related to endowment by the Spirit, though that is never implied concerning the priests. Among the Egyptians and *Hittites, anointing was believed to protect a person from the power of netherworld deities. They anointed both kings and priests. In the *Amarna texts there is reference to a king of Nuhasse being anointed by the Pharaoh, and at Emar the priestess of Baal is anointed. There is no evidence that kings in Mesopotamia were anointed, but some priests were. Additionally, throughout the ancient world anointing symbolized an advance of a person's legal status. Both concepts of protection and change of status may correlate to the priest's anointing, for it would offer him protection in handling sacred things and identify him with the divine realm.

8:5-30. consecration ceremony. Investiture and anointing would have been normal procedures for social occasions. In Mesopotamian literature examples would include preparing Enkidu for entrance into society in the *Gilgamesh Epic and the hospitality offered *Adapa when he is called before the high god Anu in the *Myth of Adapa.* In the Israelite consecration ceremony, preparation for entering the serving circle of deity simply accentuates the normal procedures by using the very finest clothing and the most expensive oil. Installation of priests in Egypt also included clothing and anointing rituals.

8:1-7. priests in the ancient world. Every culture in the ancient Near East developed a

priesthood. Only the Bedouin tribes did not set these individuals aside to perform priestly duties exclusively. Their role was to function as a part of a priestly community, serving temples, performing sacrifices, conducting religious services and staging festivals. Priests would have been educated within the temple from an early age, and their position in the priestly class was hereditary in some cases. They would have been among the few literate persons in their society and thus were relied upon to keep records of major events and tie them to the will of the gods. This process was known as *divination, and it, along with *ritual sacrifice, was the chief source of priestly power and authority. There was a distinctive hierarchy among priests—ranging from a chief priest, who sometimes rivaled the king in power, to midlevel individuals who performed daily *rituals and sacrifices, to musicians, and on down to temple servants, who performed the mundane housekeeping and custodial tasks necessary in any large community.

8:7. ephod. The most important of Aaron's priestly garments is the ephod, which was either a linen robe covering the upper body or a frontal piece attached to the shoulders and sashed at the waist. The fact that the ephod is related to idols and false worship in later passages (Judg 17:5 and 8:24-27) suggests that it was a garment borrowed from Mesopotamian society—perhaps worn by priests or used to clothe idols. The breastpiece (Ex 28:15), the Urim and Thummim (Ex 28:30), and the ephod are used in *divination (1 Sam 23:9-11). Thus the high priest is clothed in garments which aid in the discernment of God's will. Discussion of the other items of the priests' garments can be found in the comments on Exodus 28.

8:8. Urim and Thummim. No description of these objects is found in Scripture, although traditions from the Hellenistic and later periods suggest they were markers whose appearance and presentation when cast like lots would determine God's will (see Num 27:21; 1 Sam 14:37-41; 28:6). There is no negative character attached to the Urim and Thummim as there are to other divinatory practices, and they are never mentioned in passages describing non-Israelite worship or *ritual. Nevertheless, the practice of posing yes-no questions to the gods (asking *oracles) is known throughout the ancient Near East. Particularly of interest are the *Babylonian *tamitu* texts, which preserve the answers to many oracular questions. Positive and negative stones (thought to be light stones and dark stones) were also used widely in Mesopotamia in a procedure called psephomancy. In one *Assyrian text, alabaster and hematite are specifically mentioned. The yes-no question would be posed and then a stone drawn out. The same color stone would have to be drawn out three times consecutively for the answer to be confirmed. *Urim* is the Hebrew word for "lights" and therefore would logically be associated with bright or white stones. One recent study has pointed out that hematite, because of its use for weights and seals, was termed the "truth stone" in *Sumerian. The Hebrew word *Thummim* could have a similar meaning.

8:9. the diadem. This refers to a symbol of authority worn on the forehead or on the front of a headpiece. Perhaps the best-known example of this in the ancient world is the serpent (uraeus) on the front of Pharaoh's crown, which was believed to be a protective device. In the descriptions of the high priest's garments the diadem is generally associated with a "gold plate" (NIV). Since the word translated "plate" here is also the word for flower, it is possible that the insignia was flower-shaped.

8:10-21. anointing the sancta. This is done to consecrate the tabernacle and its parts for sacred use. Egyptians regularly anointed the images of the gods, but this was part of the care procedures, not a consecration.

8:14. laying on the hand. See comment on 4:4-12.

8:22-30. ram for ordination. The idiom used here for ordination, the "filling of the hand," is known from *Akkadian contexts for both priests and kings. For *Assyrian king Adad-Nirari II it is specifically a scepter that is placed into his hand signifying the authority of his office. The idiom has wider use, however, and does not require an insignia. Here it is a sacrifice of a ram in addition to the purification offering (vv. 14-17) and the burnt offering (vv. 18-21) that provides the authorization for their office.

8:23. right ear, right thumb, right big toe. It is uncertain which part of the ear is intended (lobe and antihelix are the most often suggested). The blood functions both to cleanse from *impurity and protect from "sacred contagion." Smearing or daubing *rituals in the ancient Near East generally focus on edges and entrances.

8:29. wave offering. See comment on 7:30-34. Discussion of the details of verses 25-29 can be found in comments on chapter 1.

8:30. sprinkling of oil and blood. Aaron has already been anointed with oil and daubed with blood, but the sprinkling here serves a different purpose, that of consecration.

8:31-36. atonement. The concept of "purification" is closer to the mark than "atonement." See the comment on 1:4.

8:35. staying for seven days. The high priest may not leave for any reason because this would expose him to uncleanness. In his duties he absorbs *impurity but remains immune to its effects as long as he is in the sanctuary complex. Leaving would make him vulnerable to the lethal jeopardy such *impurity creates. *Sumerian texts attest to the same concerns for *entu*-priestesses, who must not venture out of the temple while *Dumuzi, still in the realm of the dead, roams the streets (Dumuzi is a dying and rising god connected to the fertility cycle of the seasons). Seven-day dedication ceremonies were common, as in Gudea's dedication of the temple in *Lagash.

9:1-22

The Beginning of Priestly Service

9:1. eighth-day ceremony. Information concerning the details of this section may be found in the previous comments. With the seven-day initiation and dedication ceremony completed, the eighth day marks the inauguration of the system. This ceremony is to be punctuated with the appearance of the Lord (vv. 4-6, 23-24). A similar initiation ceremony occurs when Solomon's temple is initiated (1 Kings 8:62-64), where the term *hanok* ("initiation") is used (cf. Hanukkah, though the present-day Jewish holiday is not related to this event but rather to the reinitiation of the altar and temple by the Maccabeans after they had been desecrated by Antiochus Epiphanes in the second century B.C.).

9:23—10:20

The Appearance of the Glory of the Lord and the Response

9:23. the glory of the Lord. Most temple dedications in the ancient Near East featured the deity being officially installed in the temple (generally by means of the image of the deity being taken in). Here there is no installation of *Yahweh, but his glory appears to emerge from the newly dedicated tabernacle, most likely in the form of the pillar of cloud and fire (see comment on Ex 13:21-22) that has represented the Lord's presence throughout the wilderness experience. Here the fire erupts from the pillar to consume the offerings.

10:1. censers. These are most likely long-handled pans that could also shovel up the hot coals. They served as portable altars because the incense was actually burned in them. Censers are also used for burning of incense in Egypt when people wanted to protect themselves from demonic forces. For a close parallel in the Bible, see Numbers 16:46-50.

10:1. unauthorized fire. Since access to the main altar (where coals for incense offerings were supposed to be obtained) was difficult given the consuming fire, and since Aaron's sons decided that incense was needed to shield the people from viewing the glory of the Lord (see 16:13), coals from another source (unauthorized fire) were used.

10:3. Aaron's silence. Aaron's silence is in contrast to the loud wailing that usually accompanied mourning. Rather than a stunned silence, it represents a determination to follow the procedure that officiating priests should not be in mourning.

10:4. relatives caring for the dead. One of the important roles for a family is to care for their dead. In this situation the brothers of the dead were not available in that they were still involved in officiating at the sacrifice. Therefore the cousins were instructed to perform the necessary duties.

10:6-7. mourning rites and anointing oil. Disheveled hair and torn clothing are two of the principal signs of mourning. Other signs would include shaving hair or beard, putting dust on the head, and even slashing oneself. The mourning period generally lasted seven days. Aaron was warned against doing this because it contradicted the priestly condition that he was required to maintain for the ceremony. It would cheapen the holiness of the sanctuary and God's presence to interrupt that which the anointing oil had put in motion. See 21:10-12.

10:8. wine and fermented drink. Dates, honey and grain products all could be fermented and used as beverages, but barley beer was probably the most common alcoholic beverage. There is some evidence of ritual intoxication in ancient Near Eastern literature and the Bible also attests the practice (Is 28:7).

10:10. the sacred compass. Verse 10 establishes several categories. Everything that was holy (consecrated to deity) was clean (ritually purified). That which was not holy (therefore profane or common) could be either clean or unclean. It was the duty of the priests to maintain the distinctions between these categories, and they did so by maintaining what is called the sacred compass. In this concept the center of sacred space was the Most Holy Place, where the ark was. Radiating from that point out were concentric zones of holiness, each with its requirements of levels of *purity. The priests enforced the rules that would maintain

the appropriate level of holiness and *purity for each zone.

10:11. priestly instruction. Instruction by the priests would have included ethical as well as *ritual matters, though here the emphasis is likely on the latter. Deuteronomy 24:8 offers an example of such priestly instruction. Priests in the ancient world were considered experts in ritual matters of the performance of the *cult and were regularly consulted about often complex procedures.

10:12-15. priestly portions. The details of verses 12-15 have been considered in comments on chapters 6 and 7.

10:16. the importance of eating the purification offering. The purification offering was believed to absorb the impurities that it was presented to remedy. This concept of ritual absorption is common in the ancient Near East. When a great amount is absorbed (as on the Day of Atonement), the entire offering is burned so as to dispose of the *impurity. But on most occasions the priest's eating of the prescribed parts plays a role in the purification process. Milgrom suggests that it symbolized holiness swallowing up *impurity. If this is so, Milgrom is right in understanding Aaron's explanation to Moses here as reflecting his fearful caution. The presence of his sons' corpses in the sanctuary area may have greatly increased the amount of *impurity absorbed by the purification offering, making it lethal to the priest.

11:1-46

Clean and Unclean Food

11:2. dietary restrictions. In Mesopotamia there were numerous occasions on which certain foods were prohibited for a short period. There is also evidence in *Babylonia that there were certain restrictions concerning animals that particular gods would accept for sacrifice. But there is no overriding system such as that found here. Yet though there is no known parallel in the ancient world to anything like the Israelite system of dietary restrictions, the permitted animals generally conform to the diet common in the ancient Near East.

11:3-7. criteria for classification of animals. The main criteria are (1) means of locomotion and (2) physical characteristics. Nothing is mentioned of their eating habits or the conditions of their habitat. Anthropologists have suggested that animals were considered clean or unclean depending on whether they possessed all the features that made them "normal" in their category. Other suggestions have concerned health and hygiene. The weakness of each of these is that there are too many examples that do not fit the explanation. A popular traditional explanation suggested that the animals prohibited had some connection to non-Israelite *rituals. In fact, however, the sacrificial practices of Israel's neighbors appear strikingly similar to Israel's. A recent promising suggestion is that the Israelite diet is modeled after God's "diet"—that is, if it could not be offered in sacrifice to God, then it was not suitable for human consumption either.

11:7. pigs. *Assyrian wisdom literature calls the pig unholy, unfit for the temple and an abomination to the gods. There is also one dream text in which eating pork is a bad omen. Yet it is clear that pork was a regular part of the diet in Mesopotamia. Some *Hittite *rituals require the sacrifice of a pig. Milgrom observes, however, that in such rituals the pig is not put on the altar as food for the god but absorbs *impurity and then is burned or buried as an offering to underworld deities. Likewise in Mesopotamia it was offered as a sacrifice to demons. There is evidence in Egypt of pigs used for food, and Herodotus claims they were used for sacrifice there as well. Egyptian sources speak of herds of swine being kept on temple property, and they were often included in donations to the temples. The pig was especially sacred to the god Seth. Most evidence for the sacrifice of pigs, however, comes from Greece and Rome, there also mostly to gods of the underworld. In urban settings pigs along with dogs often scavenged in the streets, making them additionally repulsive. The attitude toward the pig in Israel is very clear in Isaiah 65:4; 66:3, 17, the former showing close connection to worship of the dead. It is very possible then that sacrificing a pig was synonymous with sacrificing to demons or the dead.

11:8. transfer of *impurity. Objects that come into contact with a carcass absorb the uncleanness of the carcass unless they are imbedded in the ground. Springs and wells are therefore exempt, as is seed that is to be planted. The wet seed of verse 38 is being prepared to be used as food, and so it does become unclean. Any contact with a carcass made the individual unclean as well and required purification. Most eating of meat would have involved animals that had been ritually slaughtered and therefore would not transfer uncleanness.

12:1-8

Purification After Childbirth

12:2. ceremonial uncleanness. Not all uncleanness was avoidable, and the cause of uncleanness was often something that would in

no way be considered sinful. There are several categories of uncleanness that could not be easily avoided, including sexual impurities, disease-related impurities and the uncleanness that came from contact with a corpse or carcass. Though it was a matter of etiquette rather than ethics, the sacred compass needed to be protected from that which was inappropriate. Additionally it was a common belief that demons inhabited menstrual blood. In Israel bodily emissions such as menstrual blood and semen were closely associated with life. When the potential for life that they represented went unfulfilled, they would represent death and therefore uncleanness. That the uncleanness from childbirth should be seen as similar to monthly uncleanness from the menstrual cycle was common in ancient cultures, including Egypt, *Babylonia and Persia.

12:3. circumcision. See comment on Genesis 17:9-14.

12:4-5. purification for 33/66 days. The initial seven-day period plus the thirty-three additional days brings the total to forty—the normal number for estimations. Postpartum blood flow can last anywhere from two to six weeks, so this would be a suitable approximation. Persians and Greeks had similar forty-day restrictions concerning entering sacred areas after giving birth, and many cultures require a longer purification time for girls. *Hittites considered the child unclean for three months (male) or four (female). There is no sure rationale for why the purification time differs depending on the gender of the child.

12:7. atonement. Cases like this make it clear that what has been called a "sin offering" is actually a purification offering (see the comments on chap. 4). There is no sin here that needs "atonement." Rather the *impurity is cleansed from the altar (see the comment on 1:4).

13:1-46
Skin Disease

13:2. varieties of skin disease. Those studying the language have concluded that the term often translated "leprosy" (NIV: "infectious skin disease") is more accurately rendered "lesion" or, less technical, "scaly skin." Such patches could be swollen or weeping, as well as flaking. Similar broad terminology also exists in *Akkadian, where the *Babylonians likewise considered it an unclean condition and the punishment of the gods. Clinical leprosy (Hansen's disease) has not been attested in the ancient Near East prior to the time of Alexander the Great. None of the most prominent characteristics of Hansen's disease are listed in the text, and the symptoms that are listed argue against a relationship to Hansen's disease. The condition discussed in the text is not presented as contagious. Descriptions suggest that modern diagnoses would include psoriasis, eczema, favus and seborrheic dermatitis as well as a number of fungal-type infections. Comparison to "snow" most likely concerns the flakiness rather than the color ("white" is added in the translations that contain it). The great cultural aversion to skin diseases may be that in appearance (and sometimes odor) they resemble the rotting skin of the corpse and are therefore associated with death. This natural revulsion adds considerably to the victim's outcast status when combined with the quarantine that is ritually rather than medically motivated. A reflection of this can be seen in an Old Babylonian omen that interprets white areas of skin as an indication that that person has been rejected by his god and should therefore be rejected by people as well.

13:45. behavior of victim. The disheveled hair, torn clothing and covered face characterize the victim as a mourner. In the superstitions of the day the mourner would thus disguise himself from the evil forces hovering in the places of the dead. His cry would prevent someone from coming near, for popular belief held that even his breath could contaminate.

13:46. living outside the camp. Though the camp did not need to maintain the same level of *purity as the temple compound, there were restrictions. This restriction is also found in *Babylonian literature for victims of skin diseases forced to live in isolation. It is likely that they would have lived in the vicinity of the tombs.

13:47-59. contaminated cloth. This is a reference to various fungi and molds that can infect cloth or wood. Mesopotamian literature considers these growths to be associated with evil or the demonic, but they are not so personified in biblical text.

14:1-57
Purification of Scale Contamination

14:2. cleansing ritual. These *rituals are not concerned with dirt or bacteria but with ritual *impurity. Wild birds are used because the freed (contaminated) bird must never be inadvertently used for sacrifice. In Mesopotamian and *Hittite purification rituals birds are used because they are believed to carry the *impurity back to its source in the heavens. Cedar is apparently used for its red color, along with

the yarn and the blood. This is not used magically by the Israelites (curing had already taken place) but symbolically. Many interpreters consider the red to represent life.

14:8. significance of shaving. Hair sometimes represents a person's life or identity, but here it has no symbolic value. It is shaved off so all may see the restored condition of the skin and so no residual *impurity could be harbored there.

14:10. three-tenths of an ephah. Three-tenths of an ephah is about six quarts, the equivalent of offering a grain offering for each of the three sheep offered.

14:10. log of oil. A log is a small amount, less than a pint, but it is difficult to be precise. The Bible uses the term only in this chapter, and the occurrences in other languages are equally vague.

14:12. guilt offering. This offering, better translated "reparation offering," is described in chapter 5. It is generally offered when the sanctuary has somehow suffered loss. It may be part of this *ritual to make amends for any offerings that had to be omitted by the individual during his quarantine. Another suggestion is that since skin affliction could at times be a punishment from God for an act of sacrilege, the reparation offering is made just in case there was some such offense that the victim was unaware of.

14:12. the wave offering. See comment on 7:30-34. This context is the only one in which the entire animal in included in the ceremony (see chaps. 7—8).

14:14. right ear, right thumb, right big toe. See comment on 8:23.

14:15. the use of the oil. Oil is used in the ancient Near East as a protective substance. Though that function may well have disappeared in Israel, oil was retained as an important ritual element (like mistletoe in homes today being no longer considered protection from demons but associated with the season). An Egyptian *ritual for preparing an idol for the day includes a similar procedure to that described here in verse 18.

14:18. atonement. The oil (or, more likely, the entire reparation *ritual), the purification offering, the burnt offering and the grain offering are each said to make atonement for the individual. For atonement as purgation see comments on chapter 1. Here it is used to describe the complex ritual process that provides the individual with a clean slate for being reinstated into full participation in the ritual system.

14:34. mildew. The reference here is to fungal infections, which were considered to be evil omens in the ancient world. Mesopotamian *rituals target fungus growths in a number of different contexts. The wall containing the fungus was believed to be the indicator of which member of the family would die. The fungus was an omen of the coming of demons and their troubles. There is no such element here, and only the house needs the ritual procedures, not the inhabitants.

14:48. purification ritual. This *rite shows some similarity to the fungus purification rites known from the rest of the ancient Near East. The *Hurrian ritual uses birds (two sacrificed, one released) and burns cedar just as the Israelites did. *Babylonians used a raven and a hawk. The latter was released into the wilderness. For the other details of this ritual, see the comment on the beginning of this chapter.

15:1-33
Discharges

15:1-15. discharges caused by disease. Described here is the discharge of mucus that is most frequently caused by gonorrhea (though only the more benign varieties were present in the ancient world). Alternatively it has been identified as infectious urinary bilharzia, a known scourge of the ancient world. This disease was caused by the parasite *Schistosoma* related to snails in the water system that have been detected in excavations. Such discharges were believed to be evidence of demonic presence in the person in the larger ancient Near East, but in Israel they required only washing of the individual and purification of the sanctuary, not *exorcism as in Mesopotamia.

15:16-18. seminal emissions. Among the *Hittites nocturnal emissions were considered to result from sexual intercourse with spirits. There is no such stigma here, and the purification requires only washing, not sacrifice. Any sexual activity would prevent one from entering the temple compound until evening. This was also true in Egyptian practice, though it is not in evidence in many other ancient Near Eastern cultures, presumably due to the prevalence of ritualized prostitution. In these cultures, illustrated by *Hittite practice, sexual intercourse required washing prior to participation in rituals but required no waiting period and was not explicitly prohibited on temple grounds.

15:19-24. menstruation. Menstrual flow was considered a source of *impurity throughout the ancient world and in a few cultures represented danger of demonic influence. Again Israel treats it only as requiring washing, not sacrifice, and offers no protective rituals. A

royal *Assyrian decree toward the end of the second millennium prohibited a menstruating woman from coming into the king's presence when sacrifices were being made.

15:25-33. irregular discharges. Menostaxis is the name for the principal cause of continued blood flow beyond the regular monthly period. This could result in nearly perpetual uncleanness and make it nearly impossible to have children, for sexual intercourse is prohibited when such a blood flow exists.

16:1-34

Day of Atonement (Purgation)

16:2. limited access to holy places. Temples in the ancient world were typically not houses of public worship. Access to sacred precincts was heavily restricted because they were considered holy ground. The more sacred the area, the more restricted the access, both to protect the human beings who would be taking their lives in their hands to trespass on sacred ground and to prevent desecration of the dwelling place of deity.

16:2. appearing in a cloud. *Akkadian uses the term *melammu* to describe the glowing, visible representation of the glory of deity, which in turn is enshrouded in smoke or cloud. In Canaanite mythology it has been suggested the *melammu* concept is expressed by the word *anan,* the same Hebrew word here translated "cloud," but the occurrences are too few and obscure for confidence.

16:2. atonement cover. Traditionally translated "mercy seat," though all translations are speculative. The term refers to the solid gold rectangular plate or sheet (made of one piece with the cherubim) that sat on top of the ark (see comment on Ex 25:17). One suggestion is that the word comes from Egyptian, where a similar-sounding word refers to a place to rest one's feet. Since the ark is at times viewed as a footstool for God, this would fit well.

16:4. Aaron's garments. See the comments on Exodus 28 for the description of the high priest's garments. Here he is not dressed in full regalia but, as an act of humility, in more simple linen clothing. The linen for the clothing worn by the priests was imported from Egypt, where it was also distinctively used for priests' garments. Angels, too, are said to be dressed in linen (for example, Dan 10:5). Later in the ceremony the high priest will change into the regular uniform (vv. 23-24).

16:6-10. purpose of the day. Though other cultures of the ancient Near East have *rituals to dispose of evil, in all of those the evil is of a ritual or demonic nature, while in Israel all of the sins of the people are included. The ceremony begins with purification offerings so that the priest can enter the holy place. Once inside, the blood ritual cleanses all the parts of the sanctuary from the impurities accumulated throughout the year. It works from the inside out until the sins are placed on the head of the "scapegoat," which carries them away. The goal of the regular purification offerings was forgiveness (see comment on 4:13-32). In contrast, this annual ritual is intended to dispose of the sins of the people.

16:8. Azazel. The Hebrew word translated "scapegoat" is *azazel.* This translation results in dividing the Hebrew word into two words—an unlikely solution. Since verse 8 identifies one goat as "for *Yahweh" and the other goat as "for Azazel," it is most consistent to consider Azazel a proper name, probably of a demon. Early Jewish interpreters had this understanding, as is demonstrated in the book of Enoch (second century B.C.). This goat is not sacrificed to Azazel (consistent with 17:7) but released "to Azazel" (v. 26). *Babylonians believed in *alu*-demons that lived in deserted wasteland, and this may be a similar concept. In Ebla tablets there is a purification rite for a mausoleum using a goat which is then released into the steppe country.

16:8. scapegoat concept in the ancient Near East. A number of *Hittite *rituals feature the transfer of evil to an animal that is then sent away. In some cases the animal is considered a gift to appease the gods or a type of sacrifice to the gods, but in others it is simply a means of disposing of the evil. Mesopotamian rituals that transfer *impurity often see the animal as a substitute for an individual—a substitute that will now become the object of demonic attack instead of the person. In the *Asakki Marsuti* ritual for fever, the goat that is the substitute for the sick man is sent out into the wilderness. All of these differ significantly from Israelite practice in that they are enacted by means of incantations (reciting words of power)—a concept totally absent in Israelite ritual. Additionally the Israelite practice shows no intention to appease the anger of deity or demon, whereas this is the most common motivation of the ancient Near Eastern rituals.

16:8. casting lots. Casting lots gives the Lord the opportunity to choose the goat for sacrifice.

16:12. function of the incense. Incense altars were typical of both Israelite and Canaanite sanctuaries. The incense offered on these altars was a mixture of spices featuring most prominently frankincense but also including

gum resin, onycha and galbanum (see the comment on Ex 30:34-38). Later Jewish tradition included a dozen spices in the mixture. The smoke of the incense represented the prayers of the people going up to God.

16:29. tenth day of the seventh month. This would be in the fall, ten days after New Year's Day. In our calendar it falls toward the end of September.

16:34. atonement once a year. In the *Babylonian new year *ritual the priest slaughtered a ram to be used in purging the sanctuary. Incantations to exorcise demons were recited. The king declared himself free of a number of crimes concerning his office, and the body of the ram was thrown into the river.

17:1-18

Meat Consumption and Blood

17:4. guilty of bloodshed. Domestic animals suitable for sacrifice could not be ritually slaughtered for fellowship offerings except at the tabernacle/temple. This prohibition would help prevent the offering of these sacrifices to other gods or at unapproved shrines. It would also hinder the concept that the blood of an animal slaughtered away from the sanctuary could be considered as appeasing netherworld deities. It was this spilling of blood in illicit rituals that the individual would be guilty of.

17:7. goat idols. The term most likely refers to satyrlike demons who were believed to haunt the open fields and uninhabitable places.

17:9. cut off from his people. This terminology is generally accepted as reflecting a belief that God would carry out the appropriate punishment. It does not suggest any judicial or societal action against that person but awaits the action of God.

17:11. life in the blood. The idea that blood contained the essence of life is evident in the Mesopotamian belief that the first people were created from the blood of a slain deity. But there were no dietary restrictions regarding blood and nothing to suggest a ritual use of blood, either in terms of what was offered to deity or in purification rituals, anywhere else in the ancient Near East.

17:11. blood as atonement. It is because the blood was believed to contain the essence of life that it could serve as a purifying agent in the *rituals of the sacrificial system. For more discussion about the word translated "atonement," see the comment on 1:4.

17:12. prohibition against eating blood. Eating the blood could easily be viewed as one way of absorbing the life force of another creature. This type of thinking is forbidden, as is the idea that by ingesting it the individual has destroyed the life force by dissipation. Instead, the life is to be offered back to God, whence it came.

18:1-30

Sexual Prohibitions

18:1-29. sexual taboos. Every society develops sexual taboos to regulate marriage practices, adultery and unacceptable sexual practices. These restrictions vary from one culture to another, but they are all designed to reflect the economic and moral values of their society. The laws in chapter 18 are *apodictic (command) laws, which note only that these practices defile the people. The word used in verses 22-29 (NIV: "detestable") identifies the behavior as contrary to the character of God. A parallel term in *Sumerian and *Akkadian designates conduct as being despicable to deity. In the case of incest (vv. 6-18), the primary concern is over relations with immediate blood kin (father, mother, sister, brother, son, daughter) and affinal relations (wife, husband, uncle, aunt). The only exception is in the case of levirate obligation (Deut 25:5-10), when a man's brother is required to have sexual relations with his sister-in-law. Incest was equally abhorrent in most other societies (e.g., the prohibitions in *Hittite laws). A Hittite treaty prohibits sexual relationships with sisters-in-law or cousins on pain of death. The exception is Egypt, where incest was a common practice in the royal family (but little attested elsewhere) as a means to strengthen or consolidate royal authority. This concept is also seen among *Elamite kings. Adultery (v. 20) violates the sanctity of the family and contaminates the inheritance process (see the comment on Ex 20:14).

18:21. children passed through the fire to Molech. Evidence of child sacrifice has been recovered from Phoenician sites in North Africa (Carthage) and Sardinia, and it was also practiced in Syria and Mesopotamia during the *Assyrian period (eighth and seventh centuries B.C.). Dedicating children to a god as a form of sacrifice is found in several biblical narratives. It can be explained as a means of promoting *fertility (Mic 6:6-7) or as a way of obtaining a military victory (Judg 11:30-40; 2 Kings 3:27). In no case, however, is this considered acceptable as a sacrifice to *Yahweh under biblical law (Deut 18:10). Many consider Molech to be a netherworld deity whose worship featured *rituals with Canaanite origins focusing on dead ancestors. An eighth-

century B.C. Phoenician inscription speaks of sacrifices made to Molech before battle by the Cilicians and their enemies.

18:22-23. homosexuality and bestiality. Homosexuality (v. 22) and bestiality (v. 23) were both practiced in the context of *ritual or magic in the ancient Near East. The latter particularly occurs in the mythology of *Ugarit and is banned in legal materials (especially the *Hittite laws). The mixing of realms was contrary to concepts of *purity.

18:24-28. Canaanite sexual perversions. These perversions should not be considered simply the result of human depravity. Sex had been ritually incorporated into worship in order to procure *fertility of the land, the herds and flocks, and the people. While the fertility aspect of Canaanite religion is well attested, little is known of specific details of ritualized sex. Temple personnel included male and female prostitutes, but their ritual role is still obscure. The implication of these verses is also that violation of the sexual code pollutes both the people and the land, requiring a cleansing process that will drive them out and allow resettlement by the Israelites. There is thus an understanding of an intimate relationship between land and people that would have been natural to a people who based their lives on agriculture and herding. Despite the assurance that the land would ultimately belong to them, however, caution is expressed that the Israelites not follow this same course of personal defilement and be exiled in turn.

19:1-37

Miscellaneous Laws

19:9-10. intentionally inefficient harvesting. In *fertility *cults, the portion left in the field would have served as an offering to the deities of the ground. Here it becomes a means to care for the poor. While no examples of this legislation survive in ancient Near Eastern law, texts from the town of *Nuzi suggest a similar practice.

19:11-19. social contract. This is another set of *apodictic (command) decrees similar to the Decalogue (Ten Commandments) of Exodus 20:1-17. It provides an even fuller concept of the social contract between God and the Israelites, as well as the rights and obligations of the Israelites among themselves. There are no other examples of such social contracts between people and their deity. However the ancient Near Eastern gods were believed to be concerned about justice in society, and people considered themselves accountable to the gods, either to their personal/family gods or to Shamash, the god of justice. The gods were believed to judge people's conduct and were called upon to witness behavior in the human realm. Thus the social contracts that governed human behavior among Israel's neighbors were made between the human parties with the gods invoked by oath as protectors.

19:19. mixing animals, seeds, materials. Some mixtures were considered to be reserved for sacred use. The parallel passage in Deuteronomy 22:9-11 makes it clear that this is the issue in Israel as well. The mixture of wool and linen was used in the tabernacle and in the high priest's outer garments, and it was thus reserved for sacred use. This interpretation is also current in the Dead Sea Scrolls (4QMMT). Sowing of two types of seed is also prohibited in the *Hittite laws, with a death threat to violators.

19:20-22. status of slave girl. Standards of conduct and penalties vary for slaves. Ancient Near Eastern law contains several examples of punishment for the rape of a female slave. Both the Neo-Sumerian laws of *Ur-Nammu and the *Babylonian laws of *Eshnunna (both c. 2000 B.C.) prescribe fines for rape of a female slave. The Eshnunna law adds the further provision that the woman remains the property of her original owner, so that rape cannot become a predatory means of obtaining a slave. In the biblical example, the case is not considered adultery and therefore does not end in execution (see Deut 22:23-24), since she is still technically a slave, not a free woman (see Ex 22:15-17).

19:23-25. fruit tree husbandry. Orchards of fruit trees were of such great value that the law forbade cutting them during times of war (Deut 20:19). They usually contained more than one variety of tree (see Amos 9:14). Among the most common fruit trees were fig, olive, date and sycamore fig. Some orchards were irrigated (Num 24:6), but most appear to have been planted on terraced hillsides (Jer 31:5). Careful cultivation and pruning was necessary during the first three years in order to insure eventual good harvests and proper maturing of the trees. The fruit during this period could not be eaten and was declared unclean (literally, "uncircumcised"). In the fourth year the entire harvest was to be dedicated to God as an offering, and from the fifth year on the owner could eat the fruit.

19:26. divination. *Divination involves a variety of methods used by prophets (Mic 3:11), soothsayers, mediums and sorcerers to determine the will of the gods and to predict the future. These included the examination of the entrails of sacrificial animals, the analysis of

omens of various types and the reading of the future in natural and unnatural phenomena (see Gen 44:5). The prohibition against eating meat with the "blood still in it" in this verse is tied to the injunction against participating in any form of divination or sorcery. Thus, rather than being a dietary law, this decree involves the practice of draining blood from a sacrificial animal into the ground or a sacred pit, which was designed to attract the spirits of the dead (see 1 Sam 28:7-19) or chthonic (underworld) deities in order to consult them about the future. Such practices are found in several *Hittite ritual texts and in Odysseus' visit to the underworld (*Odyssey* 11.23-29, 34-43). These practices were condemned (Deut 18:10-11) because they infringed on the idea of *Yahweh as an all-powerful God who was not controlled by fate.

19:27. significance of hair trimming. For men hair has symbolic value as a sign of manhood or virility (see 2 Sam 10:4). Women decorate their hair and groom it carefully as a sign of beauty. The prohibition against trimming the "sides of your head" or the "edges of your beard" uses the same terminology as in 19:9-10, which deals with the harvesting of fields. In both cases an offering is involved—one to the poor and the other to God. The law's placement here immediately after the prohibition against *divination suggests that the restriction on cutting the hair is based on the Canaanite practice of making an offering of hair to propitiate the spirits of the dead (see Deut 14:1). *Hammurabi's code penalizes false witnesses by having half the person's hair cut off. The Middle Assyrian code allows a debt-slave's master to pull out his or her hair as punishment (see Neh 13:25). Both laws suggest that shame is attached to the loss of hair. There is a Phoenician inscription from the ninth century B.C. reporting the dedication of shaven hair by an individual in fulfillment of a vow made to the goddess *Astarte. In ancient thinking hair (along with blood) was one of the main representatives of a person's life essence. As such it was often an ingredient in sympathetic magic. This is evident, for instance, in the practice of sending along a lock of a presumed prophet's hair when his prophecies were sent to the king of *Mari. The hair would be used in divination to determine whether the prophet's message would be accepted as valid.

19:28. cutting body for dead. Mourning and *cultic practices sometimes included lacerating oneself (see 1 Kings 18:28; Jer 16:6, 41:5). This may have been done to attract a god's attention, ward off the spirits of the dead or demonstrate greater grief then simply wailing. The prohibition may be due to its association with Canaanite religion. For instance, the *Ugaritic cycle of stories about the god *Baal (c. 1600-1200 B.C.) includes an example of mourning by the chief god *El over the death of Baal. His grief takes the ritual form of filling his hair with dirt, wearing sackcloth and cutting himself with a razor. The text reads that "he plowed his chest like a garden."

19:28. tattoo marks. The prohibition against marking the skin may involve either tattooing or painting the body as part of a religious *ritual. Such markings may have been designed to protect a person from the spirits of the dead or to demonstrate membership in a group. Some evidence for this has been found in the examination of human remains in Scythian tombs dating to the sixth century B.C. The Israelite law may prohibit this practice since it involves a self-imposed alteration of God's creation, unlike *circumcision, which is commanded by God.

19:29. prostitution. In line with the surrounding laws, which prohibit defiling either the people or the produce of the land, this law against selling a daughter into prostitution is designed to prevent defiling both her honor and that of the family. Financial problems might tempt a father to do this, but it is considered a moral pollution of both the people and of the land itself. As in 18:24-28, such a practice could result in eventual expulsion from the land. The extreme nature of this penalty may be based on the loss of honor of both the household and the community. However, it is also possible that this refers to *cultic prostitution and thus would mean the worship of gods other than *Yahweh.

19:31. mediums and spiritualists. The practitioners of spiritism and sorcery are condemned (Deut 18:10-11) because of their association with Canaanite religion and because their "art" attempted to circumvent *Yahweh by seeking knowledge and power from spirits. They represented a form of "popular religion" that was closer to the folk practices of the common people and served as a form of "shadow religion" for many. Sometimes, because of its association with *divination, their *rituals and methods stood in direct opposition to "official religion" or as an alternative to be used in times of desperation (see Saul's use of the outlawed witch of Endor in 1 Sam 28). Sorcery and potions used in the practice of magic were also banned in *Hammurabi's code and the Middle Assyrian law, suggesting that the prohibition and fear of these practices was not unique to Israel.

19:35-36. honest measurements. The injunction to deal in honest weights and measures when doing business is directly related to the laws in 19:11-18, which require fair dealing and an internalized sense that your neighbor is to be treated as you would want to be treated. Standardization of weights and measures was required in *Hammurabi's code with regard to repayment of debts in grain or silver, and involving the measuring out of grain to pay for wine. Penalties for violators ranged from forfeiture of property to execution.

20:1-27
Defiling Conduct

20:2-5. children of Molech. One of the major themes in this book equates idolatry with prostituting oneself after other gods. This in turn pollutes *Yahweh's sanctuary, the Israelites themselves and the land. The practice of sacrificing children to Molech (see comment on 18:21) is condemned, and the perpetrators are to be stoned (a form of communal execution which draws everyone into the act of purification). No violation of this command will be tolerated, even if God must mete out the punishment when the community chooses to turn a blind eye to sin. The idea of "cutting off" the sinner implies complete banishment from God and the community and was generally a punishment that was seen as being carried out by God.

20:9. cursing parents. Contrary to the NIV translation, studies have demonstrated that the infraction here is not cursing but treating with contempt. This is a more general category and would certainly include the prohibition of Exodus 21:15, which forbids striking a parent, and would be the opposite of the fifth commandment to "honor your father and your mother" (Ex 20:12). Each injunction is designed to protect the cohesion of the family unit as well as insure that each subsequent generation provide their parents with the respect, food and protection they deserve (see Deut 21:18-21). Mesopotamian law codes and legal documents are also clear on the issue of treating parents with contempt. The *Sumerian laws allow a son who disowns his parents to be sold as a slave. *Hammurabi requires the amputation of the hand of a man who strikes his father. A will from *Ugarit describes a son's behavior using the same verb used in this verse and stipulates disinheritance.

20:10-16. capital punishment for sexual crimes. The violation of sexual codes (adultery, incest, homosexuality, bestiality) is placed on a par with idolatry in this law code and thus requires the sentence of death. Both defile persons and the land and cannot be tolerated. Crimes of this nature are also punishable in *Hammurabi's code (adultery requires trial by ordeal in laws 129 and 132; rape is a capital crime in law 130; incest is punished by exile in law 154), the *Middle Assyrian laws (homosexuality punished by castration in law 20) and the *Hittite laws (bestiality with pigs or dogs punished by death in law 199). In the Hittite treaty between Shuppiluliuma and Huqqana, the latter is charged not to take his sister or cousin sexually because among the Hittites people are put to death for such behavior. Such inhibitions, however, were certainly not universal. In the Persian period, for instance, men were encouraged to marry their sisters, daughters or mother as acts of piety. In Israelite practice, however, these were all believed to undermine the family, the foundational element of Israelite society. To undermine the family was to undermine the *covenant.

20:20-21. penalty of childlessness. Having children meant having someone to care for you in old age and give proper burial and the extension of the family into the next generation. Being childless represented the cutting off of the family and the risk of being neglected in old age and death.

20:27. medium or spiritist. See comment on 19:31.

21:1—22:32
Regulations for Priests

21:5. shaving practices of priests. Priests have the special injunction to keep themselves pure and holy because it is their responsibility to bring offerings to God. As a result, their skin and hair must remain intact, free of blemish or injury, as a testimony to that holiness. Thus they are prohibited from engaging in the mourning practices common in Canaan of gashing themselves, tearing their hair or shaving their beard. In fact it would be shameful for them to present themselves in any condition that was not holy (see Satan's accusation against the high priest Joshua in Zech 3:3).

21:7. marriage regulations for priests. There was a special regulation for priests against marrying a woman who was known to have engaged repeatedly in prostituting herself ("defiled by prostitution" implies flagrant abuse). Furthermore, he was also denied the right to marry a woman who was divorced. This is probably due to the fact that the principal charge made against a woman by her husband in a divorce proceeding was infidelity

(see Num 5:11-31; Deut 22:13-14; 24:1).

21:10-14. special regulations for high priest. Even a higher standard of *purity was required for the high priest. He must avoid contaminating his person by coming into contact with the dead, even if this means absenting himself from his parents' funeral, and he cannot engage in the usual forms of mourning (see purification rituals for corpse contamination in Num 19). This restriction may also be an attempt to disassociate the priesthood from *cults of the dead. Furthermore, the priest's wife must be a virgin. She cannot have been married before, nor can she be either a divorcee or a prostitute. The high priest was anointed to represent the *purity of the nation in its dealings with God. Therefore he must avoid all contact with persons or objects that might defile him and through him the Holy of Holies.

21:16-23. prohibiting priests with defects. Just as animals with physical defects or blemishes may not be offered for sacrifice (22:19-22), priests who have a physical defect may not serve before the altar. Ritual *purity is required for the sacred precincts of the altar, the sacrifice and the religious practitioner officiating at the altar in every religion in the ancient Near East. Priests must therefore be in perfect health and in full command of their bodies and senses. Thus anyone who is "blind [even in one eye], lame, disfigured or deformed," is restricted from priestly service. The list is quite graphic and includes defects caused by accidents (broken bones, crushed testicles), birth defects (dwarfism, lameness, hunchback) or disease (skin afflictions, sores). Even though he may not approach the altar, the disabled priest is still entitled to his share of the priestly portion of the sacrifice.

21:21. food of his God. A portion of most sacrificial offerings was reserved for the nourishment of the priests (see 2:3, 10; 7:6, 31-34; 24:8-9; Num 18:12-13, 15, 26, for a description of the sacrifices and the priestly portion). Even if a priest is disqualified from taking part in the sacrificial *ritual, due to physical defect, he still has the right to eat from this divine meal, for he is still a priest. The sharing of the sacrificial repast by the deity and attending priests is also found in Egyptian and Mesopotamian texts, creating a special bond between servitor and deity. See comments on 1:1-2 and 3:6-11.

22:3-9. prohibiting priests with uncleanness. The altar and those who officiated at it were required to maintain strict *purity and cleanliness. This was the case among the Israelites as well as other peoples of the ancient Near East. Egyptian priests were required to undergo lengthy purification rites before approaching the altar. One *Hittite text contains a long list of instructions on maintaining the ritual *purity of priest and temple as well as the means to cleanse them in case of contamination, which is very similar to that found in chapter 22. Any source of contamination (improper or defective sacrifice or a defiled person or priest) would defile them and require lengthy purification rites before they could once again fulfill their function. The list in 22:4-5 provides a guide to persons who must be kept away from the sacred precincts and the priests, including those who have come in contact with the dead or an unclean animal or person or have eaten unclean food. *Hittite law, which prohibits persons who have had sexual relations with a horse or mule from becoming priests, provides another type of uncleanness which is not commensurate with serving as a priest.

22:8. carcasses. All animals found dead were unclean, so only those that had been ritually slaughtered with the blood properly drained were available for the priests.

22:10-16. eligibility for priestly portions. There are foods which are only to be consumed by the god(s) and their priests. A graphic example of this is found in the oath of a *Hittite prince, "Prayers of Kantuzilis," which certifies that he has never eaten "that which is holy to my god." At least in the Israelite law, the portion set aside for the priest may also be shared with members of his household, although not with guests or hired workers. The restrictions are based on the fact that this is sacred food, and it must not be given to persons outside his extended family (including his slaves). Even daughters who marry outside the priestly community are prohibited from eating this food. There is provision for her return to her father's household after the death of her husband, and in that case she will once again be allowed to eat from the sacrificial offering.

22:17-28. classes of unacceptable sacrifices. Just as the altar and the priests must be without defect and ritually pure, so too must the items brought for sacrifice. However, there are categories of acceptable offerings based on the type of sacrifice. For instance, when an animal is presented as a freewill offering or to fulfill a vow, it must be male and without defect. No beast which is blind, injured or maimed or which has skin disorders (warts or sores) will be accepted. But for lesser freewill offerings, a cow or sheep which is deformed or stunted will be accepted, although not one whose testicles are damaged. Similarly, in *Hittite *ritual, dogs, which were normally considered

unclean, could be sacrificed to the gods of the underworld.

22:28. prohibition concerning slaughter of mother and young. The regulation that a mother and her young should not be offered the same day provided some protection to those with just a few animals who might otherwise have found themselves with ritual requirements that would decimate their small herd. There is nothing known of foreign *cultic practice that this would combat, though some have defended the alternative that the regulation had humanitarian concerns.

23:1-44
Religious Calendar

23:1-44. Israel's religious calendar. Versions of Israel's festal calendar are found in Exodus 23:12-19; 34:18-26; Leviticus 23; Deuteronomy 16:1-17; and Numbers 28—29. Each has its own characteristics and emphases. In Leviticus a list of the sacrifices required throughout the year is intertwined with the festivals of sabbath, Passover, the Feast of Unleavened Bread, the Feast of Weeks, the Feast of Trumpets, the Day of Atonement and the Feast of Tabernacles. These feasts mark the various stages in the agricultural year, celebrate harvests and give both credit and a sacrificial portion back to God, who has provided their bounty. Several also became related to historical events. Although the sabbath is not technically a feast day, it is appended here to mark its importance, and it provides a sense of how the ancients calculated time. Much of the rest of the ancient Near East had calendars more cognizant of the sun and moon, since these were manifestations of principal deities. While Israel's calendar did not neglect lunar and solar cycles, less attention was paid to equinoxes and solstices (sometimes viewed as times of conflict between sun and moon gods). Since the agricultural seasons ultimately link to the solar cycles, the lunar month/year system used throughout the ancient Near East had to be periodically adjusted to the solar cycle. This was done by adding a thirteenth month a few days in length when priests determined that an adjustment was called for.

23:3. sacred assembly on the sabbath. Sacred assemblies or proclamations were an important part of most religious practice in the ancient world. They refer to local or national gatherings for public, corporate worship. The people were summoned together away from their occupational work. Aside from performance of corporate *rituals, it is unclear what took place at these gatherings. In later times they were used for public readings, but evidence for this on all such occasions in the early periods is lacking (see Deut 31:10-13). This passage is the only reference to these gatherings in association with the sabbath.

23:5. Passover. This celebration refers to the Passover sacrifice commemorating the departure from Egypt (detailed in Ex 12—13). It is to begin at twilight on the fourteenth day of the first month (March-April). Since the sacrifice is to be a year-old lamb, some speculate that the origin of this event is found among the pastoral nomadic groups of the land and was at this time appended to the agriculturally based Feast of Unleavened Bread. Eventually, Passover became a pilgrimage festival when worship was centralized in Jerusalem, but it returned to home celebration after the destruction of the temple in A.D. 70.

23:6-8. Feast of Unleavened Bread. The Feast of Unleavened Bread signals the beginning of the barley harvest (March-April). Unleavened bread was made from the newly harvested grain without adding yeast and was celebrated as the first sign of coming harvests that year. The seven days of celebration and burnt offering are enclosed by days at the beginning and the end when no work is allowed (see comment on Ex 12:14-20).

23:10-14. wave offering for harvest. As a part of the harvest festival, the "first fruits" are brought to the priest. He in turn waves the sheaf of grain or elevates it before the altar of the Lord. This gesture physically draws God's attention to the sacrifice and signifies that all gifts and sacrificial items derive from and belong to God. It also releases the remainder of the harvest for the people's use (see comment on 7:28-38).

23:12-13. burnt, grain and drink offering. The burnt offering of the year-old lamb, a quantity twice the usual amount of grain, and a libation of wine constituted the three major products of Israel (sometimes with olive oil replacing or supplementing wine—see 2:1; Num 15:4-7). By combining them, the fertility provided by God will be directed toward all of their efforts in animal husbandry and farming. The pleasing odor draws *Yahweh's attention to the sacrifice (see Noah's sacrifice in Gen 8:20-21) and marks it as the properly prescribed thanksgiving *ritual—not the feeding of a god as in Mesopotamian and Egyptian religions.

23:15-22. Feast of Weeks. This second of the three major harvest festivals comes seven weeks after the harvest of the early grain (Ex 34:22; Deut 16:9-12) and is also known as the

Feast of Harvest or Pentecost (Ex 23:16). In the agricultural cycle it marks the end of the wheat harvest season, and by tradition it is tied to the giving of the law on Mount Sinai. It is also associated with *covenant renewal and pilgrimage. Celebration includes the bringing of a "wave offering" of two loaves of bread, animal sacrifices (seven year-old lambs, one bull and two rams) and a drink offering in thanksgiving for a good harvest. A goat is also to be sacrificed as a sin offering for the people.

23:16-20. offerings. The Feast of Weeks requires a variety of offerings from the people. The "new grain" offering is distinct from the regular grain offering (see 2:13). The two loaves are made with yeast, but they will not actually be taken up on the altar (see regulations in 7:13). The animals that serve as burnt offerings (seven year-old lambs, a young bull and two rams) demonstrate the mixed character of the Israelite economy. The reason for the inclusion of a sin offering of a goat is unclear beyond the idea that the people must be restored to *cultic *purity prior to consuming their harvest.

23:23-25. Feast of Trumpets. The first day of the seventh month (the most sacred month in the Israelite calendar) was to be marked with the blowing of ram's horn (shofar), commemorating the *covenantal agreement and gifts of God to the people. No work is allowed, and burnt offerings are presented (see Num 29:2-6 for items sacrificed). The festival would continue until the tenth day of the month when the Day of Atonement would be observed (see 16:29-34 for details). In later times the Feast of Trumpets would become the New Year's festival, but that occurred in late postexilic times.

23:26-32. Day of Atonement. For information on the Day of Atonement, see the comments on chapter 16.

23:33-43. Feast of Tabernacles. The final harvest of the year occurred in the autumn prior to the onset of the rainy season and marked the beginning of a new agricultural year (fifteenth day of the seventh month). At this time the last of the ripening grain and fruits were gathered and stored. The seven-day event was also known as the Feast of Ingathering (Ex 23:16) and was symbolized by the construction of booths decorated with greenery for the harvesters. The festival was tied into Israelite tradition as a commemoration of the wilderness wanderings. It was also the occasion for the dedication of Solomon's temple in Jerusalem (1 Kings 8:65).

23:40. fruit, leaves and branches. To represent the abundance and lushness of the land, Israelites were instructed to celebrate, decorating their booths with fruit (citron) as well as leaves and branches from willow and palm trees. The festal occasion probably included dancing and processions carrying bundles of the leafy branches. In this way, the people acknowledge the abundance provided by God and communally celebrate the visible fulfillment of the *covenant.

23:42-43. live in booths. As a way of commemorating their life in the wilderness, the Israelites are told to construct booths and live in them during the seven days of the Feast of Tabernacles. The more practical application of these temporary shelters would be to serve as housing for workers who would protect the harvest until its distribution after the festival.

24:1-9

Maintaining the Holy Place

24:2-4. oil lamps. Only the highest quality olive oil was to be used in the sacred oil lamps that illuminated the sacred precincts of the tabernacle. They were placed on golden lampstands (see Ex 25:31-39), which stood just outside the curtain of the testimony in the tent of meeting (see Ex 27:20-21). They were to burn from evening until morning, and Aaron and his descendants were given a sacred trust to keep them lit for all time to come. Like many of the *cultic items associated with the tent of meeting, the oil lamps symbolized the presence and protection of *Yahweh as well as the perpetual service of the priests.

24:4. significance of the menorah. The familiar image of the menorah, with its six branches and center lamp, comes from the description in Exodus 25:31-40 and may be symbolic of the tree of life in the Garden of Eden. However, the description of the lampstand in 24:4 only includes the fact that it is made of gold. The number of lamps is also not specified here.

24:5-9. setting out of the bread and incense. The twelve loaves of the bread of the Presence (Ex 25:23-30) represented the twelve tribes of Israel. These loaves were consumed by the priests every sabbath, and new loaves were put in their place. The burning of frankincense provided the "sacrificial aroma," substituted for burning the flour on the altar. Because the loaves were sacred, they were reserved for the priests (although see 1 Sam 21:4-6).

24:10-23

The Case of the Blasphemer

24:10-16. nature of blasphemy. The name of God is holy. Just as the people are warned not

to misuse the name of God (Ex 20:7), to pronounce a curse using God's name without authorization or to curse God by name (Ex 22:28) is considered blasphemy. This is a capital offense, punishable by stoning. The *Assyrian texts condemn blasphemers to having their tongues cut out and to being skinned alive.

24:14-16. stoning as means of execution. Stoning is a communal form of execution and the most commonly mentioned form of execution in the Bible. It is used to punish crimes against the entire community (apostasy in 20:2; sorcery in 20:27), and it requires all those persons who have been offended to participate. Because it cannot be determined whose individual stone caused the death of the condemned, no one person need bear the guilt for the death. Mesopotamian texts do not mention stoning, but employ drowning, impalement, beheading and burning as forms of execution.

24:17-22. *lex talionis*. The legal concept of equal retribution or "an eye for an eye," is found in biblical (Ex 21:23-25; Deut 19:21) and Mesopotamian law codes. It has variations in *Hammurabi's code (eighteenth-century B.C. *Babylonia) based on the social status (nobility, citizen, slave) of the accused and the person harmed. It is possible that a price was set to redeem a life in capital cases or to replace the necessity of inflicting matching harm (broken arm, gouged eye, etc.). The basis for such laws was to insure legal restitution and thereby avoid the culturally disruptive necessity of seeking private revenge. Ideally, when an injury is done to another person, the way to provide true justice is to cause an equal injury to the culprit. Although this may seem extreme, it in fact limits the punishment that can be inflicted on the person accused of the injury.

25:1-55

Sabbatical Year and Jubilee

25:2-7. sabbatical rest for land. This set of laws requiring that the land lie fallow every seventh year parallels that found in Exodus 23:10-11. However only here is the term *sabbatical* applied to the seventh year. The benefit derived from resting the land is to retard the rate of salinization (sodium content in the soil) caused by irrigation. Large areas in Mesopotamia were actually left abandoned due to exhaustion of the soil and a disastrously high salt content. During the seventh year no cultivation of the soil is allowed. *Ugaritic texts likewise feature seven-year agricultural cycles, and some would contend that a fallow-year concept is also included. However, all of the people, as well as hired laborers and the farm animals, are allowed to eat the produce of the land that grows on its own. Such a policy may actually have been enforced on portions of each field every year, so that eventually it was all allowed to rest.

25:8-55. Jubilee year. Every fiftieth year (seven sabbaths of years plus one year) was marked by a general release from debt, servitude and a return of all land that had been mortgaged or sold to the rightful owner. Such concerns for the perpetual ownership of the land are also evident in *Ugaritic real estate documents. Declarations that returned land to its original owners and freed debt slaves were periodically made among the *Hittites and in Mesopotamia (often in the first year of a new king's reign) and are attested in proclamations by early kings such as Uruinimgina and Ammisaduqa. At the heart of the Israelite laws is the idea of the inalienable right of the people to their land. The land could be used to redeem a debt but must be released at the Jubilee in much the same way that debt slaves were to be released in the seventh year of their servitude (Ex 23:10-11; Deut 15:1-11). This could, of course, serve as the basis for the returned exiles' claim to their former lands, but this does not exclude the practice from previous historical periods.

25:23. God as owner of land compared to temple economy. All of the land occupied by the Israelites was the property of *Yahweh. It was granted to them as tenants, and as such they could not sell it outright to anyone. In the Jubilee year (every fiftieth year), all land that had been consigned for payment of debts was to be returned to its owners. If a man died, it was the responsibility of his nearest kin to redeem the land so that it would remain in the family (25:24-25; Jer 32:6-15). This concept is similar to that found in Egypt, where the "divine" Pharaoh owned the land and granted it to his subjects. However, it stands in contrast with the temple economy that existed in Mesopotamia. There land was owned by individual citizens, the king and the temples of the various gods. The laws of *Hammurabi speak of the king's land grants, which could revert to him upon the death of the vassal. The land owned by the temples was granted to tenants, who paid a portion of their harvest for the right to work the land. This patchwork of ownership, while depending in many cases on tenants who could not sell the land, did not provide the sense of unity implied in the biblical concept.

25:24-25. kinsman redeemer. Since *Yahweh has granted the land to the Israelites as ten-

ants, they cannot sell it, and if they mortgage a portion of it to pay debts, it is the obligation of their kinsman to "redeem" the land by paying off the mortgage. This demonstrates both the sense of obligation and the solidarity that are the hallmarks of ancient Israel's communally based society. Evidence of this legislation's being put into practice is found in Jeremiah's redeeming of his kinsman's land during the siege of Jerusalem (Jer 32:6-15) and in the legal background to Ruth 4:1-12. In this way the land remained within the extended family as a sign of their membership in the *covenantal community. The importance of this inalienable right to land can be seen in Naboth's refusal to relinquish the "inheritance of my fathers" when King Ahab offers to buy his vineyard (1 Kings 21:2-3). In Mesopotamia (especially the earlier periods) land was often privately owned by families rather than individuals.

25:29-31. difference between houses in walled cities and houses in villages. There is a different legal classification for dwellings in walled towns and those in unwalled villages. In the towns, inhabited by Levites, artisans and government officials, a house could only be redeemed from its buyer within one year. After that the sale was final. Similarly, the Law of *Eshnunna allows a debtor who has sold his house first claim to repurchase it when it comes up for sale again. However, Israelite village dwellings (literally, "encampments") adjacent to fields and pasture lands fell within the same legal category as arable land and could not be sold in perpetuity and were to be released in the Jubilee year. Such legislation is based on the different social conditions in these two settings and indicates an awareness that property in urban centers produced no harvest. It merely provided shelter and business space.

25:38. prohibition against taking interest. Like the other prohibitions against charging interest on loans to fellow Israelites (Ex 22:25; Deut 23:19, see comments there), this legislation is designed to help a person to escape his insolvent condition and to prevent him from falling into debt servitude due to default on a loan. This applies to loans of money as well as grain, which would ordinarily be paid back at the end of the harvest. These laws are also a way to allow the debtor to retain a measure of personal dignity and honor by being treated on a level higher than a slave or a foreigner (see Deut 23:20). Both the laws of *Eshnunna and *Hammurabi's code contain set rates of interest on loans (20 percent to 33.3 percent was not uncommon and was considered fair). However, it was understood that "acts of god," such as a flood, require compassion on the debtor and a cancellation of interest payments.

25:39-55. slavery in Israel. Ancient Israel considered permanent slavery the most inhumane condition possible. The laws dealing with slavery reflect an understanding of the reasons for poverty and try to deal with its victims nonviolently. They also do not account for the principal cause of slavery in Mesopotamia—warfare. One sign of Israelite concern may be seen in the practice of allowing a household to pledge the work of its members as collateral when it borrowed goods or services from another household. To avoid confiscation of their land and children, the members of a household in default would work off their debt one day at a time. As a state, Israel tried to prevent debt from accumulating to the point where slavery was the only option. Thus the laws against charging interest on loans worked in most cases to aid the poor (Ex 22:24; Deut 23:19-20; Lev 25:35-37; Ezek 18:3). In these cases a household could become destitute and at the insistence of its creditors sell members of the household into slavery to pay debts (2 Kings 4:1; Neh 5:1-5). Slavery in this case is defined as temporary debt slavery, since the law restricts the number of years a man may be held to six (Ex 21:2-11; Deut 15:12-18). Regulations also restrict the sale or the enslavement of Israelites by other Israelites (Lev 25:35-42). In this case the Israelite who is in financial difficulties would be reduced to the status of a hired hand or indentured servant rather than a slave, even if his owner is a non-Israelite (25:47-55). Verse 48 refers to the redemption of slaves, a practice also attested in a number of Mesopotamian sources.

26:1-46
Obedience and Disobedience

26:1. carved stone. This term occurs only here (though it is probably referred to again in Num 33:52) and is quite obscure. A. Hurowitz (on the basis of an Assyrian inscription) has suggested that it may refer to a decorated or engraved threshold slab in the temple area that the king prostrated himself on when making a petition for a favorable sign. For a potentially similar situation see comment on Ezekiel 44:3.

26:1. sacred stone. Like idols (19:4), sacred standing stones are also prohibited as foreign *cult objects. They may have been huge monoliths representing a god or a set of pillars ar-

ranged around an altar or shrine. Some of those found in excavations at Gezer and Hazor were decorated with carvings such as raised hands or symbols associated with a particular deity.

26:1. nature and forms of idols. Idols came in a variety of shapes and sizes in the ancient Near East. They were carved from stone and wood and were cast in molds using gold, silver and bronze (see Is 40:19-20). Basically human in appearance (except those from Egypt, which combined human and animal characteristics), they had distinctive, even formalized, poises, clothing and hairstyles. The image was not the deity, but the deity was thought to inhabit the image and manifest its presence and will through the image. Archaeologists have found very few life-sized images that the texts describe, but there are renderings of them that allow accurate knowledge of details.

26:3-45. blessings and curses in treaty formulae. It is typical of ancient Near Eastern legal codes and treaties to append a section of divine blessings and curses (see Deut 28; Code of *Hammurabi [eighteenth century B.C.]; Esarhaddon Treaty [680-669 B.C.]; thirteenth-century B.C. treaty between Rameses II of Egypt and *Hittite king Hattusilis III). Characteristically, the curses far outweigh the blessings and, as in this case, are generally arranged in order of increasing severity. The principle behind these statements is the need to insure compliance with law or with treaties by bringing in divine goodwill and sanction. In this way the parties will feel more obligated than if they were to simply depend on the conscientiousness of their people or neighbors.

26:4-5. importance of fertility. Without continuous yield from the land, the people could not survive. Thus fertility, in the form of regular rainfall and abundant harvest from fields and vines, was a constant concern. As a result many of the gods of the ancient Near East were concerned with rain and storm, *fertility and the growing seasons. The inclusion of fertility in the set of blessings here is a reiteration of *Yahweh's *covenant promise to give the people land and children (i.e., a country of their own and fertility to insure life to each successive generation).

26:5. agricultural calendar. As noted in the Gezer calendar, a tenth-century B.C. schoolboy exercise on a fragment of limestone, the Israelite year was divided into agricultural seasons. Thus the "rain in season" would come in the fall (October-November) to moisten the newly planted fields and in early spring (March-April) to complete the ripening process before harvest (Deut 11:14).

26:8. five will chase a hundred. A sign of the promised blessing of peace is that *Yahweh, the "Divine Warrior," will fight for them and give them the victory over their enemies, no matter how great the odds against them. Thus five can rout a hundred. This underdog-turned-conqueror theme is also found in Deuteronomy 32:30, Joshua 23:10 and Isaiah 30:17. Similar assurance of the aid of a "Divine Warrior" is found in the Moabite inscription of King Mesha (c. 830 B.C.).

26:13. bars of the yoke. Yokes, usually made of wood, consisted of a bar across the nape of the animals' necks. The bar had pegs placed down through it on either side of each animal's head. The pegs were then tied together under the chin. As slaves in Egypt, the people were burdened with work like oxen bound to a yoke (see Jer 28:10-14). God has broken this yoke of bondage, freeing them of their heavy burdens and allowing them to stand upright like free men and women. Their freedom and their human dignity have thus been restored.

26:16. nature of the illnesses. The diseases promised in this curse include a "wasting disease," a fever, an illness that damages the sufferer's eyesight and causes loss of appetite. These may all be explained by the "terror"—depression and anxiety caused by God's wrath and the incursions of their enemies. Although there have been clinical diagnostic texts discovered from Mesopotamia, it is impossible to attach a specific diagnosis to the diseases mentioned here.

26:19. iron sky, bronze ground. The sense of this metaphoric curse is also found in the execration (curse) of Deuteronomy 28 and in the Treaty of Esarhaddon (seventh century B.C.). It implies that the land itself will turn against the people, becoming hard as bronze because the iron gates of heaven will have closed and no rain will fall on it.

26:26. ten women baking with one oven. The picture of so little grain that numerous women can all bake their bread in the same oven is also found on the *Aramaic statue found at Tell Fekherye, where one hundred women cannot fill up an oven with their bread.

26:29. cannibalism in ancient Near East. Only ultimate desperation and immanent starvation would cause the people of the ancient Near East to resort to cannibalism (see 2 Kings 6:24-30). It is included as part of the curses section here and in Deuteronomy 28:53-57 and in the *Assyrian treaties of the seventh century B.C. to demonstrate just how horrible God's punishment will be on the disobedient.

27:1-34

Vows

27:2-13. nature of vows. Information concerning vows can be found in most of the cultures of the ancient Near East, including *Hittite, *Ugaritic, Mesopotamian and, less often, Egyptian. Vows are voluntary agreements made with deity. In this case the vow involves pledging the value of a person dedicated to temple service (see 1 Sam 1:11). This may relate back to the redemption of the firstborn in Exodus 13:13; 34:20 and Numbers 18:15-16, but it does not involve human sacrifice. The table of equivalences defines the value of the person to be redeemed based on gender, age and ability to work. In this way the temple received sufficient funds to make needed repairs and purchase equipment (see 2 Kings 12:5-6). As is the case in all vows, God is invoked (note the seriousness of this act in Ex 20:7), and both parties are expected to act according to the terms of the vow. The vows would typically be conditional and accompany a petition made to deity. The items that are given to redeem the person become sacred and cannot be redeemed themselves unless, by their nature, they are unacceptable for dedication (i.e., unclean or unfit). The huge amounts involved (up to fifty shekels) make it unlikely this vow was common.

27:2-8. dedication of persons. The concept of dedicating a person to temple service may be based on the idea that a family must sacrifice (i.e., give up their labor) to God's service. Thus Samuel was dedicated to the shrine at Shiloh by Hannah prior to his birth (1 Sam 1:11). However, in the labor-poor region of Israel, this would have been impractical. Thus a system was created whereby the obligation was fulfilled by redemption of the person through a set table of equivalencies based on age, gender, ability to work and ability to pay. This might be compared to the laws of bodily injury in the *Ur-Nammu code, the Laws of *Eshnunna and the laws of *Hammurabi, which set a specific monetary fine based on the type of injury, age, social status and gender of the victim.

27:3-8. relative values. The set of relative values established for redemption of persons dedicated to temple service is based on four criteria: age, gender, ability to work and ability to pay. The assumption is that the value of the labor service of an adult male between age twenty and sixty is fifty silver shekels. Even though they may serve longer than an adult, the value set for children is only a fraction of this amount (based on gender). However, for persons over sixty, the amount, understandably, is less than for those of standard working age. The amount set for the poor is based on a priest's determination of their ability to pay. Although these amounts may reflect the value of slaves, this amount fluctuates too much over time to be a reliable indicator.

27:3-7. amounts of money. The amounts of money specified for redemption of persons dedicated to temple service are all in silver. The largest, fifty shekels, based on the silver content of twenty gerahs/shekels (27:25), was many times the annual wage for a laborer. This makes it unlikely that many persons would have made this type of vow, knowing it must be paid once the vow is made. They simply could not have paid this sum and therefore the redemption of a dedicated person may have been a rare occasion.

27:3. sanctuary shekel. The price in silver to be paid was based on the sanctuary shekel as opposed to a common shekel weight, which was generally 11.4 grams. The sanctuary shekel used for the valuation is generally considered to be a fraction of the regular shekel, but precise information is not available. Archaeological finds do attest shekel pieces weighing 9.3-10.5 grams.

27:9-13. redeeming animals. If a person wished to use an animal as payment of the vow, then the determination of its value and its acceptability would be based on priestly inspection for blemish or other imperfection, and on whether the animal was clean (i.e., acceptable for sacrifice). If an animal was ceremonially unclean, it could still be offered, but it in turn would be redeemed with an extra payment of one-fifth of its value. If it was the intent of the donor to give the animal up for sacrifice, it could not under any circumstances be redeemed (see 22:21-25). Such care over the ritual *purity of sacrificial animals was also common in *Hittite and Mesopotamian rituals.

27:14-25. dedication of house or land. The consecration of a dwelling or of fields, whether owned by a person or held as collateral for a debt, may be made, but they must be inspected and valued by the priest. This allows for a set amount should the owner wish to redeem them, plus one-fifth of their value. It also could involve a purification *ritual of the property, as is also evident in *Hittite texts. The basis for this practice might involve a vow to make special provision, beyond normal sacrifices or tithes, for God's sanctuary or priesthood, and it may result from the lack of an heir. Thus the produce of land or the use of the house (for storage or rents) would belong

to God. The Year of Jubilee is also a factor which must be taken into account in this valuation and assignment of property. Only land which was owned and not redeemed may ultimately become the permanent property of the priests (27:20-21).

27:21. priest property. We know from *Hittite, Egyptian and Mesopotamian texts that temple communities owned land and benefited from its produce. Although the practice of deeding over property to the temple is not mentioned outside the Bible, it seems likely that the priestly community throughout the ancient Near East could acquire ownership of land that was consecrated to the use of the god(s). This is made possible if the owner of the land fails to redeem it. At that point, the land becomes "holy" and like sacrificial animals may not be redeemed in the future. Thus in the Israelite Jubilee year celebration, instead of the land reverting to its original owner, it becomes the permanent property of the priests.

27:25. twenty gerahs to the shekel. The sanctuary shekel (weighing 11-13 grams) was to have a silver content of twenty gerahs (0.571 grams or 8.71 grains). This established the weight as acceptable payment for dedicated persons or property.

27:29. person dedicated to destruction. There are some acts which cannot be expiated through sacrifice or redemption. Persons who have been condemned for false worship (Ex 22:19) or for violating the ban (Josh 7:13-26) or for murder (Num 35:31-34) or willful violations of ritual *purity (as in the *Hittite texts) may not be redeemed. In some cases their families and their property were also destroyed in a general purging of evil. They have committed acts that violate God's holiness and contaminate the community. Therefore their sentence must be carried out without exception. Only in this way can God's name be restored to its proper sanctity and the people be cleansed of their *impurity.

27:31-33. redeeming the tithe. Since all of the produce of the land (grain and fruit) belongs to God, a tithe must be made on it (Deut 14:22-26). Those items set aside for the tithe could not be considered part of the "freewill" offerings, since the tithe is considered the unrestricted property of *Yahweh. The amount of the tithe may be redeemed by a payment of its value plus one-fifth of that value. Note that this payment can be made only for farm produce (compare Num 18:14-19). Animals not only cannot be redeemed, but any attempt to do so results in the loss of both the animal originally chosen for the tithe and the one substituted.

NUMBERS

1:1-46

Census

1:1. Desert of Sinai. "Desert of Sinai" refers to the wilderness area surrounding the mountain where the Israelites were camped (see comment on Ex 19:1-2).

1:1. chronology. By comparing this to Exodus 40:17 it can be seen that the tabernacle has now been set up for one month and the people have been camped at Sinai for nearly a year.

1:2. purpose of census. Censuses in the ancient world were used as a means of conscripting men for either military service or government building projects. They also were often accompanied or even motivated by the collection of a head tax. This census is for conscription into the army, but it cannot easily be separated from the one in Exodus 30:11-16 (see comment) where a temple tax is collected.

1:46. size of the population. For some of the problems see the comment on Exodus 12:37.

1:47—2:34

The Arrangement of the Camp

1:52. grouping of the tribes. The camp of the priests and Levites surrounded the sanctuary, while the other tribal camps formed an outer rectangle with three camps on each side. Rectangular military encampments were the norm in Egyptian practice of this time and are portrayed in ninth-century *Assyrian art with the king protected in the center. Judah leads the prominent eastern camp (the tabernacle entrance faced east) as the leader among the tribes. Reuben, the tribe of the eldest son, leads the southern group, while Dan, the tribe of the eldest of the *concubines' sons, leads the northern group. The tribes from Rachel's sons are on the west side, led by Ephraim, the

son of Joseph with firstborn rights.

1:52. standards. In Egypt each army division was named after a deity, and the standard for that division bore a representation of that deity. It would therefore be reasonable to assume that the standard of each tribe displayed a symbol of the tribe. On the other hand, some interpreters have interpreted this word to refer to a military unit rather than a standard.

2:3-32. numbers of the census. As discussed in the comment on Exodus 12:37, there is a problem with the numbers. The most probable solution at this point is to understand that the numbers given here are mixtures. Since the Hebrew word translated "thousand" *('lp)* looks the same as the word translated "military division," a number like 74,600 (v. 4) may be read as 74 military divisions, (totaling) 600 men. The total in verse 32 would originally have been written 598 military divisions *('lp)*, 5 thousand *('lp)* and 5 hundred men. But at some point in the transmission of the text the two words were confused and added together to make 603 thousand. If this solution is correct, the size of the Israelite group that left Egypt would have been about 20,000.

3:1—4:49

The Levite Clans

3:7-10. Levites as sanctuary guards. Encamped around the sanctuary and instructed to put to death any trespasser, the Levites restricted the access to the tabernacle. Ancient sanctuaries were not public places for gathering but were the divine residences. The priests are seen as guards in *Hittite texts as well as in texts from *Mari on the upper Euphrates. In *Babylonian beliefs there were also demons or protective spirits who guarded temple entrances.

3:12-13. Levites in the place of the first-born. In the ancient world many cultures featured an ancestor *cult in which libations were poured out on behalf of the dead ancestors, whose spirits would then offer protection and help to those still living. In *Babylon the disembodied spirit *(utukki)* or the ghost *(etemmu)* could become very dangerous if not cared for and often were the objects of incantations. Care for the dead would begin with proper burial and would continue with ongoing gifts and honor of the memory and name of the deceased. The firstborn was responsible for maintaining this ancestor worship and therefore inherited the family gods (often images of deceased ancestors). While ancestor worship or *funerary cult was not approved for Israelites, the indictments of the prophets make it clear that it was one of the deviant practices of the common people. The transfer of the status of the firstborn to the Levites therefore implies that rather than a family-level ancestor worship maintained by the firstborn, Israel would have a national-level religious practice maintained and regulated by the Levites (see also the comments at Ex 13:1-3; Deut 14:1-2; 26:14). For legal background see comment on 8:24-26.

3:47-51. redemption money. The concept of ransom or redemption money occurs both in *Akkadian (Babylonian) and *Ugaritic (Canaanite) texts, though not in this same function. The nation here bought back its firstborn from God by "trading" the Levites, and the remainder of the firstborn had to be bought back with money according to the value set in Leviticus 27:6. The average shekel weighed 11.4 grams, although there are also references to a "heavy shekel," which may have weighed more. The sanctuary weight listed here may refer to a shekel that has a more standard value and weight than the standard "marketplace" shekel. It is generally considered a lighter shekel (see comment on Ex 30:13). Five shekels would have represented about half a year's wages.

4:6. hide of sea cows. Both sea cows (a herbivorous mammal, the dugong) and dolphins are found in the Red Sea, and their hides could have been tanned and used for decoration. These creatures had been hunted for their hides along the Arabian Gulf for millennia. Alternatively, this word may be compared to an *Akkadian word which refers to a semiprecious yellow or orange stone, and thus to the color of dye used rather than to an animal.

4:6. blue cloth. This has more recently been interpreted as a blue-purple or violet color. The dye for this color was one of the major exports of Phoenicia, where it was extracted from the murex snail *(Murex trunculus)*, which inhabited shallow coastal waters of the Mediterranean. An ancient refinery has also been found at Dor along the northern coast of Israel. One chemist estimated that a quarter of a million snails would be needed to produce one ounce of pure dye. This dye was used in the manufacture of the most sacred objects such as the veil of the Holy of Holies and the high priestly garments.

4:46-48. number of the Levites. Here the number of Levite men aged thirty to fifty is 8,580, while in 3:30 the total number of males over a month old was 22,000. This would imply that there were 13,420 males younger than thirty and older than fifty. This is a reasonable distribution and argues that the numbers are in right proportion. It is still likely that there has

been confusion concerning the word *thousand,* as described in the comment on 2:3-32.

5:1-4

Persons Sent Outside the Camp

5:2. infectious skin diseases. For the nature of these diseases see comment on Leviticus 13:2.

5:2. discharges. For discussion of the various classes of discharges, see the comments on Leviticus 15.

5:2. ceremonial uncleanness. Not all uncleanness was avoidable, and the cause of uncleanness was often something that would in no way be considered sinful. There are several categories of uncleanness that could not be easily avoided, including sexual impurities, disease-related impurities and the uncleanness that came from contact with corpse or carcass. Though it was a matter of etiquette rather than ethics, the sacred compass needed to be protected from that which was inappropriate. Additionally it was a common belief that demons inhabited menstrual blood. That the uncleanness from childbirth should be seen as similar to monthly uncleanness is common in ancient cultures, including Egypt, *Babylonia and Persia.

5:3. living outside the camp. Though the camp did not need to maintain the same level of *purity as the temple compound, there were restrictions. This restriction is also found in *Babylonian literature for victims of skin diseases forced to live in isolation. It is likely that they would have lived in the vicinity of the tombs.

5:5-10

Restitution in Fraud Cases

5:6-7. nature of the legislation. This section concerns a case where someone has used a formal oath to defraud someone else in court and later feels guilty about having done so. Giving restitution plus 20 percent to the defrauded individual, his next of kin or to the priest, plus the appropriate reparation offering, is commanded. In *Hammurabi's laws one-sixth is typically added to restitution amounts in the form of interest payments.

5:11-31

The Case of the Jealous Husband

5:14. basis for legal action. The only basis for this action is the jealousy of the woman's husband. The word used to describe the nature of the crime in verse 12 usually refers to a breach of faith or an act of sacrilege (see the comment on Lev 5:14-16). It is therefore likely that the woman has previously been asked to swear an oath to her innocence and is now being accused of swearing falsely. Such an accusation may come about if the woman is now found to be pregnant and the husband contends that the child is not his.

5:15. the husband's actions. It is unclear why the husband brings the particular offering that he does. Unlike the regular meal offering, it is barley (as offered by the poor) instead of wheat, and it omits the oil and incense as meal offerings associated with potential offenses do. Generally oil and incense were associated with celebration, and this was not a festive occasion.

5:16-17. the priest's actions. A text from *Mari (northwest Mesopotamia) speaks of a trial by ordeal where the gods are asked to drink water which contains dirt taken from the city gate. This bound the gods to their oath to protect the city. Here the ingredients are sacred (water from the laver, dirt from the sanctuary floor) and mixed with the inscribed curses that concern the woman's obligation to preserve the *purity of the sanctuary.

5:18. loosening the hair. This is elsewhere connected to mourning and may suggest that the woman is to adopt a posture of mourning until the Lord's verdict is clarified.

5:23-24. trial by ordeal in the ancient Near East. "Ordeal" describes a judicial situation in which the accused is placed in the hand of God using some mechanism, generally one that will put the accused in jeopardy. If the deity intervenes to protect the accused from harm, the verdict is innocent. Most trials by ordeal in the ancient Near East involved dangers such as water, fire or poison. The accused who is exposed to these threats is in effect being assumed guilty until the deity declares otherwise by action on her behalf. In contrast, the procedure in this text invokes neither magic nor danger but simply creates a situation for God to respond to. Thus the woman here is presumed innocent until circumstances (directed by the Lord) show otherwise. *Hammurabi's laws contain similar cases in which the woman undergoes a river ordeal to determine her guilt or innocence.

5:27. the negative potential results. Suggestions have ranged from a flooded uterus to false pregnancy to pelvic prolapse to atrophied genitalia. Whatever the actual physical manifestations might be, the text clearly indicates that the result is sterility. If the woman has been brought into this process because of pregnancy, it may be that the potion would be expected to induce a miscarriage in the case

that the pregnancy came about through illicit behavior.

6:1-21

The Nazirite Vow

6:3. abstinence from drinks. There are a number of different words used to describe fermented drinks made from grapes used here. While some of the terms could at times refer to intoxicants made from other ingredients (e.g., grain), only those that can refer to grape products are used here. That suggests that only grape intoxicants are prohibited to the *Nazirite. It is not drunkenness that is the issue here, but grape drinks of any sort.

6:3-4. abstinence from grape products. Prohibition of grape products has suggested to some interpreters that a nomadic lifestyle is being elevated, but it is very difficult to see that as a biblical or priestly agenda. Alternatively one must notice that the grape is one of the principal, one could say characteristic, staples of Canaan and therefore symbolically connected to the issue of fertility (note that the spies bring back a huge cluster of grapes [13:24] as evidence of the fertility of the land). The use of raisins in raisin cakes for the *fertility *cult can be seen in Hosea 3:1.

6:5. significance of hair. There is a Phoenician inscription from the ninth century B.C. reporting the dedication of shaven hair by an individual in fulfillment of a vow made to the goddess *Astarte. It is of importance that in the biblical text there is no discussion of what should be done with the hair that is cut. It is neither dedicated as in the above inscription, nor is it deposited in the temple as in some cultures. The dedicated hair is uncut (v. 9), not cut. For men hair has symbolic value as a sign of manhood or virility (see 2 Sam 10:4). Women decorate their hair and groom it carefully as a sign of beauty. The prohibition against trimming the "sides of your head" or the "edges of your beard" uses the same terminology as in Leviticus 19:9-10, which deals with the harvesting of fields. In both cases an offering is involved—one to the poor and the other to God. *Hammurabi's code penalizes false witnesses by having half the person's hair cut off. The Middle Assyrian code allows a debt-slave's master to pull out his or her hair as punishment (see Neh 13:25). Both laws suggest that shame is attached to the loss of hair. In ancient thinking hair (along with blood) was one of the main representatives of a person's life essence. As such it was often an ingredient in sympathetic magic. This is evident, for instance, in the practice of sending along a lock of a presumed prophet's hair when his prophecies were sent to the king of *Mari. The hair would be used in divination to determine whether the prophet's message would be accepted as valid. (See Lev 19:27.) Studies have shown that hair cutting was used in the ancient world as an act of distinguishing oneself from those around (as in mourning), or of reentering society (as seems to be the case with the Nazirites).

6:6-7. corpse prohibition. Corpse contamination was one of the most common and unavoidable causes of ritual uncleanness (see comment on 19:11). Some have further speculated that ritual uncleanness from corpse contamination may also represent a statement against the always prevalent *cult of the dead (see comment on 3:1, Levites in the place of the first-born).

6:8. Nazirite background. It may be no coincidence that the three prohibited areas for the *Nazirite represent fertility (grape products), sympathetic magic (hair) and the *cult of the dead (corpse contamination). These are the three principal popular religious practices that *Yahweh worship sought to eliminate. It is difficult to reconstruct, however, why these elements were chosen, or what the original thinking behind the vow was.

6:9-12. ritual procedure in case of violation. Ritual violation of the vow required the purging of the altar but only included the least expensive offerings (pigeons). It was also necessary to offer a lamb for a reparation offering because the violation involved a breach of faith (see comment on Lev 5:14-16).

6:13-20. conclusion of the vow. A whole series of offerings (see the comments on the early chapters of Leviticus for more information on each) concludes the vow, followed by the cutting and burning of the hair. Most vows in the ancient Near East were conditional vows attached to some past or present entreaty (see comment on Lev 27), and there is no reason to assume that the *Nazirite vow is any different. It is not surprising, then, that the vow culminates in offertory gifts. What is unusual, against the background of ancient Near Eastern vows, is the ritualized period of abstinence that precedes the offerings.

6:22-27

The Priestly Blessing

6:24-26. ancient Near Eastern blessings. In the ancient world blessings and curses were believed to have a power all their own that

would result in their fulfillment. This blessing is probably one that the priests were to give to someone leaving the sanctuary after participating in some *ritual. Two small silver scrolls (about one inch long) have been found in the area known as Keteph Hinnom in Jerusalem. They were *amulets in a burial cave from the sixth or seventh century B.C., and they contained this benediction. At present they represent the oldest example of any text of Scripture. The concept of the shining face of the deity resulting in mercy is found in Mesopotamian documents and inscriptions from as early as the twelfth century B.C. as well as in a letter from *Ugarit. Additionally a phrase invoking the gods to grant watch-care and well-being is used regularly in *Ugaritic and *Akkadian salutations. Finally, the phrase "the Lord bless you and keep you" is also included in the words (Hebrew) painted on a large storage jar from the ninth century B.C. found at Kuntillet Ajrud in the northern Sinai.

7:1-89

Offerings for the Tabernacle

7:1. function of anointing sacred objects. Anointing is an act of dedication. It is unclear whether here the anointing is with oil or blood—the former is usually deemed more likely.

7:13. silver plate. The two silver objects named here are more bowl-shaped, the former almost twice the size of the latter and probably deeper. They weigh about three pounds and one and a half pounds respectively.

7:13. fine flour. The flour here was the grits or semolina left in the sieve after wheat was ground into flour. It is the same as was used for the grain offerings (see comment on Lev 2:1).

7:14. gold ladle. These ladles weighed about four ounces. The word translated "ladle" is simply the word for "hand." There are tongs found at *Amarna whose ends are shaped like hands, but the fact that these implements could be filled with incense suggests ladles rather than tongs. Though they were relatively small, the incense they held was valuable so even this small amount was a substantial gift, in addition to the value of the gold.

7:84-88. function of the offerings brought. The text does not speak of the animals actually being sacrificed, and the word translated "offerings" does not refer to sacrifices. The animals were dedicated for tabernacle use for particular offerings (as indicated in the lists), but they became part of the sanctuary livestock to be used as the need arose. In providing basic supplies for operation, this resembled a housewarming party.

8:1-4

The Lampstand

8:2. lampstand. The design of three branches on either side of a central axis is common in the *Late Bronze Age cultures of the Mediterranean. See comment on Exodus 25:31-40.

8:5-26

The Levites

8:7. shaving the body for purification. Egyptian priests were also required to shave their heads and bodies as part of their purification process. Razors were often bronze, either knife-shaped with rounded handles or blades with a thin handle attached perpendicular to the flat.

8:10. laying on of hands. This is the same procedure that the Israelites used when presenting a sacrifice (see comment below). It is symbolic of designating the Levites to serve on behalf of the Israelites.

8:11. Levites as a wave offering. The wave offering (better: elevation offering) is a rite of dedication (see comment on Lev 8:27).

8:12. Levites laying hands on the bulls. See comment on Leviticus 1:4.

8:12. making "atonement" for Levites. For the word here translated "atonement" as a purifying consequence of sacrifice, see comment on Leviticus 1:3-4. But there is no sacrifice being offered here, only sacrificial symbolism being used. The Levites do not perform purification rites on behalf of the Israelites— that is the task of the priests. Instead the Levites protect against divine wrath by providing a ransom. Such attempts are commonplace in *Babylonian and *Hittite appeasement *rituals.

8:24-26. role of the Levites. In the ancient Near East there was a legal transaction by which a creditor would receive the service of a person in the family of the individual to whom he had extended a loan or commodity. The person on loan is assigned a specific area of work over a predetermined length of time. This service took the place of interest on a loan. The person on loan became part of the household of the creditor and received support and sustenance from him. In the same way, the Levites do specified service at the house of the creditor (God) and receive support and sustenance from him. That which is received by the Israelites in exchange is their firstborn.

9:1-14

The Passover

9:1. Desert of Sinai. This is the wilderness area around Mount Sinai (see comment on 1:1).

9:2. Passover. This is the first celebration of Passover since its inception a year earlier in Egypt. For the meaning of the Hebrew term see comment on Exodus 12:11. For further discussion about Passover see the comments on Exodus 12:1-23.

9:15-23

The Guidance of the Cloud

9:15. the function and nature of the cloud. Some have thought the pillar of cloud and fire could be best explained as the result of volcanic activity. An eruption on the Island of Thera (six hundred miles northwest) in 1628 B.C. brought an end to Minoan civilization, and it is possible that its effects could have been seen in the Delta. But the date is far too early (see "The Date of the Exodus," pp.96-97, and this theory would offer no explanation of the movements of the pillar, nor of the location described for it in the biblical account (they are moving southeast). The text does not suggest that the pillar was supernaturally generated, only that it was the means of supernatural guidance. For this reason some have suggested that it was the result of a brazier of some sort carried on a pole that would be used by the vanguard scouts. This was a method often used by caravans. On the other hand, the pillar is always portrayed as acting (coming down, moving) rather than being operated (no human is ever said to move it), so the vanguard theory is difficult to support. In the ancient world a bright or flaming aura surrounding deity is the norm. In Egyptian literature it is depicted as the winged sun disk accompanied by storm clouds. *Akkadian uses the term *melammu* to describe this visible representation of the glory of deity, which in turn is enshrouded in smoke or cloud. In Canaanite mythology it has been suggested the *melammu* concept is expressed by the word *anan,* the same Hebrew word here translated "cloud," but the occurrences are too few and obscure for confidence. In any case, the pillar here would then be one; smoke being visible in the daytime, while the inner flame it covered would glow through at night. (See Ex 13:21-22.)

10:1-10

The Trumpets

10:2. silver trumpets. As is obvious from the materials they are made of, these are not the ram's horn trumpets that are referred to in other contexts. Tubular flared trumpets were used in this period in military as well as ritual contexts. This is depicted on Egyptian reliefs as well as evidenced by actual instruments found, for example, in the tomb of King Tut (a silver trumpet nearly two feet long).

10:2. silver work. The techniques of silver mining were known as early as the mid-third millennium. A process called cupellation using a crucible was used to extract silver from lead and refine it through several stages of purification. In *Ur silversmith artisans were producing musical instruments as well as jewelry and other items in the third millennium.

10:3-7. trumpet signaling. In warfare signaling was done in various ways. Fire signals were common both along garrison lines as well as in the open field. Basic commands were at times communicated by upraised staff or javelin. Trumpet signals are attested in Egypt in the *Late Bronze Age (this time period) in both military and religious contexts. A preset code would include some combination of long and short blasts.

10:11-36

Leaving Sinai

10:11. chronology. At this point the Israelites are still at Sinai having left Egypt only thirteen months earlier. In our calendar it would be early May.

10:12. itinerary. If the Wilderness of Sinai is in the southern section of the Sinai peninsula, as we have suggested, this is a march toward the northeast. The Wilderness of Paran includes Kadesh Barnea and is generally located in the northeast corner of the Sinai peninsula. Several of the sites they stop at on the way are mentioned at the end of chapter 11. The Israelites spend the bulk of their forty years of wandering in the Wilderness of Paran.

10:29. Hobab, son of Reuel. In Exodus 2 Moses' father-in-law was called Reuel, in Exodus 3 he is referred to as Jethro, and here he appears to be named Hobab (see Judg 4:11). The difficulty can be resolved once the ambiguity of the terminology is recognized. The term designating male in-laws is nonspecific. Referring to a male near-relative of the bride, the term could be used for her father, brother, or even grandfather. Most solutions take account of this. Perhaps Reuel is the grandfather head of the clan, Jethro is the father of Zipporah and technically the father-in-law of Moses, and Hobab is the brother-in-law of Moses, Jethro's son. Alternatively, Jethro and Hobab

could both be brothers-in-law, and Reuel the father. (See Ex 3:1.)

11:1—12:16
A Rebellious and Quarrelsome People

11:3. Taberah. There is good reason to associate Taberah with Kibroth Hattaavah (v. 34), since there is no record of travel between these two accounts. Each name reflects an incident that occurred there. No firm identification of these sites is possible.

11:4. meat. The meat they are craving is not beef, lamb or venison. The Israelites had livestock with them but would have been reluctant to slaughter them and thus deplete their herds and flocks. Furthermore, these meats were not part of their normal diet but were eaten only on special occasions. Life by the river in Egypt had accustomed them to a regular diet of fish, however, and the next verse clarifies that this is the meat referred to.

11:5. diet in Egypt. Five types of produce are mentioned here as staples of the Israelite diet in Egypt. Several of them are known from Egyptian texts and wall paintings. The melons are either watermelons or muskmelons.

11:7-9. manna. The bread from heaven was called manna in Exodus 16:31, where it is described. The fact that it came with the dew (Ex 16:4) suggests that God's miraculous provision used a natural process. The most frequent identification is with the secretion of small aphids that feed on the sap of tamarisk trees. When it hardens and falls to the ground, it can be collected and used for a sweetener. The problem is that this only occurs during certain seasons (May to July) and only where there are tamarisk trees. A full season would normally produce only about five hundred pounds, in contrast to the biblical account that has the people gathering about half a pound per person per day. Alternatively, some would favor the sweet liquid of the hammada plant, common in southern Sinai, that is used to sweeten cakes. As with the plagues, it is not necessarily the occurrence of this phenomenon that is unnatural but the timing and magnitude. Nevertheless, these natural explanations seem to fall far short of the biblical data. The comparison to what most translations identify as the seed of the coriander (rarely found in the desert) is more likely to refer to a wider generic category of desert plants with white seeds. (See Ex 16:4-9.)

11:25. the Spirit and prophesying. Ecstatic prophecy, or prophecy that appears to proceed from someone in a "possessed" or trancelike state, is known in Israel as well as in the ancient Near East. In Mesopotamia the ecstatic prophet's title was *muhhu,* and in Israel the ecstasies often resulted in the prophets being thought of as madmen (see, for example, 1 Sam 19:19-24; Jer 29:26). Here the phenomenon does not result in prophetic messages from the Lord but serves as a sign of the power of God on the elders. In that sense it could be compared to the tongues of fire in the upper room in Acts 2.

11:31. quail. Small, plump migratory quail often come through the Sinai on their way north from the Sudan to Europe, usually in the months of March and April. They generally fly with the wind and are driven to ground (or water) if caught in a crosswind. In their exhaustion it is not unusual for them to fly so low that they can be easily caught. Quail looking for a place to land and rest have been known to sink small boats, and in the Sinai they have been noted to cover the ground so densely that some landed on the tops of others. (See Ex 16:13.)

11:32. 10 homers. A homer is a donkey load. It certainly became a more precise dry measure in time, but it is not always used with precision. Estimates of ten homers would run anywhere from forty to sixty bushels. By any estimate the Israelites were overcome with greed. Normally the quails would have been preserved with salt before being laid out to dry. Since this step is not mentioned by the text, it may have been omitted. This suggests that the plague was food poisoning.

11:34. Kibroth Hattaavah. This location cannot be identified with any degree of confidence.

11:35. Hazeroth. Tentatively identified by some as Ain el-Khadra.

12:1. Cushite wife of Moses. Cush can refer to several different places in the Old Testament, though it is most frequently the designation for the area translations usually render "Ethiopia." This is misleading, for the area Cush refers to is not modern Ethiopia (Abyssinia) but the area along the Nile just south of Egypt, ancient Nubia (in modern Sudan). The boundary between Egypt and Nubia in ancient times was usually either at the first or second cataract of the Nile. It is unlikely that Nubia ever extended much beyond the sixth cataract at Khartoum. Another possibility connects Cush here with Cushan, identified in Habakkuk 3:7 with Midian. This has been attractive to some because of Moses' known marriage to a Midianite woman, Zipporah (see Ex 2—4). While the objection of Miriam and Aaron appears to have been ethnic, there is insufficient evidence

to clarify what her ethnic background was. Nubians are depicted with dark skin pigmentation in Egyptian paintings but are sometimes lacking other features designated "negroid."

12:5. pillar of cloud. For a general discussion of the pillar of cloud, see the comment on Exodus 13:21-22. For the pillar as a means of God meeting with Moses, see comment on Exodus 33:10. Here they come to the tent of meeting for judgment of a case. In Canaanite literature the chief deity *El also dwells in a tent and from that tent (where the divine assembly is thought to meet) come forth decrees and judgments. For another example of judgment proceeding from the tent in terms of punishment, see the comment on Leviticus 9:23.

12:6. prophets. By this date there was already a well-established prophetic institution in the ancient Near East. As this text indicates, the usual modes of revelation were dreams and visions. In over fifty texts from the town of *Mari (several centuries earlier than Moses) local officials report prophetic utterances to the king of Mari, Zimri-Lim. Yahweh could choose to speak through anyone, but Moses' status and experience go beyond that of other prophets. Both dreams and visions often used symbolism that required interpretation (often through use of *divination or by an expert in the dream books; see comment on Gen 40:5-18), but there were no such riddles to solve in order to understand God's revelation to Moses.

12:10. Miriam's disease. Hansen's disease (the modern term for leprosy) is unattested in the ancient Near East prior to the time of Alexander the Great (see comment on Lev 13:1-46). The skin diseases described here and elsewhere in the Old Testament are more along the line of psoriasis and eczema. The analogy to a stillborn in verse 12 further confirms this type of diagnosis in that it describes exfoliation (peeling of the skin, not associated with Hansen's disease), not necrosis (destruction of body tissue, including bones and nerves). A stillborn progresses from reddish coloring to a brownish gray and then begins to lose its skin.

12:16. Desert of Paran. See comment on 10:12.

13:1-33

The Reconnaissance of the Land

13:21-22. scope of the exploration. The Wilderness of Zin is the area going south from an imaginary line drawn between the southern tip of the Dead Sea and the Mediterranean, an area also referred to as the Negev. It constitutes the southern border of Canaan. Rehob has often been identified with Tell el-Balat Beth-rehob, almost halfway from the Mediterranean to Hazor. Lebo Hamath is most likely modern Lebweh on one of the sources of the Orontes. This was the southern border of the land of Hamath and therefore the northern border of Canaan. These reference points suggest the scouts explored the land between the Jordan River and the Mediterranean up and down its full 350-mile length.

13:22. Anakites. The descendants of Anak are specifically mentioned in verses 22 and 28. When names are given, they are *Hurrian (biblical Horites; see comment on Deut 2). The descendants of Anak are generally considered "giants" (v. 33; Deut 2:10-11; 2 Sam 21:18-22), though the description "gigantic" may be more appropriate. There is no mention of the Anakites in other sources, but the Egyptian letter on Papyrus Anastasi I (thirteenth century B.C.) describes fierce warriors in Canaan that are seven to nine feet tall.

13:22. the building of Hebron. Hebron was built seven years before Zoan. Zoan refers to the Egyptian city of Dja'net, which the Greeks called Tanis. It became the capital city of the Delta region in the Twenty-first Dynasty (twelfth century B.C.). The earliest major builder identified by the archaeological finds is Psusennes I in the middle of the eleventh century. The archaeology of Hebron is very complex. The site was occupied in the *Early Bronze Age (third millennium), and there was a fortified city on the site in the Middle Bronze Age II (up to the middle of the second millennium). There is evidence of a tribal population during the period of the conquest and then a permanent settlement again in the *Iron Age (from 1200 on). It is difficult to be certain which building of Hebron this verse refers to.

13:24. the Valley of Eshcol. There are many wadis in this general area, and there is no way of telling which one may have been referred to here. Around Hebron today, Ramet el-'Amleh is known for its grape produce and is near a wadi.

13:26. Kadesh. Kadesh Barnea is usually identified as 'Ain el-Qudeirat, about fifty miles south of Beersheba, which has the most plentiful water supply in the region. There are no archaeological remains on this site from this period, but the site has long been a stopping place for nomads and Bedouin, and the abundance of "Negev" ware (pottery dated to this period) suggests that was true during the time of the Israelite wanderings as well.

13:27. land flowing with milk and honey. The land of Canaan is described as a land "flowing with milk and honey." This refers to the bounty of the land for a pastoral lifestyle, but not necessarily in terms of agriculture. Milk is the product of herds, while honey represents a natural resource, probably the syrup of the date rather than bees' honey. A similar expression to this is found in the *Ugaritic epic of *Baal and Mot, which describes the return of fertility to the land in terms of the wadis flowing with honey. Egyptian texts as early as the *Story of *Sinuhe* describe the land of Canaan as rich in natural resources as well as in cultivated produce. (See Ex 3:7-10.)

13:29. inhabitants of the land. The people groups inhabiting the land are identified in verse 29 as the Amalekites, *Hittites, Jebusites, *Amorites and Canaanites. The Amalekites, who were descended from Abraham through Esau (Gen 36:15), were a nomadic or seminomadic people who inhabited the general region of the Negev and the Sinai during the second half of the second millennium B.C. The well-known Hittites were from Anatolia, modern Turkey, but groups occupying sections of Syria and Canaan were also called Hittites and may or may not be related. The Hittites in Canaan have Semitic names, while the Hittites of Anatolia were Indo-European. Jebusites inhabited the area around Jerusalem and are known only from the Old Testament, which tells us very little about them. *Amorites (known in Mesopotamia as *Amurru* or *Martu*) are known from written documents as early as the middle third millennium B.C. Most scholars think that their roots were in Syria but that they came to occupy many areas in the Near East. The term can be used to refer to a geographical area ("westerners") or to an ethnic group. Some Amorites were nomadic, but there were Amorite city-states in Syria as early as the end of the third millennium. The Canaanites were the principle inhabitants of the fortified cities of the land, though they do not seem to have been native to the land. The kings of this area refer to themselves in the *Amarna letters (mid-second millennium) as *Kinanu,* a term also used in Egyptian inscriptions of this period. There are also records from Egypt concerning the population of Canaan. A prisoner list from a campaign of Amenhotep II (fifteenth century) lists numbers of Canaanites, *Apiru* (unlanded or dispossessed peoples), *Shasu* (nomadic peoples sometimes connected with biblical groups like the Midianites or Amalekites) and *Hurru* (Hurrians).

13:33. like grasshoppers. It is not unusual to use an animal metaphor to describe relative size in exaggerated comparison (cf. English "shrimp"). Grasshoppers were edible, so this invites the additional frightening prospect that "we wouldn't have even made a mouthful to them." In the *Ugaritic Epic of *Keret an army is compared to grasshoppers to indicate the vast number of soldiers.

13:33. Nephilim. The only other sure reference to the Nephilim is in Genesis 6:4, which offers little information in terms of identification. Some have also seen the word in Ezekiel 32:27 (with a slight text variation), where it would refer to warriors. Earliest interpretation (intertestamental) is divided between considering them giants, heroes and fallen angels.

14:1-45
The People Decide Not to Enter the Land

14:6. tearing clothes. Along with placing ashes in the hair, the tearing of clothing was a common form of mourning in the ancient Near East. One example outside the Bible is found in the *Ugaritic Epic of *Aqhat (c. 1600 B.C.) in which the sister of the hero tears her father's garment as she foretells a coming drought. Such an act often implied grief over the death of a relative, friend or prominent individual (2 Sam 3:31). However, it also was a sign of shame (as in this case) or loss of honor or status (2 Sam 13:19).

14:8. flowing with milk and honey. See comment on 13:27.

14:13-16. divine sponsorship and its implications. All of the peoples of the ancient Near East believed in the patronage of the gods. Each city had a patron deity (e.g., *Marduk in *Babylon), and many professions also had particular gods to whom they looked for special aid. Such associations, however, meant that when a city or a group of people warred with another, their gods also joined in the battle. The god/gods of the losing side were discredited and often abandoned by their worshipers. Thus Moses' prayer to Yahweh involves the knowledge of God's sponsorship of the Israelites and the promise of land and children. If Yahweh should destroy the Israelites in the wilderness for their disobedience, it could be construed as failure on God's part to fulfill these promises.

14:25. geographical information. These instructions require the Israelites, who fear moving directly north into Canaan, to proceed south from Kadesh in the Wilderness of Paran to the area of Elath on the Gulf of Aqaba. *Yam Suph* in this verse is therefore not the Red Sea

but, as in Numbers 21:4 and Deuteronomy 1:40; 2:1, refers to the Gulf of Aqaba on the eastern coast of the Sinai peninsula.

14:36-38. fate of the spies. Initially God was so angry at the Israelites' grumbling that they were all condemned to die of a plague (v. 12). However, after Moses asked Yahweh to have mercy, this sentence is changed to the death of all these unfaithful people in the wilderness without seeing the Promised Land. Only the spies who had brought a report questioning God's power died immediately of a plague. The term translated "plague" is too vague to identify a particular disease, although some consider it to represent bubonic plague. In the Old Testament it is generally a punishment from God for serious desecration or blasphemy.

14:45. Hormah. "Hormah" has a double meaning here. In the Hebrew it means "destruction," and this is what happened to the invading Israelites. It is also a geographic term for a site seven and a half miles east of Beersheba, tentatively identified with Tell Masos (Khirbet el-Meshash).

15:1-31

Sacrifice Regulations in the Land

15:1-31. general elements of the sacrificial system. Within the Israelite sacrificial system there were both obligatory and voluntary offerings, and they applied to the entire Israelite community as well as to resident aliens. The obligatory sacrifices, brought to a shrine or temple and burnt on the altar by priests, included portions of the harvest (grain, fruits, oil, wine) as well as from the flocks and herds. A portion of each offering was then designated for the use and maintenance of the priestly community. Some sacrifices were expiatory and designed to mitigate specific sins or infractions of the law as well as to serve as part of the *ritual of purification after a person came in contact with unclean items (corpses, diseased persons, body fluids). Voluntary sacrifices were offered as evidence of generosity or in thanksgiving for a particular joy (marriage, birth of a son, a particularly good harvest). Unlike sacrificial offerings in the rest of the ancient Near East, however, those to *Yahweh were not designed to nourish the god (see the famished gods at the end of the flood story in the *Babylonian *Gilgamesh Epic). They only were presented in a ritually correct manner ("an aroma pleasing to the Lord") in order to obtain God's blessing or forgiveness. For further information see the comments on the early part of Leviticus.

15:22-26. community culpability. Inadvertent violations of the law also require purification. For example, in *Hammurabi's code, an unknowing violator of the slave laws must take an oath before the god to clear himself. In the Israelite context, the entire community is held responsible for sins committed unknowingly and for sins of omission (usually involving *ritual or matters of law). The community is defined as both Israelites and resident aliens. The infraction may involve commission of an act without knowledge that it is a violation of the law or confusion over the consumption of some portion of the sacrificial meat or fat. Unlike in Leviticus 4:13-21, however, the expiatory sacrifice of a young bull is not called a "sin" (purification) offering. Instead it is referred to here as a "burnt offering," and a male goat is also to be sacrificed as the purification offering (see comment on Lev 4:1-3).

15:30. defiant sin. Providing contrast to inadvertent sin, this offense is committed with full knowledge of one's actions and premeditated defiance of God and community. For instance, in *Sumerian law a son who publicly denounces his father is disinherited and can be sold as a slave. Similarly, according to Israelite law deliberate criminal acts cannot be allowed to go unpunished, since they violate not only God's laws but the community's collective *covenant to obey these statutes. The sentence "to be cut off from his people," implies punishment by both human and divine agencies—perhaps capital punishment by the authorities and extinction of his family line by God.

15:30. blasphemy. The verb "to blaspheme" is used only here in the Old Testament and means to taunt or revile God so as to deny the authority of God. Such an act demonstrates total defiance of the law, and, because of its danger to the community, the violator must be "cut off from his people." This may involve capital punishment, but it also probably implies punishment by God through the elimination of the person's entire family line. One example of the extreme nature of this offense can be found in the Cyrus Cylinder (c. 540 B.C.), which charges the *Babylonian king Nabonidus with failing to recognize *Marduk's authority as the city god and explains that the god has abandoned him and allowed the Persians to capture the city unmolested.

15:32-36

The Sabbath Breaker

15:32-36. gathering wood on the sabbath. This story provides a legal *etiology explain-

ing the seriousness of violating the sabbath (gathering wood, presumably to cook with, violates Ex 35:3) and provides a precedent for future violations of the sabbath (see Nehemiah's civil reforms in Neh 13:15-22). Detention of the culprit is only until God provides the proper form of punishment, which in this case is stoning. Communal and other forms of execution must be performed outside the camp in order to prevent contamination from contact with the corpse.

15:37-41

Tassel Regulation

15:37-41. tassels on the garments. All adult male Israelites were commanded to sew blue cords into the four quarters of the hem of their robes as a perpetual reminder of God's commandments. The blue dye was extracted from the gland of the *Murex trunculus* snail and was very costly (see comment on 4:6). Decorative hems are common in ancient Near Eastern fashion as many reliefs, paintings and texts attest. Hem design was often an indication of a person's status or office. The tassels are symbolic and are designed to promote right action, not to serve as an *amulet to ward off danger or temptation. The blue cord may signify the status of each Israelite as a member of a kingdom of priests (see comment on Ex 19:5-6).

16:1—17:13

Korah's Revolt and Aaron's Rod

16:1-3. clan and tribal political structure. Each person within the Israelite community was identified as a member of a particular household, clan and tribe. This not only set them into particular kinship groups (the Reubenites claiming ascendancy here over Moses) but also served as the basis on which they could be appointed elders and members of council—so many from each tribe and clan to aid in maintaining order and assisting Moses in the administration of justice. Rivalries between the kinship groups are typical of tribal confederations. In this type of loose political structure, loyalties to the smaller kin affiliations often supersede ties of loyalty to the overall group. Even during the monarchy period, the kings will be faced with this type of mixed loyalty (2 Sam 20:1-2; 1 Kings 12:16-17).

16:6-7. the function of incense censers. The censers are most likely long-handled pans that could also shovel up the hot coals. They served as portable altars, because the incense was actually burned in them. Censers were also used for burning of incense in Egypt when people wanted to protect themselves from demonic forces. Burning incense purifies the area of the altar and signifies God's presence (see comments on Ex 30:7-8, 34-38). Moses proposes a test, ordering the followers of the rebellious Korah to offer incense in a censer before God. This was the exclusive prerogative of priests and could be very dangerous for anyone, priest or nonpriests, who might do it incorrectly (Lev 10:1-2).

16:10. distinction between Levites and priests. The Levites were given custody of the tabernacle and the sacred precincts around the altar. It was their responsibility to monitor Israelites who brought their offerings to be sacrificed and prevent them from violating any statute or encroaching on sacred areas reserved for the priests. Priests actually performed the *ritual and the sacrifices on the altar. Although both groups belonged to the priestly community and received a share of the sacrificial offerings, priests had the greatest responsibility and power over *ritual acts. Differentiation of task and authority were also common in Mesopotamian temple communities.

16:13-14. land flowing with milk and honey. The phrase "flowing with milk and honey" becomes synonymous with the Promised Land. It occurs as part of the *covenant promise and is used here in contrast to the harshness of life in the wilderness. This would also relate the lush grazing that would insure good milk production in sheep, goats and cattle. See also comment on Exodus 3:7-10.

16:14. gouging out the eyes. This is an idiom meaning to trick or "pull the wool over one's eyes." Korah's followers refuse to participate in any test suggested by Moses, calling him a charlatan who has already hoodwinked the people into following him.

16:28-30. curse pronouncement. To demonstrate his authority from God, Moses calls for a demonstration of power similar to the plagues in Egypt. The rebel leaders Dathan and Abiram stand in defiance, along with their households, and Moses must curse them so thoroughly that no doubt is left about God's choice of leader. Therefore he asks God to open the earth and take these men and their families down to Sheol alive. The underworld in ancient Near Eastern tradition (Ugaritic and Mesopotamian epics) is often portrayed as a gaping mouth. Thus no one can claim a natural event like an earthquake killed them. Their fate was predicted, and Moses proves to be a true prophet when it occurs.

16:31-35. earthquake and fire as judgment.

Both earthquake and fire cause the death of many people. However in this case the men opposing Moses and Aaron are consumed, along with their households, by the earth and by a divine fire (God's *kabod,* "glory"). The entire community witnesses the event, which demonstrates God's choice of Moses as leader. The *Lament for the Destruction of U*r in Mesopotamian literature provides a similar manifestation of divine wrath through firestorm and earthquake. Additionally, in an Assyrian text of Ashurbanipal, divine intervention resulted in fire falling from heaven and consuming the enemy.

16:47. incense as atonement. In this instance, God's wrath over the people's rebellion against Moses had "broken out" in the form of a plague. Moses has Aaron burn incense as a type of *apotropaic remedy (similar to the blood painted on their door frames during the Passover in Ex 12:7). The burning of the incense by an authorized priest was designed to provide expiation for the people's sins and guard them from God's anger. However, the more common means of expiation was blood sacrifice (see Lev 17:11). Egyptian use of incense to ward off hostile supernatural powers is well attested. To that end censers were carried in cultic processions. They are depicted in the *rituals performed when a city was under siege.

16:47-50. nature of the plague. The plague, which kills 14,700 people, takes the form of the "Angel Destroyer" who had cut down the firstborn in Egypt. So devastating is its power that Moses orders Aaron to carry a burning censer in among the dead and dying in order to ward off any further destruction. This is extraordinary, since priests normally were not to come in contact with the dead. Apparently this was the only way to hold the plague in check. An exact diagnosis of the plague is not possible from the text (see comment on 25:8).

17:2-7. staff as insignia of tribal leadership. The staff was used by shepherds to guide their flocks. In the hands of an elder or tribal leader, the staff (probably distinctively carved and known to belong to that man) symbolized his authority (see Gen 38:18). By writing the name of each of the twelve tribal leaders on the staffs and placing them before the tent of meeting, there would be no question whose flowered at God's command and who was therefore the designated priest. This public pattern of discernment is also found in Joshua 7:14-15 and 1 Samuel 10:20-21.

17:4-11. divination by wooden objects. The method of determining who is God's chosen priestly leader involves a form of *divination (using objects to ascertain God's will). This method is not to be confused with the divination practices condemned in Hosea 4:12, which involve either a wooden idol or an *Asherah pole. Here each tribal leader, plus Aaron, is commanded to place his staff in the tent of meeting. The text contains a pun on the word for staff, which also means "tribe" in Hebrew, signifying God's intention to differentiate between the leaders of the tribes. This event is never repeated and thus is not a part of a cultic *ritual. When Aaron's blooms, his authority is certified and no further argument is allowed on this matter. Association of divination practices in proximity to a tree may be found in the references to the soothsayer's tree in Judges 9:37 and to Deborah's palm tree in Judges 4:4-5. *Ugaritic texts also mention the use of trees in ritual contexts.

17:8. significance of almonds. Aaron's staff sprouts, blossoms and flowers as an almond branch. This whole creative process signifies God's power over creation, the fruitfulness of the Promised Land (see Gen 43:11) and the "diligence" (Hebrew meaning for *saqed* "almond") expected of Aaron's priesthood. In Jeremiah 1:11-12 the sprouting almond branch symbolizes God's watching over Israel. The almond was recognized as the earliest of the blossoming plants of the region (e.g., in the Egyptian Wisdom of *Ahiqar) and may therefore also signify the priority of Aaron's office.

18:1-32
Priestly Duties and Prerogatives

18:1-7. concept and care of the sacred compass. The center of the sacred space was the Most Holy Place where the ark was. Radiating from that point out were concentric zones of holiness, each with its requirements of levels of *purity. One of the principal tasks of the priests was to enforce the rules that would maintain the appropriate level of holiness for each zone. Since the entire tribe of Levi had been singled out to serve as priests, it was necessary to assign duties and responsibilities and to create a hierarchy within the group headed by Aaron and his sons. All of the Levites were put in the charge of Aaron's household. They were to perform the mundane tasks necessary to maintain the tent of meeting, guard its precincts and assist worshipers who brought offerings for sacrifice. However, no one other than Aaron and his sons and their descendants was to be allowed to actually perform the sacrifices or to minister before the ark of the testimony. Any violation by a Levite of these restrictions would result in the

death of both the Levite and Aaron. Any non-Levite who entered the forbidden precincts of the sanctuary was condemned to death. Through these restrictions on the community and the placing of such heavy responsibilities on Aaron's family, the mystery and power associated with God's service and the items tied to it are magnified and protected.

18:8-10. sacrificial portions. The most sacred sacrificial portions are designated to be consumed by Aaron and his sons as a reward for their heavy responsibilities. This consists of those items which are brought into the most sacred precincts of the tent of meeting (see Lev 6:1-7:10). They may not be shared, as are other portions, with their families but must be eaten by priests who are ritually pure and therefore holy enough to consume sacred gifts. This includes grain, sin and guilt offerings, some of which is to be burnt on the altar while the remainder becomes the holy food of the priests. Hittite sacred texts also express concern over the consumption of the "god's food" by princes and other secular officials. The seriousness of sacred property is also found in Mesopotamian law, where strict penalties (heavy fines or capital punishment) are prescribed for theft of temple property.

18:11. wave offerings. Continuing the list of sacrificial portions set aside for the priests and their families are the wave offerings. These consist of items brought to the sanctuary and given a special distinction through an elevation *ritual before the altar (see comment on Lev 8:22-30). This does not include all wave offerings, since some are totally consumed by fire (Ex 29:22-25) and some are reserved solely for male priests (Lev 14:12-14).

18:12-19. priestly prerogatives. Completing the list of items perpetually set aside for the priests and their families (excluding daughters-in-law and laborers) are the first fruits of the harvest (grain, oil and wine) and the meat of first-born animals. Some regulations are imposed. Unclean animals may be redeemed for a set price by their owners, and human babies must be redeemed by their parents (see Ex 13:12-13; 34:19-20). All blood, fat and certain internal organs are to be burnt on the altar as a well-being offering (see Lev 3:9; 7:3). Since these animal products contain the symbolic essence of life, it is proper that they be given entirely to God rather than set aside for priestly consumption.

18:16. sanctuary shekel. The shekel weight used for the redemption of children and unclean animals is equivalent to 20 gerahs of silver (11.5 grams). It will not be in the form of coined money until the fourth century B.C. For weight considerations see comment on Exodus 30:13.

18:19. covenant of salt. Salt was used widely as symbolic of preservation. When treaties or alliances were made, salt was employed to symbolize that the terms would be preserved for a long time. *Babylonian, Persian, Arabic and Greek contexts all testify to this symbolic usage. In the Bible, likewise, the *covenant between the Lord and Israel is identified as a covenant of salt—a long-preserved covenant. Allies entering into such an agreement would generally share a communal meal where salted meat was featured. Thus the use of salt in the sacrifices was an appropriate reminder of the covenant relationship. Additionally, salt impedes the action of yeast (leaven), and since leaven was a symbol of rebellion, salt could easily represent that which inhibited rebellion. (See Lev 2:13.)

18:21-32. tithing as priests' wages in the ancient Near East. Apparently, the practice of designating one-tenth of all produce (cereal, fruit and animal) as wages for the priesthood was unique to the Israelites. Although Mesopotamian temples did exact rents from tenant farmers on their lands, they were not able to tax the entire population. As a result, the revenues needed to maintain the temple and the priesthood came from their own lands and from gifts from individuals and royalty. Kings also had lands from which they derived revenue in Egypt and Mesopotamia, but this did not have the same significance as a tithe. In Canaanite culture the tithe was very similar to that in Israel but went to the king and his administration rather than to the priesthood, though priests were sometimes included among the administrative personnel. Since the Levites were not given land in the distribution after the conquest, they were to be supported by all of the people through the tithe. It should be noted, however, that the Levites also paid a tithe of what they received to Aaron and his family, thereby providing a clear distinction between Levites and priests.

19:1-22

The Ceremony of the Red Heifer

19:2-10. significance of the red heifer. The animal designated for sacrifice and whose blood will be mixed with ashes to serve as a means of purifying persons who have come in contact with the dead is a young cow. The color red may symbolize blood, but that is uncertain. The exact age of the animal is not made clear by the Hebrew, but the fact that it was not to be allowed to pull the plow or do any

other type of work suggests it may have just reached maturity. One example of this may be the cows hitched to the wagon bearing the ark by the Philistines in 1 Samuel 6:7. They were suitable for sacrifice and thus could be used in this test of divine intention. The case of an unknown homicide in Deuteronomy 21:1-9 also requires the sacrifice of a heifer and the use of its blood for a purification *ritual. The blood and the innocence of the animal are the keys to purification.

19:2-10. ritual of the red heifer. In order to create the mixture needed to cleanse a person who has become contaminated through contact with a corpse, the law requires that a red heifer without blemish that has never been yoked for labor be taken outside the camp and slaughtered by Eleazar, Aaron's son. Eleazar does this because Aaron, the high priest, would have been contaminated by the carcass of the animal. Eleazar sprinkles some of its blood seven times on the tent of meeting and then supervises the burning of the carcass, while throwing cedar wood, hyssop and scarlet wool on the fire. The ashes are kept outside the camp for later use in purification *rituals. These actions cause participants in the sacrifice to become unclean until evening, even though they bathe and wash their clothes. Comparison with *Hittite ritual corroborates that it is the ritual act, plus the ingredients concocted to purify persons, that causes a temporary *impurity by the priest.

19:11. ritual contamination from a corpse. There was a widespread *cult of the dead in the ancient Near East. Although there was no well-defined concept of afterlife in Mesopotamia or ancient Israel, it was still believed that the spirits of the dead could effect the living. For instance, in Hittite texts the terror of the dead seems to come from the fear of being "unclean before" the spirits of the dead, just as one would be before a god. Thus offerings were made in tombs to the ancestors, but actual contamination by corpses does not appear to be a concern for the *Hittites. In contrast the Mesopotamian *namburbi* *ritual evidences a significant fear of corpse contamination. What may have been of concern was a mixing of the two spheres of existence, the living and the dead. When a person came in contact with the dead, whether human or animal, contamination occurred. Purification was necessary so that that person did not infect others or the entire community with his *impurity. The biblical purification rituals are perhaps the most detailed of any developed in the ancient Near East, although those employed by the Hittites also involved bathing, sacrifices and a period of exclusion.

19:17-19. cleansing ritual. To cleanse a person contaminated by a corpse, a ceremonially clean man takes the ashes of the red heifer, mixes them with water from a spring or running stream, and sprinkles the unclean person using a hyssop branch. The hyssop is used because its hairy branches can absorb liquid. Sprinkling takes place on the third and seventh days (both of these prime numbers are often used in *rituals and stories). Then, on the seventh day, the unclean person purifies him- or herself by bathing and washing clothing. That evening he or she will be ritually pure again. In this way there is no mixing of clean and unclean within the community itself, and the ideal is maintained of a community worthy to serve their God.

19:20-21. water of cleansing. The mixture of ashes from the sacrificed heifer and water from a spring or running stream is called the "water of cleansing." It is sprinkled on an unclean person as part of the cleansing *ritual. Hittite ritual texts also include water as a means of removing actual or suspected *impurity. However, the mixture described in Numbers also makes the person who sprinkles the water unclean until evening. This is based on association with the mixture's purpose and the assumed contamination created by the sacrificial ingredients themselves.

20:1-13
Water from the Rock

20:1. chronological note. At this point the forty years of wandering in the wilderness are coming to an end, and the remaining survivors of the exodus must leave the scene, since they are not allowed to enter the Promised Land. Thus in the first month of the fortieth year Miriam, Moses' sister, dies, marking the transition of leadership that will culminate in Aaron's death in the fifth month (Num 33:38).

20:1. Wilderness of Zin. The Wilderness of Zin lies north of the Wilderness of Paran. Although its exact location is unknown, it is referred to as the southern boundary of the Promised Land (Num 34:3-4; Josh 15:1, 3). Kadesh, the oasis where the Israelites spend a considerable time, is in the Desert of Zin (see chaps. 13—14).

20:6. appearance of the glory of the Lord. During times of crisis Moses and Aaron turn to God for guidance and assistance. They go to the entrance of the tent of meeting and as supplicants they bow to the ground. Because of their humble submission of their plea,

God's "glory" *(kabod)* appears and provides a solution (see similar instances in Num 14:5-12; 16:19-22). A physical manifestation of a god's aura or power is common in Mesopotamian epics, where it is referred to as the god's *melammu*, and it can be used as a means of defeating an enemy (as in *Marduk's struggle with *Tiamat in the **Enuma Elish*).

20:1-13. water from the rock. Sedimentary rock is known to feature pockets where water can collect just below the surface. If there is some seepage, one can see where these pockets exist and by breaking through the surface can release the collected water. Again, however, we are dealing with a quantity of water beyond what this explanation affords.

20:13. waters of Meribah. The location of the waters of Meribah in Exodus 17 had been in the vicinity of Sinai, specifically at Rephidim. Now they are at Kadesh, about 150 air miles north-northeast of Rephidim. Nevertheless, these are waters of quarreling *(meribah)*, just as those had been.

20:14-21

Request to the Edomites

20:14-21. Late Bronze Age Edom. Edom was the territory ranging south from the Dead Sea to the Gulf of Aqaba. Recently archaeologists have found small amounts of pottery from the *Late Bronze period at a number of settlements in this region, but no architectural remains or written records. The Egyptians referred to the nomadic population there as the Shosu, though that term may refer to social class rather than to ethnic origin.

20:22-29

The Death of Aaron

20:22-26. Mount Hor. The death site for Aaron (although Deut 10:6 identifies his death with Moseroth). The traditional location is near Petra at Jebal Nabi Harun, but this is not "on the border of Edom." Another possibility is Jebal Madrah, west of Kadesh and near the Edomite border, but it lacks sufficient water sources.

20:29. 30 days of mourning. The normal mourning period is seven days (Gen 50:10; 1 Sam 31:13). However, to demonstrate their importance, both Moses (Deut 34:8) and Aaron are mourned for thirty days. The occasion is also marked by transition of leadership, with Eleazar succeeding his father as high priest and wearing his vestments (Num 20:26). Similarly, Joshua succeeds Moses (Deut 34:9).

21:1-3

The Destruction of Arad

21:1-3. Arad. The site identified as Arad was a walled city in the *Early Bronze period (first half of the third millennium), well before the time of Abraham. It had a major role in the copper industry that thrived in the Sinai peninsula. The next occupation detected by archaeologists is connected with the Early *Iron Age (Judges period), and there was a series of citadels and even a temple on the site about the time of Solomon. Since there is no sign of occupation during the period of the exodus and conquest, some archaeologists have suggested that the Arad of the Canaanite period is the site now identified as Tell Malhata, about seven or eight miles southwest of the site now known as Arad. Egyptian inscriptions of the tenth century identify two Arads.

21:1. Atharim. This word is obscure and may be either a place name or a profession (KJV and LXX translate it "spies"). Most likely it is to be identified with the area just south of the Dead Sea, possibly with the site of Tamar. Here the Israelites were attacked by the army of the king of Arad.

21:3. Hormah. The Hebrew word means "destruction." It is applied as a place name here to commemorate the Israelite victory. They had vowed to totally destroy the cities of the Canaanites in that area and dedicate the spoil to the sanctuary if God gave them the victory. This is similar to the **herem*, "holy war," declared against Jericho (Josh 6:17-19, 24). As a geographical name it refers to a site seven and a half miles east of Beersheba tentatively identified with Tell Masos (Khirbet el-Meshash).

21:4-9

The Bronze Serpent

21:4. itinerary. The Israelites marched south from Mount Hor on the border of Edom toward Elath at the northern end of the Gulf of Aqabah. Archaeological survey of the area suggests that the Edomites did not extend this far until the time of Solomon (tenth century B.C.).

21:6-7. snakes. The snakes are not clearly identified but may be a species of desert viper. Their "fiery" or "winged" character may have to do with their association with the cobra or their quick spring as they strike (Deut 8:15). For general information see the comment on Genesis 3:1.

21:8-9. bronze snake on a pole. The Hebrew here is actually "copper" snake. Bronze, an alloy of copper and tin, was smelted in the Tim-

nah region where this event occurred, and thus the translation here has a physical background. Excavations in that area have unearthed an Egyptian temple to the god Hathor. During the period of the Judges this temple was adopted by Midianites in the area, who made it into a shrine draped with curtains. In the inner chamber of this shrine was found a five-inch long copper image of a snake. It was common in the ancient Near East to believe that the image of something could protect against the thing itself. As a result Egyptians (living as well as dead) sometimes wore snake-shaped *amulets to protect them from serpents. Finally it is of interest that a well-known bronze bowl from *Nineveh with Hebrew names on it depicts a winged snake on a pole of some sort.

21:10-20
Journey Through Moab

21:10-20. itinerary. A fuller list of stops on this journey is given in Numbers 33:41-48. A number of the towns are unknown, making it difficult to offer archaeological evidence. Nevertheless, a number of the stops also occur on Egyptian maps and itineraries from this period. The Zered Valley is today the Wadi el-Hesa, and the Arnon River flows through the Wadi el-Mojib. Both flow from east to west, the former into the southern end of the Dead Sea and the latter into a midpoint on the east side.

21:14. book of the wars of the Lord. In compiling the history and traditions of the conquest, the biblical writers drew on a variety of sources, both written and oral. Among the written sources was the Book of Jashar (see Josh 10:13; 2 Sam 1:18) and the Book of the Wars of the Lord. Based on the three fragments of these documents that appear in the Bible, they were composed primarily of victory songs and tales of the mighty acts of God and the leaders of the Israelites during this formative period. Unfortunately, neither book has survived, but their mention in the biblical text indicates that the narrative was based, at least in part, on cultural memories.

21:21-35
Sihon and Og

21:21. Amorites. The *Amurru or Amorites of Mesopotamia formed a significant ethnic group after 2000 B.C. and are mentioned in the *Mari texts and the administrative documents of *Hammurabi of *Babylon during the eighteenth century B.C. Egyptian records list them as one of several kingdoms during the fourteenth century B.C. in the area south of the Orontes River and into Transjordan. Their effective control of Transjordan may be associated with the conflict between Egypt and the Hittite Empire. The indecisive battle of Kadesh (c. 1290 B.C.) between these two powers opened a temporary political opportunity for Amorite control, but the coming of the *Sea Peoples in 1200 B.C. further disrupted the region. In the Bible, *Amorites* is used as an ethnic term for the kingdoms of Sihon and Og (Num 21:21, 33) as well as for the inhabitants of Canaan (Gen 15:16; Deut 1:7).

21:23. Jahaz. The site of the battle with the forces of the *Amorite king Sihon is given as Jahaz. Its probable location, based on the church historian Eusebius (fourth century A.D.) and the Mesha inscription (ninth century B.C.), is between the territories of Madaba and Dibon, at Khirbet Medeiniyeh at the eastern edge of Moab by the Wadi al-Themed. The battle is also mentioned in Deuteronomy 2:33 and Judges 11:20.

21:24-30. captured land. The area of central Transjordan which is here described as the kingdoms of Sihon and Og stretches from the Arnon River valley in the south to the Jabbok River in the north. It would include Moab but not Ammon. It seems likely that these "kingdoms" were not organized states in this period and that their conquest provided passage for the Israelites without the tribes actually taking control of and settling this region.

21:25-28. Heshbon. The modern site of Tell-Heshban is located nearly fifty miles directly east of Jerusalem. However, archaeologists have not been able to detect any evidence that this site was settled prior to 1200 B.C. Some have suspected that the *Late Bronze city of Heshbon may have been at a different site, with Tell Jalul named as one possibility. Recent surveys and excavations in this region have turned up more and more *Late Bronze pottery, but it remains difficult to assess the nature of the occupation during this period.

21:29. Chemosh. The Moabite god *Chemosh, mentioned here in Israel's "taunt song" marking their victory over the Transjordanian kingdoms of Sihon and Og, is also mentioned in the ninth-century B.C. Moabite inscription of King Mesha (see also Judg 11:24; 1 Kings 11:7). As the national god of Moab, Chemosh stood in opposition to *Yahweh, just as Moab did to Israel. His *cult has similarities to Yahweh worship, and his attributes (giving of land to his people and victory in battle) are also similar. This may simply be an indication that the expectations placed on their gods by the peo-

ple of the ancient Near East were very much the same from one nation to another. Chemosh first appears in the list of gods from ancient Ebla in northern Syria (c. 2600-2250 B.C.) and may have also been worshiped in Mesopotamia and *Ugarit as an elemental deity associated with clay or mud bricks.

21:30. area of destruction. Heshbon and Dibon are the major cities in the north and south respectively in the northern section of Moab (north of the Arnon). For Heshbon see the comment earlier in this chapter. Dibon is modern Dhiban, just a mile or two north of the Arnon (Wadi al-Mujib). In the ninth century B.C. it served as one of Mesha's royal cities and is prominent in the Mesha inscription that was found there. The lack of *Late Bronze finds at the site raises questions about whether the ancient city was at Dhiban or somewhere else nearby. The fact that Rameses II also lists Dibon on his itinerary shows that there was a Late Bronze city of that name. Nophah has not been identified, and even the reading of the name is uncertain. Medeba is the principal city in the central region of north Moab and is identified with the modern city of the same name. There has been limited excavation on the site because of the modern town.

21:32. Jazer. This geographical name is associated with both a city as well as the surrounding region, including small villages or "daughters." Although its location is disputed, the most likely site is Khirbet Jazzir, twelve miles south of the Jabbok River. It served as an outpost on the border with Ammon and represented the eastward thrust of the Israelite forces.

21:33. Bashan. After defeating Sihon, the Israelites travel northward to the region of Bashan in the area (known today as the Golan Heights) bordered by Mount Hermon to the north, Jebel Druze to the east and the Sea of Galilee to the west, where they defeated King Og at Edrei (modern Der'a, thirty miles east of the Sea of Galilee). It is a broad, fertile plateau region noted for its grazing (Ps 22:12; Amos 4:1-3). See the comment on Deuteronomy 3 for more detail.

21:33. Edrei. The Israelites defeat the *Amorite king Og at Edrei on the southeastern border of Bashan. The site is identified as modern Der'a in Syria, about sixty miles south of Damascus and thirty miles east of the Sea of Galilee near the Yarmuk River. Though no excavations have been conducted there, the town is also mentioned in ancient texts from Egypt and *Ugarit.

21:33. Og. The *Amorite king of Bashan, Og, is mentioned as the last of the Rephaim or giants, whose "bed was made of iron and was more than thirteen feet long and six feet wide" (see comment on Deut 3:11). There is no historical information that sheds light on this individual. The victory was celebrated many times in Israelite tradition and is recorded in Deuteronomy 1:4; 3:1-13; 4:47; 29:7; 31:4; Joshua 2:10; 9:10; and 1 Kings 4:19.

22:1—24:25

Balaam and Balak

22:1. plains of Moab. This is the broad plain or steppe region immediately north of the Dead Sea and east of the Jordan River, just opposite the "plains of Jericho" (Josh 4:13). Its location serves as the jumping-off point for entrance into Canaan.

22:2. Balak of Moab. Balak, the king of Moab, is unknown in other historical sources. In fact, there is very little of Moab's history that has been recovered aside from the information given in the Mesha Inscription concerning the ninth century. It must be remembered that the title *king* could be used for rulers of vast empires or, as most likely in this case, petty rulers or tribal leaders.

22:4-7. Midianites. The Midianites are a people living in the southern portions of the Transjordan region. They are described as the descendants of Abraham and Keturah (Gen 25:106) and operate as traders and caravaneers in the Joseph narrative (Gen 37:25-36). Moses joins the Midianite clan of Jethro after fleeing Egypt (see comment on Ex 2:15), but the Midianites do not join the Israelites in the conquest of Canaan. In the Balaam narrative, the Midianite elders are allied with the Moabites and participate in the hiring of the prophet to curse Israel.

22:4-20. Balaam at Deir Allah. In 1967 a Dutch archaeological expedition led by H. J. Franken discovered some inscribed pieces of plaster at a site in Jordan known as Deir 'Allah. The fragments are apparently written in *Aramaic and date to about 850 B.C. They mention Balaam son of Beor, the same figure described as a "seer" in Numbers 22—24. Although the text is very fragmentary, with many breaks and uncertain words, it can be established that Balaam was a seer who received a divine message during the night and that his message was not what his neighbors expected to hear. Whether this text refers to the events described in the Bible is questionable, but it does establish a nonbiblical tradition current in the ninth century of a prophet named Balaam. It may be that Balaam's notoriety was such that he remained an important prophetic figure for

centuries and could thus be identified with the earlier Israelite narratives of the conquest.

22:5. Pethor. This is probably to be identified with Pitru on the Sajur River, a tributary of the upper Euphrates, located about twelve miles from Carchemish in northern Syria. Since Balaam is said to have been brought from *Aram in Numbers 23:7, this identification seems appropriate. However, the distance involved (about four hundred miles) has caused some to look closer to Moab for the site of Pethor.

22:6. prophetic status of Balaam. In Joshua 13:22, Balaam is described as a "soothsayer," while in Numbers 22:6 he is said to be a man whose blessings and curses are effective. He is from the region of upper Mesopotamia, near Carchemish, and has an international reputation as a true prophet. Throughout the narrative in Numbers 22—24, Balaam continually reminds Balak that he can speak only the words which God gives him to speak (Num 22:18, 38; 23:12, 26; 24:13). Although Balaam uses sacrificial rituals to obtain God's answer, he is not to be considered simply a diviner. *Divination, while sometimes used by Mesopotamian prophets, is more often associated with *cultic personnel who examine sacrificial animals or natural conditions (flights of birds, etc.). In each case, Balaam seems to have direct communication with God and then speaks God's word in the form of *oracles to Balak. This is the typical form of prophetic address found in the books of Isaiah, Jeremiah and other Israelite prophets. Spoken oracles are also recorded in over fifty *Mari texts (a few centuries earlier than Balaam, about 250 miles downstream from Carchemish). Through either lay people or temple personnel, various messages are offered to Zimri-Lim, king of Mari, from various deities. Therefore it is clear that prophetic activity in the ancient Near East during this general time period was not uncommon.

22:6. power of a curse. Curses draw the wrath of the deity on persons, groups, cities or places. They may be composed and spoken by anyone, with an intent to bring death, destruction, disease and defeat. Ritual performance was also employed, as in a Hittite text that requires water to be poured and a curse spoken against anyone who gave the king "polluted" water to drink. Curses often accompanied *covenant or treaty agreements to involve the power of the gods as cosigners and to put treaty breakers on notice of their peril. However, cursing can have negative effects on the one who curses as well. The death penalty was imposed on those who curse their parents (Ex 21:17) or God (Lev 24:11-24). In the Israelite tradition expressed in the Balaam narrative, Yahweh alone was capable of carrying out a curse, and no prophet acting, on his own could effectively curse anyone. Yet Balak describes Balaam as one so attuned to the gods that both his blessings and his curses are always effective. In effect, the prophet, as a god's intermediary or representative, is believed to be capable of interceding for good or ill with the god(s). Balaam discounts this, however, saying he can only speak what God gives him to speak.

22:7. fee for *divination. It is to be expected that a fee or reward would be paid for vital information (see 2 Sam 4:10). Diviners, as religious practitioners, would be paid for their services (1 Sam 9:8). However, Balaam is not to be paid until after he curses the Israelites (Num 24:11). Thus this may simply be an offer rather than a retainer for services.

22:18. Balaam and Yahweh. If Balaam is truly a Mesopotamian prophet who has spoken in the name of many gods, it seems unusual that he would refer to *Yahweh as "the LORD my God." It is perfectly possible that Balaam was familiar with the Israelite God, at least by reputation (see Rahab's speech in Josh 2:9-11). Or he may always refer to each god he is dealing with in these intimate terms to demonstrate his prophetic authority. Balak's interest in Balaam seems to be based on his ability to invoke blessings or curses—no matter which god he calls upon. There is little reason to maintain that Balaam served Yahweh exclusively.

22:21-35. God opposing after sending. There are times when there seems to be a strange change of mind by God. The Lord called on Jacob (Gen 31—32) and Moses to go somewhere but then accosted each on the way. In each instance God did indeed want the individual to make the journey but had an issue to settle first.

22:22-35. angel of the Lord. In the ancient world direct communication between heads of state was a rarity. Diplomatic and political exchange normally required the use of an intermediary. The messenger who served as the intermediary was a fully vested representative of the party he represented. He spoke for that party and with the authority of that party. He was accorded the same treatment as that party would enjoy were he there in person. While this was standard protocol, there was no confusion about the person's identity. All of this treatment simply served as appropriate recognition of the individual that he represented. Gifts given were understood to belong to the represented party, not the representative. Words spoken to the representative were

expected to be reported back in accurate detail and were understood as having been spoken directly to the represented individual. When official words were spoken by the representative, everyone understood that he was not speaking for himself but was merely conveying the words, opinions, policies and decisions of his liege. In the same way the Angel of the Lord serves as the messenger, the royal envoy endowed with the authority of the sender of the message. The word in Hebrew describing what the angel of the Lord does here is *satan*. This being is not the personified "accuser" or "adversary" found in Job 1—2 and Zechariah 3:1. The term is used only to explain the adversarial role played by the angel.

22:28-30. speaking animals. The only other instance in the Bible of a talking animal is the dialogue between Eve and the serpent in Genesis 3:1-5. In that case the serpent is described as the most cunning of the animals, and it is possible that it was the only animal that could speak. In the Balaam narrative the donkey is able to speak only after God gives it that ability. Such stories are commonly identified as fables, and they are quite popular in ancient as well as more recent literature. They generally have a wisdom theme and are designed to establish or question basic truths. Among the ancient Near Eastern examples are the talking cattle in the Egyptian *Tale of Two Brothers* and the dialogue between the leopard and the gazelle in the *Assyrian *Teachings of *Ahiqar.* The effect of the speaking animal in this story is to make it clear to Balaam that God can speak through any creature he chooses, with no credit to the creature.

22:36-41. geography. From the city of Ar-Moab (NIV: "the Moabite town") near the northern border of Moab, the two proceed north to Kiriath Huzoth and Bamoth Baal. Ar-Moab (see 21:15) has not been identified with certainty, but is usually connected with modern Balu'a along the southern tributary that the King's Highway followed to the Arnon. The location of Kiriath Huzoth is unknown, as is Bamoth Baal. Some place the latter some twenty-five to thirty miles north of Ar along the King's Highway, though some would place it farther north, in closer proximity to where the Israelites were camped.

23:1. seven altars. The number seven is often attested in the Bible and may be associated with the days of creation or the fact that it is a prime number (see 1 Kings 18:43; 2 Kings 5:10). Nowhere else in the Bible are seven altars constructed for sacrifice. This may relate to a non-Israelite *ritual in which each of the altars is dedicated to a different god. It is conceivable that when an international treaty was concluded and the gods were called to witness the agreement (as in the treaty between the *Assyrian king Esarhaddon and Baal of Tyre, which calls on the "seven gods"), altars to each god would be erected and sacrifices made before them (see Gen 31:44-54). But nontreaty contexts in Mesopotamia also attest the practice of using seven altars in order to offer seven sacrifices simultaneously before the high gods.

23:1. sacrifice of bulls and rams. These were the most prized and valuable stock animals in the ancient Near East, and thus their sacrifice would have signified a supreme effort on the part of the worshipers to please the god(s) and gain their aid. The sacrifice of seven of these animals is also found in Job's sin offering for his three friends (Job 42:8).

23:3. barren height for revelation. The translation "barren height" is contested, and the meaning of the Hebrew word questionable. It seems clear from the context that Balaam separated himself from the Moabites to practice his *divination alone. This may have been required by the *ritual or perhaps by God's desire to only communicate directly with Balaam. In any case, high places are often associated with gods and their revelations (Mounts Sinai, Zaphon, Olympus).

23:4. meeting with *Elohim. In the ancient world messages from deity were generally conveyed through dreams, communications from the dead or temple personnel in prophetic trances. The language here suggests none of those options, though the nature of Balaam's encounter with God is not described.

23:14. Zophim/Pisgah. *Zophim* means "watchmen" or "lookout." Used in relation to Pisgah, the generic term for the promontories of the Moabite plateau looking west toward Canaan (see Num 21:20), *Zophim* simply means that Balaam went to a known observation point to watch for a sign from God. It is possible that he intended to observe the flight of birds in order to receive an omen. This is not only a common *divination practice in Mesopotamia but one that the Deir Allah inscription (see comment on 22:4) appears to relate to Balaam.

24:1-2. difference in Balaam's method and role of the Spirit of God. As a Mesopotamian prophet, Balaam's usual procedures when invoking a god or seeking an omen would have been to engage in some form of *divination. Having now perceived that Yahweh's intent is to bless the Israelites, Balaam dispenses with these mechanical methods and leaves himself open to direct revelation from God. At that

point he turns toward the Israelites and is empowered by God's Spirit. He speaks the divine blessing, probably in a trance. It is his willingness to become vulnerable in the sight of the Moabite king that demonstrates the truth of his message and provides an example of ecstatic prophecy (see 1 Sam 10:5-6, 10-11).

24:5-7. metaphors. Balaam's *oracle contains a promise of abundance and prosperity for Israel. Looking down on their tents, he likens them to a forest containing aromatic aloe and cedars. Aloes are not native to Canaan, but the metaphor may refer to the immigrant Israelites "planted" in the Promised Land by God. Cedars do not grow near streams, and this may simply refer to any coniferous tree. The image of abundant waters and seed refer to the richness of the land of Canaan and the *covenantal promise of children. By referring to a king, the author speaks of the future nation's triumph over its enemies, the Amalekites, whose king, Agag, will be defeated by Saul (1 Sam 15:7-8).

24:7. Agag. Agag was the mighty king of the Amalekites in the time of Saul (1 Sam 15:7-8). Although Saul defeats them, the Amalekites continue to be a thorn in Israel's side (1 Sam 27:8; 30:1; 2 Sam 1:1). Agag's name appears again in the book of Esther as the ethnic name for the villain Haman the Agagite. Some have suggested that Agag should be understood as a title (like Pharaoh), but evidence is unavailable.

24:17. star and scepter metaphors. While a star is a common metaphor for kings in the ancient Near East, it is seldom used in the Bible (Is 14:12; Ezek 32:7). Its association here with a scepter, the symbol of royal power (Ps 45:6), however, makes this identification more certain. Balaam's *oracle thus predicts the rise of the monarchy in Israel and the extension of its power (like the waving of the scepter) over the lands of Transjordan. As in the Egyptian inscription of Tuthmoses III (c. 1504-1450 B.C.), the scepter is also used as a mace to crush the heads of enemy nations.

24:20. Amalekites. The Amalekites were a confederation of tribes living primarily in the steppe area southeast of Canaan (Ex 17; Judg 6—7). There may have also been groups of Amalekites in the hill country west of Samaria. They are always portrayed as Israel's rival for territory. The title of "first among the nations" may refer to what they called themselves or perhaps to their distinction as the first people to challenge the Israelites (Ex 17:8-15).

24:21-22. Kenites. Although the Kenites are described as friendly prior to this *oracle (Moses' father-in-law, Ex 2:16-22), they are condemned here with the Amalekites. They were nomadic tribes living around Kadesh in the northern Sinai peninsula and in the region of Galilee and may have been itinerant metalworkers (there were copper mines nearby in Sinai) as well as shepherds. Balaam mocks their mountain settlements, saying that they cannot prevent their eventual fall to Asshur.

24:22-24. Asshur. It is unlikely that this reference is to the Neo-Assyrian empire, which dominated the entire ancient Near East during the eighth and seventh centuries B.C. That would place the focus (and, some would say, composition) of this *oracle very late. However, the Asshurim, a tribe descended from Abraham and Keturah (Gen 25:3) does not seem significant enough to defeat the Kenites. The *Assyrians of the fourteenth century were sufficiently militaristic to contribute to the fall of the *Hurrian kingdom of Mitanni, but there is no evidence of military activity further west. This most likely should be identified as the Asshur mentioned in connection with the Ishmaelites in Genesis 25:18.

24:24. Kittim. This is the ancient name for the island of Cyprus (Gen 10:4) and derives from the name of the city Kition. In later texts (Qumran), Kittim is used as a generic for maritime nations (Dan 11:30) or for the Romans. Here some have suggested that it may refer to the "Sea Peoples"—the amalgamation of tribes (including the Philistines) that invaded the Near East around 1200 B.C.

24:24. Eber. Eber is identified as the ancestor of the Hebrews in Genesis 10:21 and 11:14. That cannot fit the context of this *oracle, however, since it would be a curse on Israel. Possible solutions may be a reference to an attack by the Kittim on "Heber," either one of the clans of the Kenites or of the Israelite tribe of Asher. No really satisfactory explanation has been put forward for this name.

25:1-18

The Incident at Baal-Peor

25:1. Shittim. The full name of this site was Abel-shittim (Num 33:49), and it is the jumping-off point for Joshua's spies and for the Israelite's entrance into Canaan (Josh 2:1; 3:1; Mic 6:5). Josephus places it seven miles from the Jordan River. Its actual location is uncertain, but it may be Tell el-Hammam on the Wadi Kefrein.

25:3. Baal of Peor. It is not uncommon for the god *Baal to be identified with different mountains (Zaphon) or city sites in the region of Canaan (see Num 32:38; 33:7; 2 Kings 1:2).

In this case, the Israelites are influenced by the Moabite women to worship the city god of Peor (see Deut 3:29 for Beth Peor). This is apparently their first contact with Baal, the Canaanite god of *fertility and rain, since the name does not appear in Genesis. The result is disastrous and sets a precedent for God's reaction to idolatry.

25:4. corpse exposure. Although the form of execution is unclear here (see 2 Sam 21:9 for a similar use of words), there is a purpose in placing the bodies of these unfaithful leaders on public display. It may be an attempt to propitiate God's anger or a warning to others that idolatry will not be tolerated. Legal tradition forbade leaving bodies exposed or impaled overnight (Deut 21:22-23). Impalement and public display of corpses was common punishment by the *Assyrians (referred to in the annals of Sennacherib and Ashurbanipal).

25:6. brought to his family. The unnamed Israelite may simply be introducing this Midianite woman to his family as his wife. But many have believed that the cause of distress here is the practice of ritual intercourse. By bringing a Midianite woman to his family, this man was encouraging all of his male kin to participate in this forbidden *ritual—even though the people were supposed to be repenting for their previous idolatry. The "chamber" (v. 8) into which they enter appears to be in the sacred enclosure and therefore suggests ritual intercourse. Though the ritual may have been *fertility-oriented, the Israelites are not engaging in agriculture, so it is difficult to imagine what connection that might have here. Alternatively, Psalm 106:28 links Baal-Peor to sacrifices for the dead (NIV: "lifeless gods"). The plague of verse 3 may have been attributed to ancestral spirits who could be appeased by ritual intercourse. In this case the "family" the woman was brought to may be the ancestral spirits.

25:8. the plague. Since no symptoms are given, the nature of the plague afflicting the Israelites is unclear. Diagnostic texts from Mesopotamia often sought to identify a causal relationship between certain symptoms or illnesses and the presumed sins that caused them. Israel had no such hierarchy of diseases, but they would interpret major or sudden outbreak of serious disease as punishment from God. Endemic and epidemic diseases in the ancient world included typhoid, malaria, cholera, tuberculosis, anthrax, bubonic plague, diphtheria and more. Yahweh's use of plague is similar to that associated with plague deities in the ancient Near East. In Mesopotamian mythology, Nergal (or, Erra) is the god of plague and king of the netherworld. The comparable Canaanite deity is Resheph, and the Hittite, Irshappa. Murshilish, a Hittite king of this general period, complains in one prayer about a plague that has lasted twenty years. He sees it as a punishment for his father's sins.

25:13. covenant of priesthood. Like the *covenant made with David (2 Sam 7:8-16; Ps 89:29), this is an "everlasting" covenant. Again, this language and the concept of a perpetual treaty agreement is not unique. It is common in Mesopotamian treaty texts (see the *Assyrian Vassal Treaties of Esarhaddon). In this instance, Phineas's act of piety is the basis for marking his particular branch of Aaron's family as the group with the sole right to officiate in the temple (see the genealogy in 1 Chron 6:3-14, which traces Phineas's lineage and not that of his brothers).

26:1-65

The Second Census

26:55. distribution by lot. By employing lots to determine the distribution of the land, the decision is left to God's judgment. This process was also employed at *Mari in Mesopotamia to allocate fiefs by the king to vassals and military retirees.

27:1-11

The Case of Zelophehad's Daughters

27:1-11. daughters' inheritance rights. Land is generally redeemed by a male relative if a man dies without a male heir (for the levirate obligation see comment on Deut 25:5-10; for the Jubilee year see comment on Lev 25:8-55; for the relative's claim see Lev 25:25-28). The separate question of a daughter's right to inherit requires, in this case, an *oracle and a divine decision, since it cannot be dealt with under existing legislation. Levirate rights (Deut 25:5-10) apparently do not apply here, since no male heirs (sons or paternal brothers) are mentioned. In this situation, therefore, the decision is made and laws are enacted giving daughters the right to inherit in the absence of any male heirs, as well as establishing a law of procedure in cases of inheritance. Some precedent seems to exist for this in Mesopotamian legal documents (Sumerian text Gudea statute B [c. 2150 B.C.]; *Alalakh [eighteenth century B.C.]; *Nuzi; and *Emar). The law in Numbers 27, however, has to be modified later due to the problem of the potential loss of a family's land if the daughter marries out of her tribe. Thus Numbers 36:6-9 adds the further stipula-

tion that daughters who inherit land from their father must marry within their own tribal clans.

27:12-23

Joshua Commissioned

27:12. Abarim range. This is a range of mountains extending east of the mouth of the Jordan River and on around the northern end of the Dead Sea (see Deut 32:49). It forms the northwestern rim of the Moabite plateau. The specific peak in this range from which Moses will view the Promised Land is Mount Nebo, 2,740 feet in height.

27:14. geography. The parenthetical note that retells the story of Moses' and Aaron's sin at Meribah is based on the version in Numbers 20:1-13. This places the events near the oasis of Kadesh Barnea, probably 'Ein Qudeirat in the wadi el'Ain, the largest oasis in the northern Sinai. The Wilderness of Zin is the barren region in the Negev south of Canaan that extends toward the Sinai.

27:18. the spirit. As Moses' chosen successor, Joshua's qualification for this position is based on the authority of God with which he has been endowed. He has shown this trait in military campaigns (Ex 17:9-13) as well as in his courage in standing up to the people and the elders (Num 14:6-10; 26:65). Eventually he will be invested with the spirit of wisdom (Deut 34:9), but here it is his God-given skills as a leader that stand out as the basis of his elevation to command. There is no established political authority over all the tribes except that designated by the Lord. The recognition of the empowerment by the spirit of God becomes the criterion by which political authority is granted by the tribes.

27:18. laying on of hands. Part of the process of investing a person with authority and signifying the transferral of power from one leader to another involves the laying on of hands (see Num 8:10; Lev 16:21). For instance, the paintings found in the *El Amarna rock tombs (c. 1400-1350 B.C.) portray the investiture of officials by Pharaoh. They are given special garments, and Pharaoh is pictured extending his arms over them as a sign of their new authority.

27:21. priest and the Urim. One sign of Joshua's new leadership role as Moses' successor is his use of the oracular office of the High Priest. By using the Urim and Thummim, the high priest could consult God and obtain a yes or no answer to questions (see this practice by David and Abiathar in 1 Sam 23:9-12; 30:7-8). While it is uncertain what the Urim and Thummim actually looked like, their use is similar to the oracular questions and answers found in *Babylonian omen texts. They were kept in a pocket inside the high priest's "breastplate" and next to his heart (Ex 28:16; Lev 8:8). For further information, see the comment on Exodus 28:30.

28:1-15

Offerings

28:1-30. festivals and holy days. The major religious festivals and holy days celebrated throughout the ancient Near East were for the most part agriculturally based. While daily offerings were made to the gods, there were "patron days" in specific towns and villages for locally honored deities, as well as occasions when the national god(s) were paraded from one town to another, "visiting" shrines and promoting the general *fertility and well-being of the land. The single most important of the Mesopotamian festivals was the Akitu or new year's celebration. The monarch assumed the role of the chief god, while the high priestess served as his consort and represented the chief goddess. Their performance of a series of intricate sacred *rituals and sacrifices was designed to please the gods and thus insure a prosperous and fertile year ahead. During the year, based on a lunar calendar, "new moon" festivals were celebrated, as were the events of the agricultural calendar (the coming of the rains or annual flood waters, plowing and harvesting). Some rituals grew out of the changing of the seasons, such as the mourning for the "dying god" Tammuz (or *Dumuzi), who could be released from the underworld only through the tears of devotees (see Ezek 8:14).

28:1-8. daily offerings: who makes them and why. The heart of the sacrificial system in ancient Israel was the daily offering made for the people by the priests. This was a communal offering made on behalf of the people rather than an offering that each person made. Although the actual content of the sacrifice apparently differed from one time period to another (compare morning and evening animal sacrifice here with a morning animal sacrifice and an evening grain offering in 2 Kings 16:15), its intent was to provide continuous thanksgiving to God and signify daily compliance with the *covenant (see the comment on burnt offerings at Lev 1:1). The belief is quite clear that any interruption in this pattern would have resulted in dire consequences for the people (see Dan 8:11-14).

28:9-10. sabbath offering: who and why. The injunction to observe the sabbath each sev-

enth day by ceasing work and by offering an additional burnt offering marks the weekly commemoration of the release from Egyptian bondage (Ex 20:11). Every Israelite, as well as their animals, servants and visitors, is required by this statute to observe the sabbath (Ex 31:12-17). This offering is not made by each family or clan but is made on behalf of the people as a whole. There is little evidence that the sabbath was used as a time for worship gatherings in ancient Israel. The sabbath is not tied to any other calendar event during the year and only has parallels in the celebration of the sabbatical and Jubilee years (Lev 25). Because the exodus event is unique to the Israelites, no similar, weekly holy day is observed by the peoples of the ancient Near East.

28:11-15. new moon offering: who and why. The lunar calendar was used throughout the ancient Near East and the worship of the moon god Sin was quite common, especially in northern Mesopotamia. Each new month began the first day of the new moon and signified the moon god's continuing dominion. The inclusion of a new moon offering in the liturgical calendar only appears in Numbers 28, although its celebration is known elsewhere (1 Sam 20:5; 2 Kings 4:23). Like the sabbath offering, the sacrifice marking the new moon is in addition to the daily offering. It is placed on a par with other major festivals with its sacrifice of a larger number of valuable animals (two bulls, a ram and seven sheep) and the addition of a sacrificial goat as a sin offering.

28:16—29:40

The Festival Calendar

28:16-25. Feast of Unleavened Bread. The Feast of Unleavened Bread signals the beginning of the barley harvest (March-April). Unleavened bread was made from the newly harvested grain without adding yeast and was eaten with joy as the first sign of coming harvests that year. For further information see the comments on Exodus 12:14-20.

28:26-31. Feast of Weeks. This second of the three major harvest festivals comes seven weeks after the harvest of the early grain (Ex 34:22; Deut 16:9-12) and is also known as the Feast of Harvest or Pentecost (Ex 23:16). Like the sabbath celebration, the Feast of Weeks is not tied to the lunar calendar (in this case because of the inaccuracy of a calendar based solely on the phases of the moon). In the agricultural cycle it marks the end of the wheat harvest season, and by tradition it is tied to the giving of the law on Mount Sinai. It is also associated with *covenant renewal and pilgrimage. Celebration includes the bringing of a "wave offering" (see comment on Lev 8:27) of two loaves of bread, animal sacrifices (seven year-old lambs, one bull and two rams) and a drink offering in thanksgiving for a good harvest (see Lev 23:15-22). Like the other major feasts, a goat is also to be sacrificed as a sin offering for the people (Num 28:30).

29:1-6. Feast of Trumpets. The first day of the seventh month (the most sacred month in the Israelite calendar) was to be marked with the blowing of ram's horns (shofar) by the priests, commemorating the *covenantal agreement and gifts of God to the people. Its significance may partially derive from its being the seventh new moon of the seventh month of the year (compare this to the sabbatical cycle). No work is allowed, and burnt offerings are presented in addition to the daily offerings. The festival would continue until the tenth day of the month when the Day of Atonement would be observed (see Lev 16:29-34 for details). In later times the Feast of Trumpets would become the new year's festival, but that occurs in late postexilic times (see Lev 23:23-25).

29:7-11. Day of Atonement. The Day of Atonement was a special day set aside each year to deal with the people's sins. The seriousness of this occasion is demonstrated by the fact that all of the *rituals had to be performed inside the sanctuary by the high priest. According to Leviticus 23:27-32 the Day of Atonement fell ten days after the opening of the civil new year (during the seventh month). On that day the people remained home in prayer and fasting while the high priest entered the inner precincts of the tabernacle and burned incense on the golden incense altar. Blood from this special sacrifice was also to be daubed on the horns of the incense altar to tie this holiest of altars and its flow of incense to the need for getting rid of the nation's sins. A more elaborate description of this yearly ritual, including the casting of the people's sins on the scapegoat, is found in Leviticus 16. See comments there for further information.

29:12-39. Feast of Tabernacles. The final harvest of the year occurred in the autumn prior to the onset of the rainy season and marked the beginning of a new agricultural year (fifteenth day of the seventh month). At this time the last of the ripening grain and fruits were gathered and stored, allowing time afterwards for pilgrimage to Jerusalem. The seven-day event is also known as the Feast of Ingathering (Ex 23:16) and is symbolized by the construction of booths decorated with greenery

for the harvesters. The festival was tied into Israelite tradition as a commemoration of the wilderness wanderings (see Lev 23:33-43). It was also the occasion for the dedication of Solomon's temple in Jerusalem (1 Kings 8:65) and was such a popular festival that the prophet Zechariah described it as the eschatological feast celebrated by the nations following Yahweh's ultimate triumph (Zech 14:16).

29:13-38. number of animals. There are more animals sacrificed during the eight days of the Feast of Tabernacles than any other annual festival. A total of 71 bulls, 15 rams, 105 lambs and 8 goats are sacrificed, with accompanying cereal and drink offerings (compare the much smaller number prescribed in Ezek 45:13-25 for holy days). The number of bulls offered diminishes during the days of the festival, perhaps as a way of denoting the passage of time or possibly as a means of sparing the nation some of its most valuable livestock. The very large number of animals involved, however, speaks both to the joy associated with the harvest (a sign of the *covenant's fulfillment) and to the need to feed the large number of persons who have made the pilgrimage to Jerusalem.

30:1-16

Regulations Concerning Vows

30:2-15. importance and role of vows. The taking of a vow magnifies the devotion of an individual in performing a specific task (sacrifice—see Lev 27; transport of the ark to Jerusalem by David—Ps 132:2-5) or serves as a form of bargaining with the deity to obtain a goal (Jephthah's vow to gain a victory—Judg 11:30-31). Thus a vow differs from an oath in that it is generally conditional rather than just promissory. It can also be used to initiate a special dedicatory period, as was the case with the *Nazirite vows (Num 6), or, during war, as a form of abstinence sacrifice, which devotes all of the spoils to God (Num 21:1-3; Josh 6:18-19). Since this is a religious act, drawing the deity into a pact with the worshiper, it may not be broken under penalty of God's displeasure (see Ex 20:7 and the injunction not to "misuse" God's name). For more information, see the comment on Leviticus 27:2-13.

30:3-15. women and vows. According to the injunction in this passage, young women and wives may not pledge themselves to a vow without the consent of their father or husband. The father or husband, as head of a household, has the right to annul any such vow. However, if he first approves of the vow and later attempts to obstruct a woman from carrying it out, he bears the punishment for its nonfulfillment (vv. 14-15). In the first case (vv. 3-5) unmarried women are considered wards of their father and thus do not own property and may not, without prior consent, obstruct their father's ability to arrange their marriage or to utilize their person to benefit the family. Married women are similarly bound to their husband's household and may not make decisions without consulting their husband that might affect the functioning or economic viability of the household (vv. 6-8, 10-13). Only in the case of Hannah (1 Sam 1) does a wife on her own initiative make a vow, dedicating her child to temple service at Shiloh.

30:3-15. the subordinate role of women. Although women often had great influence over their husbands (especially royal women), only widows and elderly women appear to have been able to act on their own in Israelite society. Young women still living with their parents and wives were under the legal control of their fathers and husbands. They could not own property, start a business, initiate a lawsuit or arrange their own marriage. All of these acts were reserved for the male. There do seem to have been instances in which married women functioned more freely in the community (as in Prov 31), but the implication is always that this was done with the consent of their husbands. Their primary responsibility, in the biblical context as well as in the wider ancient Near Eastern context, was to maintain the home, provide heirs for their husbands and, when possible, assist with the economic assets of the household (farming, herding, manufacturing). In *Hammurabi's laws a woman who neglected her household duties in preferring business pursuits could be divorced by her husband. Older women beyond childbearing years may have moved into a different social category, functioning as female elders (see Deborah [Judg 4—5] and the wise women of Tekoa and Abel [2 Sam 14:2-20; 20:15-22]).

31:1-54

Battle with the Midianites

31:1-12. Midianites. Midianite territory centered in the region east of the Gulf of Aqaba in northwest Arabia, but the Midianites ranged west into the Sinai peninsula as well as north into Transjordan in various periods. Though their early history appears to be seminomadic or Bedouin in nature, archaeological study has revealed villages, walled cities and extensive irrigation in this region, beginning as early as the *Late Bronze period (the time of the exo-

dus and early judges). There is, so far, no reference to the Midianites in ancient texts.

31:6. articles from the sanctuary. Nearly every army in the ancient Near East included priests and diviners (as seen in the *Mari texts), prophets (2 Kings 3) and portable sacred objects (Assyrian Annals of Shalmaneser III [858-824 B.C.]). In this way, the god(s) could be consulted on the battlefield or invoked to lead the soldiers to victory. Phineas, Aaron's son and a high-ranking priest himself, thus helps build the confidence of the army with his presence. Exactly which items are included here is uncertain but may have included the ark of the covenant, the breastplate of the priest and the Urim and Thummim (see the carrying of the ark into battle elsewhere—Josh 6:4-7; 1 Sam 4:3-8).

31:6. trumpets for signaling. When large numbers of troops are deployed over a fairly wide area, the piercing notes of the trumpets could serve a dual purpose, symbolizing the voice of God to frighten the enemy (see Judg 7:17-22) and giving signals to the various detachments of the army (see 2 Chron 13:2). While the shofar or horn trumpet is used elsewhere as a signaling device (Judg 3:27; 6:34; Neh 4:18-20), the Hebrew word here is for a metal trumpet, probably made of bronze or silver and capable of producing four or five tones. Tubular flared trumpets were used in this period in military as well as ritual contexts. This is depicted on Egyptian reliefs as well as evidenced by actual instruments found, for example, in the tomb of King Tut (a silver trumpet nearly two feet long). Trumpet signals are attested in Egypt in the *Late Bronze Age (this time period) in both military and religious contexts. A preset code would include some combination of long and short blasts.

31:17-18. rationale for who is put to death. The criteria used to determine who would be executed were two: (1) all the boys must be killed to prevent them from presenting a military threat in the future, and (2) all nonvirgins must die since they have already been contaminated by sexual contact with a proscribed people. Virgins represent an "unplowed field" and may be adopted through marriage into the Israelite tribes (see Judg 21:11-12). It is also possible that they were enslaved or used as *concubines. These young women were presumably innocent of the seduction of the Israelites by Midianite women at Baal-Peor (Num 25).

31:19-24. purification. The soldiers required purification because of their contact with the dead. The seven-day purification *ritual for the soldiers and for the plunder taken in war had to be performed outside the camp (compare Deut 23:10-15) in order to prevent contamination of the rest of the people (see Num 19:11-13, 16-22). Purification included bathing (Num 19:18-19) and laundering by the soldiers (see Lev 11:25, 28 and the *War Scroll* from Qumran for similar injunctions). The spoils are purified by means of fire and water. Bathing metals in fire is also found in *Hittite birth rituals.

31:25-50. conventions for distribution of plunder. Soldiers until very recently were paid in plunder. This became a sacred right in the ancient Near East. In the *Mari texts officers took oaths that they would not infringe on the booty due to their men. Normally, the god(s) also received a share, which was collected on the battlefield by the accompanying priests. In this case the convention set for distribution provides the soldiers with a share ten times that of the civilians, while one-five-hundredth of the army's share was set aside for Eleazar (and the maintenance of the sanctuary) and one-fiftieth of the civilians' share was given to support the Levites. This could be compared to the tithe given by Abraham to Melchizedek of Salem in Genesis 14:20 and David's equal distribution to soldiers and civilians in 1 Samuel 30:24-25.

31:50. gold for ransom. Counting people in the ancient world was particularly unpopular (see comment on Ex 30:11-16) and could be subject to divine displeasure, since it might suggest distrust of the god(s) as well as a concern with personal power (see the plague which results from David's census in 2 Sam 24:1-17). According to the law in Exodus 30:12, whenever a census is taken a ransom must be paid for the life of each man counted. Thus after counting the army of Israel and determining that not a single casualty had been inflicted by the Midianites, the officers paid this ransom with the golden objects they had stripped from the bodies of the dead. This ransom (NIV: "atonement") is made to prevent a plague (see Num 8:19), and the golden jewelry is melted into sacred vessels that will serve the needs of the sanctuary as an eternal memorial to the victory and the people's willingness to submit to God's law. The amount of gold given is about six hundred pounds.

32:1-42
The Tribes Who Inherited Transjordan

32:1. Jazer and Gilead. The Transjordanian region in the area of the Jabbok River provided

suitable grazing and was an attractive place for the tribes of Reuben and Gad to settle. Jazer is probably Khirbet Jazzir, twelve miles south of the Jabbok, on the border with Ammon (see Num 21:32). The region of Gilead (mentioned in *Ugaritic texts) extends from the Arnon River in the south to Bashan and the Transjordanian side of the Galilee in the north.

32:3. cities list. This same list of cities also appears in Numbers 32:34-38. Ataroth is identified with Khirbet 'Attarus, eight miles northwest of Dibon and eight miles east of the Dead Sea. It is also mentioned in the Mesha stele inscription (c. 830 B.C.) as a site built by the Israelites and inhabited by the tribe of Gad. Dibon (=Diban), the Moabite capital, is approximately four miles north of the Arnon River and twelve miles east of the Dead Sea. Nimrah, near modern Tell Nimrin, is in the northern sector of Transjordan along with Jazer. Heshbon (=Hesban), on the northwest corner of the Madaba plain (three miles northeast of Mount Nebo), is said to be the capital of the *Amorite king Sihon, but there is no archaeological evidence for permanent occupation prior to 1200 B.C. (see comment on Num 21:25-28). Elealeh (= el-'Al) is located northeast of Heshbon (see Is 15:4; 16:9; Jer 48:34). Sebam is an unknown site. Nebo has also not been located, but it is mentioned in the Mesha stele. Beon (=Ma'in, Baal Meon in Num 32:38) is ten miles southwest of Heshbon. In his victory stele Mesha (ninth-century king of Moab) claims to have built it.

32:1-37. Transjordan topography. A wide range of topography characterizes Transjordan, which included the areas of Bashan, Gilead, Ammon, Moab and Edom. In the north this includes the Mount Hermon range (highest peak at 9,230 feet above sea level) and a portion of the rift valley between the Huleh basin (230 feet above sea level) and the Sea of Galilee (695 feet below sea level). The southern limit of the region is at the Gulf of Aqaba. The rift valley extends south following the Jordan River to the Dead Sea (2,550 feet below sea level at its deepest point). East of the Jordan, the hills of Gilead rise to 3,500 feet above sea level and in the south the mountains of Edom stand 5,700 feet near the region of Petra. Most north-south travel followed the "King's Highway," starting at Damascus, cutting across the major wadis and skirting the desert to the east. East-west travel followed the Yabis, Jabbok, Nimrin and Abu Gharaba wadis. The generally dry climate necessitates irrigation farming but supplies sufficient pasturage for pastoral nomadic groups.

32:34-42. geography of tribal settlements in Transjordan. Based on the locations of the cities in this list (see Num 32:3 for locations of most of them), the tribe of Gad built cities in the southern, northern and northwestern sectors of the region of Transjordan (principally Gilead and Bashan). The Reubenites focused on the city of Heshbon, along with its surrounding villages. Joshua 13:15-31 presents the final distribution of cities, which yields to Reuben certain of the cities that the Gadites had built. Locations which can be posited for cities not discussed in Numbers 32:3 include Aroer, three miles south of Diban on the Arnon River; Jogbehah (=Jubeihat), five miles northwest of Rabbah; Beth Haran (=either Tell er-Rame or Tell Iktanu), south of Tell Nimrim; Kiriathaim (=Khirbet el-Qureiyat), six miles northwest of Diban. Archaeological attention to this area has increased in the last couple of decades, but many of these sites have yet to be excavated.

33:1-56

The Wilderness Itinerary

33:1-49. the itinerary of the journey. The itinerary form is common in ancient Near Eastern annals, including those of the ninth century B.C. *Assyrian kings, who described their campaigns in terms of stopping points and cities conquered. Closer to this period are the Egyptian itineraries preserved in the records of their various excursions into the Syro-Palestine region. This list provides a fairly complete chronicle of the journey from Rameses in Egypt to the Jordan crossing prior to the conquest. However, the omission of some important sites (Massah, Meribah) suggests that it is not comprehensive. The stages of the journey include (1) Egypt to the wilderness of Sinai (vv. 5-15; many of these sites are discussed specifically in the comments on Ex 13—17); (2) from the wilderness to Ezion Geber (vv. 16-35); (3) Ezion Geber to Kadesh in the wilderness of Zin (v. 36); and (4) Kadesh to Moab (vv. 37-49). Many of the names are obscure, occurring only here in the biblical record and unknown from ancient records or modern geographical and archaeological studies. Among those place names that can be at least tentatively identified are Rameses (=Tell el-Dab'a, see comment on Ex 1:8-14); Ezion Geber, a port city located at the head of the Gulf of Aqaba (1 Kings 9:26), either Tell el-Kheleifeh or on the island of Jezirat Far'on (the only site in the region with evidence of a substantial harbor area); Punon (=Khirbet Feinan), thirty miles south of the Dead Sea; mountains of Abarim, near Mount Nebo, just east of the Dead Sea (see comment on Num 27:12); and Abel-shittim (Shittim, see comment on Num 25:1), which is

either Tell el-Hammam on the Wadi Kefrein (runs east-west into the Jordan across from Jericho) or just east of that site at Tell Kefrein.

34:1-29

The Land to Be Assigned

34:1-12. trace the boundaries. The boundaries of the Promised Land are laid out here as a logical sequel to the order to displace the present inhabitants of the area (Num 33:50-56). Although these are not the actual borders of the nation of Israel at any point in its history, they are a close approximation of the territory claimed by Egypt in Canaan during the fifteenth to thirteenth centuries B.C. (see 2 Sam 3:10 for the realized dimensions: "from Dan to Beersheba") and are also approached by the description of the territory controlled by David and Solomon. The boundaries are outlined, using a set of then-known border points (see Josh 15—19 for the tribal divisions). The most obvious limits are those to the east and west—the Jordan River and the Mediterranean Sea respectively. The northern border reaches to the mountains of Lebanon as far as Mount Hor (unknown peak, probably in the Lebanese range) and Lebo (=Lebo Hamath, most likely modern Lebweh on one of the sources of the Orontes). This was the southern border of the land of Hamath and therefore the northern border of Canaan, including the Damascus area and Bashan (roughly equated to the modern Golan Heights). Zedad is likely modern Sedad, about thirty-five miles northeast of Lebweh, while Ziphron and Hazar Enan are commonly identified as the two oases to the southeast of Zedad. Moving south, the territory passes through the Galilee to the Yarmuk valley (the sites mentioned in v. 11 are unknown) where it moves west to the Jordan valley and from there south to Kadesh Barnea (see the comment on Num 13) in the Wilderness of Zin (see comment on Num 20:1) before swinging west to the Mediterranean at El-'Arish. It is common to identify Hazar Addar and Azmon with two of the other springs in the vicinity of Kadesh, namely, 'Ain Qedeis and 'Ain Muweilih. The location of Scorpion Pass (akrabim) is unknown, though it is usually identified with a narrow passage along the Wadi Marra headed northeast toward the south end of the Dead Sea.

35:1-34

Cities of Refuge

35:1-5. Levitical cities. Since their primary responsibility is as sacrificial priests and religious officials, the Levites are not given a portion of the Promised Land to farm (see Num 18:23-24). However, they do receive forty-eight towns, with their surrounding area as pasturage for their flocks and herds (see Lev 25:32-34 for their property rights in these towns). The precedent of assigning towns to priestly control can be seen in the practice of Egypt's rule in Canaan (and also in Hittite practice), where some cities were set aside as royal estates and placed in the hands of the priesthood, which administered that territory. These Egyptian administrative centers were typically fortified and collected the tribute or tax money from that region. Likewise in Mesopotamian and Syrian practice, designated cities had royal pasturelands connected to them. While a secular administrative role is not evident for the Levitical cities, they may well have been centers for religious instruction and collection of sanctuary revenues. Since pastureland is specified, it may also be that livestock collected for ritual use was provided for in this way.

35:6-34. cities of refuge and the judicial system. Six of the Levitical cities were to serve as places of refuge for persons who had committed an unintentional homicide (see also Deut 4:41-43). This solution, which provides asylum to the accused and prevents the "blood avenger" from killing him, may be an extension or alternative to the use of asylum altars mentioned in Exodus 21:12-14. The priestly community would have been concerned about polluting the altar and the sanctuary when a lawbreaker grasped the horns of the altar. Thus by extending the asylum zone to the entire city of refuge, this *pollution would not happen, and the person accused would also have better accommodations until the trial was completed. Sacred cities or royal cities with privileged status are evidenced throughout the ancient Near East, but the protection they offer is often in terms of freedom from certain government imposed obligations, though one text speaks of a prohibition against shedding the blood of anyone under such protection. The concept of asylum is also found in classical sources and suggests an attempt on the part of the government to tighten control over the judicial system, removing the rights of revenge from families, and insuring due process.

35:9-34. family responsibility for vengeance. While the biblical law clearly indicates the responsibility of the "blood avenger" to avenge the death of a kinsman, this practice of blood feud could be disruptive to the administration of justice, and thus the six cities of refuge were

established to provide a "cooling off" phase as well as due process for the accused. Two witnesses were necessary to convict (Num 35:30), and then it became the responsibility of the "blood avenger" to execute the felon (Num 35:19-21; Deut 19:12). No ransom for the convicted murderer was possible (Num 35:31-32). This contrasts with laws formulated elsewhere in the ancient Near East. Both the Hittite laws and the Middle *Assyrian laws provide for the payment of a ransom to buy back the life of the murderer. The Assyrian law reflects a middle ground, giving the deceased's next-of-kin the option of executing the murderer or accepting a ransom.

35:25, 28. death of the high priest. It is not the period of exile within the city of refuge that absolves a person of unintentional homicide (see Josh 20:2-6). The blood of the slain can only be expiated by another death, for bloodguilt accompanies every human slaying. However, since the accused has not been judged a murderer, he must remain in refuge until the death of the high priest. It is thus the high priest's death that eliminates the bloodguilt attached to the homicide. In this way even the death of the high priest continues his *cultic service to the people by removing bloodguilt and disposing of their sins (see Ex 28:36-38; Lev 16:16).

35:33. bloodshed polluting the land. The Promised Land, as a gift of the *covenant, is sacred and can be polluted by bloodshed and idolatry (see Ezek 36:17-18). Since blood is the source of life and a gift of God, the *pollution caused by shedding blood can be wiped away only by the shedding of blood. Thus even the blood of animals must be poured on the altar as a ransom for the person who slaughtered them (see Lev 17:11). That is why the convicted murderer must be executed and why the death of the high priest wipes away the pollution of the unintentional homicide. Failure to obey this command corrupts the land. If the land and its people become polluted, God can no longer dwell in their midst. And if he abandons the land, it will no longer yield its covenantal bounty (see Gen 4:10-12).

36:1-13

Case of Inheritance Law

36:1-13. tribal retention of land inherited by daughters. In the law established in Numbers 27:1-11, Zelophehad's daughters were given the right to inherit land since there was no male heir (the apocryphal book Tobit [6:13] shows an application of the law). A loophole was inadvertently created here which would have allowed for the transference of property to another tribe through marriage. Thus this codicil was added, restricting women who had inherited land from marrying outside their tribe so that the original tribal allotment would remain intact. Here it becomes clear that the preservation of family property holdings was one of the highest values in Israelite society. That is because the land was the gift of the *covenant, so each family's allotment was its share in the covenant. While land ownership was important in the rest of the ancient Near East, no other country had such strong religious overtones connected to the land.

DEUTERONOMY

1:1-8

Introduction

1:1-2. geography. The Arabah is the area of the Jordan rift, sometimes limited to the section between the Dead Sea and the Gulf of Aqaba. The list of locations looks more like an itinerary than a description of the Israelites' present location (thus the comment concerning the trip along the Mount Seir road). The sites are difficult to identify with any certainty. Mount Seir is another name for Edom, and the Mount Seir road takes one from the Sinai peninsula into Edom. For details on Kadesh Barnea see the comment on Numbers 13:26, and the for location of Sinai/Horeb see the comment on Exodus 19:1-2. The eleven-day journey (140 miles) mentioned here is consistent with a southern location for Mount Sinai.

1:3. chronology. The eleventh month is Tebet, and it spans our December-January. In Israel it is the middle of the rainy season, but in the southern region where the Israelites still are there is very little rainfall (an average of two inches per year), and though it is winter, the average daytime temperature would still be about sixty-five degrees Fahrenheit. It is difficult to assign a number to this fortieth year since the text has offered us no anchor to abso-

lute chronology. In the ancient world chronology was only noted in relative terms ("the fifth year of king X"), and the biblical text does the same (here, the fortieth year since the exodus). There was no absolute chronology system ("the year 1385"). See "The Date of the Exodus," p. 86.

1:4. history. The account of these battles is found in Numbers 21:21-35. Of the three sites mentioned here, only Heshbon has been excavated, and it has been controversial (see comment on Num 21:25-28). Ashtaroth is identified here as the capital city of Bashan. It is mentioned in Egyptian and *Assyrian texts and the *Amarna letters, and some think it occurs in a text from *Ugarit as a place where the god *El reigns. It is known today as Tell 'Ashtarah and is located on the Yarmuk River about twenty-five miles east of the Sea of Galilee. Neither Sihon nor Og is known from any extrabiblical records.

1:6. Horeb. Horeb is another name for Mount Sinai, most likely located in the southern section of the Sinai peninsula. For more detailed discussion see the comment on Exodus 19:1-2.

1:7. geography. The description in this verse is largely by topographical areas. The hill country of the *Amorites may refer to the entire southern region, in contrast to the land of the Canaanites, which would be the northern region. The Arabah refers to the Jordan rift valley from the Gulf of Aqaba north, while the hill country extends north and south along the west side of the Jordan River, interrupted by the valley of Jezreel. The Shephelah (NIV: "western foothills") descend from the mountains to the coast in the southern section. The Negev is the wilderness in the triangle formed by the Dead Sea, the Mediterranean Sea and the Gulf of Aqaba. The Lebanon is the northern mountain range, and the northwestern spur of the Euphrates marks the northeastern border.

1:9-18

Judiciary System

1:16. judicial structures in the ancient Near East. Egyptian and *Hittite records of this general period likewise evidence a judicial system set up in tiers, and the Hittite *Instructions to Officers and Commanders* even has military leaders in the position of judge, as verse 13 here does. This suggests the close relationship between military activity and the activity of judging that the book of Judges implies. In most other systems difficult cases were referred to the king, whereas here Moses serves as the final adjudicator. Thus in the ancient Near East, leaders, whether tribal, military, city, provincial or national, had the obligation of judging the cases under their jurisdiction. There was no trial by jury, though at times a group of elders may have been involved in judging a case together. When only one individual judge was involved, the danger of favoring the powerful or the wealthy was very real. In both ancient Near Eastern documents and the Bible impartiality is valued, along with discernment. There were no lawyers, so most people represented themselves in court. Witnesses could be called, and oaths played a very significant role since most of our scientific means of gathering evidence were not available.

1:19-25

The Commission and Report of the Spies

1:19. Amorites. The *Amorites were also known as the Amurru (in *Akkadian) and the Martu (in *Sumerian). The term *Amorites* ("westerners"), like the term *Canaanites*, can be used to describe the general population of the land of Canaan. As an ethnic group, Amorites are known from written sources as early as the middle third millennium B.C. Most scholars think that their homeland was in Syria, from where they came to occupy many areas in the Near East.

1:24. the valley of Eshcol. There are many wadis in this general area, and there is no way of telling which one may be referred to here. Around Hebron today, Ramet el-'Amleh is known for its grape production and is near a wadi.

1:26-46

The Rebellion of the People

1:28. Anakites. The descendants of Anak are specifically mentioned in Numbers 13:22, 28. When names are given, they are *Hurrian (biblical Horites; see comment on Deut 2). The descendants of Anak are generally considered "giants" (Num 13:33; Deut 2:10-11; 2 Sam 21:18-22), though the description "gigantic" may be more appropriate. There is no mention of the Anakites in other sources, but the Egyptian letter on Papyrus Anastasi I (thirteenth century B.C.) describes fierce warriors in Canaan that are seven to nine feet tall.

1:44. Seir to Hormah. Seir is generally considered the mountainous central region of Edom (with elevations generally over five thousand

feet) between Wadi al-Ghuwayr on the north and Ras en-Naqb on the south. Hormah is a site seven and a half miles east of Beersheba, tentatively identified with Tell Masos (Khirbet el-Meshash). Seir to Hormah is about fifty miles along a route to the northwest.

1:46. Kadesh Barnea. Kadesh Barnea is usually identified as 'Ain el-Qudeirat, about fifty miles south of Beersheba, which has the most plentiful water supply in the region. There are no archaeological remains on this site from this period, but the site has long been a stopping place for nomads and Bedouin, and the abundance of "Negev" ware (pottery dated to this period) suggests that was true during the time of the Israelite wanderings as well.

2:1-25

Wandering in the Wilderness

2:1. geography. Traveling the road to the Red Sea took the Israelites south along the Arabah, but probably not as far south as Elath at the tip of the Gulf of Aqaba. Instead it appears they turned north at one of the east-west wadis in the southern region of Seir to arrive at the route north that would take them to the plains of Moab.

2:8. Arabah road. The Arabah road runs north-south from the Gulf of Aqaba to the Dead Sea through the rift valley.

2:8. Elath and Ezion Geber. Elath is near the modern city of Aqaba at the tip of the Gulf of Aqaba. Ezion Geber was a port city located at the head of the Gulf of Aqaba (1 Kings 9:26) and may be either Tell el-Kheleifeh (which some identify as Elath) or on the island of Jezirat Far'on (the only site in the region with evidence of a substantial harbor area).

2:9. Ar. "Ar" is sometimes seen as a variant of Aroer. While some consider it a regional name, others have suggested it be identified with Khirbet Balu along one of the tributaries of the Arnon on the King's Highway, the major north-south route running on the east side of the Jordan.

2:10. Emites. These people are also referred to in Genesis 14:6, but nothing else is known of them.

2:10. Anakites. See comment on 1:26-46.

2:11. Rephaites. The Rephaites are mentioned as one of the ethnic groups inhabiting the land of Canaan in Genesis 15:20, but nothing else is known of them either inside or outside the Bible. The *Ugaritic texts speak of the Rephaim, whom some scholars consider to be the shades of dead heroes and kings. There is no cause, however, to think of this biblical group in those terms, though the Rephaim referred to in poetic texts such as Isaiah 14:9 (as well as in Job and Psalms) may be spirits.

2:12. Horites. The Horites are known throughout ancient Near Eastern literature as the *Hurrians. They were an Indo-European ethnic group centered along the Euphrates River in the third and second millennia. They established a political empire known as *Mitanni in the mid-second millennium, but it was breaking up around the time of the events of this book. Many Hurrian groups therefore ended up as displaced people and wandered into Syria and Palestine. The Hurrians were the dominant ethnic group in *Nuzi, and Hurrian

THE COVENANT AND ANCIENT NEAR EASTERN TREATIES

Archaeologists have recovered many treaties from the second and first millennia between nations and their vassals. The second millennium treaties are mostly made between the Hittites and others, while the first millennium examples come during the time of Assyrian kings Esarhaddon and Ashurbanipal of the seventh century B.C. The format followed in these treaties shows striking similarity to the format of a number of covenant documents in the Bible, most notably, Deuteronomy. These treaties begin with a preamble that identifies the suzerain who is making the treaty. Besides giving his titles and attributes it emphasizes his greatness and his right to proclaim the treaty. In Deuteronomy this occupies the first five verses of ch. 1. Next the treaties offer a historical prologue in which the relationship between the parties is reviewed. Priority is given to the kindness and power of the suzerain. In Deuteronomy this section comprises 1:6—3:29 (and some would extend it through the end of ch. 11). The core of the treaty is the stipulations section which details the obligations of each party. Deuteronomy accomplishes the same thing by its presentation of the law in chaps. 4-26. The treaties are concluded by three sections of legal material including instructions concerning the document, witnesses to the agreement and blessings and curses that will result from either honoring or violating the treaty. Deuteronomy addresses such issues in chaps. 28 and 31.

As a result of the recognition of this format, it becomes evident that the Lord used a very familiar literary form to communicate his covenant to Israel. Israelites would have realized that the Lord was putting himself in the place of the suzerain and that they should respond as a vassal would. It is a relationship bringing support and protection to the vassal as he is loyal to the suzerain.

groups are known from *Alalakh, *Mari, *Ugarit and the *Amarna texts as well. The Egyptians often referred to Canaan as Khurri land.

2:13. Zered Valley. The Zered Valley is the border between Edom and Moab. It is probably the wadi known today as Wadi al-Hesa, which runs east from the southern tip of the Dead Sea for about thirty miles.

2:19. Ammonites. The Ammonites lived north of the Moabites in the region around the Jabbok River. They are known from *Assyrian records as Bit-Ammon and as the land of Benammanu. They were settling this territory just around the time of the Israelite wanderings.

2:20. Zamzummites. The Zamzummites are known as the Zuzim in Genesis 14:5, but aside from their association with the Rephaites, nothing more is known about them.

2:22. Edomites and Horites. Nothing is known of this historic warfare between Esau's descendants and the *Hurrians. There have so far been no positive archaeological evidences of a Hurrian presence in Edom.

2:23. Avvites and Caphtorites. Caphtor is identified as Crete and is often associated with the homeland of the Philistines (Gen 10:14; Amos 9:7). Gaza was one of the five cities of the Philistines in the coastal plain. The Avvites are unknown outside the few obscure references to them in the Bible.

2:24. Arnon Gorge. The Arnon is today identified as the Wadi al-Mawjib, which flows about thirty miles northwest and west through Transjordan before emptying into the Dead Sea at its midpoint. The Arnon was often the northern border of Moab, though at times the Moabites extended their control north to Heshbon.

2:25. divine terror. The dread of a deity as a divine warrior was often believed to precede a powerful, successful army into battle. Egyptian texts attribute this terror to Amun-Re in the inscriptions of Thutmose III, and *Hittite, *Assyrian and *Babylonian texts all have their divine warriors who strike terror into the hearts of the enemy.

2:26-37

Battle Against Sihon the Amorite

2:26. Sihon the *Amorite. This battle is initially recorded in Numbers 21. Sihon is known only from the biblical records, and archaeology has little information to offer regarding his capital city or his kingdom.

2:26. Heshbon. The modern site of Tell-Heshban is located nearly fifty miles directly east of Jerusalem. However, archaeologists have not been able to detect any evidence that this site was settled prior to 1200 B.C. Some have suspected that the *Late Bronze city of Heshbon that was Sihon's capital was at a different site, with Tell Jalul named as one possibility. Recent surveys and excavations in this region have turned up more and more Late Bronze pottery, but it remains difficult to assess the nature of the occupation during this period.

2:26. Desert of Kedemoth. This refers to the wilderness region beyond the eastern border of Moab. The city of Kedemoth is identified tentatively as Saliya at the southern corner.

2:32. Jahaz. The site of the battle with the forces of the *Amorite king Sihon is given as Jahaz. Its probable location, based on the church historian Eusebius (fourth century A.D.) and the Mesha inscription (ninth century B.C.), is between the territories of Madaba and Dibon, at Khirbet Medeiniyeh at the eastern edge of Moab by the Wadi al-Themed. The battle is also mentioned in Deuteronomy 2:33 and Judges 11:20.

2:24-30. captured land. The area of central Transjordan, which is here described as the kingdoms of Sihon and Og, stretches from the Arnon River valley in the south to the Jabbok River in the north. It would include Moab but not Ammon. It seems likely that these "kingdoms" were not organized states in this period and that their conquest provided passage for the Israelites without the tribes' actually taking control of and settling this region.

2:34. complete destruction. See comment on the "ban" in 7:2.

2:36-37. geography. Aroer was a border fortress, identified as modern 'Ara'ir just north of the Arnon gorge, where it turns south. *Late Bronze remains have been found at the site. The Israelites are victorious throughout the Transjordan territories from the Arnon (north boundary of Moab) up to the Jabbok (the territory of the Ammonites), about fifty miles north to south and twenty to twenty-five miles east to west.

3:1-11

The Battle Against Og of Bashan

3:1. Bashan. After defeating Sihon, the Israelites traveled northward to Og's kingdom in the area known today as the Golan Heights. It was bordered by Mount Hermon to the north, Jebel Druze (Mount Hauran) to the east, the Sea of Galilee to the west and the Yarmuk region to the south. They defeated King Og at Edrei (modern Der'a, thirty miles east of the Sea of Galilee). Bashan proper, more limited to

the region of the (upper?) Yarmuk, is a broad, fertile plateau region noted for its grazing (Ps 22:12; Amos 4:1-3).

3:1. Og. There is no extrabiblical information either from historical sources or from archaeology to shed light on Og.

3:4. Argob. From the description here it is obvious that the region of Argob is heavily populated. It is sometimes equated with Bashan, and one possibility is that it refers to the area just south of the Yarmuk and half encircled by it. The *Assyrian kings of the ninth century also found and conquered many cities in this region in the vicinity of Mount Hauran.

3:5. fortified cities in Transjordan. There has been little excavation in this region, but sites such as Tel Soreg may be characteristic of the unwalled farming communities in the area. Seven cities in the area east of the Sea of Galilee are mentioned in the *Amarna texts of the fourteenth century in an area they identify as Garu (=Geshur?). Archaeological surveys in the Golan Heights have located twenty-seven cities occupied at the end of the *Middle Bronze period and eight in the *Late Bronze.

3:5. gates and bars. Gateways were often multichambered (featuring inner and outer gates) and sometimes included a turn of some sort within the gateway. The *Iron Age outer gate at Tell en-Nasebeh has slots in the stone beside the gate where bars would have been placed. The inhabitants would lock the gates by sliding the bars into sockets in the wall.

3:9. Hermon/Sirion/Senir. Hermon is in the Anti-Lebanon range. Its highest peak, Jabal ash-Shaykh, has an elevation of 9,232 feet and is usually snowcapped. The term *Sirion* is used in Egyptian, *Hittite and *Ugaritic materials. *Assyrian records of the ninth century refer to it as Saniru.

3:10. Salecah and Edrei. Edrei is identified as modern Der'a in Syria, about sixty miles south of Damascus and thirty miles east of the Sea of Galilee near the Yarmuk River. No excavations have been conducted here. The town is also mentioned in ancient texts from Egypt and *Ugarit. Salecah, modern Salhad, is another twenty-five miles east of Edrei.

3:11. Og's iron bed. Though many commentators and even some translations have identified this as a basalt sarcophagus, the language is clear enough and "iron bed" should be retained. Just as many objects described as gold, silver or ivory are not made of those but are decorated, overlaid or gilded with them, so we need not imagine a bed of solid iron. This account is still in the *Bronze Age, when iron was considered precious, so it would not be strange for this to be noted as a remarkable piece. The bed is about thirteen feet long and six feet wide. This is the same size as Marduk's bed in the temple Esagila in Babylon. Beds were not just for sleeping but were often used for reclining on during feasts and celebrations. Some reliefs picture kings reclining on magnificent couches.

3:11. Rephaim. See comment on 2:11.

3:12-20

The Division of Transjordan

3:12-17. geography. Gilead is the hilly section of Transjordan between the Jabbok on the south almost to the Yarmuk on the north. The southern half of this, as well as the territory taken from Sihon south to the Arnon (northern border of Moab), was given to the tribes of Reuben and Gad. The section of Gilead that extends into the curve of the Yarmuk (the region of Argob?) as well as some territory north of the Yarmuk (all taken from Og) was assigned to Manasseh. Geshur and Maacah are excepted, though apparently part of Og's kingdom. Geshur is a small area just east of the Sea of Galilee. Maacah is just north of Geshur and stretches to Hermon. It is referred to in the Egyptian *Execration Texts.

3:17. Pisgah. Pisgah is the designation of one of the peaks of the Abarim range (Num 27:12) paired with Mount Nebo, which is slightly higher. They are identified as the two peaks of Jebel Shayhan, about five miles northwest of Medeba and about a mile and a half apart. They stand about ten miles from the Jordan River.

3:21-29

Moses Views the Land

3:27. view from Pisgah. Though Pisgah is about four hundred feet lower than Nebo in elevation, it is farther north and west and affords a better view of the Jordan Valley and the land opposite. At this point the Mediterranean is about sixty miles west, but it cannot be seen because the hills on the west side of the Jordan obscure the view. On a clear day one can see Mount Hermon, about a hundred miles to the north, the mountains to the northwest that flank the Jezreel Valley (Tabor and Gilboa), the mountains of the central hill country (Ebal and Gerizim) and to the southwest as far as Engedi.

3:29. valley near Beth Peor. The Wadi Ayun Musa at the foot of Mount Nebo is generally considered to be the Valley of Beth Peor, with the site Khirbet Ayun Musa as probably the town.

4:1-40

Call to Obedience to the Law

4:3. Baal Peor. *Baal Peor is the god who was worshiped at Beth Peor. This refers back to the incident in Numbers 25, when the Israelites were drawn into idolatrous worship by the Moabite women. It was perhaps their first exposure to the *fertility worship of Canaan. Fertility *cults are common in agrarian societies where the populace is dependent on rainfall and the fertility of the soil for survival. These cults often featured a "dying and rising" god in the pattern of the change of the seasons. The association of human fertility with the earth's fertility led to the development of sexual elements in the religious *rituals.

4:6-8. result of the laws. The laws are presented here as an evidence of wisdom and righteousness that will distinguish Israel from the other nations. In a number of the collections of laws known from the ancient Near East there is a prologue and epilogue explaining that the collection of laws will demonstrate how wise and just the king is. Likewise Solomon's wisdom was evidenced by how he was able to make just decrees and rulings. The kings of the ancient Near East usually counted on their collections of laws to convince the gods that they were wise and just rulers. Here the Lord is revealing his own wisdom and justice to his people and the world.

4:7. nearness of god. In Mesopotamia the laws were presented to the god of justice (Shamash) by the king as evidence that he was a just king. The king had been given the authority to make laws by the gods, the guardians of cosmic law. Law was seen as something inherent in the universe, and laws were supposed to somehow reflect that impersonal cosmic law. In Israelite thinking, however, law emanated from the character of God and he was seen as the source of the laws. Moses was not the lawmaker, *Yahweh was. By proclaiming laws, the Lord is therefore revealing himself in an act that distinguished him from the other gods of the ancient world. This is the "nearness" that the text remarks on.

4:10. Horeb. Horeb is another name for Mount Sinai, most likely located in the southern section of the Sinai peninsula. See the comment on Exodus 19:1-2.

4:13. two stone tablets. See the comments on Exodus 24:12; 32:15-16.

4:15-18. prohibition of images. The second commandment concerns how *Yahweh is to be worshiped, for the idols that it prohibits are idols of him (the previous commandment already dismissed the thought of other gods). The commandment has nothing to do with art, though the graven images of the ancient world were indeed works of art. They were typically carved of wood and overlaid with hammered sheets of silver or gold, then clothed in the finest attire. But the prohibition is more concerned with how they are employed, and here the issue is power. Images of deity in the ancient Near East were where the deity became present in a special way, to the extent that the *cult statue became the god (when the god so favored his worshipers), even though it was not the only manifestation of the god. As a result of this linkage, spells, incantations and other magical acts could be performed on the image in order to threaten, bind or compel the deity. In contrast, other rites related to the image were intended to aid the deity or care for the deity. The images then represent a worldview, a concept of deity that was not consistent with how Yahweh had revealed himself.

4:19. astral worship in the ancient Near East. The celestial gods (sun god, moon god and Venus particularly; in *Babylonia, Shamash, Sin and *Ishtar respectively) were primary in most ancient religions. Controlling calendar and time, seasons and weather, they were viewed as the most powerful of the gods. They provided signs by which omens were read, and they looked down on all. *Yahweh has now warned the Israelites against *fertility worship (v. 3), magic and manipulation (idolatry, vv. 16-18), and omens and linking deities to cosmic phenomena (v. 19), all the major characteristics of the pagan polytheism of the ancient world.

4:20. iron-smelting furnace. The ancient world did not have the blast furnace, which is used today to produce cast iron. Iron has a melting point of 1,537 degrees C., a temperature that could not be consistently achieved with ancient technology. But once the iron is heated beyond 1,100 degrees C., it takes a spongy, semisolid form that can be forged. The furnace was usually fueled by charcoal to provide the carbon necessary for the chemical process. The strength of the steel is dependent on the amount of carbon it is able to absorb. The lower the temperature, the more often the process has to be repeated in order to get rid of enough slag to achieve a usable product. While a furnace can certainly be a metaphor of oppression, the fire of the smelting furnace is not destructive but constructive. It is the furnace that transforms the malleable ore to the durable iron product. The exodus experience transformed Israel into the *covenant people of God.

4:26. heaven and earth as witnesses. In ancient Near Eastern treaties the gods are typically called to witness as ones who would be able to adjudicate any failures to adhere to the terms. Here heaven and earth are not understood as deified, but, representing the entire created universe, they signify that the agreement is intended to endure long beyond human life spans. A clearer indication of the implications can be seen in the fuller wording of Psalm 89:28-29, 34-37 (see also Jer 33:20-21).
4:28. view of idols. Other passages that articulate this view are Isaiah 44; Jeremiah 10; and Psalm 115:4-8. On the beliefs about idols in ancient Near Eastern religious practice, see the comment on 4:15-18. It has long been of interest to scholars that the text does not refute mythology or the existence of the pagan gods but attacks their understanding of idols. In the end, however, it is very difficult to prove to someone that his gods do not exist. But it can be shown that the gods do not operate in the way they are believed to. To the biblical authors the "idol as fetish" aspect of pagan belief was the most vulnerable and the most ridiculous. If the gods were not manifest in their images, then many of the other aspects of the common worldview were also in jeopardy.
4:32-34. Israel's unique experience with deity. The two aspects the text highlights as unique are the two major features of the *covenant: election (vv. 34, 37) and revelation (vv. 33, 35). *Yahweh distinguished himself from the gods of the ancient Near East by these actions. The gods of the ancient Near East were sometimes believed to have chosen an individual or a family to favor with their blessing. Usually this would be a king who claimed a particular deity as his sponsor. But without revelation, such "election" is only inference or propaganda. The gods of the ancient Near East did not reveal their long-term plans and were not necessarily considered to have any. They did not reveal what they were like or what pleased or displeased them. All of this had to be inferred or deduced by those who worshiped them. But *Yahweh has chosen to reveal himself both through the law ("I am holy, so you are to be holy") and through his actions (covenant with forefathers, plagues, exodus, bringing them to the land, etc.).

4:41-43
Cities of Refuge

4:42. cities of refuge. For more information on the cities of refuge, see the comments on Numbers 35. Bezer is in the region around Medeba. It is known from the Mesha inscription (ninth century B.C.), but its archaeological identification is uncertain. The principal candidates are Umm al-Amad (about seven miles northeast of Medeba) and Tell Jalul (three or four miles directly east of Medeba). Ramoth Gilead is generally identified as Tell er-Rumeith near modern Ramtha south of Edrei along the King's Highway. Excavations at the site, however, have turned up nothing earlier than Solomon. Golan, the modern Sahm al-Joulan, is at the eastern boundary of the Golan Heights on the east side of the river el-Allan.

4:44-49
Territorial Description

4:48. borders. Finally the whole Transjordan territory is circumscribed, from the Arnon River in the south (the north border of Moab proper) to Mount Hermon in the north. The Jordan rift valley is included and the Dead Sea (Sea of Arabah).

5:1-33
The Ten Commandments

5:2. Horeb. Horeb is another name for Mount Sinai, most likely located in the southern section of the Sinai peninsula. For more detailed discussion see the comment on Exodus 19:1-2.
5:6-21. the Ten Commandments. See the comments on Exodus 20.
5:22. two stone tablets. The use of two tablets probably indicates that Moses was given two copies, not that some of the commandments were on one tablet and some on the other. The fact that they were stone suggests a larger size than clay tablets would have been, though inscribed stone tablets such as the Gezer calendar were small enough to fit in the palm of the hand. The Egyptian practice of this period was to use flakes of stone chipped from rocks. Inscription on front and back was not unusual. When the writing reached the bottom of one side, the scribe would often continue around the bottom edge and move onto the second side. Even flakes that fit in the palm of the hand could contain fifteen to twenty lines.

6:1-25
The Importance of the Law

6:3. milk and honey. The land of Canaan is described as a land "flowing with milk and honey." This refers to the bounty of the land for a pastoral lifestyle, but not necessarily in terms of agriculture. Milk is the product of herds, while honey represents a natural resource, probably the syrup of the date rather

than bees' honey. A similar expression to this is found in the *Ugaritic epic of *Baal and Mot that describes the return of fertility to the land in terms of the wadis flowing with honey. Egyptian texts as early as the *Story of *Sinuhe* describe the land of Canaan as rich in natural resources as well as in cultivated produce.

6:4. categories of monotheism. There are several levels of monotheism that can be identified and that may have characterized the beliefs of various Israelites in various periods. The ultimate monotheism could be called *philosophical monotheism:* there has only ever been one God in existence. **Henotheism* acknowledges the existence of other gods but often insists on the supremacy of one's own god. Similarly, **monolatry* describes a situation where a person or group has determined to worship only one God, regardless of whether other gods, exist or not. Finally, a *practical monotheist* may acknowledge a number of gods, but most of his religious and worship activity is focused on one particular deity. The material in Deuteronomy does not allow for practical monotheism but does allow for henotheism and monolatry at the very least.

6:4. Yahweh is one. The claim that a deity is one, or alone, in other ancient Near Eastern texts (made, for instance, by *Enlil [Sumerian] and *Baal [Canaanite]) generally relates to the supremacy of their rule. Another possibility is that the statement insists on a unified view of *Yahweh. Since a major god in the ancient Near East may have a number of different shrines, each shrine would come to emphasize a different perspective on the god. In Mesopotamia they may consider *Ishtar of Arbela quite differently from Ishtar of *Uruk. Inscriptions in Palestine do in fact indicate that this was true in Israel as well, as reference is made to Yahweh of Samaria and Yahweh of Teman.

6:4. monotheism in the ancient Near East. There were two movements interpreted as monotheistic in the ancient Near East of the Old Testament period. The first was by the Egyptian pharaoh Akhenaten in the general time period of the Pentateuch; the second by the *Babylonian king Nabonidus in the years just before the fall of Babylon to the Persian king Cyrus. Neither movement lasted more than twenty years. Akhenaten attempted to establish the sole worship of the sun disk, Aten, a god with no mythology, portrayed with no human form. It was a worship without image and had little use for temple or *ritual. Every attempt was made to eradicate the worship of Amun-Re, previously the major deity of the land, and the sun disk was proclaimed the sole god (though there was no apparent attempt to eradicate many other gods). Though Akhenaten may have intended this to be philosophical monotheism (some have even tried to identify it as trinitarian), it does not appear that many of his subjects adopted his beliefs. Nabonidus embarked on an official sponsorship of the moon god Sin by restoring his temple in Harran. For ten years he then stayed in Teima in northwest Arabia, apparently (according to some interpretations) devoted to establishing the *cult of Sin. There is little evidence, however, that this was done to the exclusion of other deities. Though he favored Sin, he continued to make requisite appearances at and donations to other temples. His time in Teima may have been the result of a falling out with the priestly powers in Babylon, or may have had trade policies or other political ends motivating it, but there is no reason to attribute monotheistic reform to it. Whether Israelite belief at this stage is labeled monotheism or henotheism, there is thus little to compare it with in the rest of the ancient world.

6:6. anatomical metaphors. Like English, Hebrew used parts of the body metaphorically to refer to different aspects of the person. "Hand" can refer to power or authority; "arm" to strength; "head" to leadership, and so on. Many of these metaphors have carried into English either because of their inherent logic or because of the role of the Bible in the English-speaking world. Not all anatomical metaphors, however, carry the same significance in the two languages. For instance, the kidneys were considered the seat of the conscience in Hebrew, and the throat was connected with life and essence of personhood. In English, "heart" is used metaphorically for the seat of emotions, in contrast to logic and reason. Hebrew uses it as the center of both emotions and reason/intellect. This usage is also true of the related Semitic languages, such as *Ugaritic, *Aramaic and *Akkadian.

6:8. symbols on hands and forehead. Headbands and armbands were common accessories in Syro-Palestine, though there is no graphic evidence proving Israelites wore them. *Amulets were often worn in the ancient Near East as protection from evil spirits. Precious metals and gems were considered particularly effective. At times amulets would include magical words or spells. Israelite practice disapproved of amulets, but if used here they are converted to reminders of the law or, in other places, may contain prayers or blessings, such as the small silver scrolls that were found in a preexilic tomb just outside Jerusalem in 1979. These miniature scrolls contain

the blessing of Numbers 6:24-26 and represent the oldest extant copy of any biblical text. There is also evidence that symbols worn on the forehead or arm were used as indicators of loyalty to a particular deity.

6:9. inscription on door frames and gates. Aside from doorways as entrances representing the house itself and needing special protection, there is evidence from Egypt of sacred inscriptions on doorposts. Requirements of this sort could function either to *preserve* the continuity of life in positive ways and a mutually beneficial relationship with deity; or to *prevent* negative consequences of dangerous situations. While Passover blood on the doorposts functioned in the latter way, the law on the doorposts is an example of the former. The idea that written texts provided protection is found in the Mesopotamian *Erra Epic,* where the invasion by the god of plague can be prevented as long as a copy of the text of this work is kept in the house.

6:10-11. cities of Canaan in the Late Bronze Age. *Late Bronze Age Canaan (1550-1200 B.C.) was characterized by declining population and fewer fortified cities than the *Middle Bronze period. Even the villages and rural settlements show significant decline. In the *Amarna letters (fourteenth-century correspondence between Canaan and Egypt), Hazor and Megiddo were two of the most important and powerful city states in the north, Shechem in the central region, and Jerusalem and Gezer in the south. Archaeology has found that the cities' wealthier inhabitants had comfortable houses, usually with center courtyards. Most cities were surrounded by arable land farmed by the majority of the population. The work of digging wells and hewing out stone cisterns, preparing the soil and setting up irrigation had all been part of the agricultural lifestyle in Canaan. Groves and vineyards usually took many years to develop and be productive, but all of this groundwork was already done.

6:13. oaths in Yahweh's name. Since oaths were considered powerful and effective, the utterance of oaths would demonstrate which deity was truly considered powerful. Though inheriting the cities, homes and farms of the Canaanites, the Israelites are not to inherit the gods that had been associated with protecting these cities and providing fertility to this land. One of the ways to demonstrate their rejection of those gods is to refuse to attribute power to them through oaths.

6:16. Massah. Massah is the name given to the place at Rephidim near Sinai where water came out of the rock (see Ex 17:7).

7:1-26

Promises and Policies Concerning the Nations

7:1. peoples of Canaan. The *Hittites were from Anatolia, modern Turkey, but groups occupying sections of Syria and Canaan were also called Hittites and may or may not have been related. The Hittites in Canaan have Semitic names, while the Hittites of Anatolia were Indo-European. Girgashites are little known, though they are attested in the *Ugaritic texts. *Amorites (known in Mesopotamia as Amurru or Martu) are known from written documents as early as the middle third millennium B.C.. Most scholars think that they came to occupy many areas in the Near East from their roots in Syria. The term can be used to refer to a geographical area ("westerners") or to an ethnic group. Some Amorites were nomadic, but there were Amorite city-states in Syria as early as the end of the third millennium. Canaan is mentioned as early as the Ebla tablets (twenty-fourth century B.C.), and the Canaanite people were the principal inhabitants of the fortified cities of the land, though they do not seem to have been native to the land. The kings of this area refer to themselves in the *Amarna letters (mid-second millennium) as *Kinanu,* a term also used in Egyptian inscriptions of this period. There is still debate as to whether the term *Perizzites* is ethnic or sociological (those living in unwalled settlements). The Hivites are sometimes connected to the Horites, in which case they may be *Hurrians. The Jebusites occupied the region later associated with the tribe of Benjamin, notably the city of Jerusalem, and are often related to the Perizzites who were located in the same region. There is no mention of the Perizzites, Hivites or Jebusites outside the Bible.

7:2. the ban *(*herem*). *Ban* is sometimes chosen as the English word to represent the concept of total destruction that is commanded here in verse 2 and elaborated in verses 5-6. Just as there were some types of sacrifices that belonged entirely to the Lord, while others were shared by priest and offerer, so some plunder was set aside as belonging solely to the Lord. Just as the whole burnt offering was entirely consumed on the altar, so the ban mandated total destruction. Since the warfare was commanded by Yahweh and represented his judgment on the Canaanites, the Israelites were on a divine mission with Yahweh as their commander. Since it was his war, not theirs, and he was the victor, the spoil belonged to him. Although the divine warrior motif occurs

throughout the ancient Near East, the *ḥerem* concept is more limited—the only other occurrence of the term is in the Moabite Mesha inscription, but the idea of total destruction is also in the *Hittite material. Some sites, such as Gezer, feature a distinct burn layer in association with the *Late Bronze period. Under siege conditions sanitation is at its worst and disease is often rampant. The practice of burning everything after the defeat of a city thus had an element of health connected to it.

7:3. command not to intermarry. In *Hittite documents of this period certain cities are designated temple cities and accorded special privileges. In order to protect those privileges, the inhabitants are prohibited from marrying outside the community. In a similar way the entire land of Israel has been designated "God's land," and the Israelites are a kingdom of priests. The prohibition against intermarriage therefore protects the privileges of the *covenant as well as the *purity of their religious ideals.

7:5. sacred stones. Standing stones or *masseboth* were apparently a common feature of Canaanite religion and also appear as memorials in a number of Israelite *covenantal contexts (see Ex 24:3-8; Josh 24:25-27). Their association with *Asherah, *Baal and other Canaanite deities is the basis for their being condemned as rivals and a threat to *Yahweh worship. Archaeologists have discovered sacred stones at Gezer, Shechem, Hazor and Arad. In the latter three cases, they are clearly within a sacred precinct and part of the *cultic practices at these sites. The Hazor stones include incised representations of upraised arms and a sun disk.

7:5. Asherah poles. *Asherah can be either the name of a *fertility goddess or the name of a *cult object (as here). The goddess was popular in the pagan deviations in Israel and was sometimes considered to be a mediator of *Yahweh's blessings. An indication of this belief is found in the inscriptions from Kuntillet Ajrud and Khirbet el-Qom. In Canaanite mythology she was the consort of the chief god, *El. She appears in Mesopotamian literature as early as the eighteenth century, where she is the consort of the *Amorite god Amurru. The *cult symbol may or may not have borne a representation of the deity on it. The pole may represent an artificial tree, since Asherah is often associated with sacred groves. Sometimes the cult object can be made or built, while on other occasions it is planted. We have little information on the function of these poles in *ritual practice.

7:6-11. the *covenant relationship. The terminology used here of love, loyalty and obedience are common to the international treaties of this time. *Hittite, *Akkadian, *Ugaritic and *Aramaic examples all show that the positive action of the suzerain toward the vassal is expressed as love, kindness and graciousness, and in return the vassal is expected to respond with obedience and loyalty.

7:15. diseases of Egypt. Some consider this to be a reference to the plagues, while others associate it with diseases indigenous to Egypt. If the latter is intended, it is difficult to be more specific, though examination of mummies has suggested the prevalence of smallpox, malaria and polio. Emphysema and tuberculosis are also evidenced. Egyptian medicine was well known for its treatment of eye diseases and diseases of the digestive and excretory/urinary systems. This might suggest that that was where persistent disease was encountered. All of these were worsened by the very primitive sanitation conditions archaeologists have identified even around the estates of the wealthy. The dry season in Egypt is known for its proliferation of diseases, usually brought to an end by the annual flooding of the Nile.

7:20. the hornet. Insects are often used as metaphors for armies, for instance, bees and flies (Is 7:18-19) and locusts (Joel 1—2). However, some interpreters see this as a wordplay on *Egypt* (see comment on Ex 23:28) or a reference to Egypt by means of an insect that was used to symbolize Lower Egypt. Other interpreters have translated the word as "plague" or "terror."

8:1-19

Remembering What God Had Done

8:3. manna. The food that nourished the Israelites in the wilderness is not easily identified. For possibilities see the comment on Exodus 16:4-9.

8:4. clothes not wearing out. In the Gilgamesh Epic, *Utnapishtim instructs that *Gilgamesh be clothed with garments that do not wear out for his return journey. Job 13:28 describes the "wearing out" of clothes as being "moth-eaten" or perhaps moldy. This verse suggests a supernatural protection from decay.

8:7. water sources. The text mentions streams, pools and springs. The first is the result of runoff from precipitation at high elevations, and the other two represent subterranean water sources. In a land where rainfall is seasonal and, in some areas, limited, irrigation is necessary to sustain agriculture, and water sources are important both for animal herds and for human settlements. While there are few

streams west of the Jordan, there are many springs that were used to sustain cities and villages.

8:8. staples of agriculture. Seven agricultural products are mentioned here that are the staple products of the region. The Egyptian *Story of *Sinuhe* describes the land of Canaan and lists six of the seven named here (pomegranates are omitted). Wine and olive oil were two of the principal exports of the region, while the other products provided a significant portion of their diet. The honey referred to here is the product of the date palm, not bees' honey.

8:9. iron and copper. The text also identifies the natural resources of the land from the mining perspective. There are numerous deposits of poor-quality iron ore in Palestine, but few of high quality. The only major deposits of iron ore known in Palestine today are at Mughar-at el-Wardeh in the Ajlun hills by the Jabbok River. Copper mining sites are mostly in Transjordan. While iron can be mined on the surface, copper mining requires shafts.

9:1-6
Conquest as Punishment

9:1. walled cities. City defenses were of most concern in troubled, insecure times. The latter part of the *Middle Bronze Age in Canaan (eighteenth-sixteenth centuries) was one such time, and many fortified cities were built. The end of that period brought the destruction of many of these cities, and many were not rebuilt during the *Late Bronze Age (1550-1200). It is generally assumed that this was because Egypt controlled the region and offered security to it. There were, however, still a number of fortified cities that served as administrative centers for Egyptian control. The fortification techniques developed in the Middle Bronze period included steep earthen slopes (some reaching fifty feet) at the foundation of the walls and a ditch around the outside dug to bedrock. These features would both hamper the approach of siege machines and prevent tunneling. The stone walls were twenty-five to thirty feet wide and perhaps thirty feet high.

9:2. Anakites. See comment on 1:28.

9:7—10:11
Remembering the Events at Sinai

9:8. Horeb. Horeb is another name for Mount Sinai, most likely located in the southern section of the Sinai peninsula. See comment on Exodus 19:1-2.

9:9. stone tablets. See comment on 5:22.

9:16. golden calf. Bull or calf figurines, made either of bronze or a combination of metals, have been found in several archaeological excavations (Mount Gilboa, Hazor and Ashkelon), but they are only three to seven inches long. The calf symbol was well known in the Canaanite context of the second millennium and represented fertility and strength. The gods were typically not depicted in the form of bulls or calves, but portrayed standing on the back of the animal. Nevertheless worship of the animal image was not unknown, and there is little in the biblical text to suggest the Israelites understood the figure merely as a pedestal (not unlike the ark). The fact that the calf is worshiped in the context of a feast to Yahweh suggests that this may be a violation of the second commandment rather than the first.

9:22. Taberah, Massah, Kibroth Hattaavah. These are all places where the Israelites experienced God's judgment. Taberah and Kibroth Hattaavah are in Numbers 11 in connection with the plague from eating quail, and Massah is associated with the incident in Exodus 16 where the people challenged the Lord to provide water.

9:23. Kadesh Barnea. Kadesh Barnea was the main camping place during the wilderness wandering. See comment on 1:46.

9:28. belligerent deities. Though the claim made in verse 28 might seem a preposterous way to think, it would not have been an unusual view in the religious world of the ancient Near East. In a polytheistic system gods could not be omnipotent, so they might fail to accomplish something they set out to do. Additionally they were not considered to be friendly, forthright or predictable. Examples would include the Mesopotamian god *Ea telling his "favorite" *Adapa that the food he would be offered was "bread of death" when in reality it would have procured eternal life for him. In the *Gilgamesh Epic, Ea advises deceiving the people into thinking that blessings cannot rain down on them unless *Utnapishtim leaves in his boat. After they send him off, they are rained on in a totally unexpected way when the flood comes and destroys them. Around 1200 B.C. the Libyans complain that the gods gave them initial success against Egypt with the intent to eventually destroy them. In Egypt the mortuary texts (Pyramid Texts and Coffin Texts) are targeted against hostile deities.

10:6. wells of the Jaakanites, Moserah, Gudgodah, Jotbathah. These sites are also in the itinerary of Numbers 33:30-34. Most of them are unidentified, but Jotbathah has been associated with Tabeh, an oasis along the western shore of the Gulf of Aqaba.

10:12—11:32

Covenant Response to Yahweh

10:17. divine titles. The enumeration of divine names and attributes is a common form of praise in the ancient Near East. Perhaps most notable is the *Babylonian creation epic, **Enuma Elish*, that proclaims the fifty names of *Marduk, chief god of Babylon.

10:17. gods accepting bribes. In the religious beliefs of the ancient Near East the gods could be manipulated because they were believed to have needs. Sacrifice and temple upkeep were part of a program of taking care of them and feeding them. By providing the food, clothing and shelter that the gods needed, an individual could win the favor of the deity. This text makes it clear that *Yahweh is not to be thought of in the same way as the gods of Israel's neighbors. This also reflects the picture of Yahweh as a just judge who refuses to distort justice for personal gain.

11:1. loving deity in ancient Near East. In the *Amarna letters (from vassal kings of Canaan to their Egyptian overlord) "love" is used as a characterization of friendly and loyal international relationships. It expresses the vassal's intentions to be loyal and to honor the terms of the treaty agreement between the parties. The biblical text shows a clear example of this usage in 1 Kings 5:1. There are rare instances in Mesopotamian literature where an individual is admonished to love a deity, but in general the gods of the ancient Near East neither sought love from their worshipers nor entered into *covenant relationships with them.

11:2. outstretched arm. The "outstretched arm" is a metaphor that was used by the Egyptian Pharaohs for the extension of their power and authority. It was *Yahweh's outstretched arm that extended his power over Egypt to bring deliverance to his people. See comment on Deuteronomy 26:8.

11:4. Red Sea/Reed Sea. There have been many different suggestions concerning the identification of this body of water. Lake Balah or Lake Timsah are the most common. See comment on Exodus 13:18.

11:9. land of milk and honey. See comment on 6:3.

11:10. irrigation methods in Egypt. The contrast here does not favor rainfall over irrigation, for everyone recognized the value and success of irrigation methods and technology. Furthermore, it is not suggested that the often-sparse rainfall of Palestine is superior to the regular abundant annual flooding of the Nile. There is no known irrigation method that would be identified as "watering by foot," but that phrase is used as a euphemism for urinating in the reading preserved in some manuscripts of 2 Kings 18:27. If that is the meaning here, the contrast would have to do not with technologies of irrigation or abundance of water supply but with the purity of the water used to grow food.

11:11-15. seasons in Israel. Israel has a rainy season (winter months) and a dry season (summer months). The rainy season begins with the autumn rains ("early rains," October-November) and ends with the spring rains ("latter rains," early April). These are important for what they contribute to the overall moisture levels in the earth and for softening the ground for plowing. Grain is harvested in the spring (barley in May, wheat in June), and the summer months (July and August) are for threshing and winnowing. Grapes are harvested in the fall, while the olive harvest stretches into the winter.

11:18. symbols on hands, foreheads and doorframes. See comment on 6:8-9.

11:24. Lebanon to the Euphrates. For the general boundaries of the land, see the comment on 1:7.

11:29. Gerizim and Ebal. Gerizim and Ebal are the mountains that flank the town of Shechem in the central hill country, Gerizim (elevation 2,849 feet) to the south, Ebal (elevation 3,077 feet) to the north. This site was chosen for the ceremony because it was believed to represent the center of the land (Judg 9:37) and because from here a large portion of the land could be seen. The valley that runs between the two mountains, Wadi Nablus, was one of the only passageways through the region. The valley at its southeastern end is quite narrow (the lower flanks of the hills are separated by little over a quarter of a mile) and would easily accommodate the antiphonal ceremony anticipated here.

11:29. blessings and curses. The international treaties of this time featured blessings and curses on the parties responsible for keeping the terms of the *covenant. The blessings and curses typically were seen as to be carried out by the deities in whose name the agreement had been made. The blessing formulas are rarer and the curse formulas grow longer between the second and first millennia.

11:30. Gilgal. This is not the same Gilgal that the Israelites use as a base in the book of Joshua but is farther north in the vicinity of Shechem. One possibility is the site of El-Unuk, about four miles east of Shechem along the Wadi Far'ah.

12:1-32

Central Place of Worship

12:2-3. outdoor shrines. Apparently the use of outdoor shrines was common among the Canaanites. These local *cult sites were considered abhorrent to the writer because they promoted a "popular" brand of religion that contained elements of Canaanite worship that deviated from the established *Yahweh-only doctrine. Thus local altars, sacred poles dedicated to *Asherah, sacred groves and any place associated with a Canaanite god (*Baal, *El, etc.) and the worship of God outside of Jerusalem, "the place the Lord your God will choose" (Deut 12:5), were forbidden. There is a difference between these outdoor *cultic places and the "high place" *(bamah)* often mentioned as a religious center in the local towns and cities (1 Kings 11:7; Jer 7:31; Ezek 16:16; 2 Chron 21:11; Mesha's inscription). The "high place" was apparently an indoor facility, built to house sacred furniture, an altar and precincts large enough to accommodate a priesthood. A clear differentiation is drawn between these two types of religious sites in 2 Kings 17:9-11.

12:3. sacred stones. See comment on 7:5.

12:3. Asherah poles. One common feature of Canaanite worship and of *syncretized Israelite worship on "high places" and in city shrines is the erection of *Asherah poles (Judg 3:7; 1 Kings 14:15; 15:13; 2 Kings 13:6). There is some uncertainty about whether these were simply wooden poles erected to symbolize trees, perhaps containing a carved image of the *fertility goddess, or part of a sacred grove. The reference in 2 Kings 17:10, which refers to Asherah poles beside "every spreading tree," seems to indicate that these were poles erected for *cultic purposes rather than planted trees. As the consort of *El, Asherah was clearly a popular goddess (see 2 Kings 18:19), and her worship is mentioned in *Ugaritic texts (1600-1200 B.C.). Her prominent appearance in the biblical narrative indicates that her *cult was a major rival to *Yahweh worship (see the prohibition in Ex 34:13; Deut 16:21). This explains the number of examples in which Asherah poles are erected and venerated, the strong condemnations of this practice and the depictions of these poles being cut down and burned (Judg 6:25-30; 2 Kings 23:4-7). For more information see the comment on Deuteronomy 7:5.

12:4, 30-31. their way of worshiping. The prohibited aspects of Canaanite religion would have included the use of idols to manipulate the deity, *fertility practices (perhaps including *ritual sex with temple prostitutes, but see comment on 23:17-18), child sacrifice, *divination and appeasement rituals.

12:3-5. wipe out their names, the Lord establishing his name. The potency and power associated with names and name giving are clearly demonstrated in the biblical narrative (see Gen 17:5; 41:45; Ex 3:13-15; Deut 5:11). One sign of this is found in the practice of erasing the names of discredited officials and even pharaohs from their monuments in ancient Egypt. Names were also used in *execration formulas throughout the Near East to curse enemies and to call down divinely inspired disaster (Num 22:6; Jer 19:3-15). *Execration texts are known in Egypt throughout the second millennium and consist of names of rulers or cities written on objects that were then smashed. When the Israelites are called on to wipe out the names of the Canaanites and their gods, the command is to wipe them from the pages of history. Utter destruction, in a world tied to the service of named persons and gods, could only come if all memory of these names was obliterated. Once that was done, only one name would remain, and there would be no reason or desire to worship another (see Is 42:8).

12:5-7. sacrifices in the presence of deity. Throughout the ancient Near East it was a common understanding that deities had their own realms of influence and thus were tied to particular sites (e.g., *Marduk of *Babylon or Baalzebub of Ekron). It was expected that devotees of these gods would come to the principal shrines, where they could offer sacrifices, take vows, formalize contracts or treaties, or provide legal testimony within the sacred precinct of the god (as in the Code of *Hammurabi and the *Middle Assyrian laws). By doing this, the supplicant could draw on the god as a witness and thus add force to the act being performed. It also provided validity to the shrine, marking it as the place where God's presence was made manifest.

12:11. vows. See comment on Leviticus 27:2-13.

12:16. pouring out blood before eating meat. Sacred literature from *Ugarit and Mesopotamia identified blood as the life force of any animal. In Israelite tradition, blood as the life force belonged to the life-giver, the Creator God *Yahweh. Therefore, the Israelites were prohibited from consuming meat which still contained blood. This sacred fluid had to be drained from the meat and "poured on the ground like water" so that it returned to the earth. In sacrificial contexts, the blood was to be poured on the altar (see Lev 17:11-12).

12:20. eating meat. The promise that the Israelites would be able to eat their fill of meat is tied to the *covenantal promise of land and fertility. This society, however, was generally never so rich in animals that they could be slaughtered indiscriminately. Animal sacrifice was therefore both a sacred and a solemn occasion. The meat of the sacrifice might be the only meat eaten for weeks at a time.

13:1-18
Those Who Encourage the Worship of Other Gods

13:1-18. sources of rebellion. In this passage prophets, close relatives and a localized subversive population are viewed as potential breeding grounds for rebellion. In Assyrian king Esarhaddon's instructions to his vassals, he requires that they report any improper or negative statements that may be made by enemy or ally, by relatives, prophets, ecstatics or dream interpreters.

13:1-3. prophet urging worship of other gods. In its effort to delineate a *Yahweh-only religion, Deuteronomy had to discredit and disavow the teachings and pronouncements of all other gods and their prophets. Prophets, diviners and priests for these other gods were present among the Canaanites and other neighboring groups (mentioned in *Mari texts, the account of Balaam in Numbers 22—24 and the Deir 'Alla inscriptions). However, what seems most heinous here are Israelites who speak in the name of other gods. This type of internal proselytizing was particularly frightening since it had a stronger degree of credibility and could therefore be most effective (see Num 25:5-11). Should the words or the predictions of prophets come true (a sign of their validity as prophets, Deut 18:22), the Israelites were to be alert to whether they attributed the signs to Yahweh. If not, it was a test of their faithfulness, and they must reject the prophet and condemn him to death as a corrupting influence.

13:1-5. foretelling by dreams in ancient Near East. Dreams were one of the standard means for receiving messages from a god in the ancient Near East (see Jacob in Gen 28:12; Joseph in Gen 37:5-11; Nebuchadnezzar in Dan 2, 4). They appear in *Old Babylonian omen texts, along with reports of the examination of sheep livers, anomalies in the weather and birth of animals, and other presumed signs of divine will. Among the most famous is the dream of Gudea of *Lagash (c. 2150 B.C.), who was commanded in a dream to build a temple by a figure reminiscent of the apocalyptic figures in Daniel's dreams and Ezekiel's call narrative (Dan 7; Ezek 1:25-28). The royal correspondence from *Mari (c. 1750 B.C.) contains around twenty prophetic utterances involving dreams, always from nonprofessional personnel. These portents were taken quite seriously and studied. The professional priesthood in both Mesopotamia and Egypt included instruction in the interpretation of dreams and other omens (see the appearance of wise men, mediums and astrologers in Gen 41:8 and Dan 2:4-11).

13:10. stoning as capital punishment. Aside from the ready availability of stones in Israel, stoning was chosen as a form of execution because it was communal. No one person was responsible for the death of the condemned criminal, but in the case of public offenses (apostasy, blasphemy, sorcery, stealing from the **herem*) every citizen was required to take a hand in purging the community of evil (see Deut 17:5; Lev 20:27; 24:14; Josh 7:25). Familial offenses such as adultery and recurrent disobedience also were punishable by stoning, and again the entire community was involved (Deut 21:21; 22:21). Stoning is not mentioned as a form of capital punishment outside the Bible. Ancient Near Eastern law codes list only drowning, burning, impalement and beheading, and in each case it is an official body, not the community at large, that is charged with carrying out the punishment.

13:16. plunder as burnt offering. There are two types of plunder reckoned as belonging solely to God: that taken in a **herem* (holy war, Josh 6:18-19) and that gathered from a village condemned for its apostasy. To keep any of these objects corrupts the one who takes them and brings down God's wrath on the people (Josh 7).

13:16. ruin. The Hebrew word that the NIV translates as "ruin" is *tel*, and it has come into English as *"tell," referring to a mound made up of the layers of the accumulated ruins of ancient settlements.

14:1-21
Clean and Unclean Food

14:1-2. ritual for the dead. Ancestor worship and *rituals associated with mourning and memorializing the dead were common in ancient Israel. The assumption behind them was that the dead, although having a rather shadowy existence, could for a time have some effect on the living (see 1 Sam 28:13-14). Thus libations were poured out during meals, and special garments were worn by the mourner. Unlike public worship, however, the rituals

for the dead were private and thus more difficult to control. These practices were specifically targeted in the late monarchy period as efforts were made to nationalize *Yahweh worship and move toward strict monotheism in the reigns of Hezekiah and Josiah (2 Kings 23:24). The specific practices (such as lacerating the skin) prohibited in Deuteronomy are also mentioned in the *Baal cycle of stories and in the *Aqhat epic from *Ugarit (c. 1600-1200 B.C.). Their association with magic and with polytheistic cultures would have made them prime targets for the Israelite writers. See comments on Numbers 3:12-13 and Deuteronomy 26:14.

14:2. treasured possession. The phrase "treasured possession" uses a word common in other languages of the ancient Near East to describe accumulated assets, whether through division of spoils or inheritance from estate. That people can be so described is evident in a royal seal from *Alalakh, where the king identifies himself as the "treasured possession" of the god Hadad. Likewise in a *Ugaritic text the king of Ugarit's favored status as a vassal is noted by naming him a "treasured possession" of his *Hittite overlord. Additionally, the Israelites are identified as a "kingdom of priests," which identifies the nation as serving a priestly role among the nations as intermediary between the peoples and God. Additionally there is a well-attested concept in the ancient Near East that a city or group of people may be freed from being subject to a king and placed in direct subjection to a deity. So Israel, freed from Egypt, is now given sacred status.

14:3-21. dietary restrictions. In Mesopotamia there were numerous occasions on which certain foods were prohibited for a short period. There is also evidence in *Babylonia that there were certain restrictions concerning animals that particular gods would accept for sacrifice. But there is no overriding system such as that found here. Yet though there is no known parallel in the ancient world to anything like the Israelite system of dietary restrictions, the permitted animals generally conform to the diet common in the ancient Near East.

14:6-10. criteria for classification of animals. The main criteria are (1) means of locomotion and (2) physical characteristics. Nothing is mentioned of their eating habits or the conditions of their habitat. Anthropologists have suggested that animals were considered clean or unclean depending on whether they possessed all the features that made them "normal" in their category. Other suggestions have concerned health and hygiene. The weakness of each of these is that there are too many examples that do not fit the explanation. A popular traditional explanation suggested that the animals prohibited had some connection to non-Israelite *rituals. In fact, however, the sacrificial practices of Israel's neighbors appear strikingly similar to Israel's. A recent promising suggestion is that the Israelite diet is modeled after God's "diet"—that is, if it could not be offered in sacrifice to God, then it was not suitable for human consumption either.

14:8. pigs. *Assyrian wisdom literature calls the pig unholy, unfit for the temple and an abomination to the gods. There is also one dream text in which eating pork is a bad omen. Yet it is clear that pork was a regular part of the diet in Mesopotamia. Some *Hittite *rituals require the sacrifice of a pig. Milgrom observes, however, that in such rituals the pig is not put on the altar as food for the god but absorbs *impurity and then is burned or buried as an offering to underworld deities. Likewise in Mesopotamia it was offered as a sacrifice to demons. There is evidence in Egypt of pigs being used for food, and Herodotus claims they were used for sacrifice there as well. Egyptian sources speak of herds of swine being kept on temple property, and pigs were often included in donations to the temples. The pig was especially sacred to the god Seth. Most evidence for the sacrifice of pigs, however, comes from Greece and Rome, there also mostly to gods of the underworld. In urban settings pigs, along with dogs, often scavenged in the streets, making them additionally repulsive. The attitude toward the pig in Israel is very clear in Isaiah 65:4; 66:3,17, the former showing close connection to worship of the dead. It is very possible then that sacrificing a pig was synonymous with sacrificing to demons or the dead.

14:21. disposal of roadkill. In a protein-starved area such as ancient Israel, it would have been almost criminal to let good meat go to waste. However, since the carcass would not have been drained of its blood, Israelites might not eat it (see Deut 12:16; Lev 11:40; 17:50). The meat could be distributed as charity to resident aliens (one of the protected classes, Deut 1:16; 16:11; 26:11). It could also be sold to foreigners who were not settlers in Israel.

14:21. goat in its mother's milk. See comment on Exodus 23:19.

14:22-29
Tithes

14:22-29. tithes and taxes. In the ancient Near

East there was little difference between tithes and taxes. Both were exacted from villages as payment to the government and usually stored in temple complexes, from which the grain, oil and wine were then redistributed to maintain royal and religious officials. In collecting and redistributing the tithe, the distinction between sacred and secular was blurred. The kings were considered divinely chosen, and the storage centers were religious centers. The services that were provided in exchange for the tithe/tax included both administrative and sacred tasks. The process is well laid out in 1 Samuel 8:10-17, a text describing how the king will "take a tenth . . . and give it to his officials and attendants." This is precisely the same procedure outlined in *Ugaritic economic texts and royal correspondence. There too specialists (artisans, bureaucrats, temple personnel) are listed, along with their ration. State building throughout the ancient Near East required assessing the annual production of their lands and villages. The harvesting of the tithe is a reflection of that type of state planning. See comment on Numbers 18:21-32 for further information.

14:23. eating the tithe. It is unlikely that the one who is tithing is expected to eat the entire tithe. That would frustrate its purpose of providing for the priestly community and serving as a reserve for the destitute. The injunction probably has more to do with bringing the tithe (or its value in silver) to God's sanctuary in Jerusalem and thereby demonstrating devotion (see Deut 14:24-26). What is eaten would serve as a *covenantal meal, similar to that eaten in Exodus 24:9-11.

14:27-29. provision for the Levites. As spelled out more completely in 18:1-8, the Levites were to receive a portion of the sacrificial tithe because they were not apportioned any section of the land after the conquest. As religious specialists, they would be allotted a ration from the land's produce in much the same way that bureaucrats and artisans are assigned specific grain and wine rations in the *Ugaritic economic documents (see comment on 14:22-29). It is therefore to be expected that the Levites would be paid for services rendered.

14:29. provision for the vulnerable. A major aspect of Israelite legal tradition involves making provision for groups classified as weak or poor: widows, orphans and the resident alien (see Ex 22:22; Deut 10:18-19; 24:17-21). Thus the tithe from the third year (not an additional tithe in that year) is to be set aside and used to support the vulnerable of society. Concern for the needy is evident in Mesopotamian legal collections as early as the mid-third millennium, but this generally addresses protection of rights and guarantee of justice in the courts rather than financial provision.

15:1-18
Cancellation of Slavery and Debts

15:1-11. financial systems in the ancient Near East. Since the wealth of the nations of the ancient Near East was based on the dual economic foundations of natural resources (mines and agriculture) and trade, an intricate financial system had to be developed to support these ventures. For instance, risk capital (in the form of gold, silver, precious stones, spices, etc.) was provided by kings and entrepreneurs in Egypt and Mesopotamia to mariners plying the Mediterranean routes to Cyprus and Crete and the trade routes south along the Red Sea to Arabia, Africa and India. Loans were also made to merchants leading caravans throughout the Near East (with an expected yield on investment of at least 100 percent) and to farmers to provide seed and equipment for the growing season. These loans were generally made at interest (although there was an interest-free category of loan within a set payment period). *Hammurabi's code contains numerous examples governing the rate of interest and even prescribing forfeiture of investment if the creditor charged more than 20 percent. Individual farmers who experienced a bad harvest would often have to incur debt in order to provide food for the coming year and supplies for the next year's planting. Continuing bad harvests would lead to the indenturing of the land or the sale of his family and eventually himself into debt slavery.

15:2-3. debt remission. In granting an absolute remission of all debt at the end of the seventh year, the Deuteronomic law expands on the original sabbatical year legislation (Ex 23:10-11), which related to the fallowing of the land. As the economy expanded, this required broadening the law to include debt as well as the return of property that had been given as collateral for debt (see the Jubilee law in Lev 25). The likelihood that this is total remission of debt rather than a suspension of debt for the year is confirmed by the *misharum* decree of the *Old Babylonian king Ammisaduqa (1646-1626 B.C.). This document prohibits creditors from pursuing the payment of debt after the decree has been issued, on pain of death. However, as in Deuteronomic law, merchants, who were often foreign nationals or new settlers (foreigners in 15:3), are still re-

quired to repay investors, since this is a transaction rather than a debt.

15:1-6. sabbatical year. The fallowing of the land in the seventh year, as an acknowledgment of the Creator's work and an example of good husbandry, is first found in Exodus 23:10-11. An expansion of that law is later found in Leviticus 25:2-7, providing more specificity about how it affects the land and the people. The Deuteronomic legislation is more concerned with debt remission, manumission of slaves (15:12-18) and the educational process of reading the law publicly (31:10-13) during the sabbatical year. Although there is no direct parallel to either sabbath or sabbatical-year legislation outside the Bible, the *Ugaritic epic of *Baal contains a seven-year agricultural cycle that may be related. In *Hammurabi's laws women and children sold into slavery would be freed after three years.

15:12. Hebrew. It may well be that originally *Hebrew,* like **Habiru* in *Akkadian texts, was a generic term for landless, stateless persons who contracted themselves as mercenaries, laborers and servants. This is not necessarily a pejorative designation. There are some negative connotations present, since persons in the ancient world tended to identify themselves with a group or place. But considering the fact that the first "Hebrew," Abram, was a landless immigrant, something like "gypsy" might give a general idea of meaning. Israelite villagers considered themselves to be free landowners. *Hebrew,* therefore, would refer to an Israelite who had become destitute (compare Jer 34:9) or was living in foreign lands (Judg 19:16). The Hebrew had to work his full six-year term in order to regain his mortgaged land and landowner status. Thus the Hebrew in Exodus 21:2, Deuteronomy 15:12 and Jeremiah 34:9 would be an Israelite, who, unlike the non-Israelite, could not be sold into permanent slavery. It was his right to release that distinguished him from the non-Israelite.

15:16-17. ear-piercing ceremony. See the comment on Exodus 21:5-6. The only difference in the description of the ceremony is that Deuteronomy has added the phrase "Do the same for your maidservant" in verse 6, since this version of the manumission law deals more fully with both male and female slaves.

15:19-23
Firstborn Animals

15:19-23. treatment of firstborn animals. Dedication of firstborn animals to deity is without firm attestation in the other cultures of the ancient Near East, though some claim to have found such a practice in the *Ugaritic texts. If it is there, the texts give us little information to understand the reasoning behind the practice.

15:23. eating blood. See the comments on Leviticus 17:11 and Deuteronomy 12:16, 20, regarding the prohibition against consuming the blood of animals along with their meat.

16:1-17
The Three Major Festivals

16:1-17. Israel's sacred calendar. Other versions of the calendar are found in Exodus 23:12-19; 34:18-26; Leviticus 23; and Numbers 28—29 (see the comments there).

16:1. Abib. The month of Abib (March-April) is considered the first month in the Israelite calendar and is tied to the exodus event (see Ex 13:4; 23:15). It is one of the month names that is often thought to have been brought over from the Canaanite month names. The first month later came to be known as the month of Nisan when the names were adopted from the *Babylonian calendar. In Exodus 23:15, Abib is tied to the Feast of Unleavened Bread, while in the Deuteronomic law it is keyed to the Passover.

16:1-8. Passover. Compare the comment on the Passover in Exodus 12. This Deuteronomic legislation makes allowance for the changes in Israelite society that have taken place since the exodus and centralizes the celebration of the Passover in "the place [God] will eventually choose as a dwelling for his Name" (v. 5), that is, Jerusalem.

16:8. sacred assembly. Sacred assemblies or proclamations were an important part of most religious practice in the ancient world. They refer to local or national gatherings for public, corporate worship. The people were summoned together away from their occupational work.

16:9. standing grain. The Feast of Weeks (see Ex 23:16) is tied to the wheat harvest of March-April. The Gezer calendar notes this as the month to "reap and feast." Since the grain would have matured at different times in the various locales of the country, the harvest of "standing grain" would have required the prescribed seven-week period to complete.

16:9-12. Feast of Weeks. This second of the three major harvest festivals comes seven weeks after the harvest of the early grain (Ex 34:22) and is also known as the Feast of Harvest or Pentecost (Ex 23:16). In the agricultural cycle it marks the end of the wheat harvest season, and by tradition it is tied to the giving of the law on Mount Sinai. It is also associated with *covenant renewal and pilgrimage. Cele-

bration includes the bringing of a "wave offering" of two loaves of bread, animal sacrifices (seven year-old lambs, one bull and two rams) and a drink offering in thanksgiving for a good harvest. A goat is also to be sacrificed as a sin offering for the people.

16:13-17. Feast of Tabernacles. The final harvest of the year occurred in the autumn prior to the onset of the rainy season and marked the beginning of a new agricultural year (fifteenth day of the seventh month). At this time the last of the ripening grain and fruits were gathered and stored. The seven-day event is also known as the Feast of Ingathering (Ex 23:16) and is symbolized by the construction of booths decorated with greenery for the harvesters. The use of the term *booths* for this festival appears first in Deuteronomy and is probably a reflection of the practice of harvesters of setting up shelters in the fields so that they could work throughout the day without returning to their homes (see Lev 23:42). The festival was tied into Israelite tradition as a commemoration of the wilderness wanderings. It was also the occasion for the dedication of Solomon's temple in Jerusalem (1 Kings 8:65).

16:16. pilgrimage feasts. See the comment on Exodus 23:17 regarding the obligation imposed on the Israelites to come before the Lord as pilgrims three times a year. In the rest of the ancient world each town had its patron deities and its local temples. Festivals and other worship activities would therefore not require lengthy pilgrimage. Nevertheless festivals such as the great Akitu (new year's) festival of *Marduk in *Babylon would undoubtedly have drawn pilgrims from near and far. One of the primary aspects of the ancient Near Eastern festivals was procession, where the image of the God was carried through various symbolic stages. Instead of finding its parallels in other religions' festivals, the pilgrimage aspect of Israel's festivals finds similarity to the *Hittite treaty documents that require the vassal king to travel periodically to the suzerain in order to reaffirm his loyalty (and pay the annual tribute).

16:18—17:13

Establishing Justice

16:18-20. judiciary institutions in ancient Near East. As evidenced by the preface to the Code of *Hammurabi (c. 1750 B.C.) and the statements made by the "eloquent peasant" in Egyptian wisdom literature (c. 2100 B.C.), those in authority were expected to protect the rights of the poor and weak in society. "True justice" (see Lev 19:15) was required of kings, officials and local magistrates. In fact, the "world turned upside down" theme found in the book of Judges and in prophetic literature (Is 1:23) describes a society in which "laws are enacted, but ignored" (for example in the Egyptian *Visions of Neferti* [c. 1900 B.C.]). An efficiently administered state in the ancient Near East depended on the reliability of the law and its enforcement. To this end, every organized state created a bureaucracy of judges and local officials to deal with civil and criminal cases. It was their task to hear testimony, investigate charges made and evaluate evidence, and then execute judgment (detailed in the *Middle Assyrian laws and the Code of Hammurabi). There were some cases, however, that required the attention of the king (see 2 Sam 15:2-4), and appeals were occasionally forwarded to that highest magistrate (as in the *Mari texts).

16:19. bribes in the ancient world. The temptation for judges and government officials to accept bribes is found in every time and place (see Prov 6:35; Mic 7:3). Taking bribes becomes almost institutionally accepted in bureaucratic situations as competing parties attempt to outmaneuver each other (see Mic 3:11; Ezra 4:4-5). However, at least on the ideal level, arguments and penalties are imposed to eliminate or at least lessen this problem. Thus *Hammurabi's code places harsh penalties on any judge who alters one of his decisions (presumably because of a bribe), including stiff fines and permanent removal from the bench. Exodus 23:8 forbids the taking of bribes and the perversion of justice as an offense against God, the weak and innocent, and the entire community (see Is 5:23; Amos 5:12).

16:21. Asherah poles. See the comments on Exodus 34:13 and Deuteronomy 7:5; 12:3.

16:22. sacred stones. See the comments on Exodus 23:24 and Deuteronomy 12:3.

17:3. astral worship. The worship of the celestial bodies (sun, moon, planets, stars) was common throughout the ancient Near East. One of the principal gods of *Assyria and *Babylonia was a sun god (Shamash), and a moon god (Thoth in Egypt; Sin in Mesopotamia; Yarah in Canaanite religion) was widely worshiped. During most of their history the Israelites would have been familiar with and heavily influenced by Assyrian culture and religion (see Deut 4:19; 2 Kings 21:1-7; 23:4-5). These forbidden practices continued to be a source of condemnation during the Neo-Babylonian period, as Israelites burned incense on altars placed on the roofs of their houses to the "starry hosts" (Jer 19:13). Be-

cause worship of the elements of nature diminished *Yahweh's position as the sole power in creation, they were outlawed. However, the popular nature of this type of worship continues to appear in prophetic literature and in Job (see Job 31:26-28; 38:7). For additional information see comment on Deuteronomy 4.

17:5. stoning as capital punishment. See the comment on 13:10.

17:6-7. witnesses in the ancient court system. The task of serving as a witness occurs in a variety of legal contexts and is a solemn duty which is not to be abused (Ex 20:16; Num 35:30; Deut 19:16-19). It can involve hearing testimony, signing commercial or civil documents, or testifying on a legal matter (laws of *Ur-Nammu, Code of *Hammurabi and the *Middle Assyrian laws). Witnesses serve an essential purpose in verifying business transactions (Jer 32:44; Hammurabi), such as the sale of property, marriages and changes in social status (*Middle Assyrian laws). Occasionally, they function as representatives of the people in matters brought before a god (Ex 24:9-11; Hammurabi).

17:8-13. verdict by omen in ancient Near East. In situations where physical evidence was not present or was insufficient, a verdict could be determined by the reading of omens. This meant that plaintiffs had to consult religious professionals (Levitical priests in 17:9), whose service included seeking divine verdicts. Among the *divination methods used in the ancient Near East were the examination of a sheep's liver (hepatoscopy), the interpretation of dreams (specific *Babylonian texts contain lists of dreams and what they portend—accidents, deaths, military defeats or victories; see Dan 2:9), the noting of freak occurrences in nature and the use of astrological charting (especially during the period of the *Assyrian empire in the tenth to seventh centuries B.C.). In the biblical text, the Urim and Thummim (Ex 28:30; Num 27:21) were used to help divine God's will, and a number of the prophets point to famines, droughts and other natural calamities as a sign of God's judgment on an unfaithful people (Amos 4:10-12; Hag 1:5-11).

17:14-20

The King

17:14-20. king chosen by deity. The *Sumerian King List, which purports to contain the names of kings from before the flood until the end of the *Ur III dynasty (c. 2000 B.C.), begins with the line, "When the kingship was lowered from heaven." The assumption throughout Mesopotamian history is that every ruler received his certification to reign from the gods. Thus *Hammurabi (1792-1750 B.C.) speaks in the prologue to his law code of the gods' establishment of "an enduring kingship" in *Babylon and how the gods Anum and *Enlil specifically chose him to rule on behalf of the people. The result is an obligation imposed on the king to rule wisely and with justice, never abusing his power and being responsible to the commands and requirements of the gods. The situation is slightly different in Egypt, where each pharaoh was considered to be a god.

17:16. proliferation of horses. Since horses were used primarily to draw chariots and carry horsemen into battle, the acquisition of large numbers of these animals implies either an aggressive foreign policy or a monarch who wishes to impress his people and his neighbors with his wealth and power. The reference to Egypt is suggestive of dependence on that nation as an ally and a supplier of horses for war (Is 36:6-9). Such alliances in the late monarchy period proved disastrous for Israel and Judah and were roundly condemned by the prophets (Is 31:1-3; Mic 5:10).

17:17. royal marriage as alliance. Marriage was a tool of diplomacy throughout the ancient Near East. For instance, Zimri-Lim, the king of *Mari (eighteenth century B.C.), used his daughters to cement alliances and establish treaties with his neighboring kingdoms. Similarly, Pharaoh Thutmose IV (1425-1412 B.C.) arranged a marriage with a daughter of the *Mitannian king to demonstrate good relations and end a series of wars with that middle Euphrates kingdom. Solomon's seven hundred wives and three hundred *concubines (1 Kings 11:3) were a measure of his power and wealth (just as horses are in Deut 17:16), especially his marriage to the daughter of the pharaoh (1 Kings 3:1). While the political advantages were quite evident, the danger of such marriages is demonstrated in the introduction of the worship of other gods by Solomon's wives (1 Kings 11:4-8).

17:17. royal treasuries. The theme of excessive acquisition of royal symbols of power (horses, wives, gold and silver) continues in this admonition against overtaxing the people simply to fill the royal treasury. All of the categories of wealth are said to lead to excessive pride, apostasy and a rejection or diminution of *Yahweh's role (compare 8:11-14). The vanity of kings who amass wealth without purpose other than pride is found in Ecclesiastes 2:8-11 and Jeremiah 48:7. The treasuries typically contained the precious metal assets of

temple and state, including contributions as well as plunder. Though coinage or bullion may have been included, much of it would be in the form of jewelry, vessels for *ritual use, religious objects or the various accessories of royal or wealthy households. Payment of tribute at times required drawing from or even emptying the treasuries (see 1 Kings 14:26; 2 Kings 18:15). Excavations or descriptions of temples and palaces often indicate rooms as treasuries, and royal officers included keepers of the treasuries.

17:18-20. king subject to the law. In Egypt and Mesopotamia the king was the fountainhead of law. It was his task to perceive and maintain the order that was built into the universe (Egyptian *ma'at;* Mesopotamian *me*). The king could not be "brought to justice," except by the gods. He was not above the law, but there was no mechanism by which he could be tried in a human court. Judicially this may have been no different in Israel, though the prophets, as spokesmen for the deity, could call the king to account.

18:1-13

Priests and Levites

18:1-5. provision for Levites. Whether or not the worshiper ate a portion of the sacrifice, a number of the sacrifices provided an opportunity for the priests to eat. This was also true in *Babylonian practice, where the king, the priest and other temple personnel received portions of the sacrifices. As early as *Sumerian texts it was considered a grievous crime to eat that which had been set apart as holy. See also the comment on Numbers 18:12-19 for tithes paid to the priests.

18:6-8. function of the Levites in the towns. During the early settlement period, Levites officiated at local shrines and altars. It would have been their role to serve as religious professionals, performing sacrifices and instructing the people on the law. While some Levites may have been tied to these places for generations (1 Sam 1:3), there is also evidence of itinerant Levites, who traveled about the country and were hired to serve for a time at a local shrine or high place (Judg 17:7-13). Without an inheritance of their own (Josh 14:3-4), the Levites stood out within a society that was territorial. The Levites were supposed to instruct the people in proper worship, though the book of Judges makes it clear that sometimes they were a major part of the problem rather than the solution. They were supposed to be preservers of tradition and law and would have often served as judges.

18:9-22

Receiving Information from Deity

18:10. divination. See the comment on Leviticus 19:26. *Divination involves a variety of methods used by prophets (Mic 3:11), soothsayers, mediums and sorcerers to determine the will of the gods and to predict the future. These included the examination of the entrails of sacrificial animals, the analysis of omens of various types and the reading of the future in natural and unnatural phenomena (see Gen 44:5). While there were acceptable divination practices among the Israelites (use of the Urim and Thummim), what is being condemned here is a group of practitioners, who served as professional fortunetellers.

18:10. sorcery. Since magic in the ancient world was a means of contacting the supernatural realm, it was considered to have two facets: good magic and evil. In Mesopotamia and among the *Hittites harmful magic was practiced by sorcerers and was punishable by death. It involved the use of potions, figurines and curses designed to bring death, disease or bad luck to the victim. This was distinguished from the practical and helpful magic of professional exorcists and "old women," whose role included the rites involved in temple construction and dedication, as well as medical aid. Only in Egypt was there no distinction between white and black magic. There the practitioners' job involved intimidating demons and other divine powers to perform required tasks or to remove curses. The Israelite law totally rejected all these practices because of their polytheistic character and the diminishing of *Yahweh's role as lord of creation (see Ex 22:18).

18:10. omens. One of the priestly classes mentioned in Mesopotamian texts is the *baru*-diviners. It was their task to perform extispicy (generally on lambs), examining the liver and interpreting this omen for the person who has asked for a reading of the future. The *baru* might be consulted by a king who wished to go to war (compare 1 Kings 22:6), a merchant about to send out a caravan or a person who had become ill. Government officials often included the report of omens in their letters (*Mari texts). However, since omens were not always clear, several groups of diviners might be used before action was taken. An entire body of omen texts (with descriptions of past events and predictions) were archived in temples and palaces for consultation by staff diviners. Even clay models of livers were used in schooling apprentices in the trade.

18:10. witchcraft. Like sorcery, witchcraft was

generally classed as an illegitimate use of magic. Its practitioners might serve in royal courts or temples or as local herbalists and itinerant diviners, who would, for a price, provide the means to harm or destroy an enemy (see Lev 19:26; 20:6; 2 Kings 21:6). The Mesopotamian distinction between good and evil magic is lost in Israelite law, where the female witch is condemned (Ex 22:18) and the words of sorcerers are declared to be unreliable (Jer 27:9; Mal 3:5).

18:11. spells, medium, spiritist. The practitioners of spiritism and sorcery are condemned because of their association with Canaanite religion and because their "art" attempted to circumvent *Yahweh by seeking knowledge and power from spirits. They represented a form of popular religion that was closer to the folk practices of the common people and served as a form of "shadow religion" for many. Sometimes, because of its association with *divination, their *rituals and methods stood in direct opposition to official religion or as an alternative to be used in times of desperation (see Saul's use of the outlawed witch of Endor in 1 Sam 28). Sorcery and potions used in the practice of magic were also banned in the Code of *Hammurabi and the *Middle Assyrian laws, suggesting that the prohibition and fear of these practices were not unique to Israel.

18:11. consulting the dead. Although there was no clear sense of an afterlife in ancient Mesopotamia, no envisioning of a place of reward or punishment, ancestor worship did exist, and offerings were made to the spirits of the dead. A group of magical practitioners created a means for consulting the spirits of the dead to find out about the future (see the witch of Endor in 1 Sam 28:7-14). This was called necromancy and could involve consulting a particular or "familiar" spirit, or it could be the raising of any ghost attracted by the spells of the medium. Ritual pits, stuffed with bread and blood, were commonly used in *Hittite ritual by diviners, and the Greek hero Odysseus used a pit filled with blood to attract the shades of his dead companions. It was believed that if libations were poured out to them, the spirits of dead ancestors could offer protection and help to those still living. In *Babylon the disembodied spirit *(utukki)* or the ghost *(etemmu)* could become very dangerous if not cared for, and such spirits were often the objects of incantations. Proper care for the dead would begin with proper burial and would continue with ongoing gifts and honor of the memory and name of the deceased. The firstborn was responsible for maintaining this ancestor worship and therefore inherited the family gods (often images of deceased ancestors).

18:10-13. worldview basis for prohibiting divination. The worldview promulgated in the Old Testament maintains that *Yahweh is the sole God and is the ultimate power and authority in the universe. In stark contrast, the polytheistic religions of the ancient Near East did not consider their gods (even as a group) to represent the ultimate power in the universe. Instead they believed in an impersonal primordial realm that was the source of knowledge and power. *Divination attempted to tap into that realm for the purposes of gaining knowledge; incantations tried to utilize its power. Both *divination and incantation can therefore be seen to assume a worldview that was contradictory to Yahweh's revealed position.

18:14-22. function of the prophet. These individuals were more than simple religious practitioners. While some of them were members of the priestly community, they stood outside that institution. Their role was to challenge the establishment and the social order, to remind the leadership and the people of their obligation to the *covenant with *Yahweh and to provide warning of the punishment that went with violation of the covenantal agreement. The prophet is invested with special powers, a message and a mission, and there is a special compulsion associated with being called as a prophet. It can be denied for a time (see Jonah's flight) but ultimately must be answered. It should also be noted that prophets may be reluctant to speak harsh words or condemnations of their own people. When this occurs, the prophet will experience a compulsion to speak that cannot be resisted (Jer 20:9). Since they speak a message that comes from God, they separate themselves from the words and thus cannot be charged with treason, sedition or doomsaying. The message is thus the most important thing about the prophet, not the prophet himself or herself. Certainly, there were some prophets like Balaam and Elijah who acquired a personal reputation, but this was based on their message or their ability to speak for God. For a prophet to gain credibility with the people, the message must come true. Although sometimes the prophets are mentioned as part of the *cult community (Isaiah and Ezekiel) and as court prophets (Nathan), they always seem to be able to stand apart from these institutions to criticize them and to point out where they have broken the *covenant with God. In the early periods of the monarchy, the prophets

primarily addressed the king and his court, much like their ancient Near Eastern counterparts did (they have been termed "preclassical" prophets). Beginning in the eighth century, however, they turned their attention increasingly to the people and became the social/spiritual commentators whom we most readily identify with the prophetic institution (the "classical" prophets and the "writing" prophets). Their role was not to predict as much as it was to advise of God's policies and plans.

18:20-22. false prophecy. Like Deuteronomy 13:1-3 and its discussion of persons urging the worship of other gods, false prophets are generally those who speak in the name of other gods. Deuteronomy discounts the existence of these other gods and thus the veracity of their prophets. In cases where prophets presume to speak in *Yahweh's name without permission, the test of true prophecy is whether what they say actually occurs. There are a number of examples of false prophecy cited in the biblical text. Jeremiah rails against it in his accusation against Hananiah (Jer 28:12-17) and in his warning against other prophets who predicted a quick end to the exile (29:20-23). In some cases, the potential for confusion involved is such that events must take their course before the true prophet is revealed (see 1 Kings 22). The Israelites were not alone in their caution concerning false prophecy. In other cultures, however, they generally used *divination to try to confirm the message of the prophet, but this was not permissible for Israel.

18:14-22. prophecy in the ancient Near East. Texts from Mesopotamia, Syria and Anatolia contain a large number of prophetic utterances, demonstrating the existence of prophets throughout much of ancient Near Eastern history. While some of these texts may actually fall into the realm of wisdom literature or omen reports, many involve individuals who claim to have received a message from a god. Most famous among these texts are about fifty texts from *Mari (eighteenth century B.C.) that contain reports from both male and female prophets: warnings about plots against the king, admonitions from a god to build a temple or to provide a *funerary offering, and assurances of military victory. These prophets present divine messages received in dreams or through omens. Others are said to fall into a trance state and speak as ecstatic prophets. This type of prophecy is also found in the eleventh-century B.C. Egyptian tale of *Wenamon and in 1 Samuel 10:5-11 and 2 Kings 3:15.

19:1-21

Capital Punishment Cases

19:1. Late Bronze Canaanite cities. Most of what is known about *Late Bronze Canaanite cities comes from archaeological excavations and surveys and the inscriptions of the Egyptian Pharaohs who ruled that region. Evidence suggests that the major cities of this period (Jerusalem, Shechem, Megiddo) were walled, but settlements were spaced fairly far apart. The central hill country was sparsely inhabited prior to 1200 B.C. The population was mixed, containing peoples who had come from the *Hittite kingdom, Syria, Mesopotamia and the desert areas of Arabia. The Egyptians apparently had some difficulty governing the area and were required on numerous occasions to send military expeditions to quell revolts and end brigandage (reported in the fourteenth-century B.C. *Amarna letters as well as in the victory inscriptions of Amenophis II [c. 1450-1425 B.C.] and of Merenptah [c. 1208 B.C.]).

19:2-3. refuge cities in ancient Near East. See the comment on Numbers 35:6-34 for a discussion of the cities of refuge in Israel. The concept of asylum and refuge is quite old. *Babylonian and *Hittite texts both speak of sacred space where all are to be protected. The inhabitants of the great temple cities of Nippur, Sippar and Babylon were granted special status because of the protection afforded by patron deities of these places. The principle was that only the god could withdraw protection from persons here, and thus no one could shed their blood without an omen or sign from the god (Herodotus has an example from the classical period). Egyptian tradition regarding asylum appears to apply only to the temple precinct rather than to the entire city. This would parallel the biblical examples in which a fugitive takes refuge at the altar (1 Kings 1:50-53; 2:28-34).

19:6. avenger of blood and the justice system. See the comment on Numbers 35:9-34 for a discussion of the responsibility of the family to avenge a death. It is possible that the title "avenger of blood" evolved out of the family obligation to engage in blood revenge when one of their clan members was slain. Such a process, while typical of tribal society, is extremely disruptive to the maintenance of order within an organized state. As a result, the "avenger of blood" (a term which appears only in the context of the cities of refuge) may have been appointed by the government to serve the needs of both the family and the state by apprehending the accused and then

carrying out the sentence if the verdict was murder.

19:11-13. capital punishment. In the Bible capital punishment is the sentence imposed for apostasy (Lev 20:2), blasphemy (Lev 24:14), sorcery (Lev 20:27), violation of the sabbath (Num 15:35-36), stealing from the **herem* (Josh 7:25), gross disobedience to parents (Deut 21:21), adultery (Deut 22:21), incest (Lev 20:14) and deliberate homicide (Num 35:9). While stoning is the most common form of capital punishment, some offenses require burning or stabbing with a sword. In every case the purpose is to eliminate contaminating elements from society and thereby purge the evil that threatened to draw the people away from the *covenant.

19:14. moving boundary stones. Since the land had been given to the people by God and apportioned according to a God-given formula, to move boundary stones and thus appropriate territory unlawfully was a crime of theft against God. The antiquity of laws concerning property rights is affirmed by inscriptions on sixteenth-century B.C. Kassite *kudurru* boundary stones, admonitions in eleventh-century B.C. Egyptian wisdom literature against relocating a surveyor's stone *(Teachings of Amenemope)* and in the curse in Hosea 5:10. Each example calls on the gods to protect the owner's rights against encroachment.

19:15-20. the role of witnesses in the ancient judicial system. Witnesses were an essential part of the judicial system in the ancient world. One sign of this is that Israelite law required two witnesses to convict a person of a crime (Num 35:30; Deut 17:6; 1 Kings 21:13). Both *Hammurabi's code and the *Middle Assyrian laws rely heavily on the presence of witnesses to certify business transactions and to testify in civil and criminal cases.

19:21. *lex talionis*. The legal principle of "an eye for an eye" or *lex talionis* ("law of retaliation") is found in both the biblical law codes and the codes of Mesopotamia. Biblical examples (Ex 21:24; Lev 24:20) express the desire to eliminate a corrupting or unclean element in society. The admonition is to have "no mercy" on the culprit. Mesopotamian law contains both the idealized version of *lex talionis* and an amelioration to set limits of compensation. For instance, the law collection of *Eshnunna sets a fine of one mina of silver for the loss of an eye. In the personal liability laws found in *Hammurabi's code, reciprocity for injury may be an exactly equivalent injury, a fine or mutilation, depending on the social status of the injured party and the accused. Even in the cases where exact reciprocity is required by Mesopotamian law, it is quite possible that a monetary equivalent was taken in compensation (if not explicitly included in the law), rather than an eye or a tooth being actually removed.

20:1-20
Rules for Warfare

20:2. priest addressing the army. Since warfare was considered a religious enterprise, it was expected that priests and other religious functionaries would accompany the army. *Assyrian texts and reliefs depict the roles performed by priests accompanying the troops. They carried or attended the images and emblems of the gods (see Josh 6:4-5; 1 Sam 4:4), performed religious *rituals and sacrifices, and undoubtedly addressed the army in the name of the gods. This latter task may have involved interpreting of omens, assuring the aid of the gods and exhorting the troops to fight for the god's chosen king (as in the annals of Tukulti-Ninurta I [1244-1208 B.C.] and Ashurnasirpal II [883-859 B.C.]).

20:5-9. exemptions from military duty. While every able-bodied free man was expected to serve in the military, in practice exemptions were allowed for special categories, such as priests (in the *Mari texts), newlyweds (Deut 24:5) and those who have religious duties to perform (see Lev 19:23-25). Conscription of troops was necessary to fulfill feudal obligations to kings and took various forms, including census taking and coercion (at Mari). The biblical injunction to allow the "frightened" to leave the army may have had its basis in maintaining discipline in the ranks, but it is also an assurance that those who fight are certain of Yahweh's aid in battle (see Judg 7:1-3). The law codes are at times contradictory on the matter of hiring substitutes for service in the military. The *Hittite code allows this practice, but it is outlawed in the Code of *Hammurabi. This latter case is based on a direct order to join the king's campaign. It is possible that arrangements could be made for members of the nobility that would preempt any awkward legal problems. In the Canaanite **Keret Epic* the king raises an army in a cause so important that normal exemptions (newlywed among them) are abandoned.

20:10-15. normal warfare practices. In the ancient world, the standard procedure was not to pay soldiers a wage. Instead they were given a portion of the loot taken in the capture of villages and towns. Because warfare was also seen as a divine mission, ordered by the god(s) and facilitated by divine intervention,

all plunder taken in battle was technically the sacred property of the god(s). As a result strict procedures had to be followed in its division in order to prevent a violation of sacred taboos. For instance, in the *Mari texts officers took an oath not to "eat the *asakkum*" (i.e., infringe on the rights) of their peers or of lesser ranks. Violators were punished with heavy fines. Following this pattern, Mesopotamian as well as Israelite armies commonly took women and children as spoils, along with animals and moveable property, while the men were killed (see Gen 34:25-29; *Assyrian Annals of Sennacherib). In this way the efforts of the victorious were rewarded, and the psychological effect of the sight of devastated cities served the purpose of enhancing the reputation of the conquering nation and its god(s).

20:16-18. holy war procedures. In unusual circumstances, an army chose to forego taking prisoners or spoils and dedicated it entirely to the god who had given them the victory. This practice is known as **herem* in Hebrew and is used very sparingly as a method of warfare. Only in a few instances is the total destruction of a city called for: Jericho in Joshua 6:17-24, Hazor in Joshua 11:10-11, Zephath in Judges 1:17 and the Amalekites in 1 Samuel 15:3. There are several instances where some variation on utter destruction is allowed, as in Deuteronomy 2:34-35 and 3:6-7 (people killed, livestock taken as spoil). Outside the Bible, this perspective on war is attested as early as the ninth century B.C. in the war against the tribe of Gad by the Moabite king Mesha. A similar concept may be reflected in the annals of several of the *Assyrian kings, who used total destruction as a psychological ploy to make revolting nations submissive.

20:20. siege works. To capture a walled city, it was necessary to employ a variety of siege works, including ramps (2 Sam 20:15; 2 Kings 19:32), towers (Is 23:13; Ezek 21:22) or perimeter walls to prevent escape (Ezek 26:8; Mic 5:1). Battering rams (Ezek 26:9) as well as supports for tunnels undermining the walls also required the use of timbers. This explains the dispensation allowed in Deuteronomy for the cutting of trees during a siege. The *Assyrian reliefs of Ashurnasirpal II (883-859 B.C.) at Nimrud portray many of these siege engines and simultaneous methods of warfare.

21:1-9
Unsolved Murder

21:1-9. innocent blood procedures and concepts. See the comments on Numbers 19 dealing with the significance of the purification *ritual and the use of the red heifer. These comments also deal with the importance of expiation for the shedding of "innocent blood." In *Hittite law if a body was found out in the open country, the person's heir was entitled to some property from the town nearest the place where the body was found, up to three leagues' distance. This legislation is more concerned with the rights of the heir than with the issue of innocent bloodshed.

21:10-14
Rights of Captive Women

21:10-14. treatment of captive women. Part of warfare is the disposition of prisoners. Some female captives could expect to serve as slaves (2 Kings 5:2-3), but many would also be taken as wives by the soldiers. The Deuteronomic law deals with the transformation process as these women were adopted into Israelite society. This included the shaving of the head, a change of clothing and a period of mourning marking the death of the woman's old life and the beginning of a new one (compare Joseph's transformation in Gen 41:41-45). The *Mari texts also provide clothing and a job to captive women. The rights extended to the former captive after she has married are similar to those of Israelite women and are designed to demonstrate that there is no reduction of her status if a divorce occurs. Similar concerns are reflected in the *Middle Assyrian laws, which require former captives who are now married to dress like all Assyrian women of that class.

21:15-21
Treatment of Sons

21:15-17. right of the firstborn. Inheritance rights are based on the law of primogeniture. This stipulates that the firstborn son is to receive a double share of his father's property. That this was the normal situation in the ancient Near East can be seen in Middle Assyrian texts, *Larsa, *Mari and *Nuzi documents, just to name a few. The intent of such laws is to insure orderly transmission of property from one generation to the next. *Hammurabi's law gives the father the right to favor whichever son he chooses. In the Nuzi texts the father had the option of altering the firstborn rights. In the ancient Near East the closest legislation to that found here is the stipulation in Hammurabi's law that says the children of the slave wife, if acknowledged as children during the father's lifetime, have an equal share in the inheritance with the full

wife's children.

21:18-21. execution of a rebellious son. When a breakdown of family coherence occurred and a son refused to give his parents the obedience and support they were entitled to, it became a threat to the community as a whole. The language used here makes it clear that a repudiation of the *covenant is involved. The references to gluttony and drunkenness are considered indications that the son is beyond reform. Due process includes parental witness of the offense, and then a communal form of execution is prescribed (see comment on Deut 13:10). This offense is as grave a threat to the covenant as worshiping other gods. Mesopotamian law also defends the rights of parents, but only extending to disinheritance or mutilation. See the comment on Exodus 21:17. The legislation limits the authority of the parents in that they have to bring such a matter before the elders rather than having the freedom to act independently.

21:22-23

Treatment of Executed Criminals

21:22-23. exposure of executed criminals. Since the Deuteronomic laws are seldom concerned with matters of ritual *purity and polluting elements (see Lev 13—17 and comments on Lev 20:10-16; 22:3-9), it may be that the sense of "desecrating" the land is based on either the sight or the smell of an exposed and decaying body. The corpse was considered a defiling object (Lev 22:8; Num 5:2) and thus a danger to the living. Very few narratives describe the practice of exposing a body (Josh 8:29; 10:26-7; 2 Sam 4:12; 21:8-13). It is unlikely that hanging was the form of execution used here. Rather, a tree or pole was used to impale the bodies for public display. *Assyrian reliefs from the palace of Sennacherib in *Nineveh (704-681 B.C.) depict soldiers erecting stakes holding the impaled bodies of men of Lachish. It is possible that the horror of this form of shameful display is the basis for the Israelite law requiring the body to be removed and buried at sunset rather than leaving it to be devoured by birds and other animals (Gen 40:19; 2 Sam 21:10).

22:1-12

Miscellaneous Laws

22:1-3. lost property. Just as in Exodus 23:4, it is expected that an Israelite will either return lost property (animals, clothing, etc.) or keep it safe until the owner reclaims it. Taking the two laws together, this maxim applies to fellow Israelites as well as enemies. The laws of *Eshnunna and *Hammurabi also deal with lost property, but they broaden the legislation to include both the responsibilities of the finder and the legal rights of the owner when property is resold.

22:5. transvestism in the ancient Near East. Just as clothing served as a status marker in the ancient world, it also distinguished gender. In classical contexts, cross-dressing occurred in the theater, where women were not allowed to perform, and was also an aspect of homosexual practice. Most instances in which cross-dressing or transvestism are mentioned in ancient Near Eastern texts are *cultic or legal in nature. For instance, when the *Ugaritic hero *Aqhat is murdered, his sister Paghat puts on a male garment under her female robes in order to assume the role of blood avenger in the absence of a male relative. An *Assyrian wisdom text contains a dialogue between husband and wife who propose to exchange their clothing and thus assume each other's gender roles. This may be a *fertility rite or perhaps a part of a religious drama honoring a goddess. It may be this association with other religions that made transvestism an "abomination" in Deuteronomy, but the issue may also be the blurring of gender distinctions. *Hittite texts use gender-related objects as well as clothing in a number of magical rites used to influence one's sexual status or diminish or alter the gender status of an adversary. The objects of the female were mirror and distaff; those of the male, various weapons.

22:6-7. treatment of bird's nest. Aside from the apparent humanitarian concern for the welfare of the creatures involved here, conservation of nature is found in leaving the mature bird to breed again. One might compare this with the prohibition against cutting down fruit trees in Deuteronomy 20:19-20. In both instances, future sources of food are preserved while an alternative is suggested for immediate needs.

22:8. parapet on house. Since roofs were considered living space (see 2 Sam 11:2; 2 Kings 4:10), a parapet would have been an appropriate safety measure. This law deals with the liability of a homeowner for injury to a visitor in the case of negligent building practices. *Hammurabi's code (laws 229-33) cautions builders against doing a substandard or unsafe job that could lead to injury or death. Penalties ranged from fines to capital punishment.

22:9-11. mixing. Some mixtures were considered to be reserved for sacred use. The mix-

ture of wool and linen was used in the tabernacle and in the high priest's outer garments, and was reserved for those uses. This interpretation is offered in the Dead Sea Scrolls (4QMMT). Sowing of two types of seed is also prohibited in the *Hittite laws with a death threat to violators. While it is not entirely clear why these mixtures are prohibited, it is possible that their origin is based on either religious or cultural taboos. The fact that the crop is "defiled" or forfeited to the priesthood suggests religious implications and perhaps a reaction to a Canaanite *fertility *ritual or practice. In Leviticus 19:19 the prohibition is against mating two kinds of animals, while here it concerns plowing with them together. Experiments with hybridization and cross-breeding are attested as early as the third millennium B.C.

22:12. tassels. All adult male Israelites were commanded to sew blue cords into the four quarters of the hem of their robes as a perpetual reminder of God's commandments (Num 15:37-41). Decorative hems are common in ancient Near Eastern fashion as many reliefs, paintings and texts attest. Hem design was often an indication of a person's status or office. The tassels are symbolic and are designed to promote right action, not to serve as an *amulet to ward off danger or temptation.

22:13-30

Laws Concerning Marriage

22:13-21. proof of virginity. Virginity prior to marriage was prized as a means of insuring that one's children and heirs were actually one's own. The integrity of the woman's household was based on her being able to show proof of her virginity. The physical evidence demanded in this case could be either the sheets from the initial consummation (bloodied by the breaking of the hymen) or possibly rags used during the woman's last menstrual period, showing that she was not pregnant prior to the marriage.

22:19. one hundred shekels of silver. The fine imposed here for false accusation amounts to about two and one-half pounds of silver. *Hammurabi's laws include cases of false accusation of sexual misconduct, but these do not concern the wedding context, and monetary fines are not set. Based on the bride price paid in Deuteronomy 22:29 of fifty shekels, this penalty amounts to twice the bride price and thus would be a real deterrent to such accusations. It would be the equivalent of about ten years of normal wages.

22:22. adultery. Having sexual relations with another man's wife was punishable by death in both the biblical and ancient Near Eastern codes. The Egyptian *Tale of Two Brothers* calls it a "great crime" that no honest man or woman would consider. This was an attack on a man's household, stealing his rights to procreate and endangering the orderly transmission of his estate to his heirs (see comment on Ex 20:14). The act itself defiles both participants (Lev 18:20; Num 13:5). Since it is not only an attack on the sanctity of the household but also a source of general contamination, adultery serves as a reason for God to expel the people from the land (Lev 18:24-25).

22:23-24. "in town" criterion. The rape of a virgin within a town brings an automatic death penalty because the woman had the opportunity to cry out and could expect to receive assistance. This is based on implied consent on her part. Mesopotamian codes also include locale as part of the rape law. However, in the *Sumerian laws, the focus is more on whether her parents were aware that she was out of the household and whether the rapist knew whether she was slave or free (laws of *Ur-Nammu and *Eshnunna impose fines for raping a virgin slave woman). *Hammurabi's law most closely resembles the Deuteronomic law. In this case the rapist is to be executed if he attacks a woman in the street and witnesses testify that she defended herself. *Middle Assyrian laws allow the parents of the victim to take the rapist's wife and have her raped. There is also provision for the rapist to marry the victim, if the family chooses, for a premium bride price.

22:23, 25. "pledged" status. A marriage contract was a sacred compact, comparable to the *covenant agreement made with Yahweh (see Ezek 16:8). The "pledge" agreement (1) set a bride price as well as the amount of the dowry, (2) guaranteed that the bride would be a virgin at the time of marriage and (3) required complete fidelity of the parties. Marriage was such an important economic and social factor in the ancient Near East that it was the basis of a huge amount of legislation. For instance, the laws of *Eshnunna and *Hammurabi explain the importance of having an official marriage contract. Hammurabi's laws also provide guidance on payment of the bride price and instances when one party or the other wishes to break the contract (see 2 Sam 3:14). Once an agreement is in place, it is expected that other persons will respect the betrothed status of the woman as technically already married (see Gen 20:3). Thus the laws of adultery are in full force even before the actual ceremony and consummation of the marriage.

22:25-27. "in the country" criterion. In this case, Israelite law adds another criterion by specifying the guiltlessness of the woman who is raped in the countryside, where her screams were unlikely to attract assistance. The assumption of her innocence is based on implied resistance to the rape in this circumstance. It is likely that the law applied to married as well as to betrothed women, even though only the latter are mentioned. A similar statement appears in *Hittite law, which condemns the man only if he seizes a woman "in the mountains" and condemns the woman only if the crime occurs "in (her) house" (see the adulterous woman in Prov 5:3-14).

22:29. fifty shekels. The bride price probably varied depending on the status and wealth of the bride-to-be's family. Fifty shekels of silver may have been a standard amount (equivalent to the value of the bride's virginity, according to *Middle Assyrian laws), but there were probably other items exchanged as well (compare Ex 22:16-17). To provide one measure of these transactions, in the *Ugaritic religious texts the moon god Yarih offers one thousand shekels of silver as a bride price for the moon goddess Nikkal. These amounts should be measured against the fact that the standard annual wage in the ancient world was ten shekels.

22:29. divorce in ancient Near East. The most straightforward statement on divorce in the ancient Near Eastern law codes is Middle Assyrian law 37, which simply says that it is a man's right to divorce his wife and that he may choose whether or not to provide her with a settlement. Other legal clauses, however, at least provide grounds for divorce: wife neglects household duties to go into business (Hammurabi); wife's desertion of her husband (*Middle Assyrian laws); failure to produce children (Hammurabi). General indications are that men in both Egypt and Mesopotamia could divorce their wives on almost any grounds. There are also a number of sources that prescribe a fixed settlement: one mina of silver to a primary wife and one-half mina of silver to a former widow (Ur-Nammu); one mina of silver if no bride price was paid (Hammurabi). It should be noted that women did have some rights in divorce proceedings: to keep the bride price (*Middle Assyrian laws); to have dowry returned (Hammurabi); to receive a share of the inheritance as a dowry (Hammurabi). There is also one case in which a woman was able to leave an unsatisfactory marriage, taking her dowry with her (Hammurabi). However, this was based on an examination of her character, which could lead to her execution if she was found to be at fault (Hammurabi).

22:30. incest. Incest was equally abhorrent in most other societies (e.g., the prohibitions in *Hittite laws). The most well-known exception is Egypt, where it was a common practice in the royal family (but little attested elsewhere) as a means to strengthen or consolidate royal authority. This concept is also seen among *Elamite kings. *Hammurabi's laws call for the execution of a son who has intercourse with his mother after the death of his father.

23:1-14
Defiling the Assembly and the Camp

23:1-8. exclusions from the assembly. "Assembly of the LORD," like the more common "assembly of Israel," is a technical term for all those adult males who are enfranchised to make decisions, participate in *cultic activities and serve in the military of Israel (Mic 2:5). Because they were a chosen people, who were required to maintain their *ritual purity as part of the *covenant (Ex 19:6), the unclean and the stranger were excluded from the activities of the assembly. The examples listed include persons who were sexually impaired (probably eunuchs) and thus incapable of procreation, men of illegitimate birth (including incest and intermarriage) and certain national groups who were excluded from ever being adopted into the assembly.

23:4. Balaam's home. The exact location of Balaam's home is unknown. Numbers 22:5, 23:7 and Deuteronomy 23:4 seem to indicate the area of the upper Euphrates, perhaps the site of Pitru, twelve miles south of Carchemish, mentioned in the monolith inscription of the *Assyrian king Shalmaneser III (858-824 B.C.). However, the journey of Balaam described in Numbers 22:21-35 suggests a shorter distance, possibly a journey from Ammon.

23:9-14. sanitation in the camp. Since the army is engaged in a holy war, they must maintain themselves in a state of ritual purity consistent with God's holiness. Thus matters of personal hygiene are elevated to reinforce the need to keep both person (see Lev 15:16-17) and place clean. Obviously, there would be health value in digging latrines outside the camp, but such mundane activities here are keyed to preventing the ritual *impurity that would cause God to abandon them (see Deut 8:11-20).

23:15-25
Miscellaneous Laws

23:15-16. slavery. Although debt slavery oc-

curred in ancient Israel, it had a term limit of six years and then the slave was freed. Perpetual slavery did exist as well, but that involved foreign captives and Israelites who had made the decision to accept that condition (Ex 21:2-11; Deut 15:12-18). It is most likely this latter class of persons that is mentioned in this law, since debt slaves could expect to be released eventually. Israel's fugitive slave law is unusual in the context of ancient Near Eastern law. However it is tied to Israel's former condition as slaves in Egypt and thus is based on a national hatred of the institution (see Ex 22:21). The Code of *Hammurabi makes hiding a runaway slave a capital crime and sets a bounty of two shekels of silver for the return of a slave. Similarly, the international treaty between Pharaoh Rameses II and the *Hittite king Hattusilis III (c. 1280 B.C.) includes an extradition clause requiring the return of fugitive slaves.

23:17-18. cultic *prostitution. One can distinguish between several different categories. In "sacred" prostitution, the proceeds go to the temple. In "cultic" prostitution, the intent is to insure *fertility through sexual *ritual. We must also differentiate between occasional sacred/cultic prostitution (as in Gen 38) and professional sacred/cultic prostitution (as in 2 Kings 23:7). The evidence for cultic prostitution in ancient Israel or elsewhere in the ancient Near East is not conclusive. Canaanite texts list prostitutes among the temple personnel, and *Akkadian literature attests those who were dedicated for life to serve the temple in this way. Although the Hebrew word used here is related to an Akkadian word for prostitute, this does not prove that any religious ritual or cultic practice is involved. It is quite possible for prostitutes to be employed by temples as a means of raising funds without their having any official status as priestesses. Furthermore, since women often did not have personal assets, sometimes the only way of earning money by which to pay a vow appeared to be prostitution. The injunction against bringing the wages of a prostitute to the temple may, however, be a reaction against practices like that of the *Ishtar temple servants in the Neo-Babylonian period, who hired out female members of their community as prostitutes. Their wages would have been placed in the temple treasury. All of this demonstrates the existence of sacred prostitution, both occasional and professional, in Israel and the ancient Near East. But the existence of cultic prostitution on either level is more difficult to prove. Cultic prostitution is not easily confirmed in Mesopotamia, unless one includes the annual sacred marriage ritual. But it is hard to imagine that prostitutes serving at the temple of Ishtar (who personified sexual force) were not viewed as playing a sacred role in the fertility cult. The translation "male prostitute" in Deuteronomy 23:18 is based on the use of the Hebrew word that usually means "dog." In the fourth-century B.C. Kition inscription, this term is used to describe a group that receives temple rations. It is possible, but not certain, that this refers to a temple official or priest. Recent study has shown that, at least by the Persian period (sixth-fifth century), dogs had some significant role in Phoenician *cultic practice. *Kalbu* (dog) has a more positive meaning of "faithful one," as can be seen in its use in personal names (like the biblical Caleb). (See Ex 34:16.)

23:19-20. charging interest. See the comment on Exodus 22:25. In Deuteronomy, though not in Exodus, it is explicitly stated that interest may be charged on loans to non-Israelites.

23:21-23. vows. In the Decalogue is the commandment that no one should "misuse the name of the Lord" (Ex 20:7). When a vow using God's name is spoken, it brings God into contract with that person. Thus any failure to carry out the stipulations of the vow breaks the contract and subjects that person to divine wrath (see Judg 11:35-36). The instruction about vows contained in Deuteronomy is a wisdom statement similar in form to Ecclesiastes 5:4-7. It is designed as a caution against unwise speech and has many parallels in ancient Near Eastern wisdom literature. For instance, the seventh-century B.C. *Assyrian *Instructions of *Ahiqar* notes that "a human word is a bird; once released it can never be recaptured." Similarly, the Egyptian *Admonitions of Amenemope* state that "to stop and think before you speak . . . is a quality pleasing to the gods" (c. 1100 B.C.). For more information on vows, see comments on Leviticus 27 and Numbers 30.

23:24-25. hand gleaning. Just as widows may glean in a ripe field or orchard to sustain themselves from the harvest provided by God, it is permissible for a traveler to refresh himself with a handful of fruit or grain, taken in passing from a field (see Deut 24:19-21). However, it is theft if a person purposefully harvests from a neighbor's field. The hospitality rights of travelers are also discussed in the Egyptian *Tale of the Eloquent Peasant* (c. 2100 B.C.).

24:1-22

Protection of Dignity

24:1-4. divorce. The basis for divorce in the

biblical text is the dissatisfaction of the husband with his wife (as in the *Middle Assyrian Laws). In that sense there must be clear grounds for the divorce (as in *Hammurabi and the *Middle Assyrian Laws). A "bill of divorcement" is drawn up specifying these particulars (see Jer 3:8), which, if it follows the manner of other legal proceedings, would be reviewed by a body of elders, and testimony would be given (as in Hammurabi's laws). For further information see the comment on Deuteronomy 22:29.

24:4. defilement. The very unusual form of the Hebrew verb used in verse 4 makes it clear that the woman in this case is the victim, not the guilty party. She has been forced to declare her uncleanness by the uncharitable actions of the first husband, and the second marriage demonstrates that another husband has been capable of accommodating whatever *impurity she was plagued with. The prohibition is aimed at preventing the first husband from marrying the woman again (in which case he might be able to realize some financial gain), whereas if the woman were impure the prohibition would be against her and would preclude a marriage relationship with anyone.

24:5. newlywed rule. This humanitarian law could be compared to the recruitment law in Deuteronomy 20:7. The latter exempts men who are betrothed from service, while this one specifically exempts the newly married man. In both cases the object is to give him time to father an heir and establish a household. However, the law in chapter 24 also concerns itself with the right of the individual to take pleasure in the joys of life before going to war.

24:6. millstone as necessary for survival. The millstone was made up of two stones, usually basalt. The lower millstone was heavy (sometimes nearly one hundred pounds), a flat or slightly curved stone upon which the grain was laid and then ground into flour with the upper, lighter stone (weighing four or five pounds), which was shaped to the hand of the worker. The poor, who could not buy processed grain from others, had to grind it themselves each day. If they were forced to give their millstone in pledge for a day's labor, they could be left without the means to feed themselves.

24:7. slave trade in ancient Near East. While slaves were bought and sold throughout the ancient Near East (see Gen 37:28-36), it was forbidden by law for persons to kidnap free citizens and sell them as slaves (compare Ex 21:16). Both the Deuteronomic law and *Hammurabi's laws condemned the kidnapper to death. In this way some restraint was placed on slave traders adding to their stock by simply taking stray children or unlucky adults. The vast majority of persons who did end up on the slave block either were sold to the slavers by their own families or were prisoners of war.

24:8-9. leprosy. See the comments on the diagnosis of skin diseases by the priests in Leviticus 13:1-46. The Deuteronomic injunction simply reinforces the prerogatives and authority of the priests to determine whether a person had the skin condition (probably psoriasis or other skin disease, since Hansen's disease was unknown in the Near East until the Hellenistic period) and, when it was cured, to perform a purification *ritual.

24:10-15. regulations concerning a pledge. It was a common business practice in the ancient Near East for a person to "make a pledge" (i.e., offer as collateral) a portion of his property as a guarantee of paying off a debt or other financial obligation. For instance, the Code of *Hammurabi and *Hittite laws stipulate the pledging of land or planted fields. Hammurabi and *Middle Assyrian laws both deal with the legal rights of persons who have been taken in pledge for a debt. What is distinctive about the Deuteronomic law, as compared to the older version in the *covenant code (Ex 22:26-27), is its emphasis on protecting both the humanitarian rights and the personal honor of the debtor. Thus the creditor may not enter the debtor's house to take an object in pledge. Instead, the debtor's dignity is preserved by maintaining the sanctity of his personal dwelling and by giving him the opportunity to choose what will be offered. In this way the poor are treated on a par with all other Israelites.

24:16. family culpability. This legal concept of personal responsibility is cited in 2 Kings 14:6 as the basis for sparing the sons of condemned men. What is unclear is this principle's relationship to the concept of *corporate responsibility, evidenced in Deuteronomy 13:12-17 and 21:1-9. In the latter cases, the entire nation was expected to maintain their ritual purity by eliminating contaminating elements. If individual and corporate responsibility were coexisting legal ideas, then the instances where entire families were slain because of the sin of the father (Josh 7:24-26; 2 Sam 21:1-9; 2 Kings 9:26) would be viewed as cases of divine punishment rather than the actions of the civil legal system.

24:17-18. justice for the vulnerable. Once again the legal rights of the "protected classes" of society (widows, orphans, resident aliens) are listed (see Ex 22:21-24; Deut 26:12).

The basis for protecting and providing for these persons is God's compassion during the exodus event, as well as the *covenant promise of a fertile land. The theme of legal protection for the vulnerable is quite common in the ancient Near East (Ex 23:6), especially in wisdom literature. For example, in the Egyptian *Teachings of Amenemope* appears the admonition not to "steal from the poor, nor cheat the cripple . . . nor poach on the widow's field." Among the titles that the "Eloquent Peasant" of Egyptian literature uses for the local governor is "father of the orphan" and "husband of the widow," reminding him of his responsibilities to uphold the rights of the weak in society.

24:19-22. provision for the needy. Since the bounty of the harvest is a reflection of God's *covenant promise, it is only just that the owners of fields and orchards share a portion of their harvest (see comments on Ex 22:22-24 and Deut 23:24-25). Such a provision served several purposes. It insured that the entire community participated in the humanitarian efforts to sustain the poor (see Lev 23:22). The practice of leaving a portion of a field unharvested may also be tied into the regular fallowing of fields (Ex 23:10-11), which allowed the land to rest and regain its fertility. In the ancient Near East in general it is likely that what was left in the fields was originally associated with sacrificial offerings to local *fertility gods. By designating this produce for the poor, rather than local deities, the biblical writer both removes the taint of false worship and establishes a practical welfare system.

25:1-19
Individual Rights

25:1-3. punishments meted out by courts. In complex societies, when a legal dispute arises, it is necessary to take it to the judicial system. This system must include judges and a place for the hearing of testimony. On the village level this simply means drawing together the "elders" at the gate or threshing floor (see Deut 21:18-21; Ruth 4:1-12). In towns and cities, the judges were officials appointed by the government, who could hear appeals from village courts (Deut 17:9-10) or try cases within their own jurisdiction (2 Sam 15:3; Jer 26:10-19). Their responsibility included hearing testimony, making a judgment based on the law and officiating to insure that punishment was meted out exactly as the law decreed (in the *Middle Assyrian laws the judges are expected to observe the punishment).

25:2-3. limitation on number of lashes. Ancient Near Eastern law (*Middle Assyrian laws and *Hammurabi) stipulate that both men and women be flogged for various crimes. The number of lashes ranges from twenty to sixty. In Deuteronomy, however, forty lashes serves as the upper limit. This limit may be based on either the symbolic value of forty or the degree of mutilation and personal humiliation permissible for an Israelite to bear without being permanently excluded from social and religious activities.

25:4. role of oxen in grain processing. Oxen were used to plow fields and to pull threshing sleds to crush the stocks of grain once they were harvested. At the threshing floor, the grain would be laid in such a way that a heavy sled could be driven over it. The hooves of the oxen would also aid in the processing of the grain. The injunction that the ox not be muzzled follows the humanitarian pattern of previous laws and allows the animal to eat a portion of the grain as its wage. Since few farmers owned their own team of oxen, they were provided by government officials (observed in *Mari texts) or hired from wealthier farmers or even other villages (as in *Lipit-Ishtar laws and *Hammurabi, which include statutes regarding the hire and liability for oxen).

25:5-10. levirate marriage. For additional information on this practice, see the comment on Genesis 38:6-26. *Hittite law 193 and *Middle Assyrian law 33 have very similar legislation, though neither offers an explanation in terms of providing a family heir or of passing on property in an orderly fashion. Both of these concerns are referred to in Deuteronomy. Thus the law, although it is also designed to provide the widow with the security attendant upon marriage and having a son, is primarily focused on the rights of the deceased husband. The obligation owed to the deceased by his brother (defined best as nearest male kin) can be an economic hardship (see Ruth 4). Thus the second part of this law allows the levir to renounce his obligation publicly and thus, judging by the example in Ruth, presumably allow the widow to marry whomever she wishes. Even though the levir must submit to public humiliation and be labeled uncooperative, the financial factors involved might make it justifiable.

25:7-8. elders at town gate. Because of the constant traffic at the gate as people went to and from the fields, it became the place of judgment and business transaction in ancient Near Eastern towns. Merchants would set up collapsible booths or simply sit under an umbrella while their customers came to them (see Lot in Gen 19:1). When a legal matter came

up, a group of the town elders either could be found sitting in the gate (Prov 31:23) or could be gathered from those passing by (Ruth 4:1-2).

25:9. removing sandal. Sandals were the ordinary footwear in the ancient Near East, but they were also a symbolic item of clothing, especially in the relationship between the widow and her legal guardian or levir. This is due to the fact that land was purchased based on whatever size triangle of land one could walk off in an hour, a day, a week or a month (1 Kings 21:16-17). Land was surveyed in triangles, and a benchmark was constructed of fieldstones to serve as a boundary marker (Deut 19:14). Since they walked on the land in sandals, the sandals became the movable title to that land. By removing the sandals of her guardian (Ruth 4:7), a widow removed his authorization to administer the land of her household.

25:11-12. law. There is a very close parallel to this law in the *Middle Assyrian code, in which the degree of physical punishment on the woman is dependent on whether one or both testicles are damaged. It would appear that punishment in the Deuteronomic law is based not on the degree of injury inflicted on the man's genitals but on the act of immodesty displayed by the woman. Her hand is severed because it is the offending appendage (see the comment on the laws of talion in Deuteronomy 19:21). Although she is attempting to help her husband, by grasping another man's genitals she has committed a sexual act that disonors her and her husband.

25:13-16. weights and measures standards. Commerce in a society without coined money is dependent on standard weights and measures. Examples of stone and metal weights, marked with specific symbols designating weight values, have been found in Egyptian tombs as well as at several sites in Israel and Mesopotamia (stylized lion-weights were found in eighth-century B.C. levels of Nimrud in *Assyria). The merchant who used a heavier weight to buy than to sell defrauded his suppliers and customers (see Prov 11:1; 20:23; Amos 8:5). Although this was condemned as an abhorrent practice, it was common enough in the ancient world. A good example is in the Egyptian *Tale of the Eloquent Peasant*, which accuses government officials and grain distributors of "shorting" the people.

25:17-19. Amalekites. See the comment on Numbers 24:20. The Amalekites wandered through vast stretches of land in the Negev, Transjordan and Sinai peninsula. They are unattested outside the Bible, and no archaeological remains can be positively linked to them. However, archaeological surveys of the region have turned up ample evidence of nomadic and seminomadic groups like the Amalekites during this period. Despite several attempts to eliminate the Amalekites (Ex 17:8-13; 1 Sam 15:2-3), they reappear as enemies of Israel on an alarming number of occasions (Judg 6:3; 1 Sam 30:1; 2 Sam 8:12; 1 Chron 4:43). Their refusal to aid the Israelites as they crossed Sinai functions, as it does here, as the basis for the original enmity, but subsequent disputes are probably based on territorial clashes and raiding of each others' villages.

26:1-18
First Fruits

26:1-15. first-fruit offering in ancient Near East. The religious principle involved in offering the "first fruits" (animal, vegetable or human) to the gods is based on the promotion of fertility. From earliest times the assumption was made that the gods created life in its various forms and that they expected to receive as their due offering the first of the harvest or the first fruit of the womb. Israelite religion tempered this by allowing for the redemption of some animals and all human firstborn males (Ex 13:11-13; Num 18:14-15). The giving of the first fruits could also take on a political character. The *Assyrian annals of Sennacherib (705-681 B.C.) contain his command that conquered peoples pay their first-fruit offerings of sheep, wine and dates to the gods of Assyria.

26:5. wandering Aramean. The creedal statement contained here emphasizes the nomadic character of Israel's ancestors. The original homeland of Abraham and his family is generally identified as Paddan Aram or Aram Naharaim (see comment on Gen 11:28). The mention of Arameans in relation to Abraham and Jacob is likely a reference to scattered tribes of peoples in upper Mesopotamia who had not yet coalesced into the nation of *Aram that appears in later texts. Based on other examples from *cuneiform literature, the name Aram may in fact have originally been that of a region (cf. Sippar-Amnantum of the *Old Babylonian period) that was later applied to people living there. For more on the Arameans see comment on Genesis 28:5.

26:8. mighty hand and outstretched arm as Egyptian metaphors. These two attributes of God also appear together in 4:34; 5:15; 7:19; 11:2; and 26:8, and in the prophetic literature (Jer 32:21; Ezek 20:33). Its origin may be found in Egyptian royal hymns and official correspondence. For example, in the fourteenth-

century B.C. *Amarna letters, Abdi-Heba, the governor of Jerusalem, refers to "the strong arm of the king" as the basis for his government appointment. Similarly, the Eighteenth-Dynasty "Hymn to *Osiris" equates Osiris's growing to majority with the phrase "when his arm was strong," and Haremhab's "Hymn to *Thoth" describes the moon god as guiding the divine bark through the sky with "arms outstretched."

26:9. milk and honey. See comment on 6:3.

26:11. sharing with Levites and aliens. Once again the "protected classes" are listed, and the command is made to share a portion of the sacrificial offering with them. In the case of Levites and aliens, neither group is allowed to own land, and thus both are economically impaired (see 1:16; 12:18; 14:29; 16:11). Their receipt of aid is balanced in the case of the Levites by their service as priests and in the case of aliens by their itinerant labor service.

26:12-15. tithing in ancient Near East. See the comments on tithing in 14:22-29 and Numbers 18:31-32.

26:12. third year, year of the tithe. See comment on 14:29.

26:12-13. provision for the needy. The four categories of needy persons are the Levites, aliens, widows and orphans. Because they lack either land or the protection of a household, it becomes the obligation of the nation to provide food and legal protection to these vulnerable people (see 1:16). In this case, the form of support which they are to receive is the tithe in the third year. However, it may be presumed that additional provision was made throughout the year, every year, for them (see Ruth 2:2-18).

26:14. eating while mourning or unclean. This threefold litany of ritual purity and obedience, similar in form to Job's "oath of clearance" (Job 31), maintains that the offerer has not contaminated the sacred meal by being in an impure state. For example, persons who had come in contact with the dead were considered unclean (Lev 5:2). *Hittite *ritual for the preparation of the king's food and meal offerings for the gods included meticulous attention to physical cleanliness as well as the exclusion of ritually impure animals (dogs and pigs) and ritually unclean persons. The Deuteronomic statute may also be tied to ritual meals associated with the ancestor *cult or with Canaanite or Mesopotamian *fertility rituals (see women mourning for *Dumuzi/Tammuz in Ezek 8:14).

26:14. offerings for the dead. See the comments on Numbers 3 and Deuteronomy 14:1-2 on *rituals associated with the ancestor *cult. In this case the assurance is given that the sacrificial meal has not been contaminated by unclean persons or polluting actions, such as giving a portion as an offering to the dead. This might include food provided for the spirit of a dead person, to strengthen it for its journey to Sheol (as seen in Tobit 4:17) or to learn something of the future (Deut 18:11). In addition, an association between eating "sacrifices offered to the dead" and the worship of the Canaanite god *Baal is made in Psalm 106:28. Either purpose would place reliance on powers other than *Yahweh, and both were therefore condemned by the biblical writer as polluting and leading to destruction.

27:1-8
Setting Up the Altar on Mount Ebal

27:2. monuments on stones coated with plaster. Ancient writing techniques included ink on papyrus (Egypt), a stylus on clay tablets (Mesopotamia), an inscribing tool on stone and a stick on wax-coated wooden boards. Engraving in stone could be very time-consuming, so one variation for longer inscriptions was to coat the stone surface with plaster and then write in the soft plaster. Inscriptions of this type have been found in the Palestine region at Deir Allah (see comment on Num 22:4-20) and Kuntillet Ajrud (see the comment on Asherah poles in 7:5).

27:4. Mount Ebal. Gerizim and Ebal are the mountains that flank the town of Shechem in the central hill country, Gerizim (elevation 2,849 feet) to the south, Ebal (3,077 feet) to the north. The altar spoken of here is actually constructed in Joshua 8. Some archaeologists believe that the remains of this altar have been found. It is a structure on one of the peaks of Mount Ebal about twenty-five by thirty feet with walls about five feet thick and nine feet high made of fieldstones. The fill is dirt and ashes, and what appears to be a ramp leads up to the top. The structure is surrounded by a courtyard, and animal bones litter the site. Pottery on the site goes back to 1200 B.C.

27:5. altar built with fieldstones; no iron tool. These instructions parallel those found in Exodus 20:25. Iron tools were used for dressing the stone—shaping it to make a sturdier structure. Altars of dressed stone have been found in Judah (the best example is at Beersheba). This altar was not supposed to be attached to a sanctuary, and perhaps the use of unhewn stone helped keep that distinction. There is a fieldstone altar in the court of the Arad fortress sanctuary dating from the monarchy period.

27:6-7. purpose of the altar. It appears that

this altar was not intended to be a permanent installation (another reason to use fieldstones), but was set up for the purpose of the celebration ceremonies of this occasion. It is specifically fellowship offerings (see comment on Lev 3) that are offered here—no purification or reparation offerings.

27:8. law on monumental stones. *Hammurabi's laws were inscribed on a diorite stele eight feet tall and displayed publicly for all to see and consult. Royal inscriptions often were placed in prominent locations. Memorial inscriptions in our culture are used on tombstones, cornerstones of buildings and at various historical sites. The purpose in these cases is for people to see, take note and remember. Treaty documents in the Near East, in contrast, were often stationed in holy places that were not accessible to the public. Here the purpose was to put the agreement in writing before the gods in whose name the agreement had been sworn.

27:9-26

The Recitation of Covenant Curses

27:12. Mounts Gerizim and Ebal. See comment on 11:29.

27:15-26. curse recitation. The curses here are not statements of what will happen to the one breaking the *covenant but statements calling down unspecified curses on particular types of covenant-breaking conduct. This section constitutes a solemn oath entered into by the people concerning secret violations. Such oath-taking ceremonies regularly accompanied international treaties.

27:15. use of idols. See comment on 4:15-18.

27:16. dishonoring parents. Honoring and respecting parents consists of respecting their instruction in the *covenant. This assumes that a religious heritage is being passed on. The home is seen as an important and necessary link for the covenant instruction of each successive generation. Honor is given to parents as representatives of God's authority and is for the sake of covenant preservation. If parents are not heeded or their authority is repudiated, the covenant is in jeopardy. In this connection, notice that this commandment comes with covenant promise: living long in the land. In the ancient Near East it is not the religious heritage but the fabric of society that is threatened when there is no respect for parental authority and filial obligations are neglected. Violations would include striking parents, cursing parents, neglecting the care of elderly parents and failing to provide adequate burial. (See Ex 20:12.)

27:17. importance of boundary stones. See comment on 19:14.

27:19. justice for vulnerable classes. A major aspect of Israelite legal tradition involves making provision for groups classified as weak or poor: widows, orphans and the resident alien (see Ex 22:22; Deut 10:18-19; 24:17-21). Concern for the needy is evident in Mesopotamian legal collections as early as the mid-third millennium and generally addresses protection of rights and guarantee of justice in the courts.

27:20-23. incest and bestiality. Incest was abhorrent in most other societies as well (see, for example, the prohibitions in *Hittite laws). The exception is Egypt, where it was a common practice in the royal family (but little attested elsewhere) as a means to strengthen or consolidate royal authority. This concept is also seen among *Elamite kings. Bestiality was practiced in the context of *ritual or magic in the ancient Near East. It occurs in the mythology of *Ugarit (and was probably ritually imitated by the priests) and is banned in legal materials (especially the Hittite laws).

27:25. taking bribe to kill innocent. What is uncertain in this context is whether the curse concerns a payment made to an assassin (thus giving a variation on the previous verse) or a bribe made to a judge or witness in order to condemn an innocent man of a capital crime and thus have him executed (cf. 1 Kings 21:8-14). The temptation for judges and government officials to accept bribes is found in every time and place (see Prov 6:35; Mic 7:3). Taking bribes becomes almost institutionally accepted in bureaucratic situations as competing parties attempted to outmaneuver each other (see Mic 3:11; Ezra 4:4-5). However, at least on the ideal level, arguments and penalties are imposed to eliminate or at least lessen this problem. Thus *Hammurabi's code (law 5) places harsh penalties on any judge who alters one of his decisions (presumably because of a bribe), including stiff fines and permanent removal from the bench. Exodus 23:8 forbids the taking of bribes and the perversion of justice as an offense against God, the weak and innocent, and the entire community (see Is 5:23; Amos 5:12).

28:1-14

Covenant Blessings

28:2-11. ancient Near Eastern treaty curses and blessings. Curses and blessings are standard elements of the ancient treaties of the third, second and first millennia B.C., though they vary in specificity and proportion from

one period to another. Since the treaty documents were confirmed by oath in the names of deities, the curses and blessings were usually those that were to be brought by the deities rather than by the parties to the treaty. Here that is of little difference because God is a party to the *covenant rather than simply the enforcer of it. Many of the curses found here are found in similar wording in the *Assyrian treaties of the seventh century B.C. Similarities can also be seen in the Atrahasis Epic, where, prior to sending the flood, the gods send various plagues on the land. These include the categories of disease, drought and famine, sale of family members into slavery, and cannibalism.

28:15-68

Covenant Curses

28:22. pathology in the ancient Near East. Affliction by various diseases is one of the curses found in *Assyrian treaty texts. Pathology in the ancient Near East was always considered in the light of supernatural cause and effect. Generally either hostile demons or gods angry at the violation of some taboo were considered responsible. "Wasting disease" probably included tuberculosis (rare in ancient Israel) as well as other diseases characterized by the same outward symptoms; verse 22 also includes categories of diseases characterized by fevers and inflammation; verse 27 describes a variety of skin diseases; and the symptoms of verse 28 are common with syphilis (in the ancient Near East generally the nonvenereal type). The categories of pathology can therefore be seen to be symptom related.

28:23. bronze sky, iron ground. An *Assyrian treaty curse from the seventh century B.C. (Esarhaddon) is very similar to this, not only using the analogies of bronze and iron but elaborating that there is no fertility in iron ground and no rain or dew comes from bronze skies.

28:25-29. devoured, infected, insane, plundered. Esarhaddon's treaties likewise include a series very similar to this and in nearly the same order. These, then, were typical ingredients of a curse section of a document such as this.

28:27. boils. Boils again represent a symptom, not a disease. The symptoms are not given in enough detail for specific diagnosis (guesses have included smallpox, chronic eczema, skin ulcers, syphilis and scurvy), but it is the symptom more than the disease that is the curse. This same symptom is the sixth plague in Egypt (Ex 9:8-11) and the affliction that tormented Job (Job 2:7-8), as well as being named among the skin diseases in Leviticus 13 (vv. 18-23).

28:40. olives dropping off. The oil of the olive is derived only from the black, ripe fruit. Olive trees normally lose a large percentage of the potential fruit due to the blossoms or the green olives dropping off the tree. The small proportion left can be further depleted by drought or disease, causing heavier dropping off. This curse is not found in *Assyrian texts because sesame seed oil was used in Mesopotamia.

28:42. locusts. The Aramaic Sefire treaty has a seven-year locust curse included in its list. Locusts were all too common in the ancient Near East and were notorious for the devastation and havoc they brought. The locusts breed in the region of the Sudan. Their migration would strike in February or March and would follow the prevailing winds either to Egypt or Palestine. A locust will consume its own weight each day. Locust swarms have been known to cover as many as four hundred square miles, and even one square mile can teem with over one hundred million insects.

28:48. iron yoke. Yokes, usually made of wood, consisted of a bar across the nape of the animals' necks. The bar had pegs placed down through it on either side of each animal's head. The pegs were then tied together under the chin. The iron yoke would likely be one that featured iron pegs, the part most liable to break.

28:51. grain, new wine, oil as staple products. Besides being the three most significant staple products of the region, grain, new wine and oil represent the main produce of the three major harvesting seasons (grain in the spring-summer, grapes in the fall and olives in the winter). The oil referred to here is olive oil. It was also one of the principal exports of the region, since olives were not grown in either Egypt or Mesopotamia.

28:53. cannibalism. Cannibalism is a standard element of curses in *Assyrian treaties of the seventh century B.C. It was the last resort in times of impending starvation. This level of desperation could occur in times of severe famine (as illustrated in the Atrahasis Epic) or could be the result of siege, when the food supply had become depleted, as mentioned in this text and anticipated in the treaty texts. Siege warfare was common in the ancient world, so this was not as rare an occasion as might be presumed. An example of this drastic measure can be seen in the biblical record in 2 Kings 6:28-29.

28:56. touch the ground with the sole of her foot. The author is showing that the most gen-

teel, refined woman imaginable, one who would not even dream of walking around barefoot, would be so desperate that she would begin cannibalizing her family.

28:58. book. We tend to think of a book as having pages, a binding and a cover. Books of that sort did not exist in the ancient world. The term used here can refer to any document from inscription to scroll, from papyrus to clay tablet to stone.

28:68. returning to Egypt in ships. *Assyrian kings of the seventh century coerced their vassals into supplying troops for their military campaigns. One way then for Israelites to return to Egypt in ships would be in the Assyrian campaigns launched from the Phoenician coast in which they were obliged to take part. This represents continued oppression by foreign enemies, as the curses have detailed. Another possibility would include falling victim to Egypt's slave trade in Syro-Palestine, where the slaves were often transported by ship.

29:1-29
Covenant Renewal

29:5. clothes and sandals not wearing out. See comment on 8:4.

29:6. no bread or wine. The Lord's provision for them instead of bread and wine was manna and water. The inclusion of strong drink here is unusual—the only individuals restricted from this were serving priests (Lev 10:9) and those under a *Nazirite vow (Num 6:3).

29:7. Sihon and Og. These battles are initially recorded in Numbers 21. Sihon is known only from the biblical records, and archaeology has little information to offer regarding his capital city or his kingdom. There is also no extrabiblical information from historical sources or archaeology to shed light on Og. For information about Heshbon and Bashan, see comments on Numbers 21:25-28, 33 and Deuteronomy 3:1.

29:19-21 the secret violator. The concept that one who keeps a violation secret will nevertheless be vulnerable to the curses is found in Aramaic (Sefire) and *Hittite treaties, where the curse includes the destruction of the violator's name (family).

29:23. land of salt and sulfur. Salt and Sulfur (sometimes translated "brimstone"; see Gen 19) are both minerals that are detrimental to the soil. They are the two most evident in the Dead Sea region known for its infertility and associated with the destruction of Sodom and Gomorrah.

29:24-25. reason identified for punishment. This same question and similar answer are found in an *Assyrian text of the seventh century where the Assyrian king Assurbanipal describes his reasons for putting down an Arab revolt that had violated the terms of a treaty. The Arabs had broken the oaths they made before the Assyrian gods.

29:29. secret things. In the ancient world there were areas of knowledge that were believed to belong only to the gods. In a hymn to Gula, the craft of a physician is identified as a secret of the gods.

30:1-20
Response to Curses and Blessings

30:2-5. forgiveness clause. Unlike the treaties of the ancient Near East, the *covenant as represented in Deuteronomy has a forgiveness clause that offers second chances when the covenant has been violated. Repentance and recommitment to the terms of the covenant would result in restoration. Such mercy was not impossible with ancient treaties, but there is no example of such a possibility being explicitly included in the written document.

30:6. circumcise the heart. This is of course not asking for a physical surgical procedure. *Circumcision had been adopted as a sign of commitment to the *covenant and acceptance of its terms. As such it could be applied to the heart as a reflection that the outer *ritual had permeated the inner being.

30:19. heaven and earth as witness. See comment on 4:26.

31:1-8
Commissioning of Joshua as Moses' Successor

31:2. life expectancy in ancient Near East. In Egypt the ideal length of life was 110 years; in a wisdom text from *Emar in Syria it was 120. Examination of mummies has demonstrated that the average life expectancy in Egypt in this general period was between 40 and 50, though texts speak of some reaching 70 and 80. Mesopotamian texts of several different periods mention individuals who lived into their seventies and eighties, and the mother of the *Babylonian king Nabonidus was reported to have lived 104 years.

31:4. Sihon and Og. For details on these two kings and the battles against them, see comments on Numbers 21.

31:9-13
Instructions for the Reading of the Law

31:9. writing down laws. From the laws of

*Ur-Nammu (probably compiled in actuality by his son Shulgi) around 2000 B.C. through the laws of *Lipit-Ishtar, *Eshnunna and *Hammurabi and the *Hittite laws in the first half of the second millennium, to the *Middle Assyrian Laws toward the end of the second millennium, rulers made it a practice to compile laws and write them down as evidence that they were fulfilling their duty of maintaining justice.

31:10. reading the law every seven years. Several *Hittite treaties contain clauses requiring periodic public reading of the document—one stipulates three times a year, while others are less specific, saying "always and constantly."

31:10. year of canceling debts. The sabbatical year featured remission of debts. See comment on 15:1-6.

31:10. Feast of Tabernacles. The Feast of Tabernacles is the fall harvest feast that commemorates the wandering in the wilderness. See comment on 16:13-17.

31:14-29

Future Rebellion

31:15. pillar at the entrance of the tent of meeting. Prior to the construction of the tabernacle in Exodus, the tent of meeting was outside the camp and served as a place of revelation (see the comment on Ex 33:7-10). However, now that the tabernacle is in operation, it also is referred to as the tent of meeting. The Lord again appears in a pillar of cloud. In the ancient world a bright or flaming aura surrounding deity is the norm. In Egyptian literature it is depicted as the winged sun disk accompanied by storm clouds. *Akkadian uses the term *melammu* to describe this visible representation of the glory of deity, which in turn is enshrouded in smoke or cloud. It has been suggested that in Canaanite mythology the *melammu* concept is expressed by the word *anan,* the same Hebrew word here translated "cloud," but the occurrences are too few and obscure for confidence. See comment on Exodus 13:21-22.

31:22. covenant song. Songs of all sorts are known throughout the ancient Near East from the first half of the third millennium. One *Assyrian list of songs about a century before David includes titles of about 360 songs in dozens of different categories. Songs concerning the *covenant are also present in the book of Psalms (e.g., Ps 89).

31:26. contents of the ark. The only objects placed inside the ark were the tablets with the law on them (10:2, 5). In Egypt it was common for important documents that were confirmed by oath (e.g., international treaties) to be deposited beneath the feet of the deity. The Book of the Dead even speaks of a formula written on a metal brick by the hand of the god being deposited beneath the feet of the god. There were a number of objects placed *before* the ark, including a jar of manna (Ex 16:33-34) and Aaron's rod that budded (Num 17:10). Here the book of the law is added to them.

32:1-43

The Covenant Song of Moses

31:30. covenant song. See comment on 31:22.

32:4. rock metaphor. Used in 2 Samuel 22:3 as a divine epithet, *rock* could also carry the meaning "mountain" or "fortress." It is used in Israelite names both as a metaphor for God (Zuriel, Num 3:35, "God is my Rock") and as a divine name (Pedahzur, Num 2:20, "Rock is my redeemer"). It is used of other deities in *Aramaic and *Amorite personal names, and its application to other gods is hinted at here in verses 31 and 37. As a metaphor it speaks of safety and deliverance.

32:8. Most High (Elyon). In the Old Testament the term *Elyon* is usually used as an epithet for *Yahweh (see comments on Gen 14:17-24). There is no convincing evidence thus far of *Elyon* as the name of a deity in the ancient Near East, but it is fairly common as an epithet for various gods, particularly *El and *Baal, the principal gods in the Canaanite pantheon.

32:8. deity granting nations inheritance. In Israelite theology *Yahweh had assigned each nation its inheritance (5:2, 9, 19; Amos 9:7), though there is also some accommodation to the concept that each god gave territory to his people (Judg 11:24). It was not uncommon for kings in the ancient Near East seeking expansion of territories to claim that deity had assigned or delivered land to them. In Israel the territorial assignment was uniquely based on a *covenantal bond with *Yahweh.

32:10. apple of the eye metaphor. "Apple" is the English idiom, not the Hebrew one. The pupil is referred to here as a sensitive, protected and significant part of the body.

32:11. eagle behavior. Though the eagle cannot be ruled out, the bird named here is more usually taken to be the griffin vulture, with a wingspan of eight to ten feet. While Bible reference books often report how the eagle carries its young on its wings when they grow weary of flying, or catches them on their wings when they are fluttering in failure, this behavior has been difficult for naturalists to confirm through observation. In fact most ea-

gles and vultures do not take their first flight until three or four months of age, at which time they are nearly full grown. Furthermore, observations by naturalists have consistently confirmed that the first flight is usually taken while the parents are away from the nest. Alternatively, if the metaphor here concerns a vulture, it may be political in nature. In Egypt, Nekhbet was the vulture goddess who represented Upper Egypt and served as a protecting deity for Pharaoh and the land. Israel was protected in Egypt until Yahweh brought them to himself. Nekhbet was depicted as particularly maternal and was believed to assist at royal and divine births. Significant building of her temple in el-Kab (capital of third nome in Upper Egypt) took place in the Eighteenth Dynasty toward the end of the Israelite stay in Egypt, so we know that she was a popular goddess at that time. It is conceivable that the imagery of this verse was not drawn from actual observation of the behavior of vultures but from elements in the depiction of the vulture goddess, Nekhbet, whose characteristics are here transferred to *Yahweh (see v. 12, "no foreign god was with him"). The first half of the verse would then introduce the metaphor of the vulture that cares for and protects its young. The second half of the verse speaks of the Lord's care and protection of his people using the imagery that was familiar from Egyptian metaphors of care and protection. Additionally, in Mesopotamia the *Tale of Etana* includes an eagle that carries *Etana and then repeatedly lets him go and catches him on its wings. (See Ex 19:4.)

32:13. heights of the land metaphor. Cities were typically built on hills because of their natural defensibility, and armies chose hills as strategic points of control. The metaphor of treading on the heights therefore is one that speaks of victory and security.

32:13. source of honey and oil. While most honey spoken of in the Old Testament is the syrup from the date palm, mention of the rock here suggests bees' honey from honeycombs in the rocks. Olive trees, which were the main source of oil, were able to grow in rocky soil because they could thrive with minimal amounts of water.

32:14. rams of Bashan. The region of Bashan (see comment on Deut 3:1) was well known for its choice livestock. The prime grazing land of the area provided a natural diet that produced animals of the highest quality.

32:15. Jeshurun. The word *Jeshurun* is built from a root related to the one used in the name Israel, and it is a poetic way to refer to Israel.

32:17. sacrifice to demons. This word for demon is used elsewhere in the Old Testament only in Psalm 106:37, but it is a well-known type of spirit/demon *(shedu)* in Mesopotamia, where it describes a protective guardian mostly concerned with the individual's health and welfare. It is not the name of a deity, but a category of being (like *cherub* would be in the Old Testament). A *shedu* could destroy one's health just as easily as it could protect it, so sacrifices to keep it placated were advisable. They are depicted as winged creatures (similar to the cherub; see comments on Gen 3:24 and Ex 25:18-20), but they do not have idols (as the gods have idols) by which they are worshiped (see comment on Deut 4:28 for how this worked).

32:22. foundations of the mountains. In the ancient worldview the netherworld, the realm of the dead, was down beneath the earth where one found the foundations of the mountains, especially those mountains that were believed to support the dome of the heavens. Though the Israelites clearly use the language of this conceptual worldview, it is difficult to distinguish between beliefs and poetic usage.

32:23-25. divine punishment in the ancient Near East. Famine, disease, wild beasts, war —these are the tools of the gods when they desire to punish their human subjects. Throughout history and literature the apparent randomness of these "acts of God" led them to be considered signs of divine displeasure. Atrahasis and the *Gilgamesh Epic both contain accounts of the gods trying to reduce human population through these means prior to the flood. In contrast to the Old Testament, where the offenses are identified that would lead to these judgments, in the ancient Near East the judgments would indicate only that some deity was angry about something, leaving the people to figure out what offense might have been committed. Examples include the *Hittite prayer of Mursilis, where he prays that a plague might be abated, several *Sumerian and *Akkadian texts of lamentations over the fall of a major city, and Egyptian Wisdom Admonitions (Ipuwer). These all view various national calamities as the punishment of the gods. Perhaps the most striking example is the Erra Epic, in which civilization itself is threatened by the anarchy and havoc wreaked by the violence of Erra (the *Babylonian deity Nergal). The text of Deuteronomy 32, however, must also be understood in the context of its treaty form, where the punishments are not random, arbitrary or unexplained. Rather, they are commensurate with

the violation of the terms of the agreement.

32:33. poisonous serpents. The allusions in the second half of verse 24 are generic, speaking of carnivorous or ferocious beasts on the one hand and creatures with poisonous bites or stings on the other. The latter are not limited to snakes, of which there were a few poisonous species around, but could also include scorpions.

32:38. food and drink of the gods. A common view of sacrifices in the ancient Near East was that they served as food and drink for the gods, who needed their sustenance (see comments on Lev 1:2). This view was rejected in the ideal Israelite worldview (see Ps 50:7-15), though many Israelites would have probably accepted the concept. This text is mocking the idea that gods who have needs would be adequate for deliverance.

32:39. no pantheon. Most religions of that day had a pantheon, a divine assembly that ruled the realm of the gods, the supernatural and, ultimately, the human world. There would typically be a deity who was designated head of the pantheon, and he, like the other gods, would have at least one consort (female partner). The first commandment forbids Israel to think in these terms. *Yahweh is not the head of a pantheon, and he does not have a consort—there are no gods in his presence. This verse goes further to insist that there is no other god exercising power or competing for jurisdiction and authority. Just as blessing and prosperity is not the result of a benevolent deity's managing to hold back demonic forces and chaos, so punishment is not the surge of malevolent power to overwhelm the protector. All happens within Yahweh's plan—an impossible concept in the pagan polytheism of the rest of the world.

32:44-52
Conclusion and Instructions to Moses

32:49. Abarim range and Mount Nebo. The Abarim range extends east of the mouth of the Jordan River and on around the northern end of the Dead Sea (see Deut 32:49). It forms the northwestern rim of the Moabite plateau. The specific peak in this range from which Moses will view the Promised Land is Mount Nebo, 2,740 feet in height. Pisgah and Nebo are identified as the two peaks of Jebel Shayhan, about five miles northwest of Medeba and about a mile and a half apart. They stand about ten miles from the Jordan River.

32:50. Mount Hor. The death site for Aaron (although 10:6 identifies his death with Moseroth). The traditional location is near Petra at Jebal Nabi Harun, but this is not "on the border of Edom." Another possibility is Jebal Madrah, west of Kadesh and near the Edomite border, but it lacks sufficient water sources.

32:51. Meribah Kadesh in the Desert of Zin. Kadesh Barnea is in the wilderness of Zin (see comment on Num 13:26). This is where the incident in Numbers 20 occurred when Moses struck the rock for water. Meribah means "quarreling," and it is a name applied to both instances when water was brought from the rock.

33:1-29
The Blessing on the Tribes

33:1. patriarchal pronouncements. In the biblical material the patriarchal pronouncement generally concerns the destiny of the sons with regard to fertility of the ground, fertility of the family and relationships between family members. Blessings or curses pronounced by the patriarch of the family were always taken seriously and considered binding, even though they were not presented as prophetic messages from God. They were usually given when the patriarch was on his deathbed. This chapter is most reminiscent of Genesis 49, when Jacob blessed his sons, the forefathers of the tribes Moses now blesses.

33:2. Seir. Seir is generally considered the mountainous central region of Edom (elevations generally over 5,000 feet) between Wadi al-Ghuwayr on the north and Ras en-Naqb on the south.

33:2. Mount Paran. Mount Paran is considered by most a poetic variation for Mount Sinai/Horeb.

33:5. Jeshurun. See comment on 32:15.

33:8. Thummim and Urim. These were devices used by the priests to give *oracular messages. See the comment on Exodus 28:30.

33:17. bull/ox metaphor. The bull and ox are symbols of fertility and strength. As such, the latter term is used as a title of *El, the head of the Canaanite pantheon. Both elements are included in this blessing on the Joseph tribes, Manasseh and Ephraim. One *Ugaritic text describes the gods *Baal and Mot as strong, goring like wild bulls, and the *Babylonian king *Hammurabi describes his own military might in terms of an ox goring the foe.

33:22. Bashan. The region of Bashan is centered in the area of the upper Yarmuk River, east of the Sea of Galilee. Its northern border is Mount Hermon. Dan's territory was originally in the south by the Philistine coast, but the

Danites moved north to the region of the city called Dan north of the Sea of Galilee and contiguous to Bashan.

33:24. bathing feet in oil. Washing feet was a constant need and an act of hospitality in the dusty terrain. Only the wealthy and genteel, however, would regularly make use of (olive) oil for the washing. Compare John 12:3. This metaphor speaks of prosperity.

33:25. bolts of the gates. The locking system on gates and doors usually included a bar (wood or metal) that slid into openings in the posts. Brackets that held the bar firmly to the doors are probably what is referred to by the "bolts" of this passage. The gate could be breached by applying a battering ram to the center where the doors met in order to break the bar. Brackets would make the bar much harder to break, but they in turn could break. Brackets of bronze or iron could make a gate much harder to break through.

34:1-12

The Death of Moses

34:1. Nebo and Pisgah. See comment on 32:49.

34:1-3. view from Mount Nebo. At this point the Mediterranean Sea is about sixty miles west, but it cannot be seen because the hills on the west side of the Jordan obscure the view. On a clear day one can see Mount Hermon, about a hundred miles to the north, the mountains to the northwest that flank the Jezreel Valley (Tabor and Gilboa), the mountains of the central hill country (Ebal and Gerizim) and to the southwest as far as Engedi.

34:1-3. the boundaries of the land. Even though the land has not been distributed yet, this viewing of the land is described partially by tribal territories, to be distinguished from the geographical descriptions given in Deuteronomy 1:7. The description moves from Moses' point toward the north and then counterclockwise through the land.

34:6. Baal Peor. The Wadi Ayun Musa at the foot of Mount Nebo is generally considered to be the Valley of Beth Peor, with the site Khirbet Ayun Musa as probably the town.

34:7. apocryphal literature concerning the death of Moses. Jude 9 speaks of a dispute over the body of Moses, and apocryphal and rabbinic literature speculated about it in a number of places, particularly in *The Assumption of Moses* (of which manuscripts are no longer known) and *The Testament of Moses* (known from one Latin manuscript from the sixth century A.D.). The former speaks of Moses ascending directly to heaven, while in the latter it is implied that he dies a natural death. Deuteronomy makes it very clear that he died, and there is nothing remarkable in the account. The text leaves it somewhat ambiguous who buried Moses, but it is clear that the grave site is unmarked and unknown.

34:8. plains of Moab. This is the broad plain or steppe region immediately north of the Dead Sea and east of the Jordan River, just opposite the "plains of Jericho" (Josh 4:13). Its location serves as the jumping-off point for entrance into Canaan. (See Num 22:1.)

HISTORICAL LITERATURE

Introduction

We find a wealth of ancient Near Eastern material to illuminate the historical literature of the Old Testament—far more than for other genres of Old Testament literature. Among these ancient resources are items we may classify as royal inscriptions, chronographic texts and historical literary texts. *Royal inscriptions* preserve an account of the achievements of kings, particularly their military exploits and their building projects. *Chronographic texts* delineate a sequence of historical events ranging from simple lists of kings to court chronicles or military annals. *Historical literary texts* are mostly poetic, epic narratives that recount the experiences of kings. These texts are occasionally carved in stone (on cliff faces or on stone reliefs or statues) but are more often inscribed on clay tablets. Some chroniclers kept records on small rectangular shaped tablets, while others used large slabs or even barrel, cylinder or brick-shaped clay polygons.

If a record of events is to be preserved for future generations, it must at some point become part of a text. But writing that record as a text requires the compiler, whether consciously or subconsciously, to work under a set of guiding principles. We call this set of guiding principles *historiography,* and it will vary from culture to culture, even from historian to historian. How history writers feel about the appropriate form, content and structure for preserving a record of events contributes to this historiography, but these are only surface issues. What is important about the events of the past? Why is the account being compiled? How do events come to pass? What causes or forces drive history? Are there patterns in history? Is there design in history? The answers to these questions play a significant role in determining how history is written. It goes without saying that different individuals, different *cultures,* will answer such questions in different ways. Thus any

given historical record represents a particular perspective about the events of the past. The shape of any given historiography is determined by the questions the compiler seeks to answer. We cannot legitimately speak of "right" perspectives or "wrong" perspectives concerning history. To do so would assume a commonly accepted absolute criterion. Perspectives, perceptions and feelings exist or do not exist. It is rarely a simple matter to label them right or wrong. In this light *any* historiography should be referred to as "perspectives on history." Any historiography must in some sense be viewed as an editorial column.

When we study historiography, we must discover what purposes authors have in writing their documents. Otherwise we will not know how to use their work as we reconstruct the history of a period. It is important not to assume that their ideas of writing history were the same as current western ideas. When history is written in Western culture, it is often understood to be history for history's sake (even though that is sometimes not the case). One of the values of contemporary society is the belief that it is essential to record, evaluate and thereby preserve the events of the past—just for the record. Along with that comes a desire to reconstruct "what really happened" and to identify cause and effect.

In most ancient historiography "what really happened" appears to be far less important. A large majority of the documents that supply us with historical information are generated through the sponsorship of the royal house. These documents are designed to serve the king, not the objective interests of the historian. Royal reputation is a far greater value than reliability. Our modern terminology calls this propaganda. The historiography of the ancient Near East, whether represented in royal inscriptions or chronicles, king lists or annals, has by all accounts a propagandistic agenda. As with campaign speeches of our day, truth can be useful to the royal house, but it is not its prime objective. Propaganda is greatly enhanced when it has truth in its favor; but if it only has statistics or other random "facts" it will make do. The perspective on truth that these texts take will present the king in the best light. The recorder is trying to provide answers to the question "Why should the king be considered good and successful?" In most cases it cannot be determined whether concealment or disinformation are part of the strategy, but negative information is uniformly lacking. When accounts of a particular battle are available from both sides, it is not odd for each to claim victory. It was common practice for a king to alter inscriptions by putting his own name in place of his predecessor's (even if it was his father). An ancient king would rarely admit to a defeat, and negative assessments of a reign come rather from later kings who may be seeking only to legitimate their own rule. Historiography among ancient cultures was largely a self-serving enterprise.

Israel's historical literature has features similar to chronographic texts and contains a few isolated examples that can be compared to royal inscriptions or historical literary texts. But the purpose of Israel's literature is theological. It is selective, as all historical writing must be, and it has an agenda. It is not interested in preserving events for history's sake. Its purpose is to document Yahweh's action in history and his control of the flow of events. In these documents the nation is more important than the king, and God is the main focus. Israel's identity and function as Yahweh's covenant people is the backbone of the entire historical cor-

pus. Thus we could say that whereas the objective of much of ancient historiography is to offer the desired understanding of the accomplishments of the king, the objective of Israelite historiography is to offer the desired understanding of the accomplishments of God.

It is also important to realize that the ancient world had a different view of deity's role in history than is common in Western culture. Until the Enlightenment it was common for a person's worldview to be thoroughly supernaturalistic. The role of deity was admitted, and the belief in occurrences that defied natural explanation was commonplace. With the Enlightenment a significant shift occurred. The resulting historical-critical method suggested that we should accept as true only that which can be empirically proven. The new historiography was concerned only with natural cause and effect in history. This is largely the view adopted by our contemporary Western culture.

The worldview of society around us thus differs dramatically from the worldview of the ancient historians. The way in which history is written today would seem quite foreign to ancient authors. The simple recital of facts and events would be meaningless to them unless the information was put to some use. While the ancients would not deny the existence of natural cause and effect in history, they were much more interested in the divine role in history. A modern historian's response to Israelite historiography might be "it has not provided information that is reliable"; the Israelite historian's response to modern historiography might be "it has not provided information that is worthwhile."

When we study the historiography of a pre-Enlightenment culture, then, it is important to recognize the worldview that drives that historiography and to respect the integrity of it. The worldview represented in Israel's historiography is one in which the directive activity of God is of primary importance. This view extends far beyond the recognition of occasional supernatural interventions to see God's activity in natural occurrences as well. In fact, it insists that all events are woven into the plan of God, which is the driving force of history.

Israel's historiography holds much in common with neighboring ancient cultures. Historical records in Mesopotamia, while not claiming to be revelation from deity, nonetheless show great interest in discerning the activities of the gods. The polytheistic nature of Mesopotamian religion, however, impedes the development of any concept of a singular divine plan encompassing all of history. At best the reigning dynasty may identify a divine plan in establishing and sustaining that dynasty. Some documents look back into the distant past to see a pattern that led to the present (e.g., the Weidner and the Akitu Chronicles). These typically concern not what the deity has done but what has been done to the deity. In Mesopotamia it is assumed that deity plays an active part in the cause and effect process that makes up history. The gods are capable of intervention and are expected to intervene. The causation of the gods and the intervention of the gods are understood to be ad hoc rather than in accordance with any overarching plan or grand design. As in the Mesopotamian view, Israel counted God as the cause of every effect and as actively intervening to shape events. Israel's record of history was not intended to be a record of events but a record of the ways in which God had acted in history. There is no secular Israelite historiography.

In the supernaturalistic view of the ancient world, events were revelation, the result of divine activity. Unfortunately, those events required interpretation to discern why the gods were doing what they did. Such interpretation was not provided in the polytheistic cultures surrounding Israel. Mesopotamians were left to their own devices to discern what the gods were up to. In Israel's view, not only events but historiography was revelation. That is, God took it upon himself not only to act but to provide an interpretation of his acts, communicating why they were done and what purposes they served. In this way Yahweh was both the cause of the events and the source of the interpretation of the events. In theological terms we would say that the general revelation of history was supplemented by the special revelation of historiography.

In summary then, Israel shared with the ancient world the idea that events are revelation—the evidence that the gods were at work. This approach stands in contrast to Western historiography. But Israel distinctively believed that its historiography was also revelation, a novel view in contrast to both modern and other ancient historiography.

JOSHUA

1:1-18

Joshua's Commission

1:4. territory of the promised land. The "wilderness" circumscribes the southern and eastern boundaries of the land. The Lebanon and the Euphrates are the northern boundaries on both east and west. The Euphrates in similar descriptions of the boundaries of the land (see comment on Deut 1:7) refers to the area where the river turns north in the region of Emar. The Great Sea, the Mediterranean, marks the western boundary. The Hittite country most likely refers to Syria, where many Hittite groups settled after the fall of the Hittite empire about 1200 B.C.

1:8. Book of the Law. We tend to think of a book as having pages, a binding and a cover. Books of that sort did not exist in the ancient world. The term used here can refer to any document: from inscription to scroll, from papyrus to clay tablet to stone. The Book of the Law is the copy of instructions given to Moses in Deuteronomy and put in front of the ark (see comment on Deut 31:26).

1:16-18. pledge of loyalty. In international relations as they are known from the documents of the ancient Near East, when a new king came to the throne, vassals of the previous king were asked to subscribe to loyalty oaths professing their allegiance to the new king. This practice is attested between the pharaohs of Egypt and the city-state kings of Palestine during this period.

2:1-24

Spies in Jericho

2:1. Shittim. The full name of this site was Abel Shittim (Num 33:49), and it was the jumping-off point for Joshua's spies and for the Israelites' entrance into Canaan (Josh 2:1; 3:1; Mic 6:5). Josephus places it seven miles from the Jordan River. Its actual location is uncertain, but it may be Tell el-Hammam on the Wadi Kefrein.

2:1. Jericho. Jericho is located by an oasis (er-Riha) about five miles west of the Jordan River along the Wadi Kelt and six miles north of the Dead Sea. It guards the strategic passageway between the Jordan valley and the central hill country to the west (including Jerusalem, about fifteen miles west-southwest, and Bethel, about the same distance west-northwest), as well as the major ford between the Jabbok and the Dead Sea. Though it averages only four to six inches of rain per year, Jericho is supplied with ample water from the spring system today called Ain es Sultan. The tell of the ancient city is Tell es Sultan. It is 825 feet below sea level, the lowest city in the world. The oblong-shaped mound covers an area of about ten acres, with a circumference of about half a mile. A city of that size would have housed perhaps as many as two thousand people, though more would have lived in surrounding farms and villages. See comment on 6:1 for archaeological information.

2:2. spies in the ancient Near East. Spies in the ancient Near East regularly collected information about enemy movements and troop sizes. It would not be unusual for spies to infiltrate the enemy forces by posing as deserters or refugees. In reconnoitering a city they would be interested in defenses, food and water supply, number of fighting men and general preparedness for attack or siege. Most important was to find out what they could about the source of the water supply. If that could be cut off or compromised, a siege would have a much better chance of success.

2:3. city-state kings. Canaan at this time was not a unified political entity. Instead it was made up of many small "kingdoms"—city-states, usually including a major fortified city plus the small villages and farms in the region. Each such city-state would have its own king and its own army. The Amarna letters from the fourteenth century are the correspondence between many such Canaanite city-states and the Egyptian pharaoh of whom they were vassals.

2:5. closing city gate at dusk. Closing the city gate at dusk was not an unusual practice for walled towns, but it was much more rigorously observed when an enemy was at hand. Hittite records speak of the diligence with which this was undertaken. The highest ranking officials in the town personally supervised the locking and sealing of the gate. Since the gates were massive structures with chambers between the several entrances, watchmen and even officers slept right by the gate.

2:6. house architecture. The typical Israelite house known mostly from 1200 on is called a four-room house. It was a rough stone or baked brick structure about thirty feet square.

It had an open courtyard surrounded by rooms (sometimes two stories) with a flat roof. Less is known about the earlier Canaanite houses, though they still featured an open courtyard with rooms arranged around it. Outside walls would be made of larger stones piled up (sometimes only one row thick, other times several feet thick) with smaller stones stuck in the cracks. The wall was usually coated on the outside with mud and on the inside with plaster. Doors were wooden and turned on a stone socket beneath the ground. There were often no windows. The rooms were usually separated from the courtyard by a row of wooden or stone pillars, perhaps with curtains hung as dividers. The roof would be made of wooden beams laid across the walls, covered with twigs and straw and coated with clay. The dirt floors were sometimes coated with plaster, though stone slabs would be put down in the kitchen area.

2:6. stalks of flax. Flax is a plant used for making linen. Young plants are used for high quality cloth and ripe, tougher plants for sturdy material such as rope. Although there is reference to the cultivating of flax in the Gezer calendar, much of it was imported from Egypt. The harvested plants need to be laid out to dry before "retting," a process involving soaking in stagnant water to separate the usable fibers. The stalks must then be laid out to dry thoroughly before the process can continue. The smell and the sogginess would have made hiding here a distinctly unpleasant experience, perhaps equivalent to burying oneself in a pile of pig slops.

2:7. fords of the Jordan. Without bridges, the places where a river could be forded served as strategic locations. From the southern end of the Sea of Galilee to the Yarmuk River, the Jordan is not easily fordable. From the Yarmuk south to the Wadi Jalud (Herod Stream) are a number of fording places, especially from the region of Beth Shan coming out of the Jezreel Valley across into Gilead. South of this area the mountains come up closer to the rift valley until the confluence with the Jabbok, with the fords at Adam just below it. The terrain then becomes difficult on either side of the Jordan until one reaches the fords by Jericho nearly twenty miles further south.

2:10. Sihon and Og. There is no historical information on Sihon and Og outside the Bible. They are the two Amorite kings who were defeated by the Israelites in Transjordan. For more information see the comments on Numbers 21:21-35.

2:11. Rahab's Confession. Rahab expresses fear of Israel's God, Yahweh, and acknowledges him as God in heaven and on earth. In the context of ancient Near Eastern religious thought, this places Yahweh in the category of cosmic deity and recognizes him as a powerful national patron god. The report the Canaanites have heard suggests that he can influence the weather as well as bodies of water, disease and the animal world. Though her confession expresses how impressed they all are with the range of Yahweh's authority and power, it is far from an expression of monotheism. She has neither renounced her gods nor offered to dispose of them. She has not affirmed any loyalty to Yahweh but has requested his help. She shows no knowledge of the obligations of the law, and we have no reason to think she is aware of the revolutionary religious system that was developing in Israel. In short, her speech does not suggest that she has risen much above her polytheistic perspective—but she knows power when she sees it. The dread of a deity as a divine warrior was often believed to precede a powerful, successful army into battle. Egyptian texts attribute this terror to Amun-Re in the inscriptions of Thutmose III, and Hittite, Assyrian and Babylonian texts all have their divine warriors who strike terror into the hearts of the enemy.

2:15. houses on the wall. Houses built into the side of the city wall were common to this period. This benefited the city by adding extra width and support for the wall and benefited the resident by providing a firm wall to support the house. Excavations at Jericho have discovered houses built on the plaster rampart between the two walls with their backs up against the inside of the outer wall (see comment on 6:1).

3:1—4:24

Crossing Jordan

3:1. Shittim. See comment on 2:1.

3:4. two thousand cubits. Two thousand cubits is a little over half a mile.

3:10. the inhabitants of the land. The list here is similar to that occurring frequently in the Pentateuch. In the list of the seven people groups that inhabited Canaan three are well known, while the other four are barely known at all. Canaan may be mentioned as early as the Ebla tablets (twenty-fourth century), but the earliest certain reference is in the material from Mari (eighteenth century). The *Canaanite* people were the principal inhabitants of the fortified cities of the land, though they do not seem to have been native to the land. The kings of this area refer to themselves in the Amarna Letters (mid-second millennium) as

Kinahhu, equivalent to a term *(Kinanu)* also used in Egyptian inscriptions of this period. The well-known *Hittites* were from Anatolia, modern Turkey, but groups occupying sections of Syria and Canaan were also called Hittites and may or may not be related. The Hittites in Canaan have Semitic names, while the Hittites of Anatolia were Indo-European. The *Hivites* are sometimes connected to the Horites, in which case they may be Hurrians. There is still debate as to whether the term *Perizzites* is ethnic or sociological (those living in unwalled settlements). *Girgashites* are little known, though they are attested in the Ugaritic texts. *Amorites* (known in Mesopotamia as *Amurru* or *Martu)* are known from written documents as early as the middle third millennium. Most scholars think that they had roots in Syria and came to occupy many areas in the Near East. The term can be used to refer to a geographical area ("westerners") or to ethnic groups, though not necessarily related to one another. Some Amorites were nomadic, but there were Amorite city states in Syria as early as the end of the third millennium. The *Jebusites* occupied the region later associated with the tribe of Benjamin, notably the city of Jerusalem, and are often related to the Perizzites, who were located in the same region. There is no mention of the Perizzites, Hivites or Jebusites outside the Bible.

3:16 parting of the Jordan. This is springtime (see 4:19), and the melting snow from the Anti-Lebanon mountains often creates a flood stage for the Jordan. Mudslides as a result of flood waters undercutting the cliffs or from seismic activity occasionally interfere with the flow of the Jordan at the very place mentioned here in the text (once as recently as 1927). Those recorded have generally blocked the Jordan for a couple of days.

3:16. Adam in Zarethan. Adam is modern Damiya on the east side of the Jordan just south of where the Jabbok River flows, eighteen miles north of the fords at Jericho. The steep banks of the Jordan are particularly susceptible to mudslides because of the large amount of water flowing together here from the two rivers. Zarethan is often identified either with Tell es-Sa'idiyeh, about twelve miles further north, or with Tell Umm Hamad on the north side of the Jabbok.

3:17. on dry ground. There is an interesting inscription of Sargon II of Assyria (eighth century) where he claims that he led his army across the Tigris and Euphrates at flood stage as on dry ground.

3:17. the role of the ark. In the divine warrior motif, the deity is fighting the battles and defeating the deities of the enemy. In Assyria Nergal is the king of battle and Ishtar is viewed as a war goddess. The Canaanite Baal and the Babylonian Marduk are divine warriors. This is not to be viewed as "holy war," because in the ancient Near East there was no other kind of war. In most situations prayers would be made and omens asked to assure the god's presence. Standards or statues of the deity were usually carried to symbolize their presence. The ark, as Yahweh's standard, represents the Lord as clearing the way before the Israelites and leading the armies into Canaan. This concept is not very different from the Assyrian belief that the gods empowered the weapons of the king and fought before him or at his side.

4:13. forty thousand men. The word translated "thousand" can sometimes refer to a military division. The latter may be intended here, though it is a complex issue. For more information see the comment on Exodus 12:37. Compare this number to the estimated population of Jericho, fifteen hundred or two thousand.

4:13. the plains of Jericho. Jericho is about five miles from the Jordan, and there is a broad flat area across the entire region between.

4:18. return to flood stage. If the stoppage was caused by a mudslide up river, a tremendous amount of water would have backed up, and when the blockage was broken up by the force of the water, the renewed flow would have been considerable.

4:19. tenth day of first month. The last chronological notation we had was in Deuteronomy 1:3, the first day of the eleventh month of the fortieth year. After that address Moses went up to the mount and died (Deut 32:48), and then the people mourned for thirty days (Deut 34:8). We would assume that it is now the first month of the forty-first year, just two months after the death of Moses. The first month is Nisan (spanning March-April), time for the Passover celebration. It is a good time for military activity because the invading troops can be sustained from crops in the field. If the early date for the exodus is accepted (see date of the exodus sidebar in Exodus 12), the date is right around 1400 B.C. If the later date of the exodus is correct, it is around 1240.

4:19. Gilgal. The site of Gilgal is currently unidentified. Some guesses put it to the northeast of Jericho near Khirbet Mefjir, where there is a decent water supply, a significant outcrop of flint (see 5:2) and remains from ancient times (but only after 1200). Another biblical Gilgal has been identified with Khirbet ed-Dawwara, located in the middle of a circle circumscribed

around Jericho, Ai, Gibeon and Jerusalem, no more than six miles from any of them. But this is not considered a likely site for this Gilgal.

5:1-12
Circumcision and Passover

5:1. Amorite and Canaanite Kings. The region at this time was comprised of many small city-states, each with their own king, army and territory. Amorites occupied the hill country, while Canaanites were in the coastal plains. The Canaanite cities were more strategically located, since the major trade route from Egypt came up the coast (for more information on the trade routes see sidebar on pages 70-71). The Israelites were much more successful gaining control of the hill country than they were the plains. The Amarna letters give us a good deal of information about the city-states of Canaan in the fourteenth century. In many of these letters the kings are appealing to Egypt to send more troops to help them against the Apiru/Habiru who are stirring up trouble. *Habiru* is a term used to describe dispossessed peoples in over 250 texts spanning the second millennium and ranging from Egypt to Anatolia to east of the Tigris. Certainly the Israelites (Hebrews) would have been counted among the Habiru. The most prominent kings in the region of Palestine from the Amarna archives are Milkilu (Gezer), Abdi-Heba (Jerusalem), Lab'ayu (Shechem) and Abdi-Tirshi (Hazor). The Egyptians had a number of administrative cities, including Gaza and Joppa on the coast and Beth Shan where the Valley of Jezreel (and the trade route) goes to the Jordan.

5:2. flint knives. The earliest tools and weapons known from the Stone Age were flakes of stone produced by striking flint at the proper angles. The edges of these flakes were extremely sharp, easily accessible and reasonably durable. A flint flake was used for the process of circumcision in Israel and Egypt even after metal tools and weapons were readily available. The use of stone blades may reflect either a long tradition that precedes the ready availability of metal blades or simply the need for many blades at once. It has been suggested that the text refers to obsidian, which was valued for the smooth sharp edges it afforded.

5:2. circumcision. Circumcision was practiced widely in the ancient Near East as a rite of puberty, fertility or marriage. Egyptian reliefs from as early as the third millennium depict the circumcision of adolescents by priests using flint knives. Although the Israelites are not the only people in the ancient Near East to circumcise their sons, it is used to mark them as members of the covenantal community. When used in relation to marriage, terminology suggests it was performed by the new male in-laws, indicating that the groom was coming under the protection of their family in this new relationship. Performed on infants it is more a ritual scarring than something done for health reasons. The fact that blood is shed also signifies that this is a sacrificial ritual and may function as a substitution for the human sacrifice that was practiced by other people. Circumcision can be seen as one of many cases where God transforms a common practice to a new (though not necessarily unrelated) purpose in

---

EGYPTIAN INFORMATION ABOUT CANAAN AND ISRAEL

From the rise of the eighteenth dynasty in the mid-sixteenth century B.C., the Egyptians established a foothold in Canaan that waxed and waned over four centuries. Military expeditions were common, and in some periods Egyptian presence was established in terms of garrisons at critical points along the trade routes. During the reign of Thutmose III (fifteenth century), Syria-Palestine became an Egyptian province. After a period of decline in the Amarna period (fourteenth century), the early part of the nineteenth dynasty (early thirteenth century) brought renewed military activity, with Canaan secured as a base of operations against the Hittites in a struggle for the control of Syria. Aside from the Amarna texts, which provide invaluable information about the political situation in Canaan and the significant role of Egypt in the region, Egyptian records have provided other pieces of information that contribute to this period. (1) Itineraries from Egyptian campaigns often make reference to cities that the Bible also mentions. Thutmose III lists over one hundred cities of Canaan. Sometimes these itineraries can help locate a city because it will identify the cities on either side of it. In addition, there are some cities for which excavations show no occupation for this period, but the Egyptian itineraries name them so we know they were occupied. (2) Egyptian reliefs from the thirteenth century depict Canaanite fortresses and fortified cities of the same sort that must have been encountered by Joshua. (3) The famous victory stele of Merenptah (second half of thirteenth century B.C.) is the earliest reference to Israel in extrabiblical sources. Discovered in 1896, the black granite monument, standing seven and a half feet tall, details the campaigns of the pharaoh against the Libyans and Sea Peoples. It then mentions victories over Ashkelon, Gezer, Yanoam and Israel as part of the plundering of Canaan. One Egyptologist (F. Yurco) has suggested that these campaigns of Merneptah are also engraved on the walls at Karnak. If he is correct, this would constitute the earliest depiction of Israelites.

revealing himself and relating to his people.

5:2. "again." One might well wonder how an individual could be circumcised again. This could refer to initiating the rite of circumcision a second time (see v. 5) or to a more radical surgical procedure. Egyptian circumcision involved only a dorsal incision rather than a total removal of the foreskin. Verses 5-8 argue against this latter explanation.

5:3. Gibeath Haaraloth. Gibeath Haaroloth means "hill of foreskins." If this is meant to refer to a place name, its location is unknown.

5:6. milk and honey. The land of Canaan is described as a land "flowing with milk and honey." This refers to the bounty of the land for a pastoral lifestyle but not necessarily for agriculture. Milk is the product of goat herds, while honey represents a natural resource, probably the syrup of the date rather than bees' honey. A similar expression to this is found in the Ugaritic epic of Ba'al and Mot, which describes the return of fertility to the land in terms of the wadis flowing with honey. Egyptian texts as early as the Story of Sinuhe describe the land of Canaan as rich in natural resources as well as in cultivated produce.

5:10. Passover. Passover celebrated the deliverance from Egypt and also may have represented a purification ceremony in preparation for the conquest. See comments on Exodus 12:1-11.

5:12. manna. For a full discussion of Manna see comment on Exodus 16:4-9. The fact that manna has been provided through all the different terrains that Israel has passed through suggests something far different from what the various natural explanations can provide.

5:13—6:27
The Conquest of Jericho

5:13. commander. The supernatural commander that Joshua encounters is another indication that Yahweh has taken charge and is going to be responsible for their military success. Just as Moses had an encounter at the burning bush that communicated God's plan for the exodus, so Joshua's encounter is providing God's plan for the conquest. The message brought by the commander includes the strategy for Jericho (reported beginning in 6:2). In the ancient Near East war was usually presented as originating from divine instructions and following a divine plan. Divine visitations on the eve of battle are not common in ancient Near Eastern literature. The divine word commanding the battle comes instead in the form of an oracle, while the divine presence is seen in the battle itself. In the Ugaritic Epic of Keret, however, the god El comes to King Keret in a dream with instructions for battle. Another closer parallel is when the Babylonian king Samsuiluna (eighteenth century B.C.) receives supernatural messengers from Enlil giving him instructions for a number of campaigns against Larsa and Eshnunna. Neither of these, however, are on the eve of battle—the armies have yet to be mustered.

6:1. Jericho. Settlement at Jericho goes back to the ninth millennium B.C., giving it the designation of the oldest city in the world. The site has occasioned much controversy, and archaeological interpretation has been complicated by significant amounts of erosion, which tends to confuse the layers that archaeologists depend on and totally obliterate large amounts of evidence. Excavations by Kenyon in the 1950s concluded that city 4 was violently destroyed (signs of earthquake and fire) about 1550 (at the end of the Middle Bronze period) and was then only sparsely and occasionally occupied until the ninth century. This poses a problem for both the late and the early date of the exodus and conquest. Most significant was the absence of Late Bronze imported Cypriote pottery. It has been argued, however, that there are many pottery samples of local ware from the Late Bronze period (1550-1200). There are still many unanswered questions about the archaeology of the site. City 4 was surrounded by a stone revetment wall (about fifteen feet high and topped by a mudbrick wall at least another eight feet high) supporting a plastered rampart that sloped up about fifteen feet to a second, upper wall also made of mudbrick. If city 4 is not the city overthrown at the time of Joshua, it is nonetheless likely that the walls of city 4 were still being used. There were houses built on top of the plaster rampart between the two walls. The city is not mentioned in the Amarna texts or in the Egyptian itineraries of the period. See comment on 2:1 for geographical information.

6:3-4. seven days marching in silence. In the Ugaritic Epic of Keret (which would likely have been known to the people of Jericho) Keret's army arrives at the city of Udm and is instructed by the god El to stay quiet for six days and to shoot no weapons, and on the seventh day the city would send out messengers and offer tribute if they would leave.

6:4. the role of the priests. The priests are necessary in order to maintain the sanctity of the ark. The importance of their lead role is to offer one more reminder that this is Yahweh's battle, not the Israelites'. For the ark's symbolism see the comment on 3:17.

6:4-5. trumpet signals. The trumpet referred to here is the rams' horn *(shofar)*. The *shofar* is

capable of a variety of tones but cannot play a tune, so it is used primarily for signals in worship or warfare. The ram's horn was softened in hot water, then bent and flattened to produce its distinctive shape. In warfare signaling was done in various ways. Fire signals were common both along garrison lines as well as in the open field. Basic commands were at times communicated by upraised staff or javelin. Trumpet signals are attested in Egypt in the Late Bronze Age (this time period) in both military and religious contexts. A preset code would include some combination of long and short blasts.

6:20. city walls. The fortification techniques developed in the Middle Bronze period and continuing in use in the Late Bronze included steep earthen slopes (some reaching fifty feet) at the foundation of the walls and a ditch around the outside dug to bedrock. These features would both hamper the approach of siege machines and prevent tunneling. The walls, made of mudbrick on stone foundations, were ten to twenty-five feet wide and perhaps thirty feet high. Hittite texts preserve an account where in similar fashion a deity carried out retributive justice by causing walls (wooden in this case) to fall down.

6:21-24. devoted to the Lord *(ḥerem).* The "ban" is sometimes chosen as the English word to represent the concept of total destruction required of the Israelites. Just as there were some types of sacrifices that belonged entirely to the Lord while others were shared by priest and offerer, so some plunder was set aside as belonging solely to the Lord. Just as the whole burnt offering was entirely consumed on the altar, so the ban mandated total destruction. Since the warfare was commanded by Yahweh and represented his judgment on the Canaanites, the Israelites were on a divine mission with Yahweh as their commander. Since it was his war, not theirs, and he was the victor, the spoil belonged to him. Although the divine warrior motif occurs throughout the ancient Near East, the *ḥerem* concept is more limited—the only other occurrence of the term is in the Moabite Mesha inscription, but the idea of total destruction is also in the Hittite material. Some sites, such as Gezer, feature a distinct burn layer in association with the Late Bronze period. Under siege conditions sanitation is at its worst and disease is often rampant. The practice of burning everything after the defeat of a city thus also had an element of health connected to it. The best analogy for us to understand *ḥerem* is to think in terms of radiation. A nuclear explosion would destroy many things and irradiate much more. The abhorrence and caution with which we would respond to that which has been irradiated is similar to what is expected of the Israelites regarding things under the ban. If radiation were personified, one could understand that once something was given over to it, it was irredeemable. It was this condition that Achan exposed himself to by taking things under the ban.

6:21. the edge of the sword. The expression used in the Bible referring to the "mouth" or "edge" of the sword reflects the fact that at this time period swords were not straight with two edges. The blade was straight coming out of the haft, but the sharp edge was along the outer side of a curved, sickle-shaped section. This was not a stabbing but a striking weapon.

6:26. curse on rebuilding. Assyrian inscriptions commonly express an intention that a destroyed city never be rebuilt, but not accompanied with an oath as here. In a Hittite document concerning the conquest of Hattusha early in the second millennium, Anitta pronounces a curse on any king who would rebuild the city.

6:26. connection of building and losing children. See 1 Kings 16:34. It used to be thought that the dedication of a house would feature human sacrifice of a child from the family. This was used to explain the incidence of skeletal remains of children buried under the thresholds of houses. This interpretation has been largely abandoned, and some researchers now see a connection between the curse and the disease schistosomiasis (bilharzia). This disease is caused by a blood fluke carried by snails of the type found in abundance at Jericho. It infects the urinary tract and affects fertility and child mortality.

7:1-26
The Results of Achan's Sin

7:1. devoted things. See comment on 6:21-24.

7:1. corporate responsibility. In the ancient Near East a person found his or her identity within the group. Integration and interdependence were important values, and the group was bound together as a unit. As a result, individual behavior would not be viewed in isolation from the group. When one Israelite sinned, the group shared the responsibility. In addition to reflecting the perspective of society, this corporate responsibility was also a result of the covenant relationship that Israel had with the Lord. The law included many guidelines for individual behavior and when individual violations occurred the benefits of the covenant were in jeopardy for all Israel.

7:2. Ai. The city of Ai is usually identified with the site et-Tell, a twenty-seven-acre tell located nine miles west-northwest of Jericho, about ten miles north of Jerusalem. The major occupation of the site was during the third millennium (Early Bronze), and it was destroyed well before the time of the patriarchs. This site shows no further sign of occupation until a very small village (covering about six acres) was established there sometime after 1200 B.C., using what remained of the Early Bronze walls for defense. There is therefore no indication that this site was occupied during any of the potential periods of the conquest. This archaeological record has made some doubt the authenticity of the biblical record, while others doubt whether this is truly the city of Ai. Over the last century many alternative sites have been and continue to be considered, but no strong candidates have yet emerged.

7:2. Beth Aven. The town of Beth Aven has not been identified with any certainty. The way it is introduced in the texts suggests it was more prominent than Ai. Tell Maryam is often considered the prime candidate. It has not been excavated, but surveys have turned up Iron Age remains. Hosea is thought to use Beth Aven as an alternate name for Bethel (4:15; 5:8; 10:5).

7:2. Bethel. See comment on 8:9.

7:5. stone quarries. Some translations have the Israelites fleeing to the stone quarries (NIV; the word means "breaks"; others render it a place name, Shebarim). Stone quarries were common in the area, but this is not the usual word for quarries. One archaeologist (Z. Zevit) has suggested that the word should be translated "ruins," referring to the ruins of the Early Bronze city wall that lay further down the slope from this smaller Late Bronze settlement. The text does not say the men of Ai chased the Israelites *from* in front of the gate (though many translations do); they chased them "past the gate to the ruins." In this case, the gate may also be the Wadi gate from the Early Bronze city.

7:6. mourning. Mourning practices generally included tearing one's robe, weeping, putting dust and ashes in one's hair, and wearing sackcloth. Sackcloth is made of goat or camel hair and was coarse and uncomfortable. In many cases the sackcloth was only a loin covering. The official period of mourning was thirty days, but it could continue as long as the mourner chose to continue to grieve.

7:7-8. Amorites and Canaanites. The Amorites and Canaanites are the main inhabitants of the land. For ethnic background see the comment on 3:10; for political background, see comment on 5:1.

7:13. consecration. Consecration consisted of steps taken to make oneself ritually pure. This process primarily entailed washing and avoiding contact with objects that would render one unclean. It typically preceded ritual action. For Israel this included sacrifices, festivals or procedures in which Yahweh was involved, such as war and oracular procedures.

7:14-18. oracular selection procedure. The text does not mention the mechanism by which groups or individuals are singled out, though some translations supply "by lot." In Israel, however, lots were typically used when a random quality was desired. Here, in contrast, they are seeking an oracle in which a question is put to God in order to receive divine guidance or information (see comment on Gen 24:12-21). The presentation of a tribe or clan before the Lord would pose the question, "Is the guilty party in this group?" If a process is used similar to the Urim and Thummim (see comment on Ex 28:30), an answer would only be given divine standing if it defied the odds (for instance, if the same results were repeated several times). In the ancient Near East lots were sometimes used to receive oracles, though in most cases oracles were pursued through divination (such as examining the entrails of a sacrificed animal for favorable or unfavorable indications). In light of the consecration that precedes the process, it is possible that there is no mechanism but rather direct communication from Yahweh.

7:21. Achan's plunder. The precious metals from the Canaanite cities had been assigned to the sanctuary, so Achan was taking what properly belonged to the Lord. There are five or six pounds of silver and about a pound and a half ingot of gold in Achan's treasure trove. That represents what it would take the average worker a lifetime to earn. The Babylonian robe of this period was fringed and draped over one shoulder, with the edge carried over the arm.

7:25. stoning as execution. Stoning is a communal form of execution and the most commonly mentioned form of execution in the Bible. It is used to punish crimes against the entire community that constitute violations of the covenant (apostasy, Lev 20:2; sorcery, Lev 20:27) and requires all those persons who have been offended to participate. Because it cannot be determined which individual's stone caused the death of the condemned, no one person must bear the guilt for that death. Mesopotamian texts do not mention stoning but employ drowning, impalement, beheading and burning as forms of execution.

7:25. entire family executed. The punishment

for violation of the ban was to be put under the ban. The ban required the obliteration of the family line. The law had forbidden children to be punished for the sins of their parents (Deut 24:16), but that was intended to curtail some very specific practices. For instance, in Hammurabi's laws if a man brought about the death of another man's son, the penalty would be that the perpetrator's son would be put to death. Another example would be where blood vengeance would extend its range to the family of a murderer. The law was intended to put restrictions on the civil law system. This incident is an entirely different category in that God is personally judging the case. Obliteration of the family line was a punishment only God could dole out.

7:26. Valley of Achor. The identification of the Valley of Achor is uncertain. One suggestion is el-Buqeia in the Judean desert about ten miles southeast of Jerusalem, running north-south just west of Qumran. Unfortunately this seems too far from Jericho in the wrong direction to suit. The other occurrences of Achor locate it on the border between Judah and Benjamin (see 15:7). El-Buqeia is too far south for that, but something in the vicinity of Jericho/Ai/Gilgal (such as Wadi Nu'eima) would be too far north.

8:1-29

Defeat of Ai

8:1. Ai. See comment on 7:2.

8:2. ambush. The strategies employed by Israel often fall into the category of indirect warfare, characterized by ambush, pretend retreats, decoys, infiltration and the like, rather than lengthy siege or pitched battle. Such tactics are known from the ancient Near East in the Mari texts (eighteenth century), the Egyptian Papyrus Anastasi (thirteenth century) and a Middle Assyrian text (tenth century).

8:3. thirty thousand fighting men. Thirty thousand appears an exorbitant number to send against a town that would probably not have more than a few hundred soldiers. It certainly is impractical for a successful ambush. Verse 25 translates that twelve thousand people of Ai were killed. Ai is presented as a small town with few men (7:3). If it was smaller than Jericho, its entire population would be less than a thousand. All of this suggests that the word translated "thousand" in these passages should be rendered by its alternate meaning, "companies" or "divisions." Rather than a specified number, it has been suggested that each clan supplied a division with the number varying dependent on the size of the clan. Later in history these companies were standardized as having a thousand, but here there may be as few as ten in a division. In the first attack on Ai in 7:4-5 there were three "thousand" sent and they treated it as a massacre when thirty-six were killed. In the Amarna letters the kings of the city states would beg Egypt for ten or twelve soldiers to reinforce their armies. For difficulties with the number of the Israelites see comment on Exodus 12:37. For further discussion of large numbers see comments on 2 Chronicles 11:1; 13:2-20.

8:9. Bethel. Bethel is just listed as a location nearby until verse 17, when the men of Bethel become involved in the chase. There is no mention of destroying the city of Bethel, though the king is mentioned as defeated in 12:16. In Judges 1 it comes under specific attack by the tribes of Joseph. Bethel is usually identified with Beitin just over 10 miles north of Jerusalem, about a mile and a half west of et-Tell, the traditional site of Ai. There was a major fortified city on the site during the Middle Bronze Age that was destroyed in the mid-sixteenth century. It was grandly rebuilt in the Late Bronze age, and there is evidence of two destructions during that period (1550-1200). Some have contested whether Beitin is Bethel, because it has been difficult to find a satisfactory adjoining site for Ai (see comment on 7:2). The main alternative is Bireh, a mile or two south of Beitin.

8:9-13. battle positions. The ten-mile march by the ambush contingent was done under the cover of darkness. They secured a position on the far side of the city (the west; Jericho and Gilgal were east of Ai). The main army marched west the next morning through the Wadi el-Asas that led them to a camp in the valley or on the slope of the hill to the north of Ai. When the soldiers of Ai came out, the Israelite army fled east, back toward their base, allowing the ambush to unfold.

8:18. javelin. Javelins of Joshua's time had a metal head attached to a short wooden shaft. Later javelins were thrown with the aid of a loop to make them spin, giving greater distance and accuracy, but these are unknown in this period. Many have suggested that the weapon described in this text is not a javelin but the well-known sickle sword (for description see the comment on 6:21).

8:25. twelve thousand killed. Probably referring to twelve divisions. See note at 8:3.

8:28. burning the city. The site of et-Tell shows no indication of destruction by fire in the Late Bronze period, nor was the Iron Age settlement destroyed by fire. See discussion of the archaeological problems with Ai at 7:2.

8:29. hanging the king. In 10:26 the kings were executed first, then hung, suggesting that this was not a manner of execution but a treatment of the corpse (see 2 Sam 21:12 compared with 1 Sam 31:10). Many believe it refers to impalement on a gibbet, as was known to be practiced later by the Assyrians and Persians. Exposing the corpse was also occasionally practiced by the Egyptians. It represented a final humiliation and a desecration (see Is 14:19-20; Jer 7:33; 8:1-3), for most ancient peoples believed that proper, timely burial affected the quality of the afterlife. See comment on 1 Kings 16:4. In the Gilgamesh Epic Enkidu, returned from the netherworld, reports to Gilgamesh that the one who died unburied has no rest and that the one who has no living relatives to take care of him can only eat what is thrown into the street. A Babylonian curse relates burial to the uniting of the spirit of the dead with loved ones. We know that even Israelites believed that proper burial affected one's afterlife because they, like their neighbors, buried their loved ones with the provisions that would serve them in the afterlife; most often pottery vessels (filled with food) and jewelry (to ward off evil), with tools and personal items sometimes added.

8:29. raising a cairn. Cairn burials were common in Palestine around 2000 B.C., mostly in the southern areas of the Negev and the Sinai, which are dry and rocky. Canaanite burials of this period featured multiple-use tombs in which whole families would be buried together in rock-cut chambers at the foot of vertical shafts. The tombs would typically be provided with all of the accessories of daily life.

8:30-35
Covenant Renewal at Ebal

8:30. function of altar. It appears that this altar was not intended to be a permanent installation (another reason to use fieldstones) but was set up for the purposes of the celebration ceremonies of this occasion. It is specifically burnt offerings and fellowship offerings (see comment on Lev 3) that are offered here—no purification or reparation offerings.

8:30-31. modern find on Ebal. Some archaeologists believe that the remains of the altar on Mount Ebal have been found. It is a structure on one of the peaks of the mountain about twenty-five by thirty-five feet, with walls about five feet thick and nine feet high made of fieldstones. The fill is dirt and ashes, and a ramp leads up to the top. The structure is surrounded by a courtyard, and animal bones were found at the site. Pottery on the site goes back to 1200 B.C.

8:31. altar built with fieldstones; no iron tool. These instructions parallel those found in Exodus 20:25. Iron tools were used for dressing the stone—shaping it to make a sturdier structure. Altars of dressed stone have been found in Judah (the best example at Beersheba). This altar was not supposed to be attached to a sanctuary, and perhaps the use of unhewn stone helped keep that distinction.

8:32. law on monumental stones. Hammurabi's laws were inscribed on a diorite stele eight feet tall and displayed publicly for all to see and consult. Royal inscriptions often were placed in prominent locations. Memorial inscriptions in our culture are used on tombstones, cornerstones of buildings and at various historical sites. The purpose in these cases is for people to see, take note and remember. Treaty documents in the Near East, in contrast, were often stationed in holy places that were not accessible to the public. Here the purpose was to put the agreement in writing before the gods in whose name the agreement had been sworn. For information regarding stones serving as boundary markers and land grant documents, see comment on 1 Samuel 7:12.

8:34. public reading. In cultures where many people were illiterate and where virtually no one would have possessed written materials (other than basic family documents) in their homes, the public reading of documents that were of religious, cultural or political significance was important. Several Hittite treaties contain clauses requiring periodic public reading of the document—one stipulates three times a year, while others are less specific, "always and constantly."

9:1-27
The Gibeonite Agreement

9:1. the political situation in the Late Bronze Age (1550-1200 B.C.). The Late Bronze Age was a period of political stalemate among major international powers. Egypt exercised control over Palestine for most of the period and often desired to extend its control into Syria, where important land and sea trade routes merged. A second major power in the region was the Hurrian coalition known as Mitanni that occupied a broad arc of the northern region between the Tigris and the Mediterranean. As Mitanni slid into decline and eventually broke up (around 1350), it was replaced by a growing Assyrian power along the upper Tigris, extending eventually to the Euphrates. The Hittite Empire took advantage of the decline of Mitanni to ex-

tend its control south from Anatolia and competed with Egypt for control of the important corridor between the seaports of Phoenicia and the river trade of the Euphrates. All during this time southern Babylonia was under the control of the Kassites. These major power struggles all left the petty city-states of Palestine little hope of achieving political significance. The region was nevertheless strategically important, providing administrative and supply garrisons for Egypt and continuing as the only option for overland trade routes into and out of Egypt.

9:1. the Amarna letters. The Amarna letters archive contains nearly four hundred letters written primarily from Canaanite city-state kings to Egyptian pharaohs Amenhotep III and Akhenaten during the first half of the fourteenth century B.C. They were discovered at Tell el-Amarna, the site of Akhenaten's capital city along the upper Nile, almost two hundred miles south of Cairo. The letters offer the best insight available into the political situation of the time. The petty kings of Canaan are little worried by all of the international struggles described in the previous comment. They are much more concerned with the threat posed by the Habiru (see next comment), against whom they seek Egyptian aid. In these texts they show their anxiety that various of the leading kings in the area may defect and align themselves with the Habiru. Such realignment would be a great temptation in light of the neglect that characterized Egypt in this period. This same concern can be understood in the context of the Israelite conquest. The city-state kings would have been very distraught at the thought of this enemy gaining control of a fortified city.

9:1. Habiru. *Habiru/Apiru* is a term used to describe dispossessed peoples in over 250 texts spanning the second millennium and ranging from Egypt to Anatolia to east of the Tigris. In many of the Amarna letters the kings of Canaan are appealing to Egypt to send more troops to help them against the Habiru, who are stirring up trouble. Certainly the Israelites would have been counted among the Habiru, and it is possible that the term *Hebrew,* in some of its uses, developed from the term *Habiru* (see comments on Gen 14:13 and Ex 21:2). The wide geographical region in which the Habiru occur in the first half of the second millennium, when Israel is in Egypt, makes it impossible to associate the Habiru exclusively with the Israelites.

9:3. Gibeon. The city of Gibeon is usually identified with the modern el-Jib, located six miles northwest of Jerusalem and about seven miles southwest of Ai. The excavations there have discovered a double water system constructed as early as the Judges period. The earlier of the two systems involved cutting straight down through the limestone some thirty-five feet (descended by a stairway spiraling down the wall) to a tunnel, allowing the inhabitants of the city to have access to spring waters at the base of the mound. A second, later system provided a stepped tunnel leading to another (more reliable) spring. This water system is strong evidence that the site is Gibeon, because of the well-known "pool of Gibeon" (see 2 Sam 2:13). The identification is further confirmed by jar handles found at the site with the city's name inscribed on them (although it should be noted that jar handles with other cities' names stamped on them were found as well, explained by the city's major industry: wine export). Little has been found that can be dated to the period of the conquest, but the excavations (done in the late fifties) covered a very limited area on the site. The city of Gibeon is noted in few extrabiblical sources. Pharaoh Sheshonk I (late tenth century B.C.) added Gibeon to a list of captured (or visited) towns during a successful military campaign into Palestine.

9:3. strategy of a ruse. Though there are no examples of a ruse of this exact nature, the literature contains numerous examples of dishonesty and deception in the course of treaty making in the ancient world.

9:7. Hivites. The Hivites are often confused or interchanged with the Horites, and together they are both identified as Hurrians. The Hurrians were Indo-European tribes that had united in the political kingdom of Mitanni from about 1500-1350 B.C. (see comment on 9:1 on the political situation). Some of the correspondence between the Hurrians of Mitanni and the Egyptians is preserved in the Amarna archives. The Hurrians were one of the principal ethnic groups in the Hittite Empire as well as the major ethnic group in the town of Nuzi. In Egyptian documents of this period, Canaan is often referred to as the land of Hurru.

9:10. Sihon and Og. There is no historical information on Sihon and Og outside of the Bible. They are the two Amorite kings who were defeated by the Israelites in Transjordan. For more information see the comments on Numbers 21:21-35.

9:10. Ashtaroth. Ashtaroth is identified here as the capital city of Bashan. It is mentioned prominently in Egyptian texts of this period, the Amarna letters (as ruled by Ayyab) and later Assyrian texts, and some think it occurs in a text from Ugarit as a place where the god El reigns. Known today as Tell 'Ashtarah, it is located on the Yarmuk River about twenty-

five miles east of the Sea of Galilee.

9:14. inquiring of the Lord. Inquiring of the Lord was done through the use of oracles, which, in Israel, usually used a mechanism such as the Urim and Thummim. See comment on 7:14-18.

9:17. cities of Gibeon. Two of the three cities of Gibeon can be identified with some confidence. Kephirah is modern Khirbet el-Kefireh, five or six miles west and a bit south of Gibeon. Kiriath-Jearim, a few miles south of Kephireh, is Tell el-Azhar. Beeroth is generally looked for north of Kephireh toward the Bethel/Ai area, perhaps at el-Bireh or Nebi Samwil.

9:18. the binding nature of oaths. In a culture where the gods were considered active and powerful and were feared, oaths took on a very serious nature. Vows could be mitigated (Lev 27; Num 30), but oaths bound those who had sworn them with the threat of divine vengeance. If an oath was not kept, the invoked deity's name was being held as worthless and powerless. The fourteenth-century Hittite king Murshili saw war and plague as the result of broken treaties that had been sealed by oaths. That Joshua was right to treat this oath as sacred is clear from 2 Samuel 21, where this same oath was broken with dire consequences.

9:26. woodcutters and watercarriers. For the sacrificial fires to be maintained and the purifying waters to be constantly replenished, much labor was involved. This task of providing wood and water was delegated to the Gibeonites. The menial nature of the work gave them permanent lowerclass status in the servitude they had chosen.

10:1-43

The Defeat of the Southern Coalition

10:1. Adoni-Zedek. This name is quite similar to the king of Jerusalem in Genesis 14, Melchizedek (Melchi = "my king"; adoni = "my lord"). There are no extrabiblical texts that offer information about him.

10:1. Jerusalem in the Amarna texts. There are six letters in the Amarna texts (see comment on 9:1) from Abdi-Heba, king of Jerusalem, to the pharaoh requesting military support. He warns that Egyptian control in the area is in jeopardy, both from the Habiru as well as from the other city-state kings, who are less than loyal and are taking advantage of Egypt's unresponsiveness. Jerusalem is one of the key cities in the region and is competing with Shechem for control of the hill country.

10:1. Late Bronze Age remains in Jerusalem. The city of Jerusalem in this period occupied only the north-south ridge covering about ten acres that runs south of the modern city walls. The population would not have exceeded one thousand. The top of the ridge is only about four hundred feet
wide and about fifteen hundred feet long. Remains from the Late Bronze period are sparse and confined to area G at the northeastern rim of the ridge. The finds there include the foundations of an identified structure and a massive stone terrace.

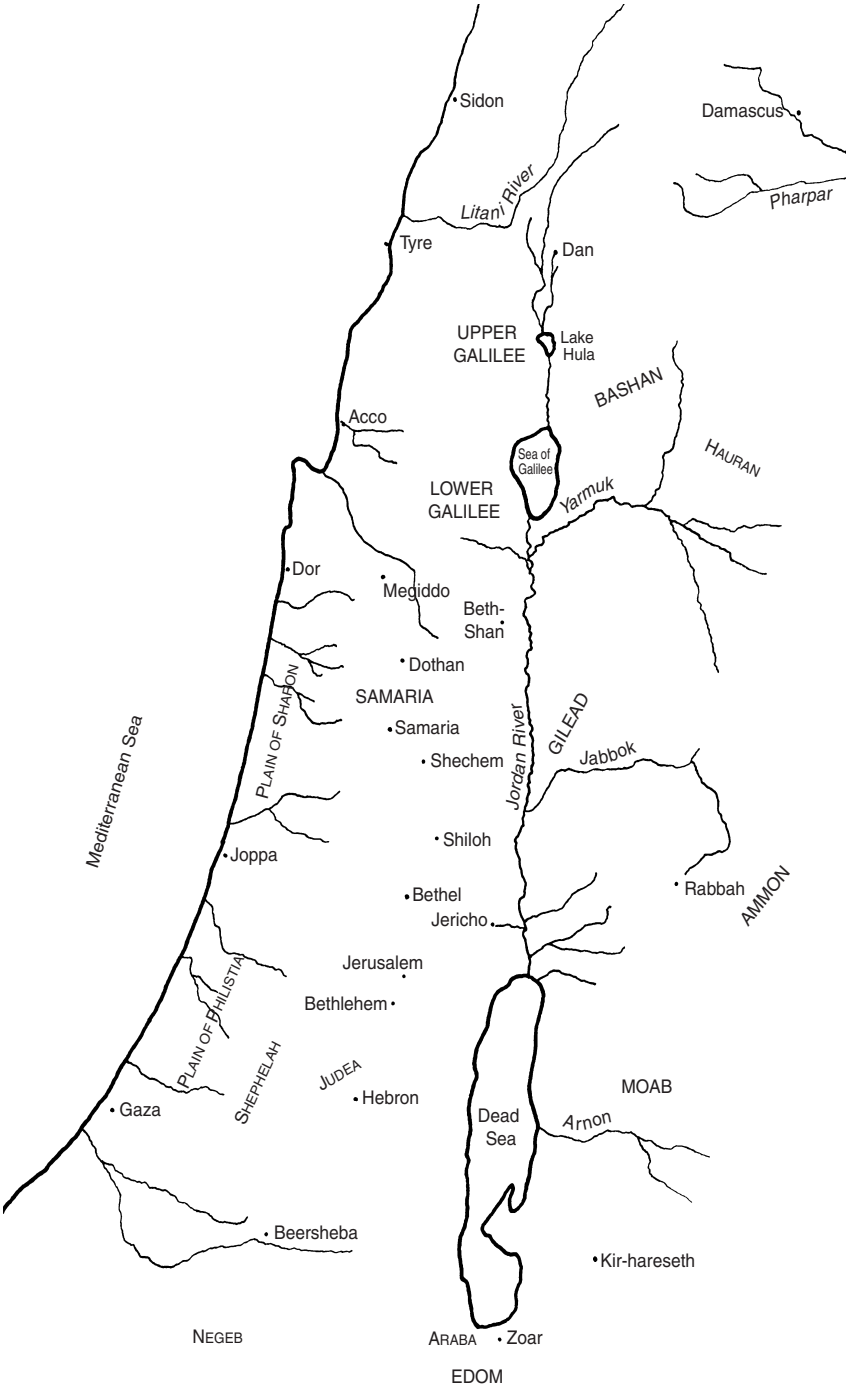
10:2. strategic location of Gibeon. One of the major passes from the hill country to the plains, from the Beth Horon pass into the Valley of Aijalon, was in the area controlled by Gibeon. With Jericho, Ai and Bethel already defeated, that gave Israel control of the primary lateral route across Palestine (from the Jordan rift to the coast).

10:2 royal cities. Royal cities would be the administrative centers of larger districts. The Egyptians had a number of cities during the Amarna period where their governors were housed, such as Gaza and Beth Shan. Cities like Shechem and Hazor could also have been considered royal cities because of the large areas they controlled. Gibeon's strategic location and fortifications give it the potential to be such a city.

10:3. the allies: Hoham, Piram, Japhia and Debir. None of these are known from contemporary sources, but all are the types of names well documented in this period. Compare, for instance, the name Japhia to the king of Beirut in the Amarna texts, Yapa'-Hadda. Names often made a statement about deity; Yapa'-Hadda means (the god) Hadda has appeared. Such names were often shortened by dropping the god's name. Even closer is the name of the king of Gezer in the Amarna texts, Yapahu.

10:3. Hebron. Tell Hebron is the site of a twelve-acre ancient city about twenty miles south of Jerusalem. Excavators have found no evidence of Late Bronze Age occupation, and it is not named in the Amarna texts, but Egyptian itineraries of Rameses II (thirteenth century) list Hebron among the cities of the region. For more information see comments on Genesis 13:18 and Numbers 13:22.

10:3. Jarmuth. Jarmuth is identified with Khirbet el-Yarmuk, about fifteen miles southwest of Jerusalem. The four-acre acropolis was occupied by a Late Bronze Age city strategically located between the Elah and Sorek valleys, the two passageways from the Shephelah (low hills between the hill country and the coastal



Map 2. Map of Major Cities and Regions of Palestine

plains) to the cities of the coast.

10:3. Lachish. Located about thirty miles southwest of Jerusalem, Lachish (Tell ed-Duweir) is one of the major cities of the Shephelah, covering some thirty acres. Along with Hebron it guarded the passage into the hill country. In the Amarna texts Abdi-Heba of Jerusalem claims that Lachish, along with Gezer and Ashkelon, had delivered provisions to the Habiru (tribute or alliance?). Another letter indicates that the Habiru had killed the king of Lachish, Zimredda. Other kings mentioned in the texts are Shipti-Balu and Yabni-Ilu. There are five letters in the archive from the kings of Lachish. Excavations at the site have uncovered a Middle Bronze Age city with impressive fortifications destroyed by fire at the end of that period (middle 1500s). The Late Bronze occupation of the Amarna period established a sizable though probably unfortified city. There is no evidence of destruction during this period (and the biblical text suggests none). There was a large temple on the site throughout this period.

10:3. Eglon. Tell Aitun, about seven miles southeast of Lachish between Lachish and Hebron, is most likely the site of Eglon. There is no mention of this city in extrabiblical sources, and the site has not been excavated.

10:5. Amorites. See comment on 5:1.

10:6. Gilgal. Location is unknown; see comment on 4:19.

10:9. march from Gilgal to Gibeon. Since the location of Gilgal is unknown, it is difficult to judge the length of the Israelites' march. Jericho to Gibeon is about fifteen miles, so the march certainly would not exceed twenty miles and may be as short as five miles.

10:10. Beth Horon, Azekah, Makkedah. The Beth Horon pass is guarded by the twin cities of Beth Horon: Upper Beth Horon, Beit Ur el-Foqa (about two miles northwest of Gibeon), and Lower Beth Horon, Beit Ur et-Tahta (about a mile and a half further to the northwest, and about a thousand feet lower in elevation). It has been suggested that this is the city referred to as Bit Ninurta in the Amarna letters. The pass leads into the Aijalon Valley (referred to in the Amarna texts as Ayyaluna), the major route from the hill country to the coastal plains. Once in the Aijalon Valley the Amorites turned south, crossing the Sorek Valley heading southeast about twelve miles to Azekah (about a mile west of Jarmuth) overlooking the Elah Valley. From there they continued south about fourteen more miles to Makkedah. This route runs along the flanks between the hill country and the Shephelah. Makkedah is identified as Khirbet el-Qom, about halfway between Lachish and Hebron and only about three miles northeast of Eglon, so this is centrally located to several of the cities of the coalition. Limited excavation has been done at the site, with no Late Bronze finds reported. Azekah is Tell Zakariya, where there is evidence of a Canaanite settlement but little light shed on that level from archaeology.

10:11. hailstones. The occurrence of hailstones as divine judgment in conquest accounts is not unique. In a letter to his god (Assur), Sargon II of Assyria reports that in his campaign against Urartu (714 B.C.) the god Adad stormed against his enemies with "stones from heaven" and so annihilated them. This battle included a coalition that fled through the passes and valleys pursued by Sargon, with the enemy king hiding at last in the clefts of his mountain.

10:12. Gibeon and Aijalon. The relative positions of the sun and moon are important to the interpretation of this passage. Gibeon is east and Aijalon is west, suggesting that the sun is rising and the moon is setting. During the phase of the full moon, the moon sets in the west shortly after the sun rises in the east.

10:12-13. sun and moon as omens. In the ancient Near East the months were not standardized in length but varied according to the phases of the moon. This lunar calendar was then periodically adjusted to the solar year so as to retain the relationship of months with the seasons. The beginning of a month was calculated by the first appearance of the new moon. The full moon came in the middle of the month and was identified by the fact that the moon set just minutes after the sun rose. The day of the month on which the full moon occurred served as an indicator of how many days the month would have. It was considered a good omen if the full moon came on the fourteenth day of the month, because then the new crescent would be seen on the thirtieth day and the month would be the "right" length and all would be in harmony. If "opposition" (moon and sun simultaneously on opposite horizons) occurred on the fourteenth, it was considered to be a "full-length" month made up of full-length days. Thus days were viewed as longer or shorter based on the way the month was going. Verse 13 reports that the sun and moon did not behave as they would have on a full-length day. As a result of these beliefs, the horizon was observed very carefully in the middle section of the month, hoping for this opposition of sun and moon to come on the propitious day (fourteenth). Opposition on the wrong day was believed to be

an omen of all sorts of disaster, including military defeat and overthrow of cities. In this way the movements of the sun and the moon became monthly omens of good fortune or ill. In the ancient Near East great significance was attached to these omens and they were often used to determine whether battle should be done on a particular day or not. As noted in the above comment on Gibeon and Aijalon, the positions reported in Joshua for the sun and moon suggest that it is near sunrise in the full moon phase.

10:12-13. terminology in the celestial omens. The Mesopotamian celestial omens use verbs like *wait, stand* and *stop* to record the relative movements and positions of the celestial bodies. When the moon or sun do not wait, the moon sinks over the horizon before the sun rises and no opposition occurs. When the moon and sun wait or stand, it indicates that the opposition does occur for the determination of the full moon day. The omens in the series known as Enuma Anu Enlil often speak of changing velocities of the moon in its course to effect or avoid opposition with the sun. Likewise in verse 13 the text here reports that the sun did not hurry but instead stood in its section of the sky. It should be noted that the text does not suggest the astronomical phenomena were unique, but instead, verse 14 says plainly that what was unique was the Lord accepting a battle strategy from a man ("the Lord listened to a man"). A Mesopotamian lamentation (first millennium) shows this same type of terminology for divine judgment when it speaks of the heavens rumbling, the earth shaking, the sun lying at the horizon, the moon stopping in the sky and evil storms sweeping through the land. Joshua's knowledge of the Amorites' dependence on omens may have led him to ask the Lord for one that he knew would deflate their morale—for the opposition to occur on an unpropitious day.

10:13. Book of Jashar. It is inferred that the Book of Jashar contained ancient poetic accounts of heroic deeds (the only other reference to it is in 2 Sam 1:18). The title Jashar could be the adjective *upright* or a form of the Hebrew verb *sing*. It has not been preserved.

10:16-43. conquest narratives in the ancient Near East. Egyptian war diaries (day books) record military campaigns in much the same way that Joshua does. The combination of longer narratives with short reports using standard, repeated phrases is attested in the records of Thutmose III. Studies of Hittite and Assyrian campaign reports also demonstrate much stylistic similarity. The claims that deity has commissioned the campaign and intervened to bring victory, as well as the reports of pursuing, subduing and conquering to bring about complete and utter defeat of the enemy are all common elements. This suggests that the biblical author was well aware of ancient Near Eastern scribal style and practice.

10:19. prevent reaching cities. Makkedah is only a few miles from each of the cities of Lachish, Eglon and Hebron. Joshua would rather prevent the kings from reaching their cities, where they could rally a defense. Without leadership the cities would be easier to conquer.

10:24. foot on the neck symbolism. The Assyrian king Tukulti-Ninurta I (thirteenth century) "puts his foot on the neck of" individual conquered kings as well as (symbolically) on that of conquered lands, clarifying that they have thus become his footstool. As a result the symbolism of making one's enemies their footstool (Ps 110:1) can be related to the action here.

10:26. exposure of the corpses. The kings were executed first, then hung, suggesting that this was not a manner of execution but a treatment of the corpse (see 2 Sam 21:12 compared with 1 Sam 31:10). Many believe it refers to impalement on a gibbet as was known to be practiced later by the Assyrians and Persians. Exposing the corpse was also occasionally practiced by the Egyptians. It represented a final humiliation and a desecration (see Is 14:19-20; Jer 7:33; 8:1-3), for most ancient peoples believed that proper, timely burial affected the quality of the afterlife (see comment on 8:29).

10:29. Libnah. The town of Libnah, on the way from Makkedah to Lachish, is usually identified with Tell Bornat, strategically located by the Wadi Zeita guarding the best route to Hebron from the coast. There have been no excavations there, but surveys have turned up both Late Bronze and Iron Age evidence on the site. Others identify it with a site five miles further east, Khirbet Tell el-Beida (nine miles northeast of Lachish).

10:33. Gezer. Gezer, modern Tell Jezer, is a thirty-three-acre mound at the west end of the Valley of Aijalon, some twenty-five or thirty miles north of the area of concentration. Its army is defeated, but the city is not conquered in this campaign (see 16:10). It is one of the cities listed as conquered by Pharaoh Merenptah and was one of the most important cities in Canaan in the Amarna texts, where there are ten letters to the pharaoh from its king, Yapahu. Extensive excavations have been carried out at the site. A heavily fortified Middle

Bronze city was destroyed by fire at the end of that period (perhaps the destruction claimed by Thutmose III, fifteenth century). The Late Bronze city was surrounded by a wall that was twelve or fourteen feet wide and over fifteen feet high.

10:33. Horam. Horam, king of Gezer, is not known from any other texts of the period, though it is a typical West Semitic name.

10:36. destruction of Hebron. For general information about Hebron see comment on 10:3. Since there has been no occupation level from the Late Bronze Age uncovered at Hebron, archaeology can shed little light on the destruction by Joshua and the Israelites. Since Hebron is the site of a modern town, there are many areas that are not available for excavation.

10:38. Debir. Debir is Khirbet Rabud, a fifteen-acre site about eight miles southwest of Hebron. A fortified Canaanite city in the Late Bronze Age, it has a commanding location along the Wadi Hebron that goes from Beersheba to Hebron. Excavation has been limited to two trenches, so there is not much information concerning the destruction by Joshua.

10:40. region and extent of conquest. The cities that have been described in this passage are all in the southern hill country and the southern Shephelah. Cities such as Gezer and Jerusalem are not mentioned as being attacked. The description given in the verse circumscribes this region. Since the kings who controlled the region had been defeated, the territory was now considered to belong to the Israelites. The use of hyperbole in describing the total nature of the destruction is common in conquest accounts. The text itself demonstrates that it is hyperbole in Joshua 15:13-16, where inhabitants of Hebron and Debir are mentioned. This type of hyperbole is used in reference to Israel in the Merenptah Inscription, where it is claimed that there are no descendants of Israel remaining, and in the Mesha Inscription, where Israel is described as utterly perished forever. Such statements are the rhetoric indicative of military victory and can be found in Hittite, Egyptian and Assyrian accounts of campaigns. This does not suggest the account is inaccurate, deceptive or misleading, for any reader would have recognized this well-known rhetorical style for reporting the results of battle.

10:41. Kadesh-barnea to Gaza. Kadesh- barnea represents the border between the Negev section of the promised land and the Sinai wilderness. Gaza (about sixty miles directly north) represents the border between Palestine and Egyptian territories in the Sinai along the coast of the Mediterranean. Together these serve as the southwestern border of the land.

10:41. Goshen to Gibeon. Goshen does not refer to the territory by the same name in the delta region of Egypt but to an area in the hill country of Judah, as indicated by 11:16 and 15:51, where it stands with the southernmost sites in the hill country. Gibeon represents the northernmost acquisitions of the southern campaign. Together these serve as the eastern border of the territories conquered in this campaign.

11:1-15
The Defeat of the Northern Coalition

11:1. Jabin. This may be another name that has been shortened by dropping the god's name (see comment on 10:3 on the allies). A similar name is found in the Amarna texts for the king of Lachish, whose name is Yabni-Ilu ("[the god] Il created"). In the Mari texts (eighteenth century B.C.) the king of Hazor is named Yabni-Addu ("[the god] Adad created"). The name may also be referred to on an itinerary list from Rameses II, where Ibni is named as the king of Qishon. Qishon is possibly the same as Qedesh, where Deborah and Barak fight against a king named Jabin also connected to Hazor (Judg 4:1-13).

11:1. Hazor. Hazor (Tell el-Qedah) is located about ten miles north of the Sea of Galilee along the major trade routes of the region. The upper city on top of the tell was about 25 acres, while the lower city covered another 175 acres, making it one of the largest cities in the fertile crescent. The tell was about 140 feet high. The Middle Bronze wall around the upper city was of mudbrick and was 23 feet wide. Parts of the lower city were defended by a rampart wall and fosse (dry moat). Hazor is the most important city in the region in the Amarna texts. Hazor's king in the Amarna texts, Abdi-Tirshi, claims loyalty to Egypt, though he is named as one of those siding with the Habiru. He is also accused of taking cities from Ayyab, king of Ashtaroth (see comment on Deut 1).

11:1. Madon. Because of textual variations most have accepted that Madon is the same as Merom, mentioned here in verse 5 as the site of the coalition camp. The currently favored location for Merom is Tell Qarnei Hittin, about five miles west of Tiberias and the Sea of Galilee. Excavations at the site have discovered a Late Bronze fortress that was destroyed in the thirteenth century. Both Thutmose III of Egypt (fifteenth century) and Tiglath-Pileser III of Assyria (eighth century) claim to have taken

Merom. The king, Jobab, is not known from any other sources.

11:1. Shimron. Shimron (Shamhuna of the Amarna texts, also in the itinerary of Thutmose III) is Khirbet Sammuniya at the western end of the Jezreel Valley, five miles west of Nazareth and seventeen miles southwest of Qarnei Hittin. There have been Late Bronze Age remains found at the site.

11:1. Acshaph. Acshaph (Akshapa of the Amarna texts, also in the itinerary of Thutmose III) has been tentatively identified as Tell Keisan, about twelve miles north-northwest of Shimron, about three miles from the Mediterranean coast on the plain of Acco. Papyrus Anastasi I (thirteenth century) confirms a location on the plain of Acco, though it leads one to expect a site a bit further south than Keisan. There have been Late Bronze Age remains found at the site.

11:2. regions. The description of the region in verse 2 is very uncertain, but it appears to cut a swath from Hazor and the Sea of Galilee on the east angling southwest through the Galilee region to the coast at Naphoth Dor. The latter is probably one of the names of the town of Dor (Khirbet el-Burj), which was an important seaport in the Late Bronze period. Kinnereth could refer either to the town on the northwest shore of the lake or to the lake itself. The Arabah is the Jordan rift valley.

11:3. people groups. For discussion of these people groups see the comment on 3:10.

11:3. Hivites in Mizpah. The region of Mizpah is the valley that comes south through the Huleh basin flanked on the east by Mount Hermon. The Hivites that lived in there were most likely Hurrians resettled from the Mitanni region. See comment on 9:7.

11:4. chariots in the Late Bronze Age. Canaanite chariots of the Late Bronze Age were light vehicles with almost no armor and wheels with four spokes. They were drawn by two horses. These are in contrast to the iron chariots of the next period, which were armored and featured six-spoke wheels to carry the extra weight.

11:5. Waters of Merom. If Merom is properly located at Qarnei Hittin (see comment on Madon at 11:1), then the Waters of Merom would be either a spring near the site or a river nearby. There is a wadi that runs through the valley north of the site.

11:6. hamstringing horses. Horses could not be mercifully shot as they are today, and the Israelites had no use for them and no means of caring for them; they certainly did not want their enemies to have continued use of them. Hamstringing involves cutting through the rear tarsal tendon in the hock joint (the equivalent of the human Achilles tendon).

11:8. path of pursuit. The path of pursuit appears to circumscribe the area known as Upper Galilee going west to the coast through the Turan Valley and the Valley of Iphtahel (the valleys north of Nazareth), then up the coast to the territory of Sidon, whose southern border is the east-west section of the Litani River (Misrephoth Maim?), east to where the Litani River swings from north-south into the Huleh Valley (the Valley of Mizpah, Marj 'Ayyun), then south again to Hazor to lay claim to the cities of the defeated kings.

11:11. destruction of Hazor. Hazor's upper and lower city were destroyed by fire in the thirteenth century B.C., and the lower city was never reoccupied. Solomon's building at the site was limited to the upper city.

11:12. royal cities. Royal cities would be the administrative centers of larger districts. The Egyptians had a number of such cities during the Amarna period where their governors lived, such as Gaza and Beth Shan. Cities like Shechem and Hazor could also have been considered royal cities because of the large areas they controlled. Gibeon's strategic location and fortifications give it the potential to be such a city.

11:13. built on their mounds. The mounds referred to here are the tells that characterize many ancient sites. A city was more defensible if it was built on elevated ground, but in addition to the natural mound, as each successive occupation level was destroyed or abandoned, the rubble was flattened for the reconstruction of the city. As one layer piled on top of another century after century, an artificial mound, or tell, rose higher and higher. Some sites have more than twenty occupation levels, and the task of the archaeologist is to peel through these layers to reconstruct the history of the site.

11:16—12:24

Summary of the Conquest

11:16-17. extent of the conquest. Verse 16 names the geographical areas of the land that covers all but the coast from Galilee in the north to the Negev in the south. Verse 17 uses two landmarks to designate the conquered territory. Mount Halak is near the Edomite border on the south and is generally identified as Jebel Halaq, along the Wadi Marra between Beersheba and the wilderness of Zin. Baal Gad is the northern boundary in the vicinity of Dan/Laish north of Hazor, sometimes identified as Banias, just east of Dan. The Valley of

Lebanon is often considered the same as the Valley of Mizpah (see comment on 11:8), joining the Litani Valley to the Huleh Valley. For the totality of the language see the comment on 10:40.

11:21. Anakites. The descendants of Anak are generally considered "giants" (see Num 13:21-33; Deut 2:10-11; 2 Sam 21:18-22), though the description "gigantic" may be a more appropriate line of thinking. There is no sure mention of the Anakites in other sources, though a possibility exists in the Egyptian execration texts. Additionally, the Egyptian letter on Papyrus Anastasi I (thirteenth century B.C.) describes fierce warriors in Canaan that are seven to nine feet tall.

11:21. Hebron, Debir, Anab. Hebron and Debir were identified in the comments on 10:3 and 10:38 respectively. Anab is also in the hill country of Judah and is probably Khirbet Unnab es-Seghir (Tell Rekhesh) about fifteen miles southwest of Hebron. It is referred to in Egyptian texts of the period, and surveys have identified Iron Age remains.

11:22. Gaza, Gath, Ashdod. Gaza, Gath and Ashdod become three of the five capital cities of the Philistine rulers along the southern coastal plains. Ashdod is about three miles from the coast, directly west of Jerusalem. It is mentioned in the Ugaritic texts, and excavations have demonstrated a large Late Bronze settlement on the site. Gaza is two miles from the coast, about twenty miles southwest of Ashdod. The modern city prevents significant excavation, but the city is well known in extrabiblical sources of the biblical period. Gath, Tell es-Safi, is further inland by the Elah Valley where it enters the Shephelah, five or six miles west of Azekah. There has been little modern excavation on the site.

12:1-24

List of Defeated Kings

12:1. Arnon to Hermon. The Transjordanian area said to be conquered stretched from the Arnon River (border between Moab and the kingdom of Sihon) in the south to Mount Hermon in the north (see Deut 3:8), a distance of about 130 air miles. This type of geographic range would be similar to the Dan to Beersheba designation in Palestine.

12:2-3. geographical area. Since the exact location of biblical Heshbon is still un-known (Tell Hesban does not contain materials related to the Conquest period), it can only be said to lie near the northern end of the Dead Sea in Moabite territory (see comment on Num 21:25-28). The eastern region of Sihon's rule ranges from Aroer, a border city located on the lip of the Arnon Valley and controlling the trade and travel route through that area, through the portion of Gilead south of the Jabbok River. Along the eastern side of the Jordan Valley, Sihon is said to rule north of the Jabbok as far as the Sea of Chinnereth (Sea of Galilee), and south as far as the northeastern shores of the Dead Sea, within the slopes of the Pisgah range, directly across from Jericho.

12:4. Rephaim. The Rephaim appear in the biblical text as either the spirits of the dead (Ps 88:10-12; Is 26:14) or, as in this text, as one of the original peoples in the Transjordanian area of Bashan (Gen 14:5; Deut 3:13). They were known for their tall stature (Num 13:33; 2 Sam 21:16) and, like the Anakim and Emim of Moab, were displaced by the invading Israelites. King Og, with his huge iron bed, is designated as the last of these people, another indicator of their demise during the Israelite conquest. The origin of the Rephaim's association with the dead may be found in the Ugaritic legends of ancient kings and heroes (see Is 14:9). Their ties to Transjordanian peoples may be remnants of Ugaritic lore about that area and may also be tied to the god or eponymous ancestor Rapah (see Deut 3:11, 13 for parenthetical information on the Rephaites).

12:4-5. geographical area. The compass of Og's territory stretches from the Mount Hermon range and Bashan in the northern section of the Transjordan to the Yarmuk River in the south. He reigns in Ashtaroth (Tell Ashtarah, twenty-five miles northeast of the Sea of Galilee) and Edrei (which is mentioned in the annals of the Egyptian pharaoh Thutmose III, lies on one of the Yarmuk tributaries and is located at Der'a, in modern Jordan). The eastern border of Og's domain is Salecah, possibly modern Salkhad (see comment on Deut 3:1-11).

12:7-8. geographical area. This list of conquered territory west of the Jordan River is a repetition of Joshua 11:16-17. Such repetition further strengthens the Israelite claim on the land, based on the covenant of Genesis 15:19-21, and provides the basis for its distribution to the tribes. The southern boundary is Mount Halak (modern Jebel Halaq) near the region of Edom, and the northern border is Baal-gad near the base of Mount Hermon on the border of Lebanon. Some additions are made in terms of geographical features, such as "the mountain slopes" (see Josh 10:40; possibly the decline toward the Shephelah or in

the Judean desert angling toward the Dead Sea) and "the desert," an area later occupied by the tribe of Judah (see Josh 15:61).

12:9-12. list of kings. The list of conquered kings roughly follows the sequence of the Israelite conquest in Joshua 6—11. Thus Jericho and Ai (beside Bethel, see Josh 7:2) appear in Joshua 6—8. The kings of the southern Canaanite coalition are listed in verses 10-12 and are found in Joshua 10:3, 23. Assyrian inscriptions occasionally list the lands and kings conquered by a particular king in the course of his campaign. Tiglath-Pileser I, for instance, tells of forty-two lands conquered over a period of five years. Shalmaneser I reports that he destroyed fifty-one cities.

12:13. Debir. See the comment describing Debir in Joshua 10:38.

12:13. Geder. The site of Geder is unknown. Some suggest that this is a scribal error for Gerar, a Canaanite city in the western Negev region. However, one of Solomon's officials is identified as a Gederite in 1 Chronicles 27:28, indicating that it is the actual name of a city. One suggestion is Khirbet Jedur about seven miles north of Hebron.

12:14. Hormah. With its name meaning "destruction," it is possible that this site name has been applied to several places. It appears to be located in the southern Negev region of Judah, but its exact location is still in dispute (among the suggestions are Tell el-Milh, seven miles northeast of Beersheba, and Tell Masos, seven miles east of Beersheba). The name is associated with Israel's initial defeat in Numbers 14:45 as well as a victory over Arad (Num 21:1-3).

12:14. Arad. The site of Tell 'Arad is eighteen miles east northeast of Beer-sheba in the southern Negev region. There are a number of small sites associated with this settlement, and it is possible that the Arad of Joshua was actually Tell Malhata, four miles east of Tell 'Arad, or possibly Tel Masos (Khirbet el-Meshash), about seven miles east of Beersheba. Ceramic evidence or its absence from these sites, however, has led to a variety of opinions. It can be noted that Tell 'Arad was virtually abandoned at the end of the Early Bronze Age after being a major, fortified site with significant Egyptian influence. There is also evidence of the appearance of an unfortified village during the Iron Age (eleventh century B.C.), which might correspond to the settlement of the Kenites mentioned in Judges 1:16.

12:15. Libnah. See the comment describing Libnah in Joshua 10:29.

12:15. Adullam. Located in the Shephelah in southern Judah, about sixteen miles southwest of Jerusalem, Adullam has been identified as Tell esh Sheikh Madhkur. Although it only appears here as part of the list of conquered kings, the site is associated with David (1 Sam 22:1) and is among the list of the fortified cities of Solomon (2 Chron 11:7). In prophetic tradition, Micah mourns its destruction during the Assyrian invasion (Mic 1:15).

12:16. Makkedah and Bethel. See the comments on 10:10 for Makkedah and on 8:9 for Bethel.

12:17. Tappuah. Identified with the hilltop site of Tell Sheikh Abu Zarad, nine miles southeast of Nablus, Tappuah was a border town between the tribal areas of Ephraim and Manasseh (see 16:8; 17:7-8). Another town by that name is also mentioned in 15:34 in Judah, but it has not been positively identified.

12:17. Hepher. Although the city-state of Hepher has not been positively identified, it was most likely within the northeast segment of the tribal allotment of Manasseh, perhaps as far north as the Dothan valley and the Gilboa range. Recent archaeological survey in that region suggests Tell el-Muhaffar as a possible site for Hepher (see 17:2-3 for ties between Hepher and the allotment of Zelophehad).

12:18. Aphek. Mentioned in the annals of the Egyptian pharaohs Thutmose III (c. 1490-1436) and Amen-hotep II (c. 1447-1421), this Aphek was located on the Sharon Plain and is identified with Tell Ras el-'Ain, at the source of the Yarkon River near modern Tel Aviv. It is also the site of at least two major battles between the Israelites and the Philistines (1 Sam 4:1; 29:1).

12:18. Lasharon. It is possible, based on the Septuagint reading, that Lasharon is simply a geographic indicator for Aphek, since that site name is used elsewhere for other cities (see Josh 13:4; 1 Kings 20:26-30). If it is a separate site, it is most likely to be located near Philistine territory.

12:19. Madon and Hazor. See the comment on 11:1 dealing with these conquered cities.

12:20. Shimron, Meron and Acshaph. See the comment on 11:1 dealing with these conquered cities.

12:21. Taanach. Although founded about 2700 B.C. at Tell Ti'innik, about four miles northwest of Megiddo on a crest above the Jezreel Valley, Taanach does not appear in extrabiblical records until the fifteenth-century annals of Pharaoh Thutmose III in his account of the Battle of Megiddo (c. 1468 B.C.). It is one of several Jezreel sites that are regularly included in the lists of conquered cities in this rich, disputed area. Its inclusion in Joshua's conquest list thus follows that pattern. Although

it was originally a part of the tribal allotment of Asher, later references describe it as part of Manasseh (Josh 17:12; Judg 5:19). Based on excavation reports, Taanach experienced its greatest period of importance during the mid-third millennium and between the seventeenth and fourteenth centuries B.C. It was only sparsely settled during the twelfth century B.C., following the collapse of Egyptian control of the area and the incursion of the Sea Peoples. However, a new defense system was constructed in the tenth century, indicating a resurgence of population during the monarchy period.

12:21. Megiddo. Since Megiddo commanded the western entrance to the strategic Valley of Jezreel, the Plain of Sharon and the coastal international trade route between Egypt and Mesopotamia, it claimed the attention of many ancient rulers. Founded around 3300 B.C. near two springs, Megiddo was destroyed and rebuilt twenty times as Egyptian (annals of Thutmose III, Seti, Rameses II; El Amarna letters), Hittite and Mesopotamian armies contended to control it and the economic link through Syro-Palestine. The destruction of the Late Bronze city (stratum VIIA) of the twelfth century probably coincides with the break in Egyptian suzerainty following the incursion of the Sea Peoples (based on the discovery of Philistine pottery). Other than in this list of conquered kings, Megiddo is not mentioned in the conquest narrative. It was assigned to Manasseh (Josh 17:11) but was not captured by the Israelites (Judg 1:27) until the monarchy period (1 Kings 4:12; 9:15).

12:22. Kedesh. This place name appears in several geographic contexts, including within Galilee (Tell Qades) and Naphtali near Megiddo (Judg 4:11; 5:19; Tel Abu Kudeis). Its appearance at this point in the list suggests a site in the Jezreel Valley, but it is not possible to make an exact determination.

12:22. Jokneam. Identified with Tel Yoq-neam, this site is located just northwest of Megiddo at the exit of the Wadi Milh in the Jezreel Valley on the border of Zebulun (Josh 19:11; 21:34). It was founded in the Early Bronze period and continued to be occupied until the Ottoman era. Its strategic importance is documented by its inclusion in the conquest list of Thutmose III. The city was destroyed in the thirteenth-century upheaval and again at the end of the eleventh century, perhaps as part of the Israelite expansion to the north.

12:23. Dor. The coastal city of Dor was most likely founded during the thirteenth century B.C. as part of Rameses II's attempt to increase trade between Syro-Palestine and the Aegean. The Philistines subsequently settled here (evident in the Egyptian story of Wen-Amon's journey), and then it was taken by Solomon and served as one of his administrative centers (1 Kings 4:11). It was in the tribal territory of Manasseh but not conquered until the monarchy period (Josh 11:2; Judg 1:27).

12:23. Goyim/Gilgal. There are several cities identified as Gilgal, and they are found throughout ancient Canaan. The identifier Goyim, "Gentiles," is not particularly helpful, although some, using the LXX reading, tie the name to Harosheth Haggoyim in Judges 4:2. Since it appears between Dor and Tirzah on the list in Joshua, this may indicate a location in the eastern quadrant of the Sharon Plain.

12:24. Tirzah. Generally identified with Tell el-Far'ah (seven miles northeast of Nablus in the central highlands), Tirzah's only biblical appearance prior to the monarchy period is in Joshua's list of conquered kings. Its association with Manasseh is based on a woman named Tirzah in the genealogy (Num 26:33; Josh 17:3). Settlement began in the Neolithic period with the largest city dated to about 1700, with thick walls and a citadel. Its Iron Age heights were reached when it served as Israel's capital (1 Kings 15:21), but the shift to Samaria left it a minor post.

13:1-33

Division of Transjordan

13:1. boundary lists in the ancient Near East. There are several Hittite treaties that offer similarities to the boundary lists found in Joshua 13—19. In the treaties the boundary lists indicate the frontiers of the land that is entrusted to the vassal by the suzerain. Even though the land technically belongs to the suzerain, he offers local control to the vassal and delineates the boundaries of the land that defines this legal relationship. It is land that is designated as territory to be protected in loyalty to the suzerain. The most extensive boundary list is found in the treaty between the Hittites and their vassal district Tarhuntassa (in south-central Anatolia). The purpose of the lists in these two treaties is to specify which territory belongs to Tarhuntassa and which territory belongs to its neighbors, the other vassal districts. This would be similar to the purpose of Joshua 13—19, to distinguish which territory belongs to which tribe. It is the role of the suzerain to define the frontiers in this way, and it demonstrates the suzerain's control of the vassals and their land.

13:2-5. the land that remained. The summary statement of territories that remained to be

conquered is divided into three regions: (1) Philistia, including the five major Philistine city-states, and the area to the south that borders on Egypt at the Wadi el-'Arish (see Josh 15:4); (2) the Phoenician coastal zone; and (3) Byblos and the Lebanon mountain zone east of Syria. This final area was never conquered by the Israelites, although commercial and diplomatic ties did exist (1 Kings 9:19). The Phoenician city-states of Tyre and Sidon in the second region were assigned to Asher but never conquered (Judg 1:31). However, they were certainly allied with the governments of David and Solomon (1 Kings 5:1; 9:11-13). Within Philistia are the settlements of a segment of the Sea Peoples. Excavations at several of these sites (most recently at Tel Miqne/Ekron) demonstrate destruction levels consistent with their incursion and the displacement of Canaanite inhabitants (for the Avvim, see Deut 2:23). Of these cities, only Gath has not been positively identified (Tell esh-Sheri'ah and Tell es-Safi have been proposed, with the latter being most likely).

13:6. geography of. This statement reiterates the geographic region of Phoenicia, although it refers to it entirely as Sidonian. It is possible to see this verse as part of the geographic summary in Joshua 13:5, but it may also be a summary statement. In any case, it proves a northern border to the region actually said to be conquered by Joshua (for Misraphoth Mayim see Josh 11:8).

13:9-13. geography of. For discussion of this geographic description of Transjordan, see the comments on Joshua 12:2-6 and Deuteronomy 3:8-17.

13:9. Medeba plateau. This fertile tableland, within the Mishor (northern Moab), lies about twenty-five miles south of Amman, Jordan. It was assigned to Reuben and was the scene of numerous battles between Israelites and Moabites for control of this area (Judg 3:12-30; 1 Sam 14:47; 2 Sam 8:2; 1 Chron 19:7).

13:10. Heshbon. See the comments on Numbers 21:26-30 dealing with the Amorite kingdom of Sihon in this region of Moab.

13:17-20. locations in. The list of captured cities within the kingdom of Sihon (Heshbon, Jahaz, Edrei, Dibon, Medeba) also appears in Numbers 21:21-35. Numbers 32:33-41 also lays claim to cities within this region for Reuben, Gad and Manasseh. Bamoth Baal is also found within the Balaam cycle of stories (Num 22:41), and several of these sites appear in the list of Levitical cities (Josh 21). Location for sites not discussed elsewhere include Beth Baal Meon with Ma'in (four miles southwest of Medeba); Kedemoth with Khirbet er Remeil or 'Aleiyan (fifteen miles southeast of Medeba); Mephaath with Khirbet Nef'a (four miles south of Amman), Tell Jawah (five miles south of Amman) or, most likely, Umm er-Rasas (almost twenty miles southeast of Medeba); Sibmah with Khirbet qurn el-Kibs; Zereth Shahar with Khirbet ez-Zarat (near the shore of the Dead Sea); and Beth Peor with Khirbet 'Uyun Musa.

13:21. Midianite chiefs. The list of defeated Midianite chiefs or princes is also found in Numbers 31:8, where they are referred to as kings. Evi and Reba only appear in these identical lists, while Zur is referred to as a tribal chief in Numbers 25:15 (1 Chron 8:30), and Hur is the name of an Israelite chief in Exodus 17:10. Rekem is a fairly common personal name (1 Chron 2:43-44; 7:16) as well as a place name (Josh 18:27). The names may also be associated with specific places ranging from southern Transjordan to northern Arabia, thereby tracing control of the trade routes of that region.

13:22. Balaam. See the comments on Balaam in Numbers 22 and the comment on Numbers 25:3, which discusses the incident at Baal-Peor and may be the basis for the account of Balaam's death here in Joshua 13.

13:24-29. geography of Gad. The territory assigned to the tribe of Gad includes most of Gilead. This region is located to the south of the Jabbok River as far as the hill country near Amman. The Aroer listed here is near Amman (Rabbah), not the southern site mentioned in Joshua 13:16. Jezer is probably to be identified with Khirbet es-Sar (about eight miles from Hesbon), and Betonim is located at Khirbet el-Batne about three miles southeast of es-Salt. Mahanaim is most often identified with Tell Heggag in the Jabbok valley just south of Penuel, and Lo-Debar (NIV: Debir) may be a little north of there, but its exact site is unknown (see Amos 6:13). Of the other sites listed, Beth Haram is either Tell er-Rameh or Tell Iktanu at the confluence of the Wadi Hesban; Beth Nimrah is either Tell el-Blebil or Tell Nimrin; Succoth is probably Tell Deir 'Alla on the Jabbok; and Zaphon is Tell es-Sa'idiye on the Wadi Kafrinji.

13:30-31. geography of Manasseh. The description of the territory assigned to the eastern half of the tribe of Manasseh is not as detailed as that for Gad. It has parallels in Numbers 32:39-42 and Deuteronomy 3:13-14. In general the area extended from Mahanaim, also a northern boundary point for Gad, northward through much of Bashan (see Josh 12:4 and 13:11-12) as far as Mount Hermon. The "settlements of Jair" cannot be identified

since they would have been tent encampments (see Num 32:41; Deut 3:14; 1 Chron 2:22), but they would have been scattered throughout Bashan. For Machir as a descendant of Manasseh, see Genesis 50:23 and Numbers 26:29. This tribal segment would have been associated with northern Gilead (see Num 32:39-40; Judg 5:14).

14:1—19:51

The Distribution of the Land

14:6. Kenizzite. The Kenizzites were a non-Israelite tribal group, geographically and ethnically tied to the Kenites, Calebites and Othnielites (see Gen 15:19; Num 32:12; Judg 1:13). Their territory included the region southwest of Hebron and reaching south of the Dead Sea in the vicinity of Edom. These smaller tribal groups were eventually absorbed into the tribe of Judah after the establishment of the monarchy.

14:15. Anakites. See the comment on 11:21.

14:15. Hebron. See the comment on 10:3.

15:2-4. geography of Judah's southern boundary. Judah's southern border is the same as that of the nation in Numbers 34:3-5. It extends from the southern end of the Dead Sea, on the border with Edom, to the Desert of Zin (see Num 13:21; 20:1) and eventually west to the Mediterranean Sea. "Scorpion Pass" may be identified with Naqb es-Safa (see Num 34:4). Kadesh-barnea was the staging point from which the Israelites traversed the wilderness and from which they began the conquest (see Num 13:26; Deut 1:19, 46). It is most likely located at 'Ain el-Qudeirat on the Wadi el-'Ain in the northern Sinai. The villages of Hezron, Addar and Karka have not been located, although they may be associated with wells or springs near Kadesh-barnea, and the site of Azmon is also uncertain, though it has been identified with Ain Muweilih, another of the springs in the area. For the Wadi (or Brook) of Egypt, the Wadi el-'Arish, see Joshua 13:3. The various directional qualifiers in the list of place names are very general and give only an approximation of direction and exact location.

15:5a. Judah eastern border. The eastern border of the tribal territory of Judah is the Dead Sea. It extended from its southern end bordering on Edom, northwest to Jericho and the Wadi Qelt, and on to the hill country of Bethel. The reference to the "mouth" implies the confluence of the Jordan River into the Dead Sea at a point 1285 feet below sea level. Like many ancient nations, Judah utilized a natural barrier to mark its border.

15:5b-11. Judah northern border. The northern border begins at the "mouth of the Jordan" and extends northwest to Jericho and the Wadi Qelt. It passes just to the south of Jerusalem (Jebus) and then on to Kiriath Jearim (Deir el-Azhar) by way of the Judean hills to Beth Shemesh (Tell el-Rumeileh) on to the border of Philistia on the "northern slope of Ekron" (Tel Miqne). It then passes through the Sorek Valley westward to Jabneel (2 Chron 26:6; later Jamnia) and the Mediterranean Sea. Reference to Gilgal is problematic since this site is generally thought to lie north of Judah's territory (Josh 5:9). The Pass of Adummim, literally "ascent of blood," is Tal'at ed-Damm. En Shemesh refers to a well south of Jerusalem and has been identified with 'Ain el-Hod to the east of the Mount of Olives. En Rogel is found at the meeting of the Kidron and Hinnom Valleys east of Jerusalem. Nephtoah is identified with Lifta, two miles northwest of Jerusalem.

15:7. Debir. See the comment on this name in Joshua 10:3. There Debir is identified as the king of Eglon and part of a Canaanite coalition defeated by Joshua. It is also noted as a city name in Joshua 10:38. In this case Debir is a place name but is not to be identified with the city in Joshua 10:38. It may be identified with Thogret ed-Debr, northeast of Jerusalem.

15:15. Kiriath Sepher. This is the Canaanite name for the site later known as Debir (see Judg 1:11-12). The name means "city of the book" or "town of the treaty," and may thus reflect either a local scribal school or possibly the site of a treaty. The biblical references indicate that the city was located southwest of Hebron in the southern portion of the Judean hill country. Recent excavation indicates its likely site is Khirbet Rabud.

15:13-19. land grant. Caleb's grant of land to Othniel and his daughter Acsah is typical of feudatory grants in the ancient Near East. Very often kings or princes would offer land grants to military officers as a reward for services rendered as well as a means of bringing uncultivated land into production and increasing the tax base (evident in some of Hammurabi's laws). This practice was also used by governments to facilitate the settlement of tribal peoples who might otherwise become a problem to the peace and economic activity of the kingdom (a practice seen in the Mari texts). The fact that this land grant is coupled with an offer of a marriage (see 1 Sam 17:25; 18:17) simply adds weight to the importance of the task of conquering the Anakim. Since the assigned land is quite arid, Acsah's request for water sources (see Gen 26:17-33) is

not out of line and holds her father to a more honest position than was originally the case.

15:21-32. southern towns of Judah. These southern towns center on Beersheba and stretch from the Edomite border to Sharuhen (see Josh 19:6) on the Mediterranean coast. Of those that have been identified, Kabzeel (2 Sam 23:20; Neh 11:25) may be Tell Gharreh between Beersheba and Arad; Jagur may be Khirbet el-Gharrah, nine miles east of Beersheba; Kinah is identified with Horvat 'Uza, three miles southwest of Arad; Kerioth Hezron may be Khirbet el-Qaryatein, four miles north of Arad; Amam may be Be'er Navatim near Beersheba; Moladah may be Khirbet el-Waten, six miles east of Beersheba; Baalah may be Tulul el-Medbah near Tel Masos; Madmannah is tentatively identified as Khirbet Tatrit; Sansannah may be Khirbet esh-Shamsaniyat in the Negeb plains; and Rimmon may be Tel Halif, eight miles northeast of Beersheba (see Neh 11:29; Zech 14:10).

15:33-47. western towns of Judah. The list of Judah's western towns and villages in the Shephelah is arranged in four groups, with a north-south orientation centering on Lachish. The last group, which includes Philistia and its major city-states (Ekron, Ashdod, Gaza), was assigned to Judah in name only since it was not forced into submission until the monarchy. Of those that can at least tentatively be identified, Jarmuth (see Josh 10:3) is Khirbet Yarmuk, sixteen miles west of Jerusalem; Zenan may be 'Araq el-Kharba near Lachish; Lachish is Tell ed-Duweir (Josh 10:3) and was massively fortified during the monarchy period; Eglon remains unknown (its traditional identification with Tell el-Hesi is unfounded); Libnah may be Tell es-Safi or Tell Bornat; Ether is Khirbet el-'Ater; Ashnah is Idhnah; Nezib is at Khirbet Beit Nesib, eight miles northwest of Hebron; and Keilah is Khirbet Qila in the eastern portion of the Shephelah (Amarna Tablets: *Qiltu*?).

15:48-60. hill country towns. The Judean hill country, which lies in a narrow, north-south strip between the Judean wilderness on the east and the Shephelah tableland on the west, contained five (six in the LXX) districts with their towns and villages assigned to the tribe of Judah. Of those that have been tentatively identified, Shamir is el-Bireh; Jattir is Khirbet 'Attir (see 1 Sam 30:27); Anab is Khirbet 'Anab; Anim may be Khirbet Ghuwein et-Tahta, seven miles southwest of Hebron; Holon is at Khirbet 'Illin; Arab is located at er-Rabiyeh; Dumah may be at Deir ed-Domeh (possibly Udumu in EA 256); Beth Tappuah is at Taffuh, three miles west of Hebron; Zior is at Si'ir, five miles northeast of Hebron; Maon may be Tell Ma'in, just south of Hebron (see 1 Sam 25:2); Carmel is at Khirbet el-Kermel; Juttah is at Yatta; Gibeah may be el-Jeba' southwest of Jerusalem; Beth Zur is Khirbet et-Tubeiqah, four miles north of Hebron; Gedor may be Khirbet Jedur; and Rabbah may be the Rubutu mentioned in Egyptian conquest lists and Amarna texts.

15:61-62. wilderness towns. The arid band of land along the western shore of the Dead Sea comprised the Judean Wilderness (see Ps 63:1). High cliffs and deep-cut valleys mark the area immediately along the shore. Further inland the eastern slopes of the hill country descend over three thousand feet in a space of about ten miles. This drastically effects the climate and effectively cuts off annual rainfall amounts needed to support farming or large permanent settlements. Life here was only possible near springs and wells and thus there are only six towns mentioned. Of these Beth Arabah (possibly 'Ain el-Gharabeh on the north bank of the Wadi Qelt, three miles southeast of Jericho) and En Gedi have been located with any confidence. The latter is identified with the oasis with hot springs at Tell ej-Jurn on the western shore of the Dead Sea. Some have identified Secacah with Khirbet Qumran.

16:1-4. Joseph tribes' boundaries. Touching on the northern boundary of Judah at the Jordan River, near the Dead Sea and Jericho, and on the border of Benjamin, which included the city of Jericho, this territory extended north of that city. Its border then continued on toward the hill country and Bethel through the arid region known as the desert of Beth Aven (see 18:12). The boundary extended westward to Gezer (see 10:33) and eventually to the Mediterranean Sea. This latter section would have been only nominally within Israelite territory.

16:2. Bethel/Luz. The connection between Luz and Bethel involves more than a name change (see Gen 28:19; Josh 18:13; Judg 1:23). They may have been originally two sites, but the importance of cultic site of Bethel in later history eclipsed Luz and combined them. Both would have been at or near the site of Beitin (see comment on 8:9).

16:5-9. Ephraim's boundaries. With its southern boundary already delineated in verses 1-4, Ephraim's border extended as far north as the area around Shechem and then swung east and south toward Tanaath Shiloh (Khirbet Ta'nah el-Foqa) and Janoah (Khirbet Yanun). Sites identified in this region include Ataroth (possibly Tell Sheikh ed-Diab or Tell-Mazar) and Naarah (Tell el-Jisr near Jericho or Khirbet

Mifgir). The western end of their territory included Tappuah (possibly Sheikh Abu Zarad; see Josh 17:7-8).

16:10. forced labor. It was a common practice to employ subject people as work gangs or menial laborers (see Josh 9:27). Forced labor is also one of the abuses of power attributed to kings and tyrants, who conscript men to do corvee labor, building roads, bridges and city walls (see 1 Kings 5:13-14; 12:4; charge against Babylonian king Nabonidus in the Cyrus Cylinder, sixth century B.C.). In this period the practice is seen in the Amarna texts employed by the king of Megiddo.

17:3-4. Zelophehad's daughters. See the comment on Numbers 36:1-13, which deals with the inheritance by daughters.

17:7-11. territory of Manasseh. The dimensions of this tribal territory are rather vague, speaking of the territory immediately north of Ephraim, in the vicinity of Shechem, and extending to a point contiguous with Asher. There is some overlap of territory, at least in the sense that the city of Tappuah (see Josh 12:17) belonged to Ephraim while the surrounding region was assigned to Manasseh (see Josh 16:9). The western boundary was the Mediterranean Sea, and the eastern border touched the region of Issachar. Again cities or their inhabitants in other tribal territories are assigned to Manasseh, all but Dor in the Plain of Esdraelon (see Josh 12:21). They are Beth Shan (Tell el-Husn), Megiddo (Tell el-Mutesellim), Ibleam near Nablus, Dor on the coast south of Mount Carmel, Endor (seven miles southeast of Nazareth), and Taanach (Tell Ti'innik, four miles northwest of Megiddo)

17:16. iron chariots. As in Judges 1:19, the use of iron chariots by the enemy is given as the reason for the Israelites' failure to completely conquer areas of Canaan. Iron technology was introduced by the Hittites and the Sea Peoples in the twelfth century B.C. However, it did not become widespread in Syro-Palestinian culture until the tenth century. References to iron chariots in the conquest narrative most likely refer to the use of iron fittings to strengthen the chariot basket or iron-shod wheels. It is possible that studs or projectile points were added to make this engine of warfare heavier and more of a factor when rammed into lines of infantry. However, maneuverability and the strength and size of the horses pulling the chariots would have limited the actual amount of iron employed.

17:16. Beth Shan. The site of Beth Shan stands at the eastern end of the Jezreel Valley and guards that important trade route's entrance into the Jordan Valley. It was assigned to Manasseh but was not captured during Joshua's time because of the inhabitants' use of iron chariots. It continued as an independent Canaanite enclave into the monarchy period (1 Sam 31:10-12) but was incorporated into Sol-omon's administrative districts (1 Kings 4:12). This is a double site, with a Roman-Byzantine city (Scythopolis) built at the base of the tell. Archaeological investigations have shown almost continuous occupation of the site since Chalcolithic times (4500-3300), and the water supply (Wadi Jalud), arable land and strategic location have insured that its population prospered, generally under Egyptian rule (starting with Thutmose III in the sixteenth century) and later under the Sea Peoples and Israelites.

18:1. Shiloh as cultic center. Shiloh (Khirbet Seilun), in a fertile valley within the Ephraimite hills between Bethel and Shechem, was occupied throughout the Iron Age and at several points in its history had significant architectural features. These included a gate complex and what may have been a temple complex. A destruction level in the mid-eleventh century may coincide with the capture of the ark in 1 Samuel 4:1-10 by the Philistines. Indications of premonarchic religious activity at this site come from Judges 21:19-23, and later traditions (Ps 78:60; Jer 7:12-15) suggest that it had served as a cultic center prior to the construction of the temple in Jerusalem.

18:4-8. ancient mapmaking. Mapmaking goes back at least into the third millennium B.C. Clay tablets have been found with maps etched onto their surfaces. Most notable are the maps of the Mesopotamian city of Nippur (from about 1500 B.C.), and a Babylonian map of the "world" (middle of the first millennium B.C.). From Egypt there is a mining map that dates to the time of Rameses II (thirteenth century B.C.).

18:6-10. casting lots. The practice of casting lots to determine God's will is a form of divination. See the comments on "Urim and Thummim" in Exodus 28:30 and on the use of lots in Numbers 26:55. Since the tribes are listed in their logical order of priority, it can be inferred that lots were not used to choose which tribe got to pick first. Instead the tribes sent their representatives in prescribed order, and the lot was cast to see which parcel of land that tribe received. In the ancient Near East, division of a father's property among his heirs was customarily accomplished by the eldest choosing his parcel and the rest being divided by lot.

18:11-20. Benjamin's allotment. Benjamin's territory lay between that of Judah and Jo-

seph, with Judah's northern boundary being roughly the same as Benjamin's southern border. The northern boundary follows that of Ephraim until it reaches Kiriath Jearim instead of extending on to the Mediterranean. In this way space is reserved for the tribal territory of Dan. The description runs east to west (from the Jordan River's entrance into the Dead Sea). It extended from just north of Jericho, through the hill country and then south toward the mountain slope of Luz (Bethel) and on to Beth Horon and Kiriath Baal (also known as Kiriath Jearim), which was the terminus point for the western boundary. The fact that its boundary ran through the valley of Hinnom means that Jerusalem was in Benjaminite territory.

18:14. Beth Horon. This is a twin city (upper and lower): Upper Beth Horon, Beit Ur el-Foqa (about two miles northwest of Gibeon), and Lower Beth Horon, Beit Ur et-Tahta (about a mile and a half further to the northwest and about a thousand feet lower in elevation). It has been suggested that this is the city referred to as Bit Ninurta in the Amarna letters. The Beth Horon pass leads into the Aijalon Valley (referred to in the Amarna texts as Ayyaluna), the major route from the hill country to the coastal plains. Although it is unclear whether the Beth Horon mentioned in Joshua 16 and 18 is the upper or lower, it is possible that their dual importance in guarding the trade route made them of equal importance and thus undifferentiated in the mind of the biblical writer.

18:15. Kiriath Jearim. Located eight miles north of Jerusalem at Deir el-Azhar, Kiriath Jearim, or "city of woods," lay at the point of intersection for the tribal territories of Benjamin and Judah. It is referred to as Baalah in Joshua 15:9 and as Kiriath Baal in Joshua 15:60 and 18:14. The city figures in the conquest narrative (Josh 9—10) and in the story of the ark's temporary retirement (1 Sam 6:19—7:2).

18:21-28. Benjaminite cities. Although several of the cities are unknown, others have been identified: Parah is Khirbet el-Farah, northeast of Anathoth; Ophrah is et-Taiyibeh, four miles northeast of Bethel; Geba may be Khirbet et-Tell, seven miles north of Bethel; Gibeon is generally identified with el-Jib, four miles northwest of Jerusalem (see Josh 9:3-5); Ramah is er-Ram, five miles north of Jerusalem; Beeroth may be el-Bireh; Mizpah may be Tell en-Nasbeh; Kephirah is Khirbet Kefirah, southwest of el-Jib; Mozah may be Khirbet Beit Mizze, west of Jerusalem; and Gibeath-Kiriath may be a high place known as the "hill of Kiriath Jearim" (see 1 Sam 7:1-2).

19:1-9. Simeon's allotment. Since the territory of Simeon is said to be "within the territory of Judah," this tribe may have been destroyed or assimilated very early, leaving only the memory of its original holdings. Most of its cities are in the Negev and two (Ether and Ashan) are in the Shephelah (see comments on Josh 15:21-32). Of those not mentioned earlier, Beth Marcaboth, "house of chariots," and Hazor Susah, "village of horses," may be functional titles rather than place names and may be equated with Madmannah and Sansannah (Josh 15:31).

19:8. Baalath Beer. This site may be the same as Bealoth in 15:24 (see Baal in 1 Chron 4:33) and was probably located just east of Beersheba. The reference to "Ramah in the Negev" suggests a "high place" or cultic site (see 1 Sam 30:27).

19:10-16. Zebulun's allotment. Although not listed, the primary orientation point for this territory is Nazareth. The boundaries and most of the cities radiate from this city both east and west. The northern boundary is about twelve miles west of Tiberias and six miles northeast of Nazareth at Rimmon (modern Rummaneh). Sarid, probably Tell Shadud (five miles southeast of Nazareth) is another orientation point looking west. From there the boundary extends along the Kishon to Jokneam (see Josh 12:22). The eastern limit stretches as far as the territory of Issachar, about two miles southeast of Nazareth. Sites mentioned in this area are Dobrath (Daburiyeh near Mount Tabor) and Japhia (Yafa, southeast of Nazareth). The only connection Zebulun has with the coast (despite Gen 49:13 and Deut 33:18-19) is by way of trade with Acre, perhaps through the nearby city of Nahalal (Tell en-Nahl). Its territory did not stretch to the Mediterranean.

19:15. Bethlehem. This site, northwest of Nahalal in Zebulun, is not to be confused with the southern site of Bethlehem in Judah. The judge Ibzan was buried here (Judg 12:9-10). A modern Arab village in the vicinity still retains the name Beit-Lahm.

19:17-23. Issachar's allotment. This territory lay primarily in the valley of Jezreel, north of Manasseh, east of Asher and south of Naphtali. Its northern border extended from Mount Tabor to the Jordan River, just south of the Sea of Galilee. The strategic and volatile nature of this area is shown by its mention in the Egyptian annals of pharaohs Thutmose III (Anaharath and Kishion) and Seti I (Remeth = Jarmuth, perhaps the same as Mount Yarmuta, six miles north of Beth Shan). Other sites which have been identified are Jezreel, which is Zer'in

northwest of Mount Gilboa; Chesulloth = Chisloth-Tabor (see Josh 19:12) is modern Iksal, two miles southeast of Nazareth; Shunem is Solem, three miles northeast of Jezreel.

19:24-31. Asher's allotment. Situated on the Plain of Acre, Asher lay west of Zebulun and Naphtali and extended as far north as the Phoenician ports of Tyre and Sidon. Again this is an area that figures prominently in Egyptian royal annals. Thutmose III lists Helkath (possibly Tell el-Harbaj or Tell el-Qassis), Acshaph (see Josh 11:1), Mishal (near Mount Carmel) and Allammelech, and Rameses II lists Kanah (seven miles southeast of Tyre) among captured Canaanite towns. Identified sites include Cabul (Kabul); Ebron (Khirbet 'Abdeh, ten miles northeast of Acco); Ummah may be Acco; this Rehob (not the same site as in Josh 19:28) may be Tell el-Gharbi, seven miles east of Acco. Mention of Tyre and Sidon do not necessitate actual control. More likely the border was more theoretical than real, although it is possible that villages associated with these city-states may have been controlled by Israel at various times.

19:29. Aczib. Located north of Acco, Aczib was allotted to Asher but was never captured (Judg 1:31). Excavations at the site demonstrate it to be a flourishing commercial center from the Middle Bronze I through the Roman period. It was sacked and rebuilt a number of times, and reached its largest extent in the eighth century B.C. before being destroyed by Sennacherib in 701. This site is not to be confused with the city mentioned in 15:44 as allotted to Judah in the Shephelah.

19:32-39. allotment for Naphtali. Mount Tabor is the principal reference point for this tribal territory. The southern boundary of Naphtali follows the Wadi Fajjas as far east as the Jordan River. There is some dispute over this based on the location of the "large tree" in Zaanannim (see Judg 4:11), but a southern perspective is most likely. Sites along this line which have been identified are Heleph (Khirbet 'Arbathath near Mount Tabor); Adami Nekeb (Khirbet et-Tell); Jabneel (Tell en-Na'am); and Lakkum (Khirbet el-Mansurah). The exact location of Hukkok is disputed but most identify it with Yaquq, just west of the Sea of Galilee. Other identified sites include Adamah (possibly Hajar ed-Damm, two and one-half miles northwest of the confluence of the Jordan and the Sea of Galilee); Iron (Yarun, on the Lebanese border); for Hazor see the comment on 11:1; Kedesh is north of the now drained Lake Huleh.

19:40-48. allotment for Dan. Although Dan has a fairly large territory to the west of Benjamin, taking in the coastal region from the Brook Sorek to the Yarkon River near Joppa, it is unlikely that the tribe occupied more than a fraction of the land. Most of this area was controlled by the Philistines and later by the Assyrians. During Solomon's time it comprised his southwest district and was annexed to Judah. An example of this is their city of Beth Shemesh (Tell er-Rumeileh), which was later listed as a Levitical city in Judah (21:16). Other Danite sites located include Shaalabbin (east of Gezer, possibly Selbit; see Judg 1:35); Aijalon is probably Yalo, five miles east of Gezer (mentioned in the Amarna texts); Timnah (Tell el-Batashi, five miles northwest of Beth Shemesh); Gibbethon (possibly Tell el-Melat; mentioned in the campaign list of Thutmose III); Bene-Berak appears in Sennacherib's annals and is located near the Arab village el-Kheiriyah near Joppa; Rakkon may be either a river or possibly Tell er-Reqqeit near Joppa.

19:47. Leshem. The tribe of Dan probably migrated under pressure from the Philistines (see Judges 18). They went north to Leshem (Laish), which was renamed Dan and subsequently became a major cultic center under King Jeroboam. The city site (largest in that region at about fifty acres) was located north of the Huleh basin on the road north to Damascus and has the benefit of a spring which is one of the sources of the Jordan River. Its importance is found in its listing in the Egyptian execration texts and in the Mari letters.

19:50. Timnath Serah. Also known as Timnath Heres (Judg 2:9), this is the portion allotted to Joshua after all of the tribal territories had been apportioned. The variation in name may be the result of this process, since *serah* means "leftover," and popular etymology might have transformed an original place name. It is located within Ephraim, but it was a political enclave belonging solely to Joshua and his household. It has been identified with Khirbet Tibnah, about twelve miles southwest of Shechem. Excavation has shown a fairly large settlement that was rebuilt in the Iron I period (see Josh 19:50).

20:1-9 Cities of Refuge. See comment on Numbers 35.

21:1-45
Levites' Cities

21:1-2. Levitical cities concept. See the comment on Numbers 35:1-5.

21:3-40. distribution of towns through territory. The legislation in Numbers 35:1-5 that sets aside the revenue from towns and pasturelands for the support of the Levites is im-

plemented here by the casting of lots—a means of divine determination. However, there is an uneven distribution of towns among the tribes, and it is not based on the population size of the tribes. One possibility is that the distribution has more to do with the size of the clans of the Levites.

21:3-40. Levitical cities. While some of the Levitical cities are well known as cultic centers (Hebron, Shechem) and some, like Anathoth, have connections with later Levitical groups (the descendants of Abiathar), many of the cities are in frontier or border areas and thus may be "colonies" or outposts. Thus in verses 11-15, the sites are along the Philistine border, and verses 28-35 contain cities along the northern and coastal boundaries of Israel, which were controlled by powerful Canaanite city-states like Megiddo, and verses 36-39 describe the area east of the Jordan that was lost to Israelite control after the reign of Solomon. Among the cities in this list, which do not appear earlier and have been identified, are Jattir (Khirbet 'Attir, thirteen miles southwest of Hebron); Eshtemoa (es- Samu', eight miles southwest of Hebron), whose excavation has shown Iron Age deposits); 'Ashan (Khirbet 'Asan, just over a mile northwest of Beersheba; rather than Ain, 1 Chron 6:59); Juttah (Yatta, five miles southwest of Hebron); Geba (Jeba, six miles northeast of Jerusalem); Almon (Khirbet Almit, a mile northeast of Anathoth); Eltekeh (Tell el-Melat, northwest of Gezer) is mentioned in Sennacherib's annals of the year 701; Aijalon (Yalo, twelve miles northwest of Jerusalem); Abdon (possibly Khirbet 'Abdeh, four miles east of Achzib); Kedesh (Tell Qedes, six miles north of Hazor, with occupation levels more marked in Early Bronze and sporadic in the Iron Age); Dimnah (possibly Rummaneh, six miles northeast of Nazareth).

21:16. Beth Shemesh. This town was located on the Philistine border in the Valley of Sorek in the northeastern section of the Shephelah. It is identified with Tell er-Rumeilah, and excavation has shown nearly continuous occupation from Middle Bronze I to the Roman period. Its most prominent role in the biblical narrative occurs in 1 Samuel 6:9-15 in the story of the capture of the ark. An eleventh-century destruction preceded its occupation as an Israelite administrative post during the United Monarchy (not fortified by Rehoboam and perhaps unoccupied during part of the ninth century). The appearance of Egyptian scarabs of Amenhotep III and Rameses II, as well as a Ugaritic tablet, attests to the trading contacts of this strategically placed city.

21:18. Anathoth. Located at Ras el-Kharrubeh, about three miles northeast of Jerusalem, Anathoth was a Levitical city within Benjaminite territory. It is the site of exile for Abiathar and his clan (1 Kings 2:26) and the home of the prophet Jeremiah (Jer 1:1). Survey excavations show occupation from Iron I to the Byzantine period.

21:21. Shechem. See the comments on Genesis 12:6, Joshua 24:1 and Judges 9:1.

21:21. Gezer. The site of Gezer, which guarded the strategic road from the coast to Jerusalem, is identified with Tell Jezer, five miles southeast of Ramleh. Earliest occupation at the site was in the Chalcolithic period (3400-3300 B.C.), but there was a long period of abandonment between 2400-2000 B.C. In the Middle Bronze period, Gezer was rebuilt and after 1800 became a major fortified site. A "high place" was constructed some time after 1650, with ten standing stones or monoliths erected in a north-south line. The destruction of this occupation level may be associated with the campaign of Thutmose III (c. 1482). Another high period occurred during the Amarna age, when Gezer served as one of the principal centers of Egyptian control in Canaan. The Philistines controlled the site during the Iron I period of the twelfth-eleventh centuries. The first Israelite occupation took place during Solomon's reign (1 Kings 9:15-17), and excavations have identified the typical Solomonic casemate walls and multichambered gate, which were also found at Megiddo and Hazor.

21:24. Gath Rimmon. This city has been identified with two nearby sites, Tell Abu Zeitun and Tell Jerishe. Both are within a couple of miles of the Mediterranean near modern Tel Aviv and close to the Yarkon River. It is possible that both are correct, since many times one site will be abandoned for a time and the city relocated nearby with the same name. This site may be the Gath mentioned in Thutmose III's city list as *knt,* and it may have also been mentioned in the El Amarna tablets as Giti-rimuni.

21:38. Ramoth in Gilead. Originally allotted to Gad, Ramoth in Gilead was also designated as a city of refuge (Deut 4:43) and in the Joshua list as a Levitical city. Its exact location is unknown since the text is not explicit and there are a number of tells along the Syrian border that could match its description. The most likely choice is Tell Ramith, three miles south of Ramtha on the modern border between Syria and Jordan, which has produced Iron Age deposits.

21:43-45. universal statements in conquest accounts of the ancient Near East. Summary statements which proclaim total conquest

and complete subjugation of an area according to divine plan and the valiant efforts of the god's ruler are fairly common in the royal annals of the ancient Near East. For instance, the Assyrian king Sennacherib's recording of his third campaign (which included the siege of Jerusalem in 701 B.C.) contains not only a list of cities conquered (the type of list also found in the Merneptah Stele, the Moabite Stone and many other inscriptions), but also a concluding statement which indicates the magnitude of his accomplishment. Similarly, the Armant Stele (1468 B.C.) of Pharaoh Thutmose III contains a summary "of the deeds of valor and victory which this good god performed on every excellent occasion." Such statements were one of the common literary features included as part of the code of conquest annals in the ancient Near East (for further discussion see comment on 10:40).

22:1-34
Misunderstanding with the Transjordan Tribes

22:8. nature of plunder. A successful conquest resulted in a large and varied plunder taken from defeated cities and peoples. The list of items here is fairly typical of the ancient economy and objects of value. The injunction to share the loot signifies the unity of the tribes in their common effort and was conducive to later cooperation (see 1 Sam 30:16-25).

22:9. Shiloh. See the comment on 18:1 for its role as a meeting place and cultic center for the Israelites.

22:10. Geliloth. There is an interchange of names between Geliloth and Gilgal in 18:17, and it is possible that that is also the case here (Codex Vaticanus does replace Geliloth with Gilgal). However, the concern here seems to be with the erection of an unauthorized altar on the very edge of Canaan by tribes who live east of the Jordan. Nearly all identifications for the site of Gilgal place it a little northeast of Jericho on the Jordan River.

22:9-34. the ambiguity of the altar (dual functions). The building of an altar by the tribes of Gad and Reuben raises a concern on the part of the other tribes, who lived west of the Jordan River, that these Transjordanian groups were seeking to establish a rival cultic site to Shiloh. What is unusual about the dispute is that the priest Phineas is the principal character rather than Joshua, and that further emphasizes the ritual concerns of the story. However, the Gileadite tribes are quick to note that they have not built an altar for sacrifice but only as a monument to their covenantal alliance with Yahweh and the other tribes (see 4:19-24). Its "imposing" size is thus explained as a monumental signal of unity rather than religious rivalry. In this way, Gilgal retains its role as rallying point for treaty-making (9:6-15), but Shiloh, and later Jerusalem, claims the role of sacrificial center.

22:11-20. covenant violation as cause for war. It was standard to include a stipulation in treaty documents that violation of any of the terms or covenants of the agreement was grounds for war. For instance, in the treaty between Pharaoh Rameses II and the Hittite king Hattusilis III (c. 1280 B.C.), the kings place a curse on the violator of their alliance and call on a list of gods as witnesses. The charges made against the Reubenites and Gadites suggest a tie to the covenant which requires not only military allegiance during and after the conquest but also recognition of the cult center at Shiloh. The emphasis placed on this site may reflect priestly rather than political concerns. Here the rivalry between tribes was apparently based on a misunderstanding of intentions or perhaps a concern for free passage across the Jordan River (see Judg 12:1-6).

22:17. sin of Peor. The reference made here is to the sin of idolatry committed by the Israelites in worshiping the Baal of Peor (see the comments on Num 25:3, 4, 6, 8). The assumption being made is that the unauthorized altar built by the Reubenites and Gadites was a potential influence that would lead to false worship and a resumption of God's wrath (a plague results in Num 25).

22:34. naming of altars. The naming of places and monuments to commemorate important events is quite common in the Bible. For instance, Hagar's theophany in Genesis 16:7-14 results in the name Beer Lahai Roi ("well of the Living One who sees me") for a nearby well. Similarly, in Judges 6:24 Gideon names a newly rebuilt altar "The LORD is Peace."

23:1-16
Joshua's Charge to the Leaders

23:1. chronology. There is no real indication in the text whether Joshua's "final sermon" to the leaders of the people occurred immediately after the incidents in Joshua 22 or even whether this is the precursor to the covenant renewal ritual in Joshua 24 (note also the lack of a geographical designation). Most important, perhaps, is the tie between the end of the conquest (God's promised "rest") and the end of Joshua's leadership.

23:2. categories of leaders. Moses had ap-

pointed a group of officials to serve as judges in Exodus 18:21-22 to relieve some of the burden of leadership. During the conquest the various leaders of the tribes and clans are mentioned on several occasions: elders (Josh 7:6; 8:33), judges (8:33), officials (1:10; 3:2; 8:33). These individuals provided counsel to Joshua on administrative and military issues, carried out his orders in organizing and keeping order in the camp, but their appearance in the text is also ceremonial. Elsewhere in the text, the leaders serve as representatives of the people on important ritual and covenant-making occasions (see Ex 24:1; Num 11:16). In addition, their legal role is mentioned frequently (Deut 16:18; 19:16-18; 21:1-4, 20).

23:13. oppression metaphors. The lure of other cultures and their gods are metaphorically compared to traps, the sting of a slaver's whip and tearing thorns that can blind the traveler. This is an often repeated warning against succumbing to syncretism (Ex 23:33; 34:12; Num 33:55; Deut 7:16). While this metaphor has the ring of a local wisdom saying (see Ps 69:22; Prov 29:6), it has been tied to the covenant relationship and the consequences of disobedience.

24:1-27
Covenant Renewal

24:1. Shechem. Located thirty-five miles north of Jerusalem in the Ephraimite hill country, Shechem (Tell Balatah) dominated a pass and trade route between Mount Ebal and Mount Gerizim. Its archaeological history contains twenty-four strata of occupation reaching from the Chalcolithic to the Hellenistic period. During the Middle Bronze Age, the Hyksos apparently administered or controlled the city, building huge ramparts and a temple. Egyptian resurgence in the area in the sixteenth century B.C. totally destroyed the Middle Bronze III city. However, it was rebuilt in the Late Bronze, when it is mentioned in the El Amarna texts as the base for the local king Lab'ayu, who professed allegiance to Egypt but created a mini-empire in northern Canaan (c. 1400 B.C.). There are no destruction levels leading into the Iron Age and thus the city may have come under Israelite control without major conflict (it is absent from Joshua's list of conquered cities—12:7-23). Its choice as the site of Joshua's covenant renewal ceremony may be the result of previous associations with the ancestors (Abram's altar in Gen 12:6; Jacob's land purchase in Gen 33:18-20, and the rape of Dinah in Gen 34). It is also possible that the ceremony took place in or near the Canaanite sanctuary on the city acropolis as the Israelites proclaimed the supremacy of their God over Canaanite deities (for additional information see comment on Judg 9:1).

24:1. categories of leaders. See the comment on 23:2.

24:2-27. covenant-treaty format. This covenant renewal ceremony follows the same format as that used for treaties in the ancient world and for the book of Deuteronomy. For discussion see the sidebar on ancient Near Eastern treaties and covenants at the beginning of Deuteronomy (p. 172).

24:2. pagan roots of Israel. The original home of the ancestors was in Mesopotamia, a land with polytheistic religious traditions. It is indicated here that Abram and his family worshiped many gods, including the patron gods of their city as well as ancestral deities and individual gods whose properties were to cure illness or provide fertility. They were only weaned of these practices by the covenantal promise made to Yahweh (see the sidebar on the religion of Abraham in Gen 12). This is important evidence to demonstrate that Abram was not the heir to a long, unbroken tradition of ancient monotheism.

24:2. land beyond the river. This designation is a technical term applied to the region west of the Euphrates River. For example, Haran, the city to which Terah migrated in Genesis 11:31, was west of the Euphrates. Technically, so was the city of Ur, but the province, as suggested by the campaign annals of Mesopotamian kings and later Persian administrative documents (see Ezra 7:21) implied the northern stretches of the Euphrates and west into Syria and Phoenicia-Palestine.

24:5-7. the Red Sea. See comments on Exodus 13—14 for further information.

24:8. the land of the Amorites. For more information see comments on Numbers 21:21-35.

24:9-11. Balaam and the Moabites. For more information see comments on Numbers 22—24.

24:11. hornet. The exact meaning of the word translated "hornet" is uncertain. The Septuagint (the oldest Greek translation of the Old Testament) reads "hornet" or "wasp," and many commentators accept this as a symbol of divine intervention, which helped prepare the way for the Israelite conquest. Insects are often used as metaphors for armies, for instance, bees and flies (Is 7:18-19) and locusts (Joel 1—2). However, some interpreters see this word as a wordplay on Egypt (see comment on Ex 23:28) or a reference to Egypt by means of an insect that was used to symbolize lower Egypt. This would suggest a previous inva-

sion of Palestine by the Egyptians that aided the Israelite cause. Other interpreters have translated the word as "plague" or "terror."

24:1-27. covenant renewal ceremonies. There are four identifiable covenant renewal ceremonies in the biblical text, and each represents not only a reaffirmation of the stipulations of the covenant but also the inauguration of a new phase in Israelite history (see Ex 24:1-8; 2 Kings 23:1-3, 21-22; Neh 8:5-9). Each contains an assembling of the people, either a recitation of the mighty acts of God or a reading of the law, a reaffirmation of the people's allegiance to the covenant and a sacrifice or festival celebration. Joshua's actions at Shechem place a final stamp on the past (the exodus and conquest) and signal a future in which the people will settle in the Promised Land.

24:26. stone and oak. Standing stones and sacred trees or groves are a part of Canaanite (see the Ugaritic Epic of Aqhat) and early Israelite cultic sites (see for stones Gen 28:18-22; Ex 24:4; 2 Sam 18:18; for trees Gen 12:6; Deut 11:30; Judg 6:11; 9:6; 1 Sam 10:3). Although both will be condemned in later traditions (Ex 23:24; Lev 26:1; Deut 12:2; 2 Kings 16:4), their use here is quite natural. It is also possible that they serve as monumental reminders of major events (as do the twelve stones noting the crossing of the Jordan River in Josh 4:2-9). They also separate the covenant renewal ceremony from the Baal temple at Shechem.

24:28-33
Death and Burial of Joshua

24:30. Mount Gaash. Although its exact location is unknown, Mount Gaash would have been in the hill country of Ephraim, south of Timnath Serah (Khirbet Tibneh). That would place it about twenty miles southwest of Shechem.

24:32. Israelite ancestor burial tracts in Canaan. The original burial tracts used by the ancestors were both purchased from the local inhabitants. The first was the cave of Machpelah, purchased by Abraham from Ephron the Hittite near Hebron. This served as the burial place for Abraham, Sarah, Isaac, Rebekah and Jacob. Only Rachel was not buried here because of her sudden death during childbirth near Bethlehem (Gen 35:19). The pillar Jacob raised over her tomb is typical of the tumulus burials of nomadic peoples in that area. The account in Joshua notes the burial of Joseph on the plot of land near Shechem that Jacob had purchased from Hamor as a grazing area. As immigrants, the ancestors would not have been able to simply bury their dead in family tracts. They had to buy the land first and thus gain title in perpetuity; otherwise their graves might be disturbed or become inaccessible. The burial of Joshua and Eleazar, however, stand in contrast to this practice, since they were buried in land claimed through conquest and allotted to them and their descendants.

24:33. Gibeah. The burial site of Aaron's son Eleazar was in the Ephraimite allotment. Eusebius placed it about five miles north of Gophna. However, there are a number of sites named Gibeah, and what the text refers to may simply be the "hill of Phineas," a local name which is presently unidentifiable.

JUDGES

1:1—2:5
Attempt to Possess the Land

1:1-2. oracular information. Prior to military engagements, it was common practice for ancient Near Eastern army commanders to seek divine aid and information through oracles and omens (see 20:18). For instance, the assumption in the Assyrian royal inscription is that war occurred "by the command of the god Ashur." However, in order to learn the nature and urgency of this call, a variety of divination practices were utilized: the examination of an animal's organs, the casting of lots or the observation of natural phenomena such as the flight of birds or cloud formations. The oracle or response would often determine (1) whether they would fight that day and (2) what tactics to employ.

1:3. territory of Simeon and Judah. The allotment assigned to Simeon in Joshua 19:1-9 was in the southern area of Palestine and "within that of Judah." The pairing of these two neighboring tribes in this episode makes logical sense. However, Simeon is eventually absorbed by the more prominent tribe of Judah. Thus Judah's offer to aid them to conquer their allotment became, in effect, an invitation

to tribal oblivion for Simeon.

1:4. Bezek. This is the site of a battle with the Canaanites and Perezzites in which Judah and Simeon defeat their leader Adoni-Bezek. Although no geographical information appears in Judges, the place name also appears in the Saul narrative (1 Sam 11:8-11). This text indicates an open plain suitable for a military muster, no more than twelve or fifteen miles southwest of Jabesh Gilead (El Maklub), just east of the Jordan River. Survey of the hill country between Shechem and the Jordan Valley indicates Khirbet Salhab as a likely location (with Iron Age deposits evidenced) for ancient Bezek.

1:6. cutting off thumbs and big toes. Like the blinding of the right eye in 1 Samuel 11:2, this act of mutilation was designed both to humiliate prisoners and to insure they could never serve as warriors again. Unsteady on their feet and unable to grasp a sword, spear or bow, these men could only beg to survive. Assyrian reliefs from the time of Shalmaneser III (ninth century) depict prisoners being mutilated and dismembered.

1:7. picking up scraps under the table. These mutilated and helpless prisoners had no resort but to beg at their captor's table. They were kept on display as a sign of the power of their conqueror, eating scraps like dogs under the table (Ugaritic parallels include the god El treating enemy gods in this manner). The irony in this passage is that Adoni-Bezek was reduced to the same condition as the seventy kings he had previously mutilated.

1:7-8. Jerusalem. Despite the description of the sacking and burning of Jerusalem in this passage, all other references to that city and its Jebusite inhabitants during the settlement period indicate a failure to occupy the site by either Judah (Josh 15:63) or the tribe of Benjamin (Judg 1:21). In Judges 19:10-12 it is still considered a foreign city. The lack of archaeological evidence for this period (post-El Amarna breakup and post-Sea Peoples disruption) leaves the question unanswered. Some commentators suggest an unfortified area of the city was attacked and burned, but there is no way to prove this assertion. It will remain for David to finally conquer the city and transform it into the Israelite capital (2 Sam 5:6-10).

1:9. geography. The orientation of this verse suggests a generally southern movement, including the southern range of the hill country of Judah in the direction of Hebron and the northern range of the Negev desert westward toward the Shephelah and the Philistine coastal area. What is implied is an attempt to capture as much as possible of the area allotted to Judah (Josh 15:1-12, 21-63) and to Caleb (Josh 15:13-19).

1:10. Hebron. Located at Jebel er-Rumeidah, twenty-three miles northeast of Beersheba and nineteen miles southeast of Jerusalem, Hebron sat at the conjunction of roads from the Shephelah, the western Negev and Jerusalem. The text mentions an earlier name, Kiriath Arba (see Gen 23:2; Neh 11:25), possibly a clan center of the Anakites (Josh 14:15, 15:13). For additional information on this site, see the comment on Joshua 10:3-5.

1:11. Debir. Located southwest of Hebron in the southernmost part of the Judean hill country, Debir in the early Iron Age may have been an outpost of the invading Sea Peoples (if the Anakim of Josh 11:21 were not Canaanites). It is most likely situated at the Khiriath Rabud. See the comments on Joshua 10:3, 38-39 and 11:21.

1:12. daughter as reward. While this is not a frequent occurrence, the idea of "status-elevation" through an otherwise unavailable marriage arrangement would be appealing to some ambitious men. For instance, David is able to marry into Saul's royal household as a result of Saul's offer of a daughter and David's eventual conquest of Goliath (1 Sam 17:25). The feat involved here and in the Goliath incident is considered both difficult and dangerous. Thus the extraordinary offer of a valuable marriage contract is made to entice a hero to step forward. Othniel already has a high status in his relationship to Calelo, but there was still greater prestige to be gained.

1:14. request for a field. Having obtained a wife through the conquest of Kiriath Sepher, Othniel is now urged by his wife Acsah to ask for a piece of land with which to support his household. This could be considered a dowry since it is not mentioned earlier in the narrative. Daughters, however, did not generally obtain land as part of their dowry or as an inheritance (see, however, Num 36:1-13). Thus the request for land had to be made by a male kinsman. Additionally, Othniel is a prized vassal who has previously done exemplary military service and could be in line for a land grant (similar cases are found in Mari texts). There is a Babylonian boundary marker from this period that depicts a father transferring land rights to a daughter.

1:14. getting off donkey. Interpretation of this action is varied. Some believe Acsah made a noise (clapped her hands) to both draw her father's attention and as a sign of derision at the land grant made to her husband. Another suggestion is that by alighting from her donkey

she became a supplicant, once again her father's daughter asking for a favor. Certainly, unwatered land was worthless; Acsah's embassy is to insure her household's survival.

1:15. upper and lower springs. This may refer to water sources that may be tapped by shallow excavations in wadi beds or by drilling deep well shafts in places where the water table is much lower. It is also possible that specific geographical locations are being refer-enced in the Negev region, but no current location can be discerned for this.

1:16. Kenites. The Kenites were one of several tribes or clans which inhabited the deserts of the Sinai peninsula and the area south and east of the Negev as far as the Gulf of Aqabah (Gen 15:19; 1 Sam 27:10; 30:29; 1 Chron 2:55). It is also possible, based on the placement of Heber's camp in Judges 4:11, that the Kenites ranged as far north as the Jezreel Valley. Their connection to Moses and Jethro (Hobab) goes back to Exodus 3:1. They are portrayed as herders (Judg 5:24-27), caravaneers and itinerant metalworkers. This latter skill is deduced from the etymology of their name, which can mean "to forge." See the comment on Numbers 24:21-22.

1:16. City of Palms. Based on the description in the text and its association elsewhere (Judg 3:13), this is most likely Jericho, the ancient oasis city just eight miles northwest of the Dead Sea (Tell es-Sultan). Its existence and fertility (boasting many palm trees as well as cultivated fields) is based on the continual flow of the springs of 'Ain es-Sultan and 'Ain Duq. Earliest occupation of the site began in the Mesolithic period (c. 9000-8700 B.C.), and eventually the population and importance of the city grew to such an extent that a complete mudbrick wall system was constructed during Early Bronze III (c. 2700 B.C.). There are some breaks in occupation due to invasion and conquest (as at the end of the Early Bronze III, c. 2500 B.C., and again during the early part of Late Bronze Iib, c. 1350 B.C.). At the time of the judges, the site was sparsely occupied and may have only served as an outpost or perhaps a caravan stop. It will not be rebuilt as a city site until the ninth century B.C. (see 1 Kings 16:34).

1:16. Arad. Located at Tell 'Arad in the Beersheba Valley, twenty miles south of Hebron, this site was first occupied in the Chalcolithic period, and the lower city (situated around a natural depression that functioned as a cistern/well combination) expanded during the Early Bronze Age due to extensive economic contacts with Egypt. An unfortified settlement was constructed on the upper tell during the Iron Age. Its occurrence and the remains of a cultic area or courtyard in addition to housing may be signs of the Kenite occupation of this area mentioned in Judges and in 1 Samuel 27:10. The upper tell of Arad contains a total of seven strata during the Iron Age, with a fortress and temple complex constructed in the tenth century B.C.

1:17. Zephath (Hormah). This is one of the Negev villages captured by Judah and Simeon in the Judges account of the conquest. It was renamed Hormah, "destruction," by the Israelites (see also Num 21:3, which places it near Arad). It has been identified with Tel Masos and Tel Ira, both in the region between Arad and Beersheba.

1:18. Gaza. Located in the southwest section of Canaan's coastal plain and on the important international highway ("Way of the Philistines" or Via Maris), Gaza (Tell Harube) functioned as Egypt's provincial capital in Canaan from 1550-1150 B.C. It is mentioned in the annals of Pharaoh Thutmose III and the El Amarna texts. After the invasion of the Sea Peoples, it became the most important of the five Philistine cities and figures in a number of the conflicts between these people and the Israelites (6:3-4; 16:1-4). The text concerning its capture by Judah is uncertain. The Septuagint states that they did not capture Gaza, Ashkelon and Ekron, and this seems to be confirmed by 1:19, which says the Israelites were unable to conquer the cities of the plain.

1:18. Ashkelon. One of the main cities of the Philistine Pentapolis, Ashkelon is located about ten miles north of Gaza and functioned as a seaport for much of its existence. Its strategic location brought it to the attention of the Egyptians, who wished to control Canaan and the highways north, beginning in the Middle Bronze Age (c. 2000-1800 B.C.), when the city appears in the Execration texts. During the El Amarna period (fourteenth century B.C.), Ashkelon's ruler was a vassal of Akhenaton and wrote several letters to that pharaoh. Merenptah also lists the city among his conquests in his victory stele (c. 1208 B.C.) and depicts its capture on the walls of the great temple at Karnak. Although it was allotted to Judah, this city and the other Philistine cities of the plain were not con-quered by the Israelites.

1:18. Ekron. Assigned in the lists to both Judah (Josh 15:11) and Dan (Josh 19:43), Ekron lay on the border between the Shephelah and the Central Hill Country. It is identified with Tel Miqne, about twenty miles southwest of Jerusalem in the frontier area separating Philistia from Judah. Although there are traces of

occupation as far back as the Chalcolithic, excavations have shown the first major city site appears in the Late Bronze Age, when contact with Egypt and Cyprus are indicated by ceramic and scarab (Nineteenth Dynasty) remains. The abrupt shift in the material culture resulting from the Sea Peoples invasion of the twelfth century B.C. led to expansion of the city and a new population group. During the first millennium, under Assyrian and Babylonian domination, Ekron became a major industrial city, producing huge quantities of olive oil in its refineries. Its appearance in the list in Judges indicates its place as a major Philistine city and one not captured by Judah (Judg 3:1-4).

1:19. iron chariots. The use of iron chariots is ascribed to Israel's enemies in Canaan, especially the cities of the plain, throughout the conquest period (see the comments on Josh 17:16 and Judg 4:3). They reflect a higher level of technology and greater wealth than that of the Israelites (see 1 Sam 13:19-21) and as such a major threat to the success of the conquest. The actual amount of iron used may have been very small, but its appearance as decoration, reinforcements or as wheel sheaths may have been enough to strike terror in their enemies. In this passage, the mention of iron chariots suggests a realistic appraisal of the military situation which kept the Israelites bottled up in the hill country where chariots would be of less use. Certainly, there are assurances that the tribal forces, with the help of God as the Divine Warrior, would be able to overcome this obstacle (Josh 17:18; Judg 4:7). However, the archaeological record as well as the admission here that some areas were never conquered indicates a rationalization for failure based on the physical reality of the situation. It will only be when Israel acquires iron technology and military parity with the Philistines that this dreaded weapon will lose its ability to frighten them.

1:20. sons of Anak. These were among the inhabitants of Canaan at the time of the conquest. Their territory centered on Hebron (Josh 21:11), and they were said to be men of great size (Deut 2:10; 9:2) and greatly feared by the Israelites (Num 13:28, 33). Their expulsion from Hebron by Caleb may have marked at least one success in displacing a native people from the area of Judah. Subsequently, the surviving Anakim may have taken refuge in the Philistine cities of Gaza, Gath and Ashdod. See the comment on Joshua 11:21.

1:21. Jebusites. First mentioned as descendants of Canaan (Gen 10:16), the Jebusites were probably non-Semitic peoples, related to Hittites or Hurrians, who moved into this region during the early second millennium. They inhabited the hill country along the southern border with Benjamin (Josh 15:8) and the city of Jebus (Josh 15:63; 2 Sam 5:6). Jerusalem, but not Jebus, is mentioned in the El Amarna texts, and Jebus also does not appear in the Execration texts. The statement that the Benjaminites could not conquer the city is reinforced by the Levite's refusal to stop in an "alien city" of non-Israelites in Judges 19:10-12. After David captured Jerusalem, the Jebusites apparently were either assimilated or eventually lost their ethnic identity as an enslaved people (2 Sam 5:6-9).

1:22-23. Bethel. The strategic location of Bethel (modern Beitin), on a crossroads that bisected the central hill country just north of Jerusalem, made it a natural target for the Israelites and later conquerors as well (Joseph's [i.e., Ephraim's] mention here may reflect later tribal alliances subsequent to its allotment to Benjamin; see Josh 18:22). Its role as a sanctuary site has long standing in the biblical narrative (see the comment on Gen 28:19), and excavations have revealed a Middle Bronze cultic installation at the site. It will eventually become one of the two major cultic centers during the divided monarchy (1 Kings 12:29-33). The description of its capture, which is not mentioned in Joshua, may be based on the use of a postern gate (a minor passage used when the city gates were closed for the night) such as that found in the excavations at Ramat Rahel (just south of Jerusalem). Excavations indicate a massive destruction level at Bethel dating to the late thirteenth century B.C.

1:26. Luz in the land of the Hittites. The reference to the Hittites has generally been equated with Syria or the area of Lebanon, two regions that were a part of the Hittite empire prior to the Sea Peoples' invasion in 1200 B.C. It is also possible that the new city of Luz was simply established further north within Palestine and west of Bethel (see Num 13:29; Josh 16:2).

1:27. Beth Shan. Identified with Tell el-Husn, Beth Shan is located at the eastern end of the Jezreel Valley in northern Canaan. Like Megiddo on the western end, it serves as a guardian of the important Via Maris highway. Settlement began in the Chalcolithic period and was nearly continuous up until the present. A second city lies at the base of the tell, built during the Hellenistic period as one of the Decapolis cities and greatly expanded during Roman and Byzantine times (Scythopolis). Excavations seem to indicate that, unlike many Late Bronze sites, Beth Shan was not de-

stroyed by the Sea Peoples, and Rameses III continued to maintain control of this important commercial center during the first half of the twelfth century B.C. The biblical text notes that Saul did not conquer this city (1 Sam 31:10-12), and it is only in Solomonic times that it is added to Israelite territory (1 Kings 4:12).

1:27. Taanach. See the comment on Joshua 12:21 for discussion of this northern Canaanite city.

1:27. Dor. See the comment on Joshua 12:23 for discussion of this coastal city in northern Canaan.

1:27. Ibleam. This fortress site (Khirbet Bel'ameh) is situated at the eastern end of the Jezreel Valley and functioned as one of a group of cities guarding that important transportation link. It is listed as one of the cities that the tribe of Manasseh was unable to conquer (Josh 17:11-12), but it does have some significance as an Israelite outpost during the divided monarchy (2 Kings 9:27). Its strategic importance is confirmed by its mention in the conquest list of Thutmose III (c. 1504-1450 B.C.).

1:27. Megiddo. See the comment on Joshua 12:21 for discussion of this major city located at the western entrance to the Jezreel Valley.

1:29. Gezer. See the comment on Joshua 21:21 for discussion of this major city, which linked the coastal plain and Philistia with the central hill country and Jerusalem.

1:30. Kitron. Assigned to Zebulun, the most likely location for this site is in the northwestern portion of the Jezreel Valley. Other suggestions, which place it more in the Acco Plain (Tell Qurdaneh and Tell el-Far) simply because this would have been a factor favoring Canaanite military tactics, are less likely based on current information.

1:30. Nahalol. Although its exact location is uncertain, a case has been made to equate this city of Zebulun's allotment with Tell en-Nahl, five miles east of the Mediterranean Sea near Haifa. Etymological similarities in the name and the appearance of artifactual remains covering the Early Bronze to the Arabic periods favor this identification, but its placement in Asher's territory creates a geographic problem that has not been resolved.

1:31-32. territory of Asher. See the comment on Joshua 19:24-31 for a discussion of Asher's tribal allotment.

1:33. Beth Shemesh. See the comment on Joshua 21:16 for discussion of this city located in the northeastern section of the Shephelah as it borders on Philistia.

1:33. Beth Anath. The precise location of this site is still unknown. The most likely claimant at this point is Safed el-Battikh in the upper Galilee region. The city was apparently mentioned in Egyptian records from the time of Thutmose III, Seti I and Rameses II, and appears to lie on the route between Hazor and Tyre.

1:34-36. Amorites. See the comment on Numbers 21:21 for discussion of this ethnic group which existed in Canaan prior to the formation of Israel. Their cultural and linguistic influence on Mesopotamia and Syro-Palestine is perhaps the most pervasive of any people, creating the high civilization of Hammurabi's Babylon and maintaining their cultural identity, at least in some regions, until the beginning of the Iron Age.

1:35. Mount Heres. The "mountain of the sun" has often been equated with Beth Shemesh (see Josh 21:16) or Ir Shemesh (Josh 19:41). That is, however, not certain, and the site itself may be one of several villages identified just southeast of Yalo (five miles east of Gezer). As part of Dan's tribal allotment, it would have been located in the southeastern area of the Valley of Aijalon.

1:35. Aijalon. This site, assigned to Dan (Josh 19:42), is probably to be equated with Yalo, situated five miles east of Gezer at the western end of the Valley of Aijalon. Its strategic importance, lying on a major road leading into the hill country, is confirmed by its mention in the El Amarna texts and its appearance in Saul's campaigns (1 Sam 14:31).

1:35. Shaalbim. This city in the territory of Dan (Josh 19:42) has been identified with Selbit, three miles northwest of Aijalon. It was later incorporated into Solomon's second administrative district (1 Kings 4:9) and may have served, like Aijalon, as a fortress guarding the passage through the Valley of Aijalon.

1:36. Scorpion Pass. This refers to a pass southwest of the Dead Sea, the Neqb es-Safa, which may have first been used by the Egyptians as they traveled to the copper-mining area near the Arabah and Eilat (see Num 34:4; Josh 15:3).

1:36. Sela. Although its identification is uncertain, its placement in association with the Scorpion Pass suggests a location to the southwest of the Dead Sea. Because its name means "the rock," some commentators equate it with either Petra, the Nabatean rock city, or with modern Sela', two miles northwest of Buseira. Excavations, however, have not revealed deposits earlier than the ninth century B.C. for these sites.

2:1-5. Bokim. This site is named for the weeping of the Israelites after they were rebuked by

God's angel for failing to obey the covenant and failing to wage total war against the Canaanites. Its location is unknown, although the text suggests placement just west of the Jordan River near Gilgal.

2:6—3:6

The Cycles of the Judges

2:9. Timnah Heres. See the comment on Joshua 19:50 (Timnah Serah) for this place name, which is associated with Joshua's portion of the land within the boundaries of Ephraim. It is identified with Khirbet Tibnah, fifteen miles southwest of Shechem, which contains extensive evidence of a village site during Iron I and II.

2:9. Mount Gaash. Associated with Timnah Heres and Joshua's allotment of the land, this mountain has not been identified. It should, however, be located within a range of fifteen to twenty miles southwest of Shechem in the territory of Ephraim. The hilly terrain in that region makes exact identification difficult (see 2 Sam 23:30).

2:11-13. Baals. The use of a plural form here does not indicate a large number of different Canaanite gods. Rather it refers to various local manifestations of the same storm and fertility god Baal. Gods were generally tied to local sites (high places, shrines, cities). This also seems to be the case with Yahweh (Bethel, Jerusalem and Shiloh are all associated with God's name or presence). Baal, which means "lord," occurs as a divine name as early as the eighteenth century B.C. in Amorite personal names from Mari. Some would offer examples as early as the late third millennium. By the fourteenth century it was used by Egyptians to refer to the storm god. The name is also evident in texts from Alalakh, Amarna and Ugarit as the personal name of the storm god, Adad. Baal was a fertility deity and was a dying (winter) and rising (spring) god. In the mythology of Ugarit he is pictured in combat with Yamm (the sea) and Mot (death). His consorts are Anat and Astarte.

2:13. Ashtoreths. The plural form of Astarte, the consort of Baal within the Canaanite pantheon, is indicative of her appearance in various local manifestations. She was both a fertility goddess and a goddess of war. The singular form of the name only appears in 1 Kings 11:5 and 2 Kings 23:13, where it refers to the chief goddess of the Phoenician city of Sidon. In fact there are several female deities who are mentioned as Baal's consort (Anath, Ashtoreth, Asherah) in Ugaritic and Phoenician texts. Astarte's popularity among the Canaanites may reflect a merging of these other goddesses into her person or simply a local preference. The cult of Astarte also appears in Egypt during the New Kingdom (perhaps due to greater contact with Canaan) and in Mesopotamia.

2:11-19. relationship cycle. The idea of a cycle of relationship with deity is a common pattern in the ancient Near East. The sequence of certain types of behavior alienating deity, making him angry and leading to devastation of the country, followed by the land recovering divine favor, bringing restoration, is offered as a common explanation of rise and fall. It can be observed, for instance, in Assyrian king Esarhaddon's account of the destruction of Babylon (carried out by his father, Sennacherib, in the seventh century). Differences would include (1) that the offenses in the Esarhaddon text were ritual offenses, and (2) that there is no raising up of a deliverer, though it is clear that Esarhaddon fashions himself in that role.

2:16-19. judges. In English the term *judge* is used to describe an official who maintains justice within the established court system. The Hebrew term used in the context of this book describes an individual who maintains justice for the tribes of Israel. This justice comes in bringing protection from foreign oppressors. Maintaining international justice was often the role of the king. What made these judges unlike kings was that there was no formal process for assuming the office, nor could it be passed on to one's heirs. There was no supporting administration, no standing army and no taxation to underwrite expenses. So while the actual function of the judge may have had much in common with the king, the judge did not enjoy most of the royal prerogatives. Just as a king also judged civil cases, the judges may have had some of that responsibility (see 4:5), but this would have been a minor role. The judges did not serve as heads of government in general but did have the authority to call out the armies of the tribes. Prior to the monarchy, no one from any one tribe would have been able to exercise such authority over another tribe. God was the only central authority. Therefore, when a judge successfully rallied the armies of several tribes, it was seen as the work of the Lord through that judge (see 6:34-35). Only the establishment of kingship assigned a permanent human central authority over the tribes.

3:3. five rulers of the Philistines. After the invasion of the Sea Peoples (c. 1200 B.C.), a group known as the Philistines settled along the Coastal Plain and in the Shephelah region of Canaan. Eventually five major city-states

emerged: Gaza, Ashkelon, Ashdod, Gath and Ekron (Josh 13:2-3). Destruction levels found in excavations at Ashdod and Ashkelon indicate the overthrow of Egyptian garrisons about 1150 B.C. and the resettlement of the area by the Philistines. While their city-states and attendant villages were independent politically, they often functioned as a coalition in their dealings with Israel and other states (see 1 Sam 6:16; 29:1-5). At their height, the Philistine coalition expanded northward to Tell Qasile (on the coast at the Yarkon River) and east through the Jezreel Valley to Beth Shan. It is only the emergence of a strong monarchy under David and Solomon that eventually holds Philistine hegemony in check in the rest of Palestine.

3:3. Canaanites. See the comment on Genesis 15:19-21 for discussion of these inhabitants of Canaan prior to the conquest. In the Judges context, *Canaanites* is used as a generic ethnic term to designate one of four groups of people who are neighbors of the invading Israelites (Philistines, Hivites, Phoenicians [Sidonians]). This is a much reduced list from that found in Genesis 10:15-18 and 15:19-21, and is probably more reflective of the major political groups with which the Israelites had to deal.

3:3. Sidonians. The Sidonians are listed in Genesis 10:15 as descendants of Canaan. However, in the context of the Judges period, they represent the people of Lebanon and Phoenicia, which bordered on the northern edge of the Israelite tribal allotments. The city-state of Sidon was a major seaport on the Mediterranean coast, twenty-five miles north of the other important Phoenician seaport, Tyre. It is mentioned in the Ugaritic Epic of Keret (c. 1400 B.C.) as well as in the El Amarna texts and the campaign lists of Pharaoh Thutmose III. Its later associations with Israel are diplomatic (Jer 27:3) and commercial (Is 23:2).

3:3. Hivites. See the comment on Genesis 34:2 for a discussion of these people of Canaan and their possible relation to either Hurrian or Hittite settlers.

3:3. Lebanon Mountains. These heights extend for over one hundred miles north-south and rise to an elevation of over ten thousand feet. The western slopes of these mountains receive as much as sixty inches of rain and snow a year and thus provide fertile ground for agricultural pursuits. The extensive cedar forests that also existed in antiquity were the direct result of this pattern of Mediterranean climate. Although the eastern slopes do not receive as much rainfall, there are a number of rivers and springs that make their more gentle slopes fertile in the Beqa' Valley region.

3:5. peoples of Canaan. The list of nations with which the Israelites had to contend in Canaan is found in several other places, with some variations (see Gen 15:19-21; Deut 7:1 lists seven nations, including the Girgashites, which are excluded in Judges). For discussion of the individual groups, see the comments on Judges 3:3 (Canaanites); Genesis 23:3-20 (Hittites); Judges 1:34-36 and Numbers 21:21 (Amorites); Genesis 15:20 (Perizzites); Genesis 34:2 (Hivites); and Judges 1:21 (Jebusites).

3:7-11
Othniel

3:7. Baals and Asherahs. These Canaanite fertility deities often appear together. They represent the bounty of rain and the growth of crops in the fields. See the comments on Judges 2:11-13 for discussion of them as a danger to the Israelites' adherence to the covenant.

3:8. Aram Naharaim. The region identified with Aram Naharaim is the northern portion of the Euphrates in eastern Syria and the Habur triangle region within which Nahor and Haran are located (see Gen 24:10). This is the area where the Hurrian empire of Mitanni was located from 1500-1350. The Hittites had begun action against Mitanni as early as 1365, and the middle of the fourteenth century brought the breakup of the Hurrian kingdom, creating refugees and displaced tribes from the region. Cushan-Rishathaim's name, though admittedly hebraized, shows similarities to common Hurrian names of the period (Kuzzari-rishti). It is possible, then, that this first threat comes from a displaced tribe trying to find a new homeland rather than from a foreign conqueror trying to enlarge his empire.

3:12-30
Ehud

3:12-13. Moabites, Ammonites, Amalekites. Moab and Ammon were Transjordanian kingdoms that had genealogical ties to the Israelites (see the comment on Gen 19:30-38). Their appearance here as rival states probably reflects the growing border tensions resulting from the expansion of the Israelite tribes. The Amalekites are always portrayed as sworn enemies of Israel (see Num 24:20; Deut 25:17-19). Although tied to the Sinai peninsula and Midian in some narratives, they seem to have also ranged into the southeastern portion of Canaan and into the hill country of Samaria. As such, they would be a useful ally for any encroaching enemy such as Eglon's Moabite force.

3:13. City of Palms. The reference once again, as in Judges 1:16, is to the oasis site of Jericho, just north of the Dead Sea. It was a natural stronghold for any force attempting to control the Judean wilderness and the roads leading into the central hill country.

3:15. left-handed. The appearance here and in Judges 20:16 of left-handed Benjaminites suggests a practice of teaching ambidextrous use of weapons by that tribe. However, being left-handed was sufficiently unusual that it could be used as a strategic factor, allowing Ehud to enter Eglon's presence with a concealed weapon.

3:15. tribute. When one state or other political entity conquered another or extended hegemony over its affairs, the result was the exaction of tribute payments from the subject people (see 2 Sam 8:2; 1 Kings 4:21; 2 Kings 17:3-4). This could take the form of precious metals (by weight or as jewelry or implements), farm produce (a significant portion of the harvest), or labor service. Not surprisingly, this draining of the economy was unpopular and was generally the reason for revolt or warfare. Extrabiblical documentation for this practice is widespread. For instance, the annals of the Assyrian kings often include lists of items received as tribute: the "Black Obelisk" inscription of Shalmaneser III (859-824 B.C.) contains Jehu's tribute to Assyria of silver, gold, lead and hard woods; Tiglath-Pileser III (744-727 B.C.) received elephant hide, ivory, linen garments and other luxury items from his vassals in Damascus, Samaria, Tyre and elsewhere.

3:16. Ehud's sword. The dagger fashioned by Ehud was probably made of bronze. At only eighteen inches in length and straight, it was less likely to be detected by Eglon's Moabite guards. This also allowed it to be doubled-edged, unlike the more common "sickle-swords" of that era, which were designed for chopping, not thrusting. Since the blade was made to be punched into its victim, it would not have had a cross piece, only a grip or wrapped surface for the wielder to hold. Thus it could be forced completely into the body of Eglon, killing him quickly, and very little blood would result from what was in essence a corked wound. Like so many other factors in this narrative, this was an unusual weapon, used by a left-handed man, and designed for a single purpose: assassination.

3:16. strapped to right thigh. Since Ehud was left-handed, it would be natural for him to strap his dagger on his right thigh. Thrusting weapons must be drawn across the body in order to be placed on guard immediately. However, since most people are right-handed, Eglon's guards would be less careful about checking what to them would be an awkward placement for a weapon.

3:19. the idols near Gilgal. These images (perhaps either standing stones or carved idols) may mark the boundary between Israelite (Ephraim/Benjamin) territory and that held by Eglon at Jericho. It is possible that a Canaanite sanctuary existed at Gilgal and that the tribute brought by Ehud would have had to be brought here in order that the gods could witness this show of submission. However, subsequent action (and its second mention in Judg 3:26) suggests that this is just Ehud's turning-back point prior to returning to Eglon's court.

3:19. secret message. Eglon's reaction to Ehud's proffered secret message (sending his attendants away), suggests that this is considered an important and prized piece of information. It is unlikely he was expecting to receive the report of a spy but rather an oracle from a god. Otherwise he would have wanted his advisors to hear the news. Ehud had singled him out with the title "O king" and then confirmed his desire by stating that the message was from Yahweh (v. 20). Just as Ehud's people had submitted to him, Eglon now expected divine word of future conquests and favor (in a prophecy text from Mari the king is given a secretive warning of a revolt). In this way Eglon's ambition led to his demise.

3:20. king rising from seat. This statement has been included in the translation based on the reading from the Septuagint. It provides an extra piece of narrative action. Certainly, by rising to a standing position, Eglon made himself a better target for Ehud's stabbing thrust in 3:21.

3:23. architecture. The architectural features of Eglon's audience chamber are predicated on a term which does not appear elsewhere but may be translated "the upper chamber over the beams." This implies a raised platform, reached by a staircase, within a larger audience chamber. There were apparently doors which separated this private room from the larger area and since it was the king's private meeting area it probably contained a toilet facility, which was at times a display of pride. Thus when Eglon drew Ehud up the stairs and into this room, closing and locking the door behind them, Ehud was able to dispatch him in private. He was then able to escape by removing the toilet seat and descending through the floor into the latrine below (the NIV translates it "porch") and out through the "janitor's door" into the larger audience

room. His departure through the portico would not have aroused the guards waiting there, and they would have been slow to investigate the king's absence due to the fecal smell emanating from his inner chamber.

3:24. smell. At the point when Ehud stabbed Eglon, the murdered man's anal sphincter exploded, creating a smell similar to that associated with a bowel movement. Eglon's guards hesitated to interrupt the king while he was relieving himself (see similar euphemistic reference in 1 Sam 24:3) and thus gave Ehud time to escape and rally his troops.

3:26. Seirah. This site or geographic features has not been positively identified. Its proximity to the "idols near Gilgal" (see Judg 3:19) suggests the area just north of Jericho in the Jordan Valley. Such a spot would have been sufficiently close to rally the Israelites to attack the Moabite garrison at Jericho.

3:28. fords. To hold the fords (shallow crossing) of the Jordan River was to effectively control passage of armies from Canaan into Transjordan and vice versa (see comment on Josh 2:7). Ehud's strategy was to prevent the evacuation of Eglon's garrison and to hold off any reinforcements that might come from the direction of Moab. Similar strategic use of the fords is also found in Judges 12:5-6 when Jephthah held them against the Ephraimites and in Rameses II's depiction of the Battle of Kadesh against the Hittites (c. 1285 B.C.).

3:31
Shamgar

3:31. Shamgar. There is no reason to think of Shamgar as an Israelite or as a judge. The Philistines were moving from the north toward Egypt at the end of the thirteenth century, and the Egyptians undoubtedly would have used mercenary bands to engage them. Shamgar could well have been the leader of such a band (perhaps Apiru, see comment on Josh 5:1). His military intervention would have benefited Israel as much as Egypt. Nevertheless, he was used by the Lord as an instrument of salvation.

3:31. son of Anath. This designation or title for Shamgar may indicate his dedication to or association with the Canaanite goddess Anath, who was a patron of warriors. Shamgar's name may well be Hurrian (although some suggest it is West Semitic and therefore Canaanite). Thus he may be a mercenary, like Jephthah or David's thirty mighty men (2 Sam 23:8-39). The title has been compared to the Haneans in the Mari texts, who are warlike mercenaries from the shrine of Hanat (=Anat). There is additionally an Egyptian warrior in the thirteenth century who is identified as son of Anat, and also an arrowhead from Late Bronze Age Palestine engraved with Ben Anat. All of these suggest a military class designated by this title.

3:31. Philistines. As the Sea Peoples began to settle in Syro-Palestine after their successful invasion of all of the Near Eastern coastal areas (except for Egypt, where Rameses III barely drives them off), they had to contest the area with its local inhabitants (see Judg 3:3). The Philistines, one of these Sea People contingents, must have faced a variety of opponents, including the Israelites. In this case, a unit of six hundred Philistines is attacked by Shamgar. The story could be read to suggest that he alone slew them all with an oxgoad. However, it does not rule out the possibility that he was a local Canaanite or Hurrian mercenary leader (well-known enough to also appear in the Deborah narrative in Judg 5:6) whose exploits at least indirectly aided the Israelites by destroying a common enemy.

3:31. oxgoad. The term *malmad* appears only in this story. It could refer to the goad or cattle guide used by herdsmen to direct their animals. If it had a fire-hardened or metal point, it could also serve its wielder as a short spear or pike when no formal weapon was available. Like many of the makeshift weapons used in Judges, it reflects a less technologically advanced culture.

4:1-24
Deborah and Barak

4:2. Hazor. Mentioned as an important city in both the eighteenth-century Mari texts and the fourteenth-century El Amarna letters, Hazor (Tell el-Qedah) stood at a strategic point in northern Galilee (ten miles north of the Sea of Galilee) on the road between Damascus to Megiddo. The Joshua account describes it as "the head of all those kingdoms" (Josh 11:10), and in both Joshua and in Judges, its king Jabin is defeated (Josh 11:13; Judg 4:24; see also 1 Sam 12:9). Archaeological investigations do show a major destruction level in the thirteenth century, which could be the result of attacks by either the Sea Peoples, the Israelites or some other group. Subsequently the city was refortified by Solomon (1 Kings 9:15) and remained a major center of commerce and a key to Israel's northern border until the Assyrian conquest (2 Kings 15:29). See the comment on Joshua 11:1 for additional information.

4:2. Harosheth Haggoyim. It is uncertain

whether this place name, translated "forests of the nations" in the Septuagint, is a city site or a forested region in Galilee. Attempts have been made to identify it with various sites (Tel el-Harbaj and Tell Amr), but the archaeological evidence is not conclusive. Similarly, there is no definitive reason to equate it with Muhrashti of the El Amarna letters. From the description in the text, it appears to either be a staging area or rallying point within the Jezreel Valley, perhaps within a zone under the control of Philistines (Sisera's name is non-Semitic). It may simply refer to that area of the Galilee region under the control of Sisera, who appears to be a military governor allied with Jabin of Hazor.

4:3. nine hundred iron chariots. The number of chariots involved in this engagement is so substantial that some have considered it exaggerated. Exaggerated figures were sometimes used in the ancient Near East to magnify the strength of an opponent and serve as a means to add greater glory to the commander or deity when the victory is won. Other examples of suspected hyperbole in the annalistic style of writing occur in the Assyrian Annals of Shalmaneser III (858-824 B.C.), which list 3240 chariots among his enemies, and in Thutmose III's claim to have captured 892 chariots at the battle of Megiddo. Other large numbers of chariots in biblical accounts can be found in 1 Samuel 13:5 (30,000/3,000 in Septuagint); 1 Kings 10:26 (1,400 chariots); and 1 Chronicles 19:7 (32,000 chariots). For more information on the use of iron fittings, see Judges 1:19.

4:5. holding court. Deborah is the only figure portrayed in the book of Judges as actually functioning in a judicial position. She hears and decides cases and provides answers to oracular inquiry under a palm tree which served as a landmark for that region. The description of her "court" is similar to that found in the Ugaritic epic of Aqhat (c. 1500 B.C.), which depicts King Danil sitting on a threshing floor before the city gates, judging the cases of the widows and orphans (Aqhat III.i.20-25).

4:5. between Ramah and Bethel. Ramah, in the tribe of Benjamin, is identified with er-Ram, three miles north of Jerusalem, and Bethel (Beitin) is another four miles north along the road into Ephraimite territory. This well-traveled route would be a likely place for a judge or prophet to sit and hold court.

4:6. Kedesh. See the comment on Joshua 12:22 for this site identified with Tell Qades, northwest of Lake Huleh in the upper region of the Galilee.

4:6. mustering at Mount Tabor. Its distinctive shape, a flat-topped promontory rising above the northeastern end of the Jezreel Valley (about two and a half miles from Nazareth), and its position at the juncture of the tribal territories of Zebulun, Issachar and Naphtali (Josh 19:22) made Mount Tabor a logical rallying point for troops from these tribes. From its summit it is possible to see south to Mount Gilboa and west to Mount Carmel. It would also be neutral ground where sacrifices and other cultic activities might be performed prior to a battle or at its conclusion (see Judg 8:18 and 1 Sam 10:3). Should an enemy detect their movements, the tribes would also hold high ground from which to fight and remain safe from Sisera's chariots. The actual battle, however, will take place to the south at the Wadi Kishon.

4:7. luring Sisera to Kishon. The Kishon River lies south of Mount Tabor near Taanach (see Josh 12:21). Although this is a flat plain that would ordinarily favor the use of chariots by Sisera's forces (see Judg 1:19), the river was apparently overflowing its banks due to heavy rainfall (Judg 5:20-21). This would have muddied the battlefield to the extent that the chariots would have been bogged down and become deathtraps. The genius of luring the enemy into an area where they would be overconfident and then surprised by the condition of the terrain provided the edge needed by the Israelites.

4:10. ten thousand men. It is difficult to determine whether this number should be read as ten thousand men or as ten divisions. The Hebrew terms are ambiguous. Often a clan would send a division of armed men, and these would likely have numbered far less than a thousand each. For more discussion see comment on Joshua 8:3.

4:11. Kenites. For discussion of these people, who ranged throughout the area from Galilee south to the Negev and the Sinai, see the comments on Numbers 24:21-22 and Judges 1:16.

4:11. tree of Zaanannim. Heber's campsite would be on the southern border of Naphtali (Josh 19:33), and its association with a landmark or sacred tree parallels it in the story to Deborah's palm (Judg 4:5). It was most likely near Mount Tabor and within the territory of Kedesh. This would place it north of the battle scene and within the capacity of a fleeing man like Sisera to reach.

4:12-13. Sisera's strategy. Having received reports of the deployment (possibly from Kenite allies—see Judg 4:17) of Barak's allied forces at Mount Tabor, Sisera marshaled his troops and chariots and sent them east through the Jezreel Valley into the Plain of Esdraelon.

They would have passed the sites of Megiddo (not yet reoccupied at this period) and Taanach as they drove toward the Kishon River. It is at this point that Sisera's strategy came apart due to the combination of rushing water in the wadi bed and the heavy rains that turned the plain into a quagmire.

4:14-16. Israel's strategy. Apparently, the strategy commanded by Deborah and carried out by Barak was to gather the combined tribal forces at Mount Tabor, a point on the fringe of their territories, from whose heights a clear view of the area could be seen. It provided protection should they be detected too soon and forested cover for their forces. Once they had been able to lure Sisera's army toward them through the Jezreel Valley and into the plain near the Kishon River, the Israelites could make a rushed attack on them as they floundered in the mud and water of the overflowing wadi. The strategy, as portrayed in Judges 4—5, is dependent upon divine intervention (a storm) and the giving of the exact moment in which to strike from Deborah, Yahweh's representative.

4:18-21. Jael's hospitality. In the "world-turned-upside-down" theme employed in Judges, many customs or everyday actions are reversed (see the correct sequence of events in a hospitality situation in Gen 18:2-8). Thus a woman instead of her husband offers Sisera hospitality. As a guest Sisera is not supposed to ask for anything, but he asks for both a drink as well as sentry duty on Jael's part. Finally, murdering a guest is never a part of the protocol of hospitality. However, Jael may have been justified in killing Sisera, since he was a potential threat to her as well as the honor of her household.

4:21. tent peg and hammer. The weapons Jael employed to kill the sleeping Sisera were ones with which she was quite familiar, since she undoubtedly used them to erect her tent each time they made camp. They would have easily come to mind, and the stroke, driving the peg through the skull into the ground, would have been a natural one for her.

5:1-31
Deborah's Song

5:1-3. singing victory songs. One way to celebrate victories and commemorate them for years to come is to compose and sing songs. They could be employed as immediate tributes to conquering heroes (see Judg 11:34 and 1 Sam 18:6-7) or serve as lasting parts of oral tradition (see the "Song of the Sea" in Ex 15:1-18). Victory songs are known in the ancient Near East such as that in the Epic of Tukulti-Ninurta (Assyria, thirteenth century B.C.) concerning his campaign against the Kassite king Kashtiliash. The song records how Tukulti-Ninurta requests divine aid on the basis of their previous relationship and how the gods come to his aid. It also includes a section of taunt against the enemy king who fled from the battle. Just as Deborah's song parallels the prose account in chapter 4, ancient Near Eastern literature offers several examples (in addition to the Tukulti-Ninurta Epic) of battle accounts being preserved in both prose and poetry (other examples come from Tiglath-Pileser I and Rameses II, both thirteenth century, and Thutmose III, fifteenth century).

5:6-7. troubled times. The lawless period associated with Shamgar and Jael, in which individual acts of heroism were the only moments of brightness, was characterized by roads so dangerous and subject to attack by bandits that merchants and farmers had to take hillside tracks and Israel's warriors were nowhere to be seen. Such troubled times are part of the "world-turned-upside-down" theme here and in the visions of Balaam found inscribed in plaster at Tell Deir ʾAlla in the eastern Jordan Valley.

5:8. no shields or spears. The low level of technological development among the Israelites and their lack of the implements of war is also mentioned in 1 Samuel 13:19-22. They may have been forced to turn in all their weapons by their Philistine and Canaanite overlords, or they may simply have lacked the knowledge necessary to make them. In any case, Deborah's song implies their subjugation was also due to their worship of other gods and Yahweh's wrath.

5:10. riding white donkeys. Only the wealthy merchants could afford these prized animals. The call here is to have all classes, those who ride and those who must walk because of their poverty, to join in the song of praise for Yahweh who will deliver the people.

5:11. singers at watering places. The song to Yahweh is to be sung even louder than the cry of those who vied to water animals at wells and caravan stops. These men would cry out the news or a favorite story, perhaps accompanied by cymbals or other instruments. By entertaining travelers and carrying water, they could earn a small living and transmit stories.

5:14. roots in Amalek. In the list of tribes answering Deborah's call is a group from Ephraim associated with the hill country of the Amalek at Pirathon (see Judg 12:5). While it is possible that the wide-ranging Amalekites are referred to in this passage, it makes more

sense to simply see this as an area within Ephraimite territory.

5:14. Makir. This passage and 1 Chronicles 7:14 both indicate that Makir (Machir) was a tribal group dwelling in the area between Ephraim and Zebulun, near the Kishon River.

5:19. Taanach. Five miles southeast of Megiddo and about the same distance west of Mount Gilboa, Taanach is one of the fortified cities that guarded the Valley of Jezreel (see comment on 6:33). It is mentioned in Pharaoh Thutmose III's reports of the Battle of Megiddo (fifteenth century B.C.) and possibly referred to in passing in the Amarna tablets. There was sparse occupation during the twelfth century, but there is a destruction layer dated about 1125.

5:20. the stars fought. In Near Eastern and Mediterranean traditions various gods (Egyptian Resheph; Mesopotamian Nergal; Greek Apollo) are associated with heavenly bodies (planets, stars, comets). They are occasionally viewed as leaving their courses to join in human battles, confound enemies and bring plagues to animals. As early as the end of the third millennium, Sargon's texts refer to the sun dimming and the stars going forth against the enemy. The Gebal Barkal stela of Thutmose III also mentions the aid of stars flashing from the sky to confuse and decimate his Hurrian enemies (see the use of stars and scepters in Num 24:7). It should be noted, however, that the stars in the Judges passage have no personalities connected to them and serve simply as Yahweh's messengers and tools, not as personified deities. See further the comments on Joshua 10:12-13.

5:21. the flooding of Kishon. The Kishon River is either the Wadi al-Muqatta, which serves as a drain for the Jezreel Valley flowing west to the Mediterranean, or the Wadi el-Bira, which flows east from Mount Tabor to the Jordan River. In Deborah's song, the river functions as an integral part of the battle strategy. With the aid of the stars in heavens, a source of rain in Ugaritic and Mesopotamian epic, the battle at the Kishon was decided by an unusual summer storm that sent torrents of water flooding in the Kishon River. As the banks overflowed, the saturated ground eliminated the effectiveness of Sisera's chariots. The story is very similar to that in Exodus 14:19-25, in which the pharaoh's chariots are disabled and destroyed by the returning waters of the Red Sea.

5:26. head crushing. In the Canaanite literature from Ugarit, the goddess Athtart (biblical Ashtaroth) is known as a warrior goddess who crushes the head of her opponents.

5:28. mother waiting at the window. There is a real poignancy about a woman, either mother or wife, standing and waiting for her husband or son to return from battle. While she must try to maintain her dignity and cast about for scenarios that will help rationalize the lateness of that return (vv. 29-30), she can only peer expectantly from the latticed window. Sometimes the window holds her captive in a cloistered universe, and sometimes it frames her as champion of a lost cause (see Michal in 2 Sam 6:16 and Jezebel in 2 Kings 9:30-32).

5:30. plunder. Warfare in the ancient world was justified by divine command or national honor. However, the impetus that drew kings and common soldiers to battle was the taking of plunder. The spoils of war meant riches, power and the subjugation of the enemy (see Deut 31:11-12; 20:14; Josh 11:14; 1 Sam 14:30-32).

6:1—8:35
Gideon

6:1. Midianites. The Midianites are a people living in the southern portions of the Transjordan region. They are described as the descendants of Abraham and Keturah (Gen 25:106), and in the Joseph narrative they operate as traders and caravaneers (37:25-36). Moses joins the Midianite clan of Jethro after fleeing Egypt (see comment on Ex 2:15), but the Midianites do not join the Israelites in the conquest of Canaan. In the Balaam narrative the Midianite elders are allied with the Moabites and participate in the hiring of the prophet to curse Israel (Num 22:4). Midianite territory originally centered in the region east of the Gulf of Aqaba in northwest Arabia, but Midianites ranged west into the Sinai Peninsula as well as north into Transjordan in various periods. Though their early history appears to be seminomadic or Bedouin in nature, archaeological study has revealed villages, walled cities and extensive irrigation in this region beginning as early as the Late Bronze period (the time of the exodus and the early judges). There is, so far, no reference to the Midianites in ancient texts, though they are sometimes identified with the *Shasu* mentioned frequently in Egyptian literature.

6:2. hiding in caves. With few fortified cities, the Israelites' only protection was to hide out in the hills, where they could preserve their supplies and their families. In this region they are most likely to have used the caves from the Carmel range into the Iron Hills flanking the Valley of Jezreel on the southwest.

6:3. invasion at harvest time. The timing of the invader was very important. If harvest time had passed, the villagers would have stored and hidden all of their grain and could withstand attack more easily. If the grain was still in the fields, the invader would have ample provisions and the villagers none. This would suggest April or May as the time of the invasions. The villages could easily be crippled if they were deprived of their year's supply of grain, so what the invaders did not use or steal, they destroyed. The trampling of the fields would also jeopardize future seasons.

6:3. Amalekites. See the comment on Numbers 24:20. The Amalekites wandered through vast stretches of land in the Negev, Transjordan and Sinai peninsula. They are unattested outside the Bible, and no archaeological remains can be positively linked to them. However, archaeological surveys of the region have turned up ample evidence of nomadic and seminomadic groups like the Amalekites during this period.

6:5. camels. It is important not to infer what the text does not state. It clearly indicates that the Midianites had innumerable camels, but it does not suggest that they used them as the equivalent of war horses in cavalry units. In fact evidence concerning the domestication of the camel does not suggest cavalry use for a couple of centuries yet. Nonetheless the saddle types used in this period do indicate that camels were being used effectively for transportation and as beasts of burden.

6:8. prophet. This is the first unnamed prophet in the biblical text. For discussion of various aspects of prophecy and prophets see the comments on Deuteronomy 18:14-22. Here he is seen as a defender of the covenant, and his message focuses on worshiping Yahweh exclusively. Ancient Near Eastern prophets often had messages that included admonitions regarding who should receive worship and how.

6:11. the Angel of the Lord. In the ancient world direct communication between heads of state was a rarity. Diplomatic and political exchange normally required the use of an intermediary. The messenger that served as the intermediary was a fully vested representative of the party he represented. He spoke for that party and with the authority of that party. He was accorded the same treatment as that party would enjoy were he there in person. While this was standard protocol, there was no confusion about the person's identity. All of this treatment simply served as appropriate recognition of the individual that he represented. Gifts given were understood to belong to the represented party, not the representative. Words spoken to the representative were expected to be reported back in accurate detail and were understood as having been spoken directly to the represented individual. When official words were spoken by the representative, everyone understood that he was not speaking for himself but was merely conveying the words, opinions, policies and decisions of his liege. In the same way the Angel of the Lord serves as the messenger or royal envoy endowed with the authority of the sender of the message.

6:11. Ophrah. The site of Ophrah has not been located with any certainty. The leading contender is the modern Affuleh between Megiddo and the Hill of Moreh in the Valley of Jezreel. Trees were often associated with oracles and theophanies, and sometimes marked places of worship (see Gen 12:6; 21:33; 35:4; Judg 4:5; 9:37; Is 1:29; Hos 4:13).

6:11. threshing wheat in a winepress. Threshing floors were large areas of dirt or stone that were usually out in the open so that the breezes could be used to blow away the chaff. They would generally be used by the whole community. Threshing was done mostly in June and July, using a stick or by walking cattle over the sheaves. A winepress was a square or circular pit hollowed out of rock big enough for a few people to walk around in. Threshing activity in a winepress would be much less conspicuous than on a threshing floor.

6:12. mighty warrior. The epithet used by the angel has often been translated "mighty warrior" (NIV), and that is acceptable when it is in a military context. There are, however, a number of people that are so described in community contexts (see Ruth 2:1; 1 Sam 9:1, both of which the NIV translates as "man of standing"). In these cases it designates the person as a responsible, upstanding individual in the community.

6:15. weakest clan, least in family. Gideon's comments about the impotence of his clan and his own lack of standing in the family have to do with authority. He has no authority to call out soldiers from his own clan or family, let alone from other tribes. The prerogatives of command came only with status, of which he is claiming to have none.

6:16. together/as one man. The NIV translates this phrase as if it applies to the Midianites' weakness before Gideon. An alternative would be that despite Gideon's lack of official authority the Israelites would fight in concert, unified behind his leadership.

6:19. Gideon's offering. When Gideon describes what he wants to bring, he uses a gen-

eral word for "gift" that is not necessarily indicative of a sacrifice, although when it is connected to a meal it usually has sacrificial overtones. It is the same word used for the offerings of Cain and Abel (see comment on Gen 4:1-7) and describes one of the categories in the sacrificial system (grain offerings, see Lev 2). The fact that the kid is prepared as meat and brought to the place rather than brought live and slaughtered there suggests more a meal than a sacrifice. The contents of this meal included goat meat and broth and unleavened bread (having been made quickly). An ephah is about half a bushel, which would make ten flat cakes of eight or ten inches in diameter, a very generous provision for the hard times they were experiencing.

6:20. put on rock. It is the angel that instructs Gideon to place the meal on a rock, where it is consumed, thus changing it from a meal to a sacrifice. Rocks were at times used as altars (1 Sam 14:32-34), but usually with the intention of allowing the blood to drain from the slaughtered animal, which would not be an issue here.

6:25. second bull, seven years old. The text may speak of two bulls (not in NIV, but see NASB). The second is offered as a sacrifice, and some infer the first must have been used to help tear down the altar. Only a few male bulls were needed to sustain a herd, so many males were slaughtered at a young age. Only the best stock would be kept for breeding. A seven-year-old bull must therefore have been a prime breeding bull. The sacrifice of this bull would have been extremely significant. Some bulls were kept for work animals, but these were usually castrated to make them more manageable and docile. If there are two animals here, the first was probably a gelded draft animal.

6:25. altar to Baal. Though the altar is said to belong to Gideon's father, the response of the town suggests it was a community shrine. There are a number of Canaanite temples that have been found in Israel (Hazor, Lachish) and a few open air sites from this period such as the "Bull Site" a few miles east of Dothan. Objects found at the sites, however, tend to be *masseboth* (standing stones, see comment on Gen 28:18-19) and incense stands rather than altars. One of the earliest Israelite altars is the tenth-century fieldstone altar at Arad that is about eight feet square and almost five feet high.

6:25. Asherah pole. Asherah can be either the name of a fertility goddess or the name of a cult object (as here). The goddess was popular in the polytheistic deviations in Israel and was sometimes considered a mediator of Yahweh's blessings. An indication of this belief is found in the inscriptions from Kuntillet Ajrud and Khirbet el-Qom. In Canaanite mythology she was the consort of the chief god, El. She appears in Mesopotamian literature as early as the eighteenth century, where she is consort of the Amorite god Amurru. The cult symbol may or may not have born a representation of the deity on it. The pole may represent an artificial tree, since Asherah is often associated with sacred groves and is portrayed as a stylized tree. Sometimes the cult object can be made or built, while on other occasions it is planted. We have little information of the function of these poles in ritual practice.

6:31. Joash's defense. Gideon's father, Joash, confronted with villagers seeking vengeance on behalf of the affronted Baal, suggests that this is not a matter for the community to punish but for Baal himself to avenge. When a desecration has taken place, it is deity's role to judge (see Lev 10:1-3; 1 Sam 6:19; 2 Sam 6:7). He declares that anyone who takes the matter of revenge into his own hands will be judged by his clan as guilty of bloodshed and subject to clan retribution. In the ancient Near East it is more common to see the god coming to the defense of his temple or image. So, for instance, the Weidner Chronicle reports how Marduk carried out his retribution on those whose performance of the rituals was unacceptable. In similar fashion Marduk seeks to restore to Babylon the image of himself that was carried off by the Elamites. These retributions, however, were all carried out by human beings claiming to be instruments of the gods' vengeance. It is this pretence that Joash wished to avoid.

6:33. Valley of Jezreel. The Valley of Jezreel gets its name from the town of Jezreel at the east end of the valley. This fertile plain divides the Carmel range from lower Galilee, extending southeast with the Kishon River from the Acco plain above Carmel to pass between the Hill of Moreh and Mount Gilboa and into the Jordan valley by Beth Shan. It ranges from five to ten miles wide across its fifteen-mile length (Jokneam to Jezreel). Major trade routes came into the valley by way of Nahal Iron at Megiddo, so the valley was sometimes referred to as the plain of Megiddo, or, later, Armegeddon. It was a natural staging ground for battles, and many took place there during biblical times, including Deborah and Barak's battle with the Canaanites (Judg 4), the battle of Mount Gilboa between Saul and the Philistines (1 Sam 31), and the battle between Josiah and Pharaoh Necho (2 Kings 23:29). It was

also the location of Thutmose III's famous battle of Megiddo in the fifteenth century to subdue the land of Canaan.

6:34-35. the Spirit of the Lord in Judges. When the Spirit of the Lord is attached to any activity in Judges, it is usually to the calling up of an army. In a tribal society with no centralized government, it was difficult to get other tribes to stand with one or two that might be facing problems. The measure of a leader in such situations was his ability to compel others to follow even though he had no office of command over them. In Israel this was a mark of the power of Yahweh, for it was he alone who had the authority to call out the armies of the tribes. Yahweh was the only central authority. It was therefore a clear indication of the Lord's authority at work in someone when they exercised authority that was only Yahweh's by calling out the armies (see Judg 11:29; 1 Sam 11:6-8). This was one of the distinguishing features of the Judges of Israel.

6:36-40. fleece oracles. In an oracle a yes-no question is posed to deity and a mechanism of some binary nature is used so that deity can provide the answer. In Israel the priest carried the Urim and Thummim to use in oracular situations (see comment on Ex 28:30). That is apparently not available, so Gideon must be more creative and use a natural mechanism for the oracle (see Gen 24:14 and 1 Sam 6:7-9 for other occurrences). His yes-no question is whether or not the Lord is going to use him to deliver Israel. His oracular mechanism is based on what would normally happen to a fleece on a threshing floor overnight. Since the fleece is soft and absorbent and the threshing floor is rock or hard dirt, one would expect the fleece to be damp and the ground of the threshing floor dry. That would be the normal behavior of nature. In this case such a response would indicate a "yes" answer to his oracular question. Gideon has already been informed of the Lord's intentions by the angel and is just offering an opportunity for the Lord to inform him if the plan has changed. When the events of the first night turn out exactly how one would expect them to under normal circumstances, Gideon wonders if maybe this "silence" might just mean the Lord wasn't paying attention. He therefore switches the indicators so that the unusual occurrence would represent the "yes" answer—the fleece dry and the threshing floor wet. The thought behind this is that if deity is providing the answer, he can alter normal behavior and override natural laws in order to communicate his answer. In the ancient Near East, when they wanted a natural mechanism for oracles, they tended to use the liver or kidney of sacrificed animals (a divinatory practice called extispicy; see comment on omens at Deut 18:10).

7:1. spring of Harod. The spring of Harod is at the base of the northern slope of Mount Gilboa, about a mile and a half east of the town of Jezreel. This is at the narrow pass at the east end of the Valley of Jezreel.

7:1. hill of Moreh. The hill of Moreh is directly north of Mount Gilboa and south of Mount Tabor. It blocks off the northeastern corner of the Valley of Jezreel. Traffic to Beth Shan and the fords of the Jordan there would swing south of the hill of Moreh to go through the pass where Gideon and his men are gathered. The Midianites were camped in the valley just west of Moreh about four or five miles from the spring of Harod and very close to Ophrah, Gideon's hometown (see comment on 6:11).

7:3. Mount Gilead. This is a very obscure reference that many believe represents a problem in the scribal transmission of the text. Mount Gilead usually refers to an area east of the Jordan which is difficult to fit in here.

7:5-6. styles of drinking water. Those who drink water in a kneeling position with their heads in the water to lap it up are (1) an easy target, (2) unaware of any enemy movement while they drink, and (3) susceptible to leeches. The alternative is to lie down flat (where one presents less of a target) and to keep alert, bringing water to the mouth while continuing to look around.

7:13. dream. Dreams were commonly believed to have significance in the ancient world. Not only did the Midianite soldiers take it as an omen, but so did the eavesdropping Gideon. Although the interpretation of dreams was often something best left to an expert because of the obscurity of the symbolism, some dreams were fairly transparent. It would not take an expert to discern that the barley loaf represented the farmer and the tent represented the nomad. For more on dreams see comments on Genesis 40:5-18; 41:8-16; and Deuteronomy 13:1-5. The concept of an overheard word as providing (inadvertently) an omen of encouragement is also found in the *Odyssey* as a slave girl expresses the wish that this would be the suitors' last meal.

7:16-21. Gideon's strategy. Gideon's three companies would have been positioned on the three sides of the camp, north, west and south (the hill of Moreh was on the east). The torches that they each have are made of material such as reeds that would smolder until exposed to the air and waved. The pitchers

cover the glow of the smoldering torch until the proper moment. When all three divisions were deployed in their proper positions, the ram's horns were sounded. Usually only a few of the soldiers carried trumpets for signaling because hands were needed for weapons and shields. Likewise, for night battle, a certain number would be assigned to hold the torches that would illuminate the battle area and block retreat at the perimeter. It would be expected, then, that the trumpet blowers and torch holders would represent only a small percentage of the army, with the rest charging in to fight. Therefore, when the Midianites heard the blast of three hundred trumpets and saw the myriad of torches around the perimeter, they naturally assumed there was a massive army that would be charging into the camp, whereas Gideon had instructed his men to hold their positions around the perimeter.

7:22. fighting one another. It is a common motif that one of the ways a deity achieves victory is by throwing the enemy into confusion. An example in Egyptian literature occurs in the myth of Horus, where at Edfu Horus confuses the enemy so that they begin to fight one another until none remain.

7:22. Beth Shittah. The most common choice for the location of this town is the village of Shatta about six miles east of Jezreel heading toward Beth Shan. Therefore the Midianites have fled around the south end of the hill of Moreh to try to get across the fords of the Jordan along the Beth Shan Valley.

7:22. Zererah. Zererah is elsewhere known as Zarethan (Josh 3:16) and Zeredah. Most now identify it with Tell es-Sadiyeh eight miles further south from Abel Meholah, on the east side of the Jordan along the south side of the Wadi Kufrinje.

7:22. Abel Meholah, Tabbath. Abel Meholah is located on the west bank of the Jordan somewhere south of Beth Shan. The most likely candidate is Tell Abu Sus eleven miles south of Beth Shan at the southern end of the Beth Shan Valley where the Yabis river enters the Jordan from the east. Pottery shards from this period have been found in surveys at the site. Tabbath is less certain. It is often identified as Ras abu Tabat, though that seems too far south, very close to Tell es-Sadiyeh rather than Tell Abu Sus.

7:24. Beth Barah. The identification of this site is unknown, but it is obviously along the Jordan valley, apparently at a fording place near Abel Meholah.

8:1. Ephraim's complaint. Even though land had been assigned to each of the tribes, there were still frequent land disputes between them. Military activity of the sort conducted by Gideon could be expected to yield available territory that would previously have been controlled by the Midianites. The Ephraimites do not want to be left out should there be apportionment of additional territory. There is also the issue of plunder, which everyone could be expected to want a share of.

8:5. Succoth. Succoth is located at Tell Deir Allah about a mile north of the Jabbok River, about three miles east of the Jordan River. Remains from this period (Iron Age I) have been found on the site. The area on the top of the tell is comparable to one and a half football fields, about one and a quarter acres. It was a small settlement that was involved in a bronze-smelting industry.

8:6. hands in our possession. It was a common practice for a hand to be cut off each dead enemy so that a count of the casualties inflicted could be made. Egyptian monuments from this period depict piles of hands gathered after battle. Since the Midianite kings are not yet dead, the men of Succoth are unwilling to side with the resistance.

8:8. Peniel (Penuel). Penuel is located about five miles east of Succoth along the Jabbok River at modern Tell ed-Dhahab esh-Sherqiyeh. Surveys have provided evidence of settlement during this period, but the site has not been excavated.

8:9. tower in the town. Since the site of Penuel has not been excavated, remains of this tower have not been found. Iron Age sites, however, did often feature such towers as part of their fortifications. For example, excavations have shown that the town of Succoth had such a tower at the end of the judges period that was almost twenty-five feet in diameter. Such towers could be part of the gate structure, lookout posts along the walls, or, more frequently in this period, inner citadels in the area of the local shrine.

8:10. Karkor. The site of Karkor likely should not even be translated as a place name. In the text it has the definite article (which is unusual for place names), and the word means "level ground." It should almost certainly be identified as the Beqa'a basin. This is a broad, flat depression about five miles long, two miles wide, oriented on a southwest to northeast axis about seven miles northwest of modern Amman (biblical Rabbah).

8:11. route of the nomads. A local route climbed out of the Jabbok valley heading south from Penuel and moved southeast to intersect with the southwest corner of the Beqa'a basin. But the "route of the nomads" would be more off the beaten track. This verse

says they went *east* of Nobah and Jogbehah. The location of Nobah is unknown, but Jogbehah is usually identified with Jubeihat about six miles northwest of Amman. It is located on an elevated ridge at about the middle of the southern side of the broad Beqa'a basin. If Gideon went to the east of Jogbehah, he must have been skirting the northeast end of the Beqa'a. This suggests that the "route of the nomads" followed the Jabbok east for several miles before heading south and swinging around to the south side of the Beqa'a from where the attack was made. This route would be about twenty miles from Penuel and about seventy from the initial encounter at Moreh.

8:13. Pass of Heres. Like Karkor above, the word "Heres" has a definite article and therefore is probably not a proper name. *Heres* means "sun," but that does not help identify the location. If the reconstruction of the comment on 8:11 is correct, the pass may be located heading out of the basin on the southwest. It may refer either to the ascent out of the basin itself or to the ascent along the road from the Beqa'a basin to the watershed a couple of miles northwest of Beqa'a toward Succoth.

8:14. writing among the general population. The languages such as Sumerian, Egyptian, Akkadian and Hittite that used cuneiform and hieroglyphics were syllabic and used hundreds of different signs. This made reading and writing something that only professional scribes could take the time to learn. Alphabetic script was invented in the middle of the second millennium and made popular literacy achievable, since it used less than thirty signs. Slaves in the mines of the Sinai region (the turquoise mines of Serabit el-Khadem) left alphabetic inscriptions (proto-Sinaitic) as early as the seventeenth century B.C. It is therefore not unlikely that Gideon could easily find someone who could write down the names of the leaders.

8:14. elders. The elders represent the ruling council of the town. In small towns this group may be comprised of the two eldest males from each household. That may be the case here, since 77 are identified and given the size of the site (see the comment above at 8:5) a population of 200-250 would be expected, 30 to 35 dwellings. Ugaritic uses 77 figuratively parallel to 66 to represent a large number. For another potentially representative use of 77, see comment on 8:30.

8:16. punishing with thorns. The verb used here and in verse 7 always means "to thresh" in the Old Testament. It is used figuratively of the destruction of enemies in a number of passages (see Mic 4:13). Gideon threatens to thresh/destroy the leaders *along with* briars and thorns. This may refer to a method of execution or, alternatively, to a dishonorable treatment of the corpses. Note that the men of Peniel are executed as well.

8:18. men killed at Tabor. There has been no mention of any fighting at Tabor. When the ambush occurred and the Midianites were backed up against the hill of Moreh, the main route of the flight took them to the south of the hill (see comment on 7:22). If there was fighting at Tabor, it means that some may have tried to escape around the north side of the hill to get to the Jordan via the Wadi Tabor. It can be inferred from verse 19 that Gideon had deployed some of his family to hold that pass and block their retreat.

8:20-21. execution by a minor. Execution with a sword can be very drawn-out and painful if the executioner does not know where to strike or lacks the strength or confidence to drive the sword home. Although it was an honor that Gideon offered to his son, it is easy to understand why the kings would prefer a skilled and practiced hand to do the job.

8:21. camel crescent ornaments. It is believed that these represented the moon. Some have been found in excavations at sites such as Tell al-Ajjul. Earrings also were often crescent-shaped, like the many examples found at Tell el Fara and Tell Jemmeh.

8:26. seventeen hundred shekels. In Genesis 24:22 a gold nose ring is said to weigh half a shekel. If earrings were about the same size, seventeen hundred shekels would represent thirty-four hundred earrings. This would be the equivalent of over forty-two pounds of gold.

8:27. golden ephod. An ephod was part of the priestly wardrobe (see comment on Ex 28:6-14) and in both Egypt and Mesopotamia was reserved for clothing images of deity and for high-ranking priests. Exodus 39:3 explains the process by which gold was worked into each thread used to weave the garment. It is likely that this ephod was also made of golden threads rather than of solid gold. Since Gideon had had success with oracles (6:30-36) and since the ephod is elsewhere closely associated with oracles (it contains the Urim and Thummim, see comment on Ex 28:30, and was used for oracular consultation in 1 Sam 30:7-8), it can be inferred that this ephod was intended to function as an oracular device. People who wanted to ask information of deity would come (pay their fee) and receive an answer (through the mediation of the specialists, Gideon and his family).

8:30. seventy sons, many wives. The wives of

an ancient ruler usually represented political alliances. Towns, city-states, tribes or nations who wished to ally themselves with a ruler or come under his protection sealed the treaty with a marriage of a daughter of their chief family to the suzerain. This was an act of loyalty on the part of the vassal, who would then have a personal stake in preserving the dynasty. The large number of sons indicated the strength of the family line, for with that many it would be assured of not dying out. This would be important for a ruler because the family usually occupied key positions in the administration. A large family would theoretically be able to secure the future of the dynasty. Some have considered seventy as simply a conventional indication of a large indeterminate number. Besides the several biblical examples, the Ugaritic myth concerning Baal's house speaks of the goddess Athirat (=Asherah) having seventy sons, and in the Hittite myth of Elkunirsa and Ashertu Baal claims to have killed Ashertu's (=Asherah) 77 (88) children.

8:32. family tomb. Burial practices of this period featured multiple burials in cave tombs. The body was laid out on its back with personal objects arranged around it.

8:33. Baal-Berith. Baal-Berith means "lord of the covenant" and is the designation of the deity worshiped in Shechem (about thirty miles south of Ophrah, where one of Gideon's concubines was from). There is no extrabiblical attestation of this epithet, but see comment on 9:46 on El-Berith.

9:1-57

Abimelech

9:1. Shechem. The site of Shechem has been identified with Tell Balatah, east of modern Nablus and thirty-five miles north of Jerusalem. Perhaps because of its proximity to two nearby peaks, Mount Gerizim and Mount Ebal, it has had a long history as a sacred site. The strategic position of Shechem, at the east entrance to the pass between these mountains, also made it an important trading center. As early as the Middle Bronze I Period Shechem is mentioned in the Egyptian texts of Pharaoh Sesostris III (1880-1840 B.C.). In the Amarna period (fourteenth century) Shechem was one of the major cities of Canaan and the city flourished. Jerusalem's governor complains to Pharaoh that Shechem's governor, Labayu, has given the area over to the Habiru (for more information see comments on Josh 5:1 and 9:1). The settlement was about six acres surrounded by a circular wall with a gate at the east and a temple on the acropolis. The Iron Age of the judges period found little change in the city. It is not conquered by Joshua, and accordingly there is no evidence of destruction. It is likely that the temple on the acropolis is the temple of El-Berith mentioned in verse 46. The evidence of the destruction recounted in verse 49 can be seen in the form of debris and ash marking the end of stratum XI, dated to about 1125.

9:2. primogeniture in Israel. In the ancient Near East primogeniture is not always the rule. In many texts it is clear that the children divide the inheritance evenly. With regard to succession to rule, in some cultures brothers had priority over sons. In others it was up to the king to designate who his successor would be, and in some cases the subjects had to consent. In Israelite culture the firstborn was generally assumed to have certain advantages, but neither inheritance nor succession inevitably fell to the firstborn.

9:4. seventy silver shekels. The temple treasury pays out seventy shekels for the seventy lives of Gideon's sons. This is an indication of how cheaply they were valued (compare a fifty-shekel-per-male ransom price in Lev 27:3 and the typical twenty shekels for which a slave might be bought).

9:4. temple of Baal-Berith. For Baal-Berith see comment above at 8:33. For this period there is only one confirmed temple found by archaeologists inside the city of Shechem (though other buildings have been interpreted by some as possibly being temples). Whether this one is the temple of Baal-Berith or the temple of El-Berith (see v. 46), or whether these are two designations for the same temple, is a matter of some dispute that cannot be resolved based on the information available at this time.

9:4. use of mercenaries. A town of Shechem's size would have had a population of perhaps a thousand people and therefore a potential army of maybe two to three hundred. Nevertheless, most of these would have been uncomfortable with the task of execution for which these mercenaries were hired. Mercenaries are often motivated by the potential for plunder. In a situation such as this that would not be the case. In the Mari military organization in the eighteenth century B.C. it is thought that the temples provided the financial backing for military activity that was supported by the deity.

9:5. ritual execution. The comment that the sons of Gideon were executed "on one stone" suggests ritual execution. Sacrifices usually took place on an altar and a large rock was at

times used for a makeshift altar (see comment on 6:20). This might further have connection to the huge standing stone that was the focus of the courtyard of the acropolis temple at Shechem in this period. The execution of competitors for the throne is well known through the ancient Near East and, indeed, throughout history. But there are no known examples of ritual execution of claimants to a throne as human sacrifice in the ancient Near East.

9:6. pillar in Shechem. The translation "pillar" represents an emendation of a difficult Hebrew word. An alternative that has been suggested on the basis of archaeology is that the word should not be emended but translated as a technical architectural term referring to a palisade.

9:6. Beth Millo. The Beth Millo makes most sense as the fortified temple precinct on the town's acropolis (see comment on 9:46). A millo is generally considered an area where fill dirt has been used to create an artificial elevated platform.

9:7. Mount Gerizim. There is no doubt that someone positioned on the flanks of Mount Gerizim could make themselves heard in Shechem. Gerizim is just south of the city and the natural acoustics would accommodate such a confrontation. There is a natural outcropping of rock on the lower section of the flank not far from Shechem that is often identified as a potential point. The ruins of a temple from centuries before would have been there at this time.

9:8. tree parables. There is an Old Babylonian fable from early in the second millennium called The Tamarisk and the Palm. The two trees are arguing which is superior by exploring what each has to contribute to the king's palace. Also of interest is the section of the Love Lyrics of Nabu and Tashmetu in which the shade of various trees (cedar, cypress, etc.) stands as a metaphor of protection for the king. In the Sumerian myth Lugal-e, Ninurta is opposed by an enemy that the plants have named king over themselves.

9:9-13. olive tree, fig tree and vine. These are three of the most productive members of the economy of Palestine. Olive oil, figs and wine are among the staple products of the region and constituted the primary exports. They therefore represented domestic prosperity and successful foreign relationships—both the result of a competent king's rule.

9:14. thornbush. Many consider this to be prickly boxwood, which, with its very tiny leaves, has no shade to offer unless one would sit in the middle of a thicket of it—a very unpleasant experience. In the dry climate of Palestine fires can be frequent in the brush. Such brush fires would in turn generate enough heat to kindle a fire among the larger trees. The Aramaic Wisdom of Ahiqar contains a conversation between the bramble and the pomegranate tree.

9:21. Beer. Be'er in Hebrew means "well," and there are many towns with names that include the word (such as Beersheba). It is therefore difficult to identify this town with any confidence. The most common suggestion is the town of el-Bireh north of Shechem in the Jezreel Valley near Gideon's hometown of Ophrah.

9:25. robbers in the hills. One of the advantages of a city strategically located on a trade route is the merchant traffic that flows through the town, selling goods, buying local goods to merchandise elsewhere and bringing business and tariffs to the town. Setting robbers in the hills would serve to make Shechem an unattractive station for traveling merchants and would deprive Abimelech of the tariff income that he would collect. This strategy then is designed to bring ruin to Abimelech by crippling trade.

9:26. Gaal and his brothers. The band of Gaal and his brothers has every appearance of one of the small dispossessed clans that were common during this period. Having been driven from their own cities or homeland, they take to the road as a traveling guild or as mercenaries for hire, looking for a new location in which to settle. In the Amarna letters this type of group is labeled "Habiru."

9:28. mixed population disputes. Hamor, Shechem's father, is taken as a reference to the native population that lived in Shechem since the days of the patriarchs (see Gen 34). It appears, then, that Gaal is stirring up dissension between the Israelite population and the Hivite (Hurrian?) population. Abimelech had made his case for being appointed as ruler on his own mixed heritage (see 8:31 and 9:2). Just as his membership in both groups had allowed for his acceptance by both, it now provides a basis for his rejection by both.

9:35-37. shadows from the mountains. Zebul and Gaal are standing at the east gate of the town looking east. From that vantage point there is the Askar plain directly in front of them and hills to the southeast (Mount el-Urmeh) and northeast (Mount el-Kabir). The rising sun would leave both the western flank of the northern hill and the northern flank of the southern hill (both forested) in shadow. The remains of a fortress settlement from this period have been found at the top of Mount el-Urmeh, which could have been the location of

Abimelech's headquarters (Arumah, v. 41).

9:42. attacking those who went out to the fields. The phrase used here to describe the activity of the people can refer to going out in the fields for agricultural activities (as in 9:27) but can also refer to "taking the field" in military campaign (see 2 Sam 11:23; 18:6). Though Gaal has been driven from the city, there is apparently a contingent that wants nothing more to do with Abimelech and is embarking on a military operation.

9:43-44. ambush. It is likely that the ambush group coming down to the gate of the city came off the flanks of Mount Gerizim, which is south of the city, to get behind those going out, who were met by frontal assault from the other two divisions.

9:45. scattering salt. Though this practice is not attested elsewhere in the Bible, early Hittite documents refer to scattering cress over a devastated city, and in thirteenth-century Assyrian texts Shalmaneser I scatters salt on a destroyed city. Both substances are referred to in one of the curses found in the Aramaic Sefire treaty. None of these texts offer explanation for the purpose of this action. Some have thought that its intention was to render the fields infertile. But not all salts accomplish that, and the part on which salt was scattered was not the fields but the city. Furthermore, this would not explain the alternate use of cress. In the Old Testament as well as the rest of the ancient Near East, salt is used for consecration (see comment on Lev 2:11-13). This would suggest that the practice was a ritual for purification or consecration of the city to deity. Additionally, salt impedes the action of yeast (leaven), and since leaven was a symbol of rebellion, salt could easily represent that which inhibited rebellion. Finally, salt is symbolic for that which is infertile. In a Hittite treaty, the testator pronounces one curse that says if the treaty is broken may he and his family and his lands, like salt that has no seed, likewise have no progeny.

9:46. temple of El-Berith. The comparable title *il brt* is attested in one of the Hurrian hymns among the tablets from Ugarit. El was the chief god of the Canaanite pantheon and "berith" means covenant. It has been suggested that there may have been a syncretism of religious beliefs among the mixed Israelite/Canaanite population of Shechem, combining elements of Yahweh, the covenant God of Israel, with El, the Canaanite deity. The remains of a temple of this period have been found on the acropolis at Shechem (see comments on 9:1 and 9:4). This temple was 108 feet by 92 feet and was fortified with walls 18 feet thick. A standing stone *(massebah)* stood in the courtyard. Others have suggested that the sacred site on nearby Mount Ebal (see comment on Josh 8:30-31) should be identified with the El-Berith shrine (since the retreat there appears to take place after the city has been destroyed, v. 45), but there is no evidence of any fortress there.

9:47. Mount Zalmon. Mount Zalmon is otherwise unknown in the Old Testament. Some have suggested that it refers to Ebal or Gerizim, but it is difficult to understand why a different name would be used here. Another possibility is that it refers to the next ridge across the valley south of Gerizim.

9:50. Thebez. Thebez has been identified with modern Tubas, about nine miles northeast of Shechem, based on early Christian writings (Eusebius). No archaeological work has been done at the site.

9:51. central tower. A common feature of towns of this period was a second fortified area inside the town—a citadel of sorts. These often took the form of a tower at the highest point of the town, perhaps also including the temple area and the storehouses and treasuries.

9:53. upper millstone. The millstone was made up of two stones, usually basalt. The lower millstone was heavy (sometimes nearly one hundred pounds), a flat or slightly curved stone upon which the grain was laid and then ground into flour with the second, lighter, stone, which weighed four or five pounds and was shaped to the hand of the worker.

10:1-5

Minor Judges: Tola and Jair

10:1. "minor" judges. The text never refers to these as "minor" judges—that is a much more modern designation, used to refer to those judges who are not recorded as being involved in military activity. The nature of their "judging" must then be identified in other ways. It was the king's duty to establish justice, and that is also the nature of the role of these "judges." This is not so much done through a judiciary system, though that is included, but through all the many aspects of ruling. These then are local rulers. See comment on 2:16.

10:1. Shamir. Shamir has been identified by some as Samaria, the later capital of the northern kingdom. If it is not Samaria, the location is unknown.

10:4. thirty sons, thirty donkeys, thirty towns. Besides referring to physical sons, this terminology could refer to vassals (see 2 Kings

16:7) or those at one's service (see 1 Sam 25:8; 2 Kings 8:9). In this case Jair would be identified as having a territory of thirty towns under his control, each with its own ruler (they generally rode donkeys) who was his vassal. There is a Hittite myth that tells of the queen of Kanesh bearing thirty sons in a single year.

10:4. Havvoth Jair. Havvoth Jair means "settlements of Jair" and refers here to the settlements in the region east of the Sea of Galilee in Gilead between the Yarmuk and Jabbok rivers.

10:5. Kamon. Though there have been many different suggestions for the location of Kamon, there is little to go on for evidence for any of them.

10:6—12:7
Jephthah

10:6. list of gods. Baals and Ashtoreths (=Astarte) refer to the Canaanite deities, while all the other deities are referred to by nation rather than by name, though it is not necessary to think in terms of national gods with political associations. These were more likely fertility gods and other nature gods. This shows the syncretism within Israel and her continued polytheistic mindset. The polytheism of the ancient world was an open system. It was considered foolish to ignore or neglect any god who could potentially bring either harm or blessing.

10:8. Gilead. Gilead is the region in Transjordan bordered by the Jabbok River on the south (though at times extending as far south as the Arnon) and the Yarmuk River on the north.

10:9. Ammonites. The Ammonites lived north of the Moabites in the region around the Jabbok River. They are known from Assyrian records as Bit-Ammon and as the land of Benammanu. They were settling this territory just around the time of the Israelite wanderings.

10:17. Mizpah. There are several different sites that go by the name of Mizpah. The most familiar is located in the tribal territory of Benjamin and is identified as modern Tell en-Nasbeh about six miles north of Jerusalem, but this is too far away to muster troops for a battle in Gilead. Mizpah in Gilead is most likely the place where Jacob and Laban had made their agreement (Gen 31), but this site is likewise unknown. The Gilead where the Ammonites camped may be the town of Gilead, modern Khirbet Jel'ad about six miles south of the Jabbok.

10:18. military governors. In times of military threat, territories governed by elders or tribal leaders were willing to submit themselves to a military governor who would provide protection and perhaps rid them of their enemies. A parallel to this political necessity can even be seen in the stories about the gods. In the Babylonian Creation Hymn to Marduk, Marduk becomes the chief of the pantheon when he agrees to take responsibility for meeting the military threat presented by the younger gods. It is this sort of arrangement that is believed to have been the sociological stepping-stone to the development of kingship in the ancient Near East.

11:1. mighty warrior. The text refers to Jephthah as a "mighty warrior" (NIV). The terminology used here is not just military in nature but can refer to a person of repute or one who has standing in the community—a responsible person. In this context, however, it is likely that his reputation is built on his military success. This is the same phrase used to describe Gideon in 6:12.

11:2. illegitimate sons driven from household. It should be noted that it was not any family shame or humiliation that resulted in Jephthah's being driven out. With the existence of temple prostitutes and polygamy it would be fairly common for children of different mothers to be in the same household. Here the text makes it clear that it was the inheritance that motivated the expulsion. Whether Jephthah, as the firstborn, had rights to a double portion, or whether they were dividing equally (see comment on primogeniture at 9:2), elimination of one party would increase the shares of the others.

11:3. land of Tob. Tob has been identified with et-Tayibeh in the region between Edrei (Der'a)

THE POLITICAL CLIMATE IN THE EARLY IRON AGE

In the Late Bronze Age (1550-1200 B.C.) there was an ongoing struggle between major political powers seeking control of Palestine (see comment on Josh 9:1). With the arrival of the Sea Peoples around 1200 (see comment on Judg 13:1), all of the major powers were either wiped out (e.g., the Hittites) or neutralized (Egypt). Moving into the Iron Age (just about this point in the book of Judges), the power stalemate has been replaced by a power vacuum. The absence of major powers vying for control of the region allowed the smaller states to test their strength, develop and build regional "empires." The Philistines were able to take advantage of this early in the period. Then David and Solomon were able to build a substantial empire in Syro-Palestine without needing to be concerned about political powers in Mesopotamia, Anatolia or Egypt.

and Bozrah (Busra ash-Sham) in western Gilead, about twenty miles west of Mount Hauron. Though no excavations have been conducted on the site, it is possibly named in Thutmose III's city list of this period.

11:8-10. position offered to Jephthah. The initial offer by the elders would have set Jephthah up as the military governor of Gilead, though apparently still operating under the authority of the elders. In verse 9 Jephthah negotiates to be in authority also over the elders, a step closer to the idea of kingship (compare how Abimelech was made king in the region of Shechem in chap. 9 and David's kingship over just Judah in 2 Sam 2:1-4).

11:12-13. negotiating territorial dispute. Basic to the understanding of the negotiation is the recognition that the Ammonites and Jephthah share a concept of divinely granted eminent domain. The gods are the ones who give rights and possession to the land, and appeal is made to the gods to judge the case and, eventually (in war), to defend the territorial distribution. The question of rights to the land did not turn on who was there first, but on the evidence that deity had given the land and on his ability to preserve the possession of the land for his people.

11:15-23. Jephthah's claims. The Israelites had taken the land from the Amorites, not the Ammonites. Though the Ammonites might be able to claim that the Amorites had taken the land from them, Jephthah's point would be that Yahweh had taken the land away from the Amorites and given it to Israel. Any prior claims the Ammonites may have had were nullified by the amount of time that Israel has been in possession of the land with no claim having been made. For details of the geographical issues presented by Jephthah, see the corresponding comments in Numbers 21.

11:24. Chemosh. Chemosh is best known as the national god of the Moabites, and in the ninth-century Moabite stone (Mesha Inscription) he is said to bring victory in battle, as Yahweh is depicted as doing for Israel. The Ammonite national deity is generally Milcom (1 Kings 11:5, 33; NIV, Molech). Although Chemosh was adopted as the national deity of the Moabites, the occurrence of the variant form, Kamish, in a deity list from Ebla, where he had a temple, suggests he was on the register of Semitic gods in third-millennium Syria, long before the Moabites. One Assyrian deity list associates Chemosh (Kammush) with Nergal, the god of the netherworld. There is not yet any firm identification of what natural phenomenon Chemosh was related to, nor is there any uncontested depiction of him on archaeological finds.

11:26. chronological note. Jephthah identifies the Israelite possession of the land as having already a three-hundred-year history to it. Although this is undoubtedly a round number, it supports a date for the conquest in the fifteenth rather than the thirteenth century (see sidebar concerning the date of the exodus at Ex 12). Jephthah is generally dated to around 1100 B.C. and cannot be placed much later if space is to be left for Samuel, Saul and David. Though the Bible's integrity would not be jeopardized if Jephthah were misinformed or exaggerating, it is difficult to believe his argument would carry any force if Israel had really been in the land only half that time.

11:29. Spirit of the Lord. The Spirit of the Lord is again associated with the raising of an army (see comment on 6:34-35). Though Jephthah has been given authority to command in Gilead, he has no such formal role in other areas of Manasseh, including the area of Bashan (north of Gilead) as well as considerable territory west of the Jordan.

11:29. troop movement. Since the site of Mizpah is uncertain, there is nothing here specific enough to reconstruct Jephthah's muster of the troops.

11:30. vows. A vow is a conditional promise, usually of a gift to be made to deity (for more information see comments on Gen 28:20-22; Lev 27:2-13; and Num 30:2-15). Parallels to Jephthah's vow can be found in classical literature in the vow of Idomenus, king of Crete (roughly contemporary with Jephthah). The storm that threatens him as he returns from the sack of Troy leads him to make a vow much like Jephthah's and results in his sacrifice of his son. Often appropriate sacrifices to request divine aid would be offered prior to battle (see 1 Sam 13:8-12). If there was no possibility or opportunity for this prior to battle, one might envision the type of vow made by Jephthah. An alternative for Jephthah could have been to devote the plunder to the Lord (compare Num 21:2), but perhaps that would be inappropriate for towns outside of Israelite territory.

11:31. what Jephthah expected to meet him. While it is true that the Israelite house accommodated animals, animals do not go out to meet someone. Dogs were not kept in houses, were not kept as pets and were unsuitable for sacrifice. Furthermore, a simple animal sacrifice would not be suitable for the extent and significance of the victory Jephthah has achieved. It can therefore be concluded that Jephthah is anticipating a human sacrifice (on human sacrifice in the ancient Near East see

comments on Gen 22:1-2; Deut 18:10).

11:31. burnt offering. In all of the over 250 occurrences of the term used here, it refers to an actual sacrifice literally burnt on an altar. It is never used figuratively or symbolically. For a discussion of the burnt offering see comment on Leviticus 1:3-4. It is the word used in Genesis 22:2 and in 2 Kings 3:27, where human sacrifice is in view.

11:33. area of conquest. The area of Jephthah's conquest is said to include twenty towns, with three named specifically. Archaeologists have found many small fortified settlements in this region from this time that featured round watchtowers. It is likely that many of these twenty settlements were of this type. There is a well-known Aroer just north of the Arnon gorge where it turns south, on the southern border of Ammonite territory, but it is likely that this is a different town by that name closer to Rabbah (as in Josh 13:25). Abel Keramim probably is the town called *krmm* in Thutmose III's list of cities, but the identity of the site is unknown. Minnith, on the basis of later Greek sources, is placed between Heshbon and Rabbah. A tentative identification suggests Umm el-Basatin. Though there is some uncertainty about the sites, what is clear is that Jephthah did not simply expel Ammon from Israelite Gilead but invaded Ammon and conquered many of its fortified garrisons, mostly between Rabbah and Heshbon.

11:34. victory celebration. The practice of maidens going out to greet returning victors with song and dance is attested in the celebration for Saul and David (1 Sam 18:6-7) and partly by Miriam's song in Exodus 15:20-21. The "tambourine" his daughter played has been identified in archaeological reliefs as the tambour, a small drum (leather stretched over a hoop) that would not have the tinny rattle sound of modern tambourines.

11:34. only child. In the popular religious belief in the ancient Near East the veneration of ancestors by succeeding generations was important to the comfort one would enjoy in the afterlife. Such concepts were sometimes held by Israelites as well, though not endorsed. Within the context of the covenant, the end of a family line meant the forfeiture of the land that had been granted as a share of the covenant. In either worldview, the death of the only child was devastating on the philosophical as well as the personal emotional level.

11:35. tearing clothes in grief. Along with placing ashes in the hair, the tearing of clothing was a common form of mourning in the ancient Near East. One example outside the Bible is found in the Ugaritic epic of Aqhat (c. 1600 B.C.), in which the sister of the hero tears her father's garment as she foretells a coming drought. Such an act often implied grief over the death of a relative, friend or prominent individual (2 Sam 3:31). However, it also was a sign of impending ruin, as in the Ugaritic example, Numbers 14:6 and here.

11:35-36. breaking vows. Since a vow is a religious act, drawing the deity into compact with the worshiper, it may not be broken under penalty of God's displeasure (see Ex 20:7 and the injunction not to "misuse" God's name). Though a vow could not be broken, the law allowed for the mitigation of vows, especially those involving persons (see comment on Lev 27:2-8). This loophole was apparently unknown to Jephthah.

11:37. roaming the hills for two months. In Canaanite mythology from Ugarit *(Baal and Mot)* the virgin goddess Anat roams the hills mourning for lost fertility, since Baal is dead. The motif of roaming the hills for lost fertility is therefore a possible connection with Jephthah's daughter's request. In early Mesopotamian practice it was the god Dumuzi (Tammuz), the "quickener of the child in the womb," who had died and was lamented. The time period of two months likely correlates with one of Israel's "seasons." The Gezer calendar (tenth century) divides the year into eight periods: four of two months' length and four of one month's length. The second two-month period (for sowing) consisted of winter months when concerns about fertility would be most prominent.

11:39. fulfillment of the vow: women serving at tabernacle? It has been suggested by some interpreters that instead of being slaughtered as a sacrifice Jephthah's daughter was consecrated to serve in the tabernacle in a state of celibacy. There are examples of lifelong dedication to sanctuary service (Samuel in 1 Sam 1:28) and of women serving at the sanctuary (Ex 38:8; 1 Sam 2:22). But there are no examples of women serving the sanctuary in a vow of celibacy or in lifelong consecration. In the ancient Near East as a whole, dedication to the sanctuary generally involved prostitution rather than celibacy (see comment on Deut 23:17-18). This sort of dedication has been viewed as comparable to sacrificing a son. Perhaps most significant is the class of women referred to as *naditu* in the Old Babylonian period (1800-1600). They were connected with the temple as "bride of the god" and were therefore prohibited from marriage, though they were not necessarily celibate. Hammurabi's laws mention situations where a man marries a *naditu,* but in such situations she did

not bear children.

11:40. commemoration. The verb that the NIV translates "commemorate" is uncertain (the only other occurrence is in Judg 5:11, NIV: "recite"), yet it offers the only description of this annual observance. As a result commentators can only speculate as to its nature. Without any clear indication of its nature, it is difficult to suggest parallels in the ancient world. In the Old Babylonian period the *naditu*s (see above comment) yearly performed rites on behalf of those who had died childless. The context of this passage suggests the four-day observance was in some way a period of mourning for lost fertility (see comments on 11:37 above).

12:1. Zaphon. The general location of Zaphon is clear enough, but there is still no consensus about its precise location. Joshua 13:27 lists it next to Succoth in Gad's territory. It is commonly identified with Tell el-Qos a couple of miles north of Succoth (Tell Deir ʿAllah).

12:1. Ephraimites' complaint. The Ephraimites are inclined to be contentious (see with Gideon, 8:1 and comment there), but while Gideon is able to assuage them, here the complaint escalates into civil war. None of the territory taken from the Ammonites had been allotted to Ephraim, but their allotted territory was across the Jordan from the Ammonite lands. It should also be remembered that the tribes of Israel were set up as individual entities joined together by their common faith and heritage. The only formal leadership they recognized was the leadership of their national God, Yahweh, and the tribal leadership of elders and clan heads. Jephthah represented a departure from that because he was given a formal position of rule (see comment on 11:8-10). This may have been viewed as a threat to other tribes.

12:4. Gileadites as renegades. The Ephraimites attempted to nullify any territorial claims by the Gileadites by negating their tribal status. Historically Gilead was one of the clans from the tribe of Manasseh. By identifying them as mixed stock (Ephraim and Manasseh), they were classifying them as squatters on the land with no rights to territory as full-fledged clans and tribes would have. This was a land grab by the Ephraimites.

12:5. fords of the Jordan. The fords referred to here would be those by the town of Adam just south of the confluence with the Jabbok River (see comment on Josh 2:7).

12:6. variations in ancient Hebrew pronunciation. Pronunciation of some consonants varies between the related Semitic languages of the ancient Near East. In one of these variations the Hebrew consonant *shin* (sh) combines two consonants from Ugaritic (similar to Canaanite), *sh* and *th.* So the Hebrew word for three, *shalosh,* in Ugaritic is *thalath* and in Aramaic is *talat.* Most significant is the fact that Ammonite also featured the *th* consonant variant. It is this type of variation in pronunciation that distinguished the Ephraimite and Gileadite speech. This is not so much dialectical as it is regional variation. As is always the case, consonant sounds that are not native to one's own speech dialect are difficult to reproduce without practice. G. Rendsburg has worked out the most likely scenario to fit the details of both linguistics and context. The Ephraimites would generally have pronounced the word "shibboleth," while the Gileadites, sharing Ammonite practice, would have pronounced it "thibboleth." When the Gileadites confronted the suspected Ephraimites, they challenged them to pronounce "thibboleth," for which the Ephraimites could only manage "sibboleth." The word *shibboleth* can mean either ears of corn or the torrent of a river. The latter makes more sense in the context.

12:8-15 Minor Judges: Ibzan, Elon, Abdon

12:8. "minor" judges. We know nothing of these three individuals from any other sources in or out of the Bible. For discussion of office see comments on 10:1 and 2:16.

12:8. Bethlehem. Bethlehem here is generally considered to be not the one in Judah a few miles south of Jerusalem but the one in the territory of Zebulun in the hills of Galilee just north of the Valley of Jezreel. The only indicator leading to this decision is that Elon and Abdon are also from this general area.

12:9. political marriages. The wives of an ancient ruler or his children usually represented political alliances. Towns, city-states, tribes or nations who wished to ally themselves with a ruler or come under his protection sealed the treaty with the marriage of a daughter of their chief family to the suzerain or his son. This was an act of loyalty on the part of the vassal, who would then have a personal stake in preserving the dynasty. The large number of sons indicated the strength of the family line, for with that many it would be assured of not dying out. This would be important for a ruler, because the family usually occupied key positions in the administration. A large family would theoretically be able to secure the future of the dynasty. Verse 9 indicates a vast web of political associations.

12:11. Aijalon in Zebulun. The well-known town and Valley of Aijalon is in the territory allotted to Dan and is therefore different from that referred to here. This site is unidentified.

12:13. Pirathon. Pirathon has been identified with the village of Farata six or seven miles south-southeast of Samaria.

12:14. forty sons and thirty grandsons on seventy donkeys. It is difficult to tell whether these sons and grandsons represent political alliances (see comment on 10:3) or the size of the clan that he ruled (see comment on 12:8 above). The reference to the donkeys favors the former and the reference to grandsons favors the latter.

13:1-25
The Birth of Samson

13:1. Philistines. The group of Philistines that are well-known through the narratives of Judges and 1 and 2 Samuel came into the Palestine area with the migration from the Aegean region of the group known as the Sea Peoples about 1200 B.C. It is the Sea Peoples that are generally thought to have been responsible for the fall of the Hittite Empire and the destruction of many cities along the coast of Syria and Palestine, such as Ugarit, Tyre, Sidon, Megiddo and Ashkelon, though the evidence for their involvement in those areas is circumstantial. Their battles with the Egyptian Pharaoh Rameses III are depicted on the famous wall paintings at Medinet Habu. It is this vast people movement that is also reflected in the Homeric Epic of the siege of Troy. Coming from Crete, Greece and Anatolia, they probably used Cyprus as a base from which to launch their attacks. Following the repulsion of the Sea Peoples from Egypt, the tribe that came to be known as the Philistines settled on the southern coast of Palestine, where they established their five capital cities of Ashkelon, Ashdod, Ekron (Tell Miqne), Gath (Tell es-Safi) and Gaza.

13:2. Zorah. Zorah is identified with the modern Sar'a about sixteen miles west of Jerusalem in the Sorek Valley, which was the major pass from the coastal plains through the Shephelah to the hills around Jerusalem.

13:2. barrenness. The inability of a wife to bear children often made her vulnerable to her husband's whims, for most marriage contracts allowed for her to be divorced on such grounds. Alternatively it often led to the taking of other wives, who, upon producing children, would assume a more favored status within the family. This text is not, however, concerned with family politics or psychological tensions. The previous barrenness of Manoah's wife is one element that helps to demonstrate the supernatural aspect to Samson's life and career.

13:4-5. Nazirite vow. As with most vows in the ancient Near East, the Nazirite vow typically represented a conditional agreement with deity that was concluded with offertory gifts in response to a favorable answer to a petition. What distinguished the Nazirite vow was the period of abstinence preceding the offerings. Samson's situation is even more notable in that the period of abstinence is not the usual days or weeks, but his entire lifetime. For more information on the details of the Nazirite vow, see the comments on Numbers 6:1-21.

13:5. ritual importance of hair. There is a Phoenician inscription from the ninth century reporting the dedication of shaven hair by an individual in fulfillment of a vow made to the goddess Astarte. It is of importance that in the biblical text there is no discussion of what should be done with the hair that is cut. It is neither dedicated as in the above inscription, nor is it deposited in the temple as in some cultures. The dedicated hair is uncut, not cut. Hair (along with blood) was one of the main representatives in ancient thinking of a person's life essence. As such it was often an ingredient in sympathetic magic. This is evident, for instance, in the practice of sending along a lock of the presumed prophet's hair when the prophecies were sent to the king of Mari. The hair would be used in divination to determine whether the prophet's message would be accepted as valid.

13:15-16. hospitality meal. Hospitality custom required that all strangers who approached a dwelling were to be offered the opportunity to rest, refresh themselves and eat a meal. This was done to assure the friendship of the stranger. This would be particularly true of someone who was offering such prophetic portents as here described. What is particularly generous here is the fresh meat, an item not usually found in the daily diet.

13:17. importance of the name. Someone's name was believed to be intimately connected to their being and essence. A name was believed to be important for magical purposes or hexing. The giving of one's name was an act of favor, trust and, in human terms, vulnerability. The Ten Commandments had prohibited Israel from attempting to use Yahweh's name in magical ways to manipulate him. But here it is neither evil intent nor invocation that are intended by Manoah. The text indicates that Manoah did not realize that the visitor

was supernatural. If a prophet, the individual's reputation could be enhanced and his sponsorship provided for by someone pleased with the accuracy and benevolence of his pronouncements. Such rewards could only be given if the individual's identity were known.

13:19. grain offering. The word used to describe the grain offering means "gift" or "tribute." The offering is used in situations where respect or honor are intended. The same term is used the same way in Ugaritic and Akkadian (Canaan and Mesopotamia). It is typically found on occasions of celebration rather than the context of sadness or mourning. In formal settings a small portion was burnt on the altar as a token of the gift to the Lord, while the remainder was given to the officiating priest. The ingredients of this offering were grain, oil and incense. The grain was the grits or semolina left in the sieve after wheat was ground into flour. The oil was olive oil, used as shortening in cooking and easily combustible. The incense was frankincense, which was made from the gum resin of a type of tree found only in southern Arabia and Somaliland. The grain offerings used a small amount that was entirely burnt in a slow smolder (For more information see comments on Lev 2).

13:19. sacrifice on rock. By placing the food on a rock, it is changed from a meal to a sacrifice and is consumed. Rocks were at times used as altars (1 Sam 14:32-34), usually with the intention of allowing the blood to drain from the slaughtered animal.

13:22. taboo of seeing God. The concept of deity having an awesome, unapproachable appearance was not limited to Israelite theology, for in Mesopotamia the gods displayed their power through their *melammu,* their divine brilliance. This display, however, though it struck terror in the heart, was not seen as being fatal. It is also clear in the biblical text that there is nothing like the *melammu* attached to the messenger, because his supernatural identity is not recognized by Manoah. Parallels to this taboo are unattested in ancient Near Eastern literature.

13:24. Samson's name. Samson's name is a form of the noun that in Hebrew means "sun." Just a couple of miles south of his home is the town of Beth Shemesh, house/temple of the sun. The solar cult is known to have existed among the religious aberrations in Israel (2 Kings 23:11), and some have suggested that Yahweh was at times depicted as the sun in relief (the incense stand from Taanach) and in literature (e.g., Ps 80:2-3; Deut 33:2).

13:25. Mahaneh Dan. Mahaneh Dan means "camp of Dan" and therefore most likely does not represent an established settlement. Zorah and Eshtaol (Khirbet Deir Shubeib) are only about a mile apart, but there is a spring by the Wadi Kesalon running between the two towns that may be the area referred to here.

14:1—16:31
Samson's Exploits

14:1. Timnah. Timnah is located about five and a half miles west along the Sorek Valley from Samson's home in Zorah. It is modern Tell el-Batashi, situated about halfway between Zorah and the Philistine city of Ekron. Excavations at the site show occupation during this period but offer little insight into the biblical narrative.

14:2. parent arranged marriages. Throughout the ancient Near East marriage was viewed more as a clan partnership (often with economical motivations) concerned with family status than as a romantic matching of couples who had feelings for one another. As a result the arrangements for these partnerships were in the hands of the head of the family. The parents decided when marriage should take place and who the mate should be. Often arrangements were made when the spouses-to-be were still children. Endogamy, marriage to someone from the same tribe or village, was the common practice, especially in Israel where land holdings were tied to tribal affiliation. Even when an individual would have the freedom to make a choice on his own, the parents would then have to carry out the negotiations for the financial arrangements concerning bride price (see comment on Gen 29:18-20) and dowry (usually property), both constituting assets that become attached to the wife. Bride price is discussed much more than dowry in the ancient Near East and in the Bible.

14:3. uncircumcised. Circumcision was practiced by many different peoples in the ancient Near East (see comment on Gen 17:9-14) but not by the Philistines. The comment here has little to do with physical attributes or sociological practices, but is an ethnic designation that for the Israelites is a sign of the covenant.

14:5-6. lion. Kings and heroes of the ancient world often boast of their lion-hunting skills. A familiar scene in Egyptian paintings is Pharaoh astride his chariot facing lions with bow or spear in hand. Assyrian kings likewise claim hundreds of lions as hunting trophies. A relief from Tel Halaf (about 900 B.C.) pictures a warrior using a sword to fight a lion. Killing a lion with bare hands is a feat attached to other ancient heroes as, for instance, the Sumerian

king Gilgamesh and Heracles of Greek legend. Lions were common in the forested regions of Palestine, and in this time period the whole region surrounding the Sorek Valley between Zorah and Timnah was forested.

14:6. Spirit of the Lord. In previous appearances in the book the Spirit of the Lord has been involved at the point where the authority to raise an army was a strategic issue (see comments on 6:34-35 and 11:29). In those cases the Spirit endowed the judge with an authority that could only be given by God. In Samson's situation not authority but physical ability is involved. The Spirit of the Lord comes upon Samson on a number of occasions (see 14:19 and 15:14), but not every time he performs an unusual feat. The common denominator is that the Spirit is involved in each situation when he attacks or is attacked.

14:10. feast for bridegrooms. This was the second stage in the marriage process, which took place some time after the proclamation of espousal had been formally made. The traditionally seven-day feast was climaxed by the consummation of the marriage, which may have taken place after the first night of the feast. A ceremony under a canopy is indicated in biblical materials (Ps 19:4-5; Joel 2:16). The Ugaritic tale of King Keret features a wedding feast when he marries Huray, but little detail is given.

14:11. thirty companions. The bridegroom's companions would be those from the clan or village of the bride who came forth to support the union. Their obligations are unclear but may involve providing security for the bride by committing to see that she was treated fairly in her new family and perhaps by accepting liability for the woman's support should her husband abandon her. At the beginning of verse 11 there is a variant reading of "Because they feared him" instead of NIV "When he appeared." If this variant is correct, there may be an implication that there was some intimidation that brought out so many, thus also supporting the claim of verse 15 that the companions were coerced to come in order to be robbed.

14:12. riddles. Riddles are characteristically based on two levels of meaning inherent in the words used. One level would involve the common word usage, while the solution to the riddle would require unraveling a more obscure meaning of the words. It has been suggested that the common level of meaning in Samson's riddle would have been either something crude (related to the results of overindulgence at a banquet) or something erotic (related to the imminent consummation of the marriage), though either of these would appear too metaphorical to be able to constitute a common level of meaning. In Greek legend of this period Mopsus engaged Calchus, a leader of the Achaeans leaving the sack of Troy, in a riddle contest. The intriguing connection here is that Mopsus is later credited with the founding of Ashkelon.

14:13. thirty sets of clothing. The thirty outfits spoken of here would be fine apparel used for special occasions. The equivalent today would be thirty three-piece suits. In the same way that a shirt would be worn under a suit, the linen garments referred to here would be worn under the embroidered outer cloak.

14:14. honey in the carcass. The motif of bees building their hive in the carcass of a large animal is known from literature in the Aegean region (where the Philistines originated), so this riddle should have been one the Philistines could solve.

14:18. riddles answering riddles. Samson's friends answer his riddle, while at the same time posing their own riddle that gives a clue as to how they procured the answer. Honey and the lion answers Samson's riddle. But what is it that is sweeter than honey and stronger than a lion? A woman's enticement, of course. Samson demonstrates his skill at riddles by immediately solving theirs and responding with his own wordplay. "Plowing with someone's heifer" could be analogous to our expression "walk a mile in his shoes" but it also has the more insidious meaning of meddling with his wife.

14:19. Ashkelon. Ashkelon is located nearly forty miles down the coast south of Tel Aviv. It is a one-hundred-and-fifty-acre site that was heavily fortified as one of the five major cities of the Philistines. The Canaanite ruler during the Amarna period (fourteenth century) was Yidya, who was responsible for seven of the letters of the Amarna archive. The Philistines settled on the site around 1175 B.C. During the period of Samson's exploits (Iron Age I) Ashkelon had fortifications at least on the northern slope as well as a glacis (sloped area outside the wall to prevent easy access to the wall) and a mudbrick tower. From Timnah to Ashkelon would have been a journey of twenty-five miles. It is unclear why he would have gone there rather than to Ekron, Gath or even Ashdod, all much closer.

14:20. outcome of wedding: wife given to another. The giving of the wife to the companion does not suggest a secret side romance but would have been the normal course of action. The role of the companions at the wedding was to guarantee continued support should

the wife be deserted, as the family assumed had happened. A Babylonian prayer to Ishtar requests that an angry young man come back to his wife at his in-laws' house and the connected ritual is intended to result in conception.

15:1. wheat harvest time. The wheat harvest time was at the end of May in this section of the country.

15:1. taking young goat. Though the marriage was usually consummated the first night of the feast, the bride often did not go to live with the bridegroom at the end of the seven-day feast. For several months the husband would regularly bring a gift and visit the bride in her father's house (and stay the night) until all was ready for the move. In Babylon this was typically a four-month period, perhaps intended to be a probation period to see whether the bride could become pregnant.

15:4. three hundred foxes. The word translated by the NIV as "fox" is believed to be a more generic term that could also refer to jackals. From the practical standpoint it is likely that jackals are used here. Foxes hunt alone while jackals hunt in packs. Trapping this large a number of foxes would require not only great amounts of time but also cover a large range of territory. Acquisition of jackals would be a more manageable task in that whole packs could be captured at once. Both species were native to Palestine during this period.

15:5. shocks and standing grain. The stalks that have already been cut and are lying in piles awaiting the threshing process are the shocks. The standing grain is that which has not yet been cut. It was still some months until the grapes and olives would be harvested, but the fire did irreparable damage to those industries as well.

15:8. rock of Etam. There is a town near Bethlehem named Etam (2 Chron 11:6), but it is too far east to be involved here, and Samson is not in a town. The most common identification is with 'Araq Isma'in in the vicinity of Samson's hometown, Zorah, on the slopes of the Sorek Valley.

15:9. Lehi. It is uncertain whether Lehi (jaw) is a place name or a description. Akkadian uses the word for jaw to describe the boundary of a territory, and some have felt that the same occurs here in Judges, though it is unattested elsewhere in the Old Testament. Those who consider it a place name generally identify it with Khirbet es-Siyyagh in the hill country of Judah heading toward Jerusalem in the vicinity of Beth Shemesh. It is about two miles from Zorah and the rock of Etam.

15:13. new ropes. Ropes have been found preserved in Egyptian tombs made of green papyrus or of date-palm fiber. In Israel the stem of the sparrow-wort, a desert shrub, was one of the most suitable and convenient materials. New ropes would have been less brittle and therefore more resilient.

15:15. donkey's jawbone. The jawbone of a donkey would be about nine inches long and weigh a little less than a pound. It would be slightly curved and may well have had many of the teeth still in place to improve its effectiveness as a weapon.

15:19. provision of water. Sedimentary rock is known to feature pockets where water can collect just below the surface. By breaking through the surface the collected water can be released. The text does not explain in what way God opened up the rock.

15:19. En Hakkore. No spring has been located in this region that would suit the details of the passage.

16:1. Gaza. Gaza was one of the five major cities of the Philistines. It is located about twelve miles southwest of Ashkelon about three miles from the Mediterranean. In the Amarna period it was the most important center of Egyptian administration of the region. The 135-acre site is located at the southern entrance to the coastal plain, where it occupies the highest point in the region along the main trade route coming up from Egypt. Egyptian reliefs portray the city as well fortified in the thirteenth century, though the limited excavations have turned up little from the Old Testament period.

16:3. structure of city gates. The text mentions three parts of the gate: the gate itself, the posts and the bar. Two gate doors were generally set into stone sockets buried just under the ground. The posts flanked the gate on either side. They were made of wood and joined to the wall. During Iron Age I many cities did not have walls, but instead there were houses built close around the perimeter to serve that purpose. The bars slid across the gates and the end fit into an opening in the post. These bars could be locked in place by a series of small wooden dowels that slipped into holes on a block mounted on the gate. One could therefore not exit the city without a key once the gate was locked. Since the fortifications of ancient Gaza have not been found by archaeologists, it is difficult to be more precise about the details of this particular gate. Gate openings of this period were often as much as twelve feet wide, though some are as small as six feet.

16:3. hill facing Hebron. Hebron is nearly forty miles east of Gaza in a continual uphill climb. The text does not suggest that Samson

carried the gates to the vicinity of Hebron. The phrase used can often mean "on the way to" (see for instance Josh 13:3). He headed off on the road to Hebron and dumped the gates on a hill on the way.

16:4. Valley of Sorek. The Valley of Sorek is the area of most of Samson's activity. The main valley is about thirteen miles west of Jerusalem and is part of the wadi extending about thirty miles in a northwesterly direction from the hills around Jerusalem to the Mediterranean. It serves as the main pass between the coastal plain and the hills of Judah near Jerusalem.

16:5. rulers of the Philistines. The five rulers of the Philistines appear to be equal in authority. The term used to describe them is likely the Philistine term, and most scholars believe it has its roots in the language of the Sea Peoples (Greek or another Indo-European language). Until more information is found it is impossible to offer a clearer political analysis.

16:5. eleven hundred shekels of silver. Eleven hundred shekels of silver is an exorbitant sum—a king's ransom (see 2 Sam 18:12). Compare the ten shekels that was the standard annual wage of a laborer and the four to six hundred shekels that was paid for tracts of land. The 5500 shekels would equal 550 times the average annual wage. If we took $25,000 as an average annual wage today, that kind of offer would be in the $15 million category.

16:5. Philistine beliefs about Samson's strength. The Philistines believed there was a secret to Samson's great strength that needed to be discovered and that could be exploited to weaken him. This demonstrates that they considered supernatural or magical elements to be the source of his abilities. Samson understands this in that he offers magical solutions for binding him. Just as modern superstitions maintain that only silver bullets can be used to slay a werewolf, so in the ancient traditions certain materials had magical properties that could be used to counteract supernatural phenomena. This falls into the category of magic designated "rite of contact and transference" known from Hittite texts. In these rites, wool or cords of various colors or materials were used to neutralize magical properties.

16:7. fresh thongs. The fresh thongs or bow strings were sometimes made of the intestines of cattle. Sumerian literature refers to deriving bow strings from a sheep's leg (presumably the tendons) or from ram's gut, while Ugaritic literature refers to tendons from a bull's leg. They were usually laid out to dry before being put to use. Others have preferred to think of vines being used. The fact that seven are used also suggests a magical element to the procedure.

16:11. new ropes. See comment on 15:13.

16:13-14. loom weaving. There were two types of looms used in this period: the horizontal loom and the vertical loom. From the description given of Delilah's loom it appears to be the former type. Four stakes were driven into the ground in a rectangular pattern. The threads that would make up the warp of the fabric were tied at regular intervals to sticks on both ends, and the sticks were then used to stretch out the threads between the stakes. When the ends of each stick were braced behind the stakes, the threads would be stretched horizontal to the ground, taut for weaving. A shuttle would then be tied to the thread that was to be woven in as the woof of the fabric, with a bar being used to separate alternating threads of the warp to allow the shuttle with the woof thread to pass through. Once the woof thread was in place the pin would be used to tighten that row against the previous rows. Samson has now become quite creative for he is suggesting that his hair be substituted for the woof thread. This would, however, be a logical magical procedure in that the hair was considered to contain one's life essence and the weaving would be a binding action. When Samson jumps up, he pulls the whole loom with him, snapping the end sticks off the four stakes between which the fabric was stretched.

16:13. seven braids. It was a common style for men to have the hair bound or even curled in segments. Samson's hair was styled in seven such segments (one in the back and three on each side).

16:17. Nazirite. See comments in Numbers 6 for more information about the Nazirite vow and the significance of hair. Though Samson may have violated the vow on numerous occasions, such circumstances merely required the vow to be renewed. This was different in that the shaving of the hair was the way to bring the vow to an end.

16:17-19. cutting hair to deprive of invincibility. There are a few examples of this same concept known from early literature of the Aegean region reported by Apollodorus (second century B.C.). One account is of Nisus, king of Megara, whose long hair made him invincible. His daughter, Scylla, had fallen in love with his enemy, Minos, king of Crete (seventeenth century B.C.), so she cut off part of her father's hair so that Minos could achieve victory. A similar fate likewise befell Pterelaos, king of Teleboea (also reported by Apollodorus), whose hair, which made him

immortal, was shaved off by a daughter in love with the enemy. These stories may well have been known by the Philistines who were from the Aegean region, in which case the suggested course of action would have made perfect sense to them.

16:21. blinding prisoners. Most evidence comes from Mesopotamia, where it was common practice for prisoners of war to have either their eyes gouged out or their tongues removed.

16:21. bronze shackles. Both manacles and fetters were used in the ancient Near East, and bronze would have been the logical material to make them out of at this period. Even later in the Iron Age bronze continued to be used for this purpose (see Jer 39:7). It is likely that Samson had both his hands and his feet shackled in this way.

16:21. grinding mill. Grinding grain into flour was usually done with millstones and was the job of the lowest members of society. One of the basic "appliances" of any ancient household would have been the handmill (called a saddle quern) with two stones for grinding (see comment on Judg 9:53). Larger milling houses often served as prison workhouses in Mesopotamia, but each prisoner still used a handmill for grinding. The large rotary mill that could be powered by donkey or slave labor was not invented until after the Old Testament period. The palace at Ebla had a room containing sixteen handmills, inferred to be a place where prisoners ground grain. Grinding houses would include prisoners of war, criminals and those who had defaulted on their debts.

16:23. Dagon. There is evidence of Dagon as a important god within the Semitic pantheon of deities as early as the third millennium B.C. in Mari. Assyrians worshiped him in the first half of the second millennium, and in Ugaritic literature he is positioned as the father of Baal Haddu. His temple in the town of Ugarit was bigger that the temple of Baal. It is generally assumed, then, that the Philistines did not bring this god with them from their Aegean homeland but adopted him upon their arrival in their new territory. Dagon is often identified as a god of grain or of storm, but both of these remain somewhat speculative.

16:25. brought to entertain. The "entertainment" provided by Samson was probably not connected to his wit or his strength, but to his blindness. Putting obstacles in the way and striking or tripping him would be only a few of the cruel possibilities for tormenting a blind person in an unfamiliar place.

16:29. temple architecture. The temples at Tell Qasile (ancient name unknown, but occupied by Philistines; located within modern Tel Aviv) and at Beth Shan are the only Philistine temples from this time period that have been uncovered by archaeologists, though the temple at Lachish is also instructive. They commonly feature pillars that support the roof in a central hallway (perhaps partially open-air). The pillars in the temples of this period were often made of wood and stood on stone pedestals. They were held in place by the weight of the roof. The largest phase of Iron I temples at Tell Qasile was twenty-five by forty-five feet. The temple at Beth Shan features a central area with two pillars and measures nearly forty-five feet square. The Late Bronze acropolis temple at Lachish (Canaanite and slightly earlier) was of similar design, with two pillars in the central area, but was bigger, measuring about sixty by one hundred feet.

16:29-30. bringing down the house. The verb used in verse 30 suggests a twisting motion, from which we can infer that Samson turned the pillars off their stone bases, thus removing the support of the roof and causing its collapse.

16:31. Zorah and Eshtaol. Zorah is identified with the modern Sar'a about sixteen miles west of Jerusalem in the Sorek Valley, which was the major pass from the coastal plains through the Shephelah to the hills around Jerusalem. Zorah and Eshtaol (Khirbet Deir Shubeib) are only about a mile apart, but there is a spring by the Wadi Kesalon running between the two towns that may be the area referred to here.

17:1—18:31
Micah and the Danites

17:2. eleven hundred shekels. Although a very large amount (eight grams/shekel), it is not beyond the realm of possibility that this much silver could be involved here (compare the four hundred paid by Abraham for Machpelah and Gideon's spoils taken in Judg 8:26). It most likely represented the woman's dowry, received at marriage, that was to provide support should she be widowed or abandoned. It is also the amount paid to Delilah in 16:5 by the Philistine kings.

17:2. curse. The text is ambiguous enough to allow for either "oath" or "curse" with regard to the eleven hundred shekels of silver. It is possible that Micah's mother had pledged that amount to Yahweh, or it may be that she had placed a curse on whomever had taken it. In both cases God would have been called upon as witness (see Num 5:21 and Neh

10:29). The mother might well have been desperate to find her pledged funds and called upon God to help with the search. Micah's reassurance that he has the silver sounds less like a response of a dutiful son than it does of someone frightened of taboo (i.e. consecrated) items (see Josh 7:20-21).

17:2. changing curse to blessing. Like Balaam (Num 23:11), Micah's mother changes her curse into a blessing. She may have been disappointed to find that her son had taken the silver, but she quickly transposes one form of divine invocation into another. In this way, the potential harm is abetted (see 2 Sam 21:3).

17:3. consecrated to the Lord to make image. The making of sacred images was forbidden in Exodus 20:4. However, the lawlessness portrayed in the Judges period and common practice among the Canaanites makes it almost a certainty among the Israelites (see Gideon's ephod in Judg 8:27). Idols were carved out of wood or stone as well as cast from precious metals (see the golden calves in Ex 32:1-4 and 1 Kings 12:28). Molds for the casting of gods have been found at several Canaanite sites. It may be presumed that the material employed was consecrated at the beginning of the process, and certain rituals (the "mouth-opening" in Egyptian and Mesopotamian texts) and ceremonies were performed to bring the object to life. Then the final product was consecrated in the service of the god represented (see Ex 40:9-11 and Lev 8:10-11 for the consecration of the tabernacle).

17:5. shrine. Archaeological excavations at sites throughout Syro-Palestine have uncovered house-shrines. These private sanctuaries would have served the needs of households and perhaps extended families within a village culture (the plaster fragments from Tell Deir 'Alla may be associated with such a shrine as may the Kuntillet 'Ajrud inscriptions). In larger population centers, more formal temples and shrines also existed to serve as worship and sacrificial centers for all devotees and as a base of operations for the priestly community of the god. However, the biblical text makes a point that Micah's shrine was not a proper center for Yahweh worship, and the inclusion of an idol graphically demonstrates the danger of unsupervised local worship (see the law in Deut 12:2-7).

17:5. ephod. The ephod was part of the priestly garments to be worn exclusively by Aaron and other high priests (see the comment on Ex 28:6-14). It was probably an apronlike affair, made of special fabric and woven with a mixture of woolen and linen thread as well as gold. The breastplate containing the twelve stones representing the Israelite tribes was attached to the ephod (Ex 28:25). The association of the breastplate with the Urim and Thummim, the lots used in divining God's will, makes the ephod a part of this oracular procedure. As such it could have eventually been so closely associated with the divine that it too was worshiped (see Gideon's golden ephod in Judg 8:27). Micah's ephod is designed to add legitimacy to his personal shrine, and the fact that it is listed in association with his idols suggests it was also an object of worship (see Judg 18:14-31).

17:5. idols. Graven images of any sort are strictly forbidden by Exodus 20:4-6; 34:17. Yet the existence of idols made of metal, wood and stone was a continual reality in ancient Israel (see Is 40:19-20; Hos 8:4-6). It is therefore not surprising that Micah has created idols. However, the official sanction given to them by the Levite raises the scandal of the lawless Judges period.

17:6. no king. Given limited central authority, the judges were not able to undertake significant spiritual or social reform among the people, nor were they in a position to adjudicate intertribal squabbles. The priesthood, the tribal leadership and the judges are seen in the narrative to be part of the problem rather than part of the solution. Inauguration of a central, civil authority had the potential to resolve some of these problems, but only the appropriate view of kingship would result in progress. As 1 Samuel 8—12 will point out, there are drawbacks to kingship as well, and it is a dangerous mistake to treat a spiritual problem with a political solution.

17:7-10. family priests. Micah's original choice was to appoint one of his sons as the priestly administrator of his shrine. However, when the opportunity arose to install a Levite, he jumped at this opportunity to legitimize his sanctuary (note how it has gained a reputation in Judg 18:14-15). The use of the term "father" here implies ability to make true oracular answers to the yes and no questions posed to God through him (see the use of this term in 2 Kings 6:21; 8:9; 13:14). It might also be compared to the title "mother in Israel" given to Deborah in Judges 5:7. However, the practice of using local or family priests is eventually forbidden as the monarchy attempted to centralize all worship in Jerusalem (see 2 Kings 18:4; 23:5-9).

17:7-9. itinerant Levite. The Levites did not receive a specific territorial allotment because they were to serve all of the tribes as priests (Josh 18:7). Thus it is not out of character in this period for a young Levite to go on a jour-

ney and seek employment in his profession. There are some problems here with his association with Judah, but the historical context is uncertain.

17:10. priest's salary. There is no provision in the law for a priest to receive a salary. Exodus 28:1 and 29:26-28 describe the portion of the sacrificial offering that is to be set aside for the priests, and Joshua 21:3-40 lists towns and pasturelands allotted to the Levites for this sustenance. However, the offering of a specific amount of precious metal as wages functions more as a bribe or retainer for a prized employee.

18:1-2. Danite migration. The allotment assigned to the tribe of Dan was between that of Ephraim and Benjamin along the coastal plain (Josh 19:40-48). They would have been closest to and most immediately affected by the Philistines (see Samson's exploits in Judges 13—16) and may have eventually felt that they would never be able to effectively compete with this much stronger people.

18:5-6. oracle. One of the most common forms of divination employed in the ancient Near East involved asking a god a yes or no question. This might require the casting of lots or, as in this instance, inquiring of a prophet or priest at a shrine. While this might seem to eliminate ambiguity, the Levite's answer suggests that a question could be answered with a noninformative statement. In Mesopotamia, the *baru* priest sometimes used a "divining cup" (see Joseph in Gen 44:5) or might consult a body of omen texts to provide answers.

18:7. Laish. Located at the foot of Mount Hermon in the extreme northern portion of Israelite territory (also known as Leshem in Josh 19:47), the city was about one hundred miles from Dan's assigned territory. Laish was conquered by the Danites and renamed Dan. The site, which contains one of the sources of the Jordan River, has a long history, attested by Egyptian execration texts and in the Mari letters. It would not be surprising to see Phoenician (Sidonian) influence in this northern city. For more information see the comment on Dan in 18:29.

18:12. Kiriath Jearim. Listed as a city within Judah (Josh 15:60), the site is commonly identified with Tell el-Azhar, nine miles west northwest of Jerusalem, but this is unsubstantiated by archaeological finds or extrabiblical references. Its association with Mahaneh Dan in this verse puts it in this general area (see the comment on 13:25). This location places it only six miles from Gibeon, with which it is also associated (see comment on Josh 9:17).

18:14-27. pillaging the shrine. The practice of attacking and looting shrines and temples was simply part of warfare in the ancient world. Since these places were often storehouses of grain and other commodities and contained valuable objects made of precious metals, they were a natural target. The collecting of sacred images as "hostages" was also common (see 1 Sam 5:1-2) and is documented in the Mari letters (eighteenth century B.C.) as well as in the Cyrus Cylinder from the Persian period (c. 540 B.C.).

18:28. Sidon, Beth Rehob. At the time of the Danite conquest of Laish, it was a village controlled by the Sidonians (on the Lebanese coast). The exact location of Beth Rehob is unknown, although it most likely is to be found "near the entrance to Hamath" (Num 13:21), in the Huleh valley where it links with the Bekah valley of southern Lebanon.

18:29. Dan. Tel Dan (Tell el Qadi) is located at the foot of Mount Hermon and is watered by a number of springs which serve as one of the sources of the Jordan River. Its identification has been proven by the discovery of an inscription which invokes "the god of Dan." However, its original name was Laish (see Josh 19:47; Judg 18:7), and by that name it was mentioned in the Egyptian execration texts and perhaps in the Mari letters. The Middle Bronze period at the site saw the construction cover over thirty acres. An arched mudbrick gateway from this era testifies to the remarkable culture of the city. The conquest of the city in the early Iron Age is not evidenced by a destruction level, but there is material evidence (pottery, storage pits) of the introduction of a new population group in the Iron Age. No temple or shrine has been found from this period, but Jeroboam may have been following earlier tradition when he constructed a temple when the nation was divided in the tenth century (1 Kings 12:29-30).

18:30. tribal priesthood. The Levites were to serve as priests for all of the tribes. Thus it is not out of character to speak of Jonathan, the son of Gershom, as priest of the tribe of Dan. Jonathan came to his position by first serving as a household priest in Ephraim and officiating before idols, and then by consenting to the confiscation of these sacred images from Micah's house. In that sense he perpetuated a form of false worship along the lines of those priests condemned by Hosea for failing to convey the true knowledge of God to the people (Hos 4:6).

18:31. house of God in Shiloh. The shrine at Shiloh operated as a cultic center during the Judges period (Judg 21:19) and in the time of Samuel (1 Sam 1:3), but it was apparently de-

stroyed by the Philistines after the battle of Ebenezer (1 Sam 4:1-11). Mention in Psalm 78:60 and Jeremiah 7:12; 26:6-9 suggests the shrine there may have been rebuilt and used until Solomon built the Jerusalem temple. The site has been identified as Khirbet Seilun, about halfway between Bethel and Shechem. This seven-and-a-half-acre site is situated in a strategic location where it enjoys fertile land, a reliable water source and access to the main north-south route through the heartland of Israel. Substantial Iron Age I ruins have been found at the site, along with evidence of destruction by means of fire. Though remains of public buildings from this period have been found, no trace of the sanctuary has been identified. The probable location at the highest point of the tell has suffered from erosion and later settlement.

19:1—21:25
The Civil War Against Benjamin

19:1. Levites. For discussion of the role, function and provisions made for the Levites, see the comments on Numbers 16:10; Deuteronomy 14:27-29; 18:1-5; 18:6-8.

19:1. concubines. A concubine is a secondary wife who has probably come into the marriage without a dowry. Her children may only receive a portion of their father's estate if he chooses to publicly acknowledge them as his heirs (note how Abraham treated his sons by Keturah and his concubines in Gen 25:1-4). It is possible that this sort of arrangement became necessary when the first or principal wife was infertile (see the use of Hagar in Gen 16:1-4 and the maids of Leah and Rachel in Gen 35:21-22). However, in most cases in which a marriage contract is made with the father of a woman who will be considered a concubine, there is an assumption of a lesser status than a regular wife. Thus the Levite may have simply contracted for a sexual partner, since his social status would ordinarily have required a wife of certain attributes (see Lev 21:7). This may explain why he was in no hurry to bring his concubine home (Judg 19:2).

19:1. hill country/Bethlehem. The geographical distances involved are not great (perhaps thirty miles), but they do represent two tribal areas and in later terms the two kingdoms of Israel and Judah. In any case it would have required at least a full day's travel to cover and thus explains why they must stop for the night after a later afternoon departure only got them as far as Jebus/Jerusalem (Judg 19:8-11). The text actually refers to "Mt. Ephraim" (NIV: the hill country of Ephraim) which may be identifiable as Jebel Asur, the most noticeable elevation in the region.

19:10. Jebus/Jerusalem. For discussion of the pairing of these city names see the comments on 1:7-8 and 1:21. The city would have been only about four miles north of Bethlehem.

19:12-14. Gibeah. Scholarly consensus now places the site of Gibeah at Jaba', about four miles northeast of Jerusalem. Jaba' sits on a hill above a canyon pitted with caves (see the Rock of Rimmon in Judg 20:47). Although it is described as a village in the tribal territory of Benjamin, Gibeah will later serve as Saul's fortress city when he becomes Israel's first king (see 1 Sam 10:26; Is 10:29). The travelers would likely have passed west of Jerusalem and then taken the road northeast through Anathoth to Geba.

19:15-17. city square hospitality. What is implied here is that no one met the Levite's party as they entered the village, unlike in Genesis 19:1, and they were forced to seek shelter in the *rehob* ("city square"). This place is a poor refuge for travelers. Having to spend the night there would be their last choice, and it would reflect on the poor hospitality of the town that strangers would have to shelter there. In Genesis 19 the angels' intention to go to the *rehob* suggests a testing of the community. The fact that the Levite in Judges 19 is forced to go to the *rehob* demonstrates a basic failure on the part of the citizens of Gibeah to offer him hospitality.

19:18. house of the Lord. It is possible that the Levite is either speaking of his own home in Ephraimite territory, where he may or may not perform any cultic functions, or to the shrine at Shiloh where the ark of the covenant is housed and a group of Levites provide official sacrificial duties (1 Sam 1:3).

19:21. foot washing. It is typical for the host to make a modest offer to the guest (usually water, food, shelter and a foot washing). This does not preclude more being given to the guest, but it does protect the host who may find himself in the dishonored position of offering more than he can deliver. In any case the host will make every effort to insure his guest's comfort, and this would include cooling and cleansing hot, dusty feet (see Gen 18:4; 19:2; 24:32).

19:24. daughter and concubine made available. The situation here may be intended to portray a skewed world in which no man or woman is safe from harm. The Ephraimite's invitation that the men do "what seems good to you" is suggestive of the final phrase in this narrative: Judges 21:25b—"everyone did as he

saw fit." It should be noted that women are legal extensions of their husbands in ancient Israel and thus would come under the same legal protections guaranteed to their husbands—as long as their husbands identified them as such. In this instance the Ephraimite apparently shifts his role from hospitable to inhospitable host by "callously" offering the Levite's concubine to the crowd in order to save his honor and perhaps his own life. Technically the concubine could not be legally separated from the Levite and should have been protected by the customs of hospitality to the same degree.

19:25. Levite gives concubine to crowd. This interchange is less dramatic than that in Genesis 19:9. The citizens of Gibeah simply ignore the Ephraimite's offer without accusing him of "playing the judge." There is a sense of urgency in the text, brought on by a lack of reasoning in the actions of the mob, which may explain the Levite's action of thrusting his concubine out the door and into the hands of the crowd. In both cases the life of the host is saved by his guest(s), but clearly the solution provided by Lot's guests is preferable to the Levite's. What is clear in both narratives is that the guest is forced to save his own life and that of his host. The irony of this reversal climaxes the narrative, although a sense of disgust lingers over the violence done to the Levite's concubine. She is a victim whose only attempt to assert her independence (her flight from her husband in Judg 19:2) was thwarted by her father, her husband and the failure of the citizens of Gibeah to carry out their proper role as host. The Levite chooses to sacrifice her to save himself.

19:29. cut up pieces sent. The Levite will perpetrate one last indignity on his concubine's body by carving her up into twelve pieces and then using them as grisly invitations to a general assembly of the tribes. There are clear parallels between this action and Saul's call to arms in 1 Samuel 11:7, in which he carved his oxen into twelve pieces.

20:1. Dan to Beersheba. This is the traditional geographic range given in the text for the north-south political limits of Israel. It represents a distance of approximately 160 miles.

20:1-3. assembly in Mizpah. This site in the tribal territory of Benjamin was a common assembly point in premonarchic Israel (Josh 18:26; 1 Sam 7:16). The name means "to watch," and the site may have been a military outpost or border fortress, and thus a likely spot for the type of encampment described in Judges. It may be identified with Tell en-Nasbeh, about six miles north of Jerusalem.

20:2. four hundred thousand soldiers with swords. As in many of the other passages that mention the size of an army, it is difficult to ascertain whether the Hebrew word ought to be read as "thousands" or "divisions" (for more discussion, see comment on Josh 8:3). Whatever the case may be, this is a large turnout in response to the summons. Population estimates for this period generally run in the 200,000 to 250,000 range, based on the number of settlements, the size of the settlements and the average number of inhabitants per acre of city space. The swords that are mentioned are probably bronze swords, since we know that Israel did not develop iron technology until the monarchy period.

20:3-8. the hearing and verdict. Some aspects of Israelite judicial procedure are followed in this episode. The chiefs or elders of the tribes are assembled to hear testimony. Once this has been given, a verdict is rendered (compare the case of the prodigal son in Deut 21:18-21). One major variation on this process is the fact that only the word of the Levite is given. Ordinarily, two witnesses are required for a verdict to be given (see Num 35:30; Deut 19:15). The judgment of the tribes in this case includes taking an oath to stay in the field until punishment has been administered. Such a united front is unprecedented in the Judges period, when the tribes often fight among themselves (Judg 12:1-6) or refuse to join a combined military effort (see Judg 5:15-17). The idea that honor has been violated or a great affront done that requires military action may be compared to David's vow after being rebuffed by Nabal in 1 Samuel 25:21-22.

20:9,18. direction of the lot. The casting of lots prior to battle forms an inclusio in the book of Judges. At the beginning of the book, God responds to the Israelites' question of "who will be the first to go up and fight?" with the name Judah (1:1-2). And, again, in this final episode Judah is directed to "go first" in the battle against Gibeah and the Benjaminites (20:18). The use of lots is common in Israelite tradition in situations of land distribution (see Josh 14:2; 19:1-51) and judicial procedure (see Josh 7:14-21; 1 Sam 14:41-42). It is a form of divination in which the decision, based on the cases of lots (dice, knuckle bones, incised ivory palettes, etc.) is provided by God's answer to a question (see the comments on Judg 1:1-2 and 18:5-6).

20:15. twenty-six thousand swordsmen. For discussion of the large numbers see the comment at 20:2.

20:16. seven hundred left-handed slingers. The number may reflect a special or elite con-

tingent of ambidextrous warriors (see the comment on Judg 3:15), who were such marksmen with their slings that they could turn the odds for an outnumbered army (see 1 Chron 12:2 for another group of Benjaminite heroes or elite troops who were experts with the sling).

20:26. fasting. Fasting is little attested in the ancient Near East outside of the Bible. It generally occurs in the context of mourning. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about their spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10). After their second defeat by the Benjaminites, the other tribes gathered to seek God's advice, and in preparation for this query they fasted and made sacrifices in order to remove any sin or other obstacle that may have been the cause for this defeat. For similar efforts related to military action, see 1 Samuel 7:6 and 2 Chronicles 20:1-4.

20:26-28. ark at Bethel. This is the only reference to the ark in the book of Judges, and therefore for most of the book it is unknown where the ark is being kept or how it is being used. It is generally assumed that its location changed on a number of occasions during the period. In the beginning of 1 Samuel it is at Shiloh.

20:28. time period. Since the episodes in the book of Judges are not always in chronological order, it could be that these events occurred closer to the beginning of the settlement period. This would allow for a son of Aaron to still be alive and able to serve as priest before the ark at Bethel. If it relates to a later period, then this was probably Phinehas II, the predecessor to Eli at Shiloh.

20:29-36. ambush strategy. The use of decoying ambushes, such as that described in this episode, seems to have been a familiar part of Israelite military strategy. Joshua employs it in his second attack on the city of Ai (Josh 8:2-21), and Abimelech uses similar tactics in his capture of the city of Shechem (Judg 9:30-45). This strategy falls into the category of indirect warfare, characterized by ambush, pretend retreats, decoys, infiltration and the like, rather than lengthy siege or pitched battle. It would have been difficult for armies to besiege walled cities without siege engines or a large enough force to completely surround the city and prevent counterattacks or the escape of the citizens. Thus trickery was used to fool the city into opening its gates or into sending contingents of troops outside the walls that could be cut off by ambushes (see Jeroboam's unsuccessful strategy in 2 Chron 13:13-18). Such tactics are known from the ancient Near East in the Mari texts (eighteenth century B.C.), the Egyptian Papyrus Anastasi (thirteenth century B.C.) and a Middle Assyrian text (tenth century B.C.).

20:33. Baal Tamar. A site between Gibeah and Bethel which has not been conclusively identified. Among the possibilities are Khirbet Atarah, Ras et-Tavil and Sahre al Gibiyeh, all of which are within this general area. The city serves as the site of a diversionary battle which allowed another army of Israelites to attack Gibeah and destroy it.

20:35. 25,100 killed. The original Benjaminite muster was 26 divisions plus 700 trained warriors (v. 15). The number here in verse 35 is the total casualty count, which is broken down in the following verses. Of the divisions, 25 were wiped out, including 18 on the battlefield (v. 44), 5 during flight (v. 45) and 2 more in the "mop up" operation (v. 45). Of the 700 trained warriors, 100 were killed while 600 escaped and hid (v. 47).

20:45. rock of Rimmon. The limestone cliffs around the site of Gibeah/Geba are pitted with small caves from which ambushing soldiers could spring or in which these six hundred survivors could hide (see comment on Judg 19:12-14). This is the origin of the name "Pomegranate Rock," which is most likely identified with the el-Jaia cave in the Wadi es-Swenit, approximately one mile east of Gibeah/Geba.

20:48. decimating cities (incl. animals). Although the term is not used here, the action taken against the Benjaminite towns is precisely the same as a *ḥerem*, a holy war in which all persons, animals and property are destroyed as a sacrifice to God (see Josh 6:17-21 at Jericho and 1 Sam 15:2-3 and the *ḥerem* against the Amalekites). This would then account for the fact that only six hundred Benjaminites (hiding at the Rock of Rimmon) would have survived this devastation. It is an extreme form of warfare, and one that occurs only infrequently since it does not provide the conquering force any loot or slaves.

21:1. oath. Once again an unwise oath appears in the narrative (see previously Jephthah's oath in Judg 11:30-31). In their zeal to punish the Benjaminites, they had carried out a war of total devastation and had sealed the fate of their future existence by swearing not to intermarry with any survivors (see the importance

of keeping a vow in Num 30:2-15). This may have also been a security measure should there be future conflicts with the Benjaminites. However, the destruction had been so complete that the six hundred survivors were left without wives or other women to marry. Since the Israelites could not violate their oath without bringing God's wrath upon them, an alternative source of brides for the Benjaminites had to be sought.

21:4. built altar. If Bethel was only an assembly point for this episode and not the permanent cultic site for the ark, it is to be expected that a new Yahweh altar would have to be constructed for the use of the Israelites (see the legislation on construction of altars in Ex 20:24-26). It is also possible that a new altar would have been built in an open area or on a high place to accommodate the large numbers of Israelites assembled (see Gideon's new altar in Judg 6:26).

21:4. offerings. In order to purify themselves and make themselves worthy of God's attention, a new altar is constructed and burnt, and peace offerings are made (see Ex 20:24). This is done because they have placed themselves in a difficult situation after making an unwise vow. They are responsible for the near-extermination of the tribe of Benjamin. Now they regret that act and want to seek Yahweh's guidance on how to save Benjamin from extinction. Their act of building an altar and making sacrifices is proper (as it was in Judg 20:26) and elicits a response from God.

21:8-12. Jabesh Gilead. Most likely located at Tell Maklub, on the Yabis River in the northern Gileadite hill country, just east of the Jordan River. It was a strategic site, commanding the well-traveled wadi immediately below the city. As such it controlled much of the merchant traffic in that area (see 1 Sam 11).

21:5, 10. death for not attending. The Israelite tribes had taken an oath of solidarity. The assumption was that anyone who failed to assemble was taking the side of their enemy and thus deserved the same fate. Thus Jabesh Gilead was targeted for punishment as a fulfillment of the oath and, conveniently, as a source of brides for the six hundred remaining Benjaminites. Taking an oath such as this might be compared to Saul's statement in 1 Samuel 11:7 when he called for a mustering of Israelite tribes to save Jabesh Gilead from the Ammonites. He threatened to destroy the cattle of any man who failed to assemble for this campaign. The threat probably implied violence against the person as well. One Mari text provides a graphic example of this type of threat. The head of a criminal was carried on a pole as an indication of the fate of draft dodgers.

21:6. elders. In the absence of a king or other dominant leader, the tribes had to rely on the collective assembly of the tribal elders. They administered justice in the village culture (Deut 19:12; 21:2-6; 22:15) and served as representatives for the people at major gatherings (Josh 8:10; 1 Sam 4:3).

21:19. geography. The festival of Shiloh (Khirbet Seilun) must have been on the pilgrimage route between Bethel in the south and Shechem (Tell Balatah, about thirty miles north of Jerusalem) to the north. Lebonah was located north of Shiloh (possibly either El-Lubban or Lubban Sherqujeh). All of these directions by the elders suggest that none of them had been to this Canaanite festival.

21:21-23. girls of Shiloh. The idea of stealing brides also occurs in early Greek and Roman traditions and probably reflects a practice that was not uncommon in the ancient world. The festival in question was apparently a Canaanite fertility ritual associated with the harvest.

21:25. no king. This chapter concludes with the same statement which appears earlier, explaining the anarchic conditions in the Judges period by noting that no king ruled at that time (see the comment on Judg 17:6). This provides an exclamation to the entire book. The stories filled with violence and death were an obvious case for the necessity of the monarchy. The covenant was ignored, the people rebelled, and no law was above breaking in a time when everyone did what was right in their own eyes. Thus the only hope for peace and the rule of order was a reestablishment of the covenant and the imposition of strong leadership.

RUTH

1:1-22

To Moab and Back

1:1. chronological note. The story of Ruth is placed by the narrator in the time of the judges, but no indication is given as to when in this several-century period it took place. If the genealogy at the end of the book has no gaps (see comment on Gen 5:1-32), the events would best be placed in the second half of the twelfth century, roughly contemporary to Jephthah and Samson.

1:1. Bethlehem. Bethlehem is located about five miles south of Jerusalem. Bronze and Iron Age pottery has been found at the site, but little excavation can be carried out due to continuing occupation. The town was particularly susceptible to the climate because there was no spring and it relied on cisterns to gather water. The main produce of the area includes grain crops (wheat and barley) as well as olives and grapes.

1:1. going to Moab in time of famine. There are a number of wadis that cross the region of Moab, and the combination of adequate rainfall and porous soil makes it good for agriculture. The family of Elimelech would have traveled north to the area of Jerusalem and then taken the Jerusalem to Jericho road to cross the Jordan at the fords by Jericho. From there the road east up to Heshbon would connect them to the north-south King's Highway leading through the region of Moab. Depending on where they settled, the trip would have been seventy to one hundred miles and would have taken about a week.

1:1. Moab. The region of Moab, east of the Dead Sea, extended from the plains north of the Arnon River south to the Zered River. The region measures about sixty miles north to south and about thirty miles from the Dead Sea to the eastern desert. The "plains of Moab" north of the Arnon was a region that had belonged to Sihon (see Num 21) and had been distributed to the tribe of Reuben. Little is known of Moab during this period, though archaeological surveys have identified several dozen settlements during this time.

1:2. Ephrathites. "Ephrathite" could refer to either a geographical district or a clan ancestor. The fact that the designation could refer to individuals from differing tribes and clans would make it a potentially confusing designation, but geographical possibilities are equally uncertain.

1:3-5. plight of the widow. Widows in the ancient Near East had lost all social status and generally were also without political or economic status. They would equate to the homeless in our American society. Typically they had no male protector and were therefore economically dependent on society at large.

1:1-6. divine intervention. As would be the case for any natural occurrence, the Lord is seen as intervening to bring an end to the famine. In the ancient Near East, deity played the most important role in cause and effect, both in history and in nature. In our worldview we would be inclined to identify human or natural cause and effect first and then mention that "of course, God was behind it all." In the ancient Near East it would be the other way around. God would be identified as the cause behind famine or war, with natural or human causes given secondary notice, if mentioned at all. They would not rule out natural causes any more than we would rule out supernatural ones.

1:8. advantage of mothers' homes. Usually the place of protection is in the *father's* house rather than the mother's. Ruth 2:11 implies that Ruth's father is still alive. In its other appearances in the Old Testament (Gen 24:28; Song 3:4; 8:2) the mother's house has to do with preparations for marriage. This corresponds to the situation in both Mesopotamia and Egypt, where the mother was protector of the daughter and the one who advised and supervised in matters of love, marriage and sex. Therefore, Naomi's encouragement of the girls to return to their mother's home does not suggest seeking a place of legal protection, but rather a place that may provide a new family situation.

1:13. why would they wait for Naomi's sons? In Israel the law had established the institution of levirate marriage (see comments on Gen 38:6-26; Deut 25:5-10) wherein if a man died leaving his wife childless, his brother was responsible to impregnate the widow so that the family line of the deceased would not die out. Commentators have noticed, however, that in the scenario Naomi is presenting, the potential sons that could provide an heir for Ruth or Orpah would have a different father than their deceased husbands, so this would not qualify as levirate marriage. It is difficult to see, therefore, how this would preserve the line of Mahlon or Kilion. Nonetheless, such sons could at least provide legal

protection and care for the women in old age.

1:16-17. the nature of Ruth's commitment. Rather than having any evangelistic intentions, Naomi makes every attempt to chase Ruth back to her own gods. It was not unusual for women who married into foreign families to seek the continued protection of their native deities (see Gen 31:19; 1 Kings 11:8; 16:31). From the information the text gives, one could conclude that Ruth's acknowledgment of Yahweh just comes along with the adoption of a new people in a foreign land. Just as Ruth has stated that wherever Naomi travels or settles she will travel or settle, she has also affirmed that whoever Naomi's people or gods are will be her people and gods. This appears to be a commitment made to Naomi on the basis of a relationship with Naomi rather than a commitment made to Yahweh because she has been convinced of the theological superiority of monotheism and that Yahweh is the sole God of heaven and earth.

1:17. even death will not separate us. Contrary to many translations, Ruth here affirms that even in death she will not leave Naomi. What she means is that she intends to care for Naomi's burial and the rituals connected with death, and to be buried in the same place as Naomi. Being cared for in death would have been a typical concern to a childless widow, so this would be a significant commitment to Naomi. Ruth's decision to be buried in Naomi's land would show that she was totally setting aside her former allegiances and dependencies to cast her lot in with Naomi. Being buried in the same family tomb as Naomi would be further assurance that appropriate provisions would continue to be made for Naomi after death. Care for the dead was popularly believed to influence their existence in the afterlife.

1:19. the whole town. Bethlehem has never been a big town despite the important role it has in Israel's history. The population of the town would not have exceeded a couple of hundred in most periods and was likely considerably less at this time.

1:20. significance of names. In the ancient Near East a name was often given with a meaning in mind and with the hope that the name would characterize or imprint itself on the person's destiny. Unfortunately the name Naomi, "pleasantness," brings only irony as it appears to mock her ill-fortune. She suggests it would be a false claim to admit being Naomi after all the bitterness (Mara) she had experienced.

1:21. deity as cause of suffering. In the ancient world the gods were seen as behind all mundane daily occurrences and, therefore, certainly as determining the course of one's life. The cycle of nature (that had brought the famine) as well as disease and death were all in the hands of deity. It is natural, then, that Naomi identifies Yahweh as the source of her misery. It is important to note that this does not explicitly translate into blame. She does not proclaim her innocence or seek vindication, and she does not openly call into question God's justice. It is safe to assume, however, that she is not aware of any claim deity would have against her integrity and would be distressed that the reasons for Yahweh's actions against her were not evident. On the other hand, the general opinion in the ancient world was that the mortals rarely could discern what led the gods to do what they did. This puzzlement is a common theme of Mesopotamian wisdom literature.

1:22. beginning of the barley harvest. The barley harvest in this region would begin in mid- to late-April as the rainy season came to a close. It was the earliest of the major harvest seasons.

2:1-23

Ruth Meets Boaz

2:1. status of Boaz. Traditionally translations have identified Boaz as a "valiant warrior," but the NIV "man of standing" is probably a better choice. One's prominence could be achieved through military prowess (see Jephthah, Judg 11:1), but many of the people described by this phrase have no known military reputation. It is likely that the phrase has broader application (see comment on Judg 6:12).

2:2. poor gathering grain. Israel's law mandated provision for the poor and destitute by allowing them to follow the reapers in the fields to gather what was dropped or left behind (see comments on Lev 19:9-10 and Deut 24:19-22). This solution to a social problem required that the recipients work hard for their provision, and it therefore preserved the dignity that is sometimes forfeited by those who are entirely dependent on the generosity of others.

2:8. the field of Boaz. Since land was apportioned by tribe and clan and family, what would have looked like a single field may have had delineated tracts that belonged to various clan or family members. Stone markers would have identified the boundaries, and it would be very easy to pass from one family holding to another in what looked like one

field. Indeed, it would have been easiest for the poor to roam over the whole field to improve their chances of adequate returns. In contrast, Boaz has intentions that Ruth be more than adequately provided for.

2:12. refuge under the wings. The metaphor of taking refuge under the wings of deity is found also in Psalms (36:7; 57:1; 61:4; 91:4) and is consistently related to issues of care and protection connected to the covenant. The metaphor is also known from other ancient Near Eastern cultures, particularly Egyptian, where even the disembodied wings represent protection. Deities with wings are often portrayed overshadowing the king. Likewise an ivory from Arslan Tash dated to the eighth century shows characters in human form with wings protecting a figure in the center.

2:14. dipping bread in wine vinegar. The morsel that Ruth dips would most likely have been a grain cake of some sort, usually cooked in oil. The substance she dips it in had as a base the byproduct of the wine fermentation process. It was bitter tasting if used for a drink but here is used as a dressing or condiment of sorts and would have been enjoyable.

2:15-16. additional gathering privileges. Verse 16 uses some very obscure terminology in relaying Boaz's instructions to his workers, but it is clear that he has purposed to make Ruth's labor productive. Best estimates conclude that the workers are instructed to take some stalks out of their own harvested handfuls and leave them for Ruth to retrieve.

2:17. threshing the grain. The hard surface of the threshing floor often served the needs of an entire community. A stick or a rock would be used to beat the stalks to separate the grain from the chaff.

2:17. ephah. An ephah would amount to about two thirds of a bushel of grain. This has been calculated to be between thirty and fifty pounds of grain, which would have represented about a month's worth of the grain ration usually allotted to male workers.

2:20. kinsman-redeemer. The kinsman-redeemer's role was to help recover the tribe's losses, whether those losses were human (in which case he hunted down the killer), judicial (in which case he assisted in lawsuits) or economic (in which case he recovered the property of a family member). Since Yahweh had granted the land to the Israelites as tenants, they could not sell it, and if they mortgaged a portion of it to pay debts, it was considered very important to regain ownership as soon as possible. In this way the land remained within the extended family as a sign of its membership in the covenantal community. The importance of this inalienable right to land can be seen in Naboth's refusal to relinquish the "inheritance of my fathers" when King Ahab offered to buy his vineyard (1 Kings 21:2-3). In Mesopotamia (especially in the earlier periods) land was often owned by families rather than by individuals, so any individual would be limited in his ability to sell the property.

2:23. barley harvest and wheat harvest. The barley harvest ended in May and blended into the wheat harvest, which continued into June.

3:1-18
Ruth's Proposal

3:2. winnowing barley at the threshing floor. Winnowing was often done in the late afternoon, when the breeze had picked up after the day's heat. The process used a pronged fork on a long handle by which the threshed grain was tossed into the air. The breeze blew the lighter chaff a short distance away (it was later retrieved to be used as fodder), while the grain fell back to the threshing floor. The threshing floor was usually out in an open area to make maximum use of the breeze.

3:3. Ruth's ablutions. The perfume mentioned here consisted of scented oils that would have been commonly used at celebrations and other festive occasions. The scents were usually derived from imported plants.

3:3. why shouldn't Boaz know she is there? Some commentators have suggested that Ruth is fashioning herself as a bride, and thus to be seen would be to tip her hand. Most consider her remaining hidden to be an issue not of propriety but of appropriate timing.

3:7. lying at the end of the grain pile. The threshing floor would have been used by many members of the community, so there would have been others there winnowing besides Boaz. Each would have had his assigned traditional area, and each would sleep by his pile after the festivities so as to guard it until it could be carted away in the morning.

3:7-9. uncovering feet and the spreading of the garment. There are occasions in the Old Testament where the term "feet" is used euphemistically for the sexual organs. The expression "spread the edge of the garment" is likewise used with sexual overtones in a betrothal context in Ezekiel 16:8. The text of Ruth does not suggest a blatant sexual act but is provocative in its ambiguity.

3:9. what is Ruth asking? Ruth uses a phrase that elsewhere is used to refer to betrothal and marriage. It is also clear from Boaz's response in the next verse that she has requested mar-

riage. Naomi had not advised her to be this bold, but the outcome of marriage was certainly what Naomi had in mind.

3:12. why does it matter that there is a closer relative? The benefits that derived from functioning as a kinsman-redeemer required that a sequence of priorities be established. Closer relatives were therefore given the opportunity to exercise that function first.

3:14. why should it not be known a woman was there? Aside from the natural desire to preserve the reputation of both Ruth and Boaz (the word used in v. 13 for staying the night does *not* have sexual connotations), Boaz was anxious not to jeopardize the legal matters of the following day by any shadow of immorality.

3:17. six measures. The unit of the six measures is unspecified and therefore uncertain. It is unlikely that it would be six ephahs—that would be far too much for her to carry. Boaz may just have used shovelfuls or double handfuls.

4:1-16

A Husband and a Son

4:1. seat at the town gate. The gate area in Israelite cities was an open space that was the hub of activity. Merchants, visitors, messengers and judges all frequented that area and conducted their business there. It was a logical place to find someone you might be looking for. Since people heading out to their fields would pass through the gate area, Boaz hoped to encounter the individual he sought. Numerous excavations have produced gate plans showing that often there were benches lining the whole area where people could meet for their various purposes. Since only limited excavation has been done at Bethlehem, no gate from this period has yet been uncovered.

4:2. ten elders as witnesses. The elders, usually clan leaders or heads of household, served as the governing body of the city. Judicial and legal matters were in their hands. Here there is no legal judgment to pass, but they would oversee the legal transaction to assure that all was done according to law and custom, as well as serve as witnesses to the transaction.

4:4. why would he want to redeem the land? By redeeming Naomi's land the kinsman would have prospects for very soon enlarging his own permanent landholdings. Since Naomi had no heir, when she died, the land would revert to his family and be passed on to his heirs. The money put forth for the land would be an investment on future returns. If this was just a case of land redemption, it would have been a very attractive business proposal.

4:5-6. Why does Ruth's involvement change the situation? Once Boaz interprets the kinsman responsibilities as including marrying Ruth, the economic picture changes considerably. One could forgive the other kinsman for not realizing that Ruth came with the package deal. Only by a significant stretch in custom would he be considered to have any levirate obligations to Ruth (for review of levirate laws see comment on Deut 25:5-10), yet it is clear that that is involved by the reference in verse 5 to maintaining the name of the dead. If the kinsman must marry Ruth, the son that may be born to her would then be the heir to the property of Elimelech's family. In this case the money that is used to redeem the land is not an investment but simply reduces his family assets. Instead of serving to eventually enlarge his holdings of land, his money would be going to a charitable cause. He would also incur additional cost in providing for Naomi, Ruth and who knows how many additional children. It is even possible that Ruth's children would have a claim to a portion of his inheritance along with any children he already had. It is likely he is married; the economic impact on his family of redeeming Ruth is thus a chief criterion in his decision.

4:7-8. removal of sandal. Sandals were the ordinary footwear in the ancient Near East, but they were also a symbolic item of clothing, especially in the relationship between the widow and her legal guardian. This may have been due to the fact that land was purchased based on whatever size triangle of land the buyer could walk off in an hour, a day, a week or a month (1 Kings 21:16-17). Land was surveyed in triangles, and a benchmark was constructed of fieldstones to serve as a boundary marker (Deut 19:14). Since they walked off the land in sandals, the sandals became the moveable title to that land. By removing the sandals of her guardian, a widow removed his authorization to administer the land of her household. Land transfers in the Nuzi texts also involved replacing the old owner's foot on the land with that of the new owner.

4:9-10. nature of the transaction. By purchasing all of Naomi's property and goods, Boaz has undertaken the total care of Naomi and the obligation to support her in life and provide for her in death. By acquiring Ruth, he has obligated himself to give her the opportunity to bear children, the first of whom would then become the heir of Elimelech and his sons.

4:11-12. blessing. Blessings connected to marriage rarely address the relationship between husband and wife; instead they focus on children. The blessing of creation as well as the covenant blessing anticipated reproduction as the blessing of God. In the ancient world as a whole this is also true as can be seen in the blessing on King Keret in the Ugaritic texts—that his new wife would bear him seven or eight sons. Examples in the blessing on Boaz are drawn from Israel's national history (Rachel and Leah, see Gen 30) as well as from the tribal history of Judah (Tamar, see Gen 38).
4:15. responsibility of children. It is here suggested that the son will lift Naomi's spirits and console her after the loss of her husband and sons. Her grief over her previous loss would have been not only in terms of personal relationships, but also in terms of economic hardship and possibly even of afterlife issues that were popularly associated with ongoing rituals by descendants (see comment on Num 3:1). This grief would then be addressed, since it was expected that children would care for their parents in old age (providing food and shelter, legal protection and proper burial).
4:17. Naomi's son. Some have concluded that there was an official adoption of the child by Naomi. While adoption for legal purposes was a very common practice in the ancient world, the legal situation here would not have required an adoption. Another suggestion has been that the son is actually being turned over to Naomi's custody for her to raise, since he is a substitute son for her. While this is possible, it is most likely that there is simply a recognition that Naomi is the legal mother of the child and that she will play a significant role in his upbringing, while he will continue to provide for her in the next generation.

4:17-22
Genealogy

4:18. importance of family line. Here we discover that this incident that nearly resulted in a family of Israel dying out concerned none other than the family of David. The great King David came that close to never having been born. The genealogy is demonstration that God resolved the family crisis. Not only did the family of Naomi survive, but it prospered to become one of the great families in Israel. Survival of the traumatic Judges period (setting from 1:1) was through faithfulness and loyalty; faithfulness and loyalty in turn resulted in individuals such as David (result of 4:21).

1 SAMUEL

1:1-28
Samuel's Birth

1:1. Ramathaim in the hill country of Ephraim. There is a town called Ramah (modern er-Ram) in the territory of Benjamin about five miles north of Jerusalem and four miles south of Bethel. Since Ramah is given as the place of Samuel's home in 1:19, some consider this to be the site. The text, however, clearly locates Ramathaim in the hill country of Ephraim. This has long been associated with New Testament Arimathea about fifteen miles west of Shiloh.
1:2. polygamy in Israel. In Israel, as in most of the ancient world, monogamy was generally practiced. Polygamy was not contrary to law or morals, but was usually not economically feasible. The main occurrence of polygamy would be when the first wife was barren, but there are several other factors that encouraged the practice, including (1) an imbalance in the number of males and females, (2) the need to produce large numbers of children to work herds and/or fields, (3) the desire to increase the prestige and wealth of a household through multiple marriage contracts, and (4) the high rate of death for females in childbirth. Polygamy is most common among pastoral nomadic groups and in rural farming communities where it is important that every female be attached to a household and be productive. In the Bible most cases of polygamy among commoners occur prior to the period of the monarchy.
1:2. shame of childlessness. Since bearing children was a sign of God's greatest blessing (Ps 127:3), the inability to bear children was often viewed as a sign of God's punishment. Additionally, a woman's status in the family would be very tenuous if she had not borne children. A barren woman could be and often was discarded, ostracized or given a lower status. Mesopotamian prayers and legal texts

show that these same issues existed throughout the ancient Near East.

1:3. Shiloh. Whether Elkanah's home is Ramah in Benjamin or Ramathaim in Ephraim, the journey to Shiloh was about fifteen miles. For a family this would have been a two-day journey. The site of Shiloh has been identified as Khirbet Seilun, about halfway between Bethel and Shechem. This seven-and-a-half-acre site is situated in a strategic location enjoying fertile land, a reliable water source and access to the main north-south route through the heartland of Israel. Substantial Iron Age I ruins have been found at the site, along with evidence of destruction by means of fire. Though remains of public buildings from this period have been found, no trace of the sanctuary has been identified. The probable location for the sanctuary at the highest point of the tell has suffered from erosion.

1:3. annual sacrifice. The law called for three annual pilgrimages: at the Feast of Unleavened Bread, the Feast of Weeks and the Feast of Tabernacles. Many interpreters consider the last to be the occasion for Elkanah's visits. Since the text does not specify the occasion of a pilgrimage feast, however, some believe that this was a traditional family ritual reflecting the piety of Elkanah.

1:3. priestly line of Eli. Eli was from the line of Aaron through his fourth son, Ithamar. At the beginning of the Judges period, the high priest was Phinehas, son of Eleazar, the eldest remaining son of Aaron. Aaron's first two sons, Nadab and Abihu, had been slain because of ritual violation (Lev 10). How the care of the tent of meeting and ark had switched from the Eleazar branch to the Ithamar branch is unknown.

1:4. giving portions of sacrifice. A number of the sacrifices provided an opportunity for a shared meal, especially the fellowship offering (see the comment on Lev 3:1-5). When a sacrificial meal was included, the officiating priest as well as the family of the celebrants would receive portions of the meat, a rare item in ancient meals. This would have the sociological status of a turkey dinner in America.

1:5. double portion for Hannah. The description of Hannah's portion is obscure in the Hebrew. Most translations identify it as a double portion (NIV, NASB, NKJV, NRSV), while other suggestions have been "only one portion" (RSV) and "special portion" (NLT). Many of the commentators favor "only one portion" because that sets up the contrast that makes most sense of the context.

1:7. sanctuary at Shiloh. Here the sanctuary is referred to as the "house of the Lord," which is ambiguous regarding the nature of the structure. In verse 9 it is referred to as a "temple," which implies a building. In 2:22 reference is made to the tent of meeting, that is, the tabernacle. This variation in terms suggests that the tent has either had a more durable structure built around it or has been erected inside a sacred enclosure that perhaps was previously Canaanite.

1:8. husband better than ten sons. Elkanah's attempt to console Hannah is weak. While their relationship on a human level could be argued to meet Hannah's emotional needs, there is much more involved here. First, there is the social stigma of barrenness. Second, there is the extension of the family into the future. Children were relied upon to care for parents in their old age, to provide proper burial and to carry on their memory. In some cases it was believed that one's comfort in the afterlife was dependent on provisions carried out by succeeding generations. Hannah's status in society and hope for the future are dismal. These concerns give Elkanah's well-meaning question an empty ring.

1:9. priest's seat by the entrance. Eli was perhaps too advanced in years to continue officiating, but he could still serve a public relations function, greeting worshipers at the entrance and offering advice or instruction. The piece of furniture described here could be translated "chair" but in most places refers to a throne or a seat of honor. In public settings benches would often be provided, while in residences a couch or stools would be more common. Excavations at Mari have provided many examples of stools in residences.

1:11. vows. Vows are voluntary, conditional agreements that are common in most of the cultures of the ancient Near East, including Hittite, Ugaritic, Mesopotamian and, less often, Egyptian. In the ancient world the most common context for a vow was when a request was being made to deity. The condition would typically involve God's provision or protection, while that which was vowed was usually a gift to deity. The gift would most frequently take the form of a sacrifice, but other types of gifts to the sanctuary or priests would be options. Fulfillment of a vow could usually be accomplished at the sanctuary and was a public act. In Ugaritic literature King Keret makes a vow in requesting a wife who could produce offspring. In return he offered gold and silver corresponding to his bride's weight.

1:11. hair cutting. Refraining from cutting hair is the most important element in the Nazirite

vow (see comments on Num 6). The Nazirite vow is usually restricted to a limited time period, but here, as with Samson, it is specified as being lifelong. The significance of hair to the vow is unknown, though hair (along with blood), was one of the main representatives in ancient thinking of a person's life essence. As such it was often an ingredient in sympathetic magic. This is evident, for instance, in the practice of sending along a lock of the presumed prophet's hair when the prophecies were sent to the king of Mari. The hair would be used in divination to determine whether the prophet's message would be accepted as valid.

1:13. silent personal prayer. Often prayers were accompanied by sacrifices. In this official act a priest would be paid a fee to offer the sacrifice and recite an appropriate prayer. Hannah, lacking funds for such an official undertaking, is praying on her own but is delighted to receive a favorable blessing from the priest, which she took as having the force of an oracle. In Mesopotamia the seer-priests would use divination to read omens on behalf of women praying for conception. There are numerous examples of spontaneous prayer in the Old Testament, though this is the only occasion where the prayer is specified as being silent. In the ancient Near East prayers tended to be formulaic and often had a basis in magical incantations. As a result we know little about silent spontaneous prayer.

1:19. nature of worship. The worship referred to here probably indicates participation in the daily morning sacrifice (see comment on Lev 6:8-13).

1:22-24. weaning age. Weaning generally took place between the ages of two and three and was accompanied by a celebration since it was a rite of passage. According to the Egyptian *Instruction of Any* a child was nursed for about three years.

1:24-25. nature of the sacrifice. The sacrifice offered by Elkanah and Hannah included a bull, flour and wine. According to Numbers 15:8-12 the flour and the wine were to accompany a bull offering. The text is more easily understood as referring to three bulls rather than to a three-year-old bull. This would be supported by the fact that they also bring three times the required amount of flour and wine. If there are three bull offerings to be made, this may indicate the generosity of Elkanah and Hannah.

1:28. lifelong dedication. As pointed out in the comment on 1:11, this length of dedication was abnormal for the Nazirite vow. Even so the length had been specified in the vow and was being fulfilled accordingly. Hannah is not only fulfilling her vow but is carrying out an ancient tradition. The first male offspring born to any mother was considered as belonging to deity. In the ancient Near East this concept sometimes led to child sacrifice to ensure fertility. Alternatively, in ancestor worship the firstborn would have inherited the priestly function for the family. In Israel it led to consecration—transferring the firstborn to the domain of deity for cultic service or to the temple for holy use. From that status the son may be redeemed, and Israelite law saw his place being taken by the Levites (Num 3:11-13). Because of her vow, Hannah did not follow through on the redemption proceedings. In Mesopotamia slaves were sometimes given as gifts to the temple for the rest of their lives, and Akkadian literature attests to a particular class of women who were dedicated for life to serve the temple as prostitutes. Gifts of children to the temple are evidenced in Sumerian texts from the beginning of the second millennium.

2:1-10
Hannah's Prayer

2:1. horn. The imagery of the horn is at times used in relation to posterity (see especially 1 Chron 25:5, but also Ps 132:17). It is also used to represent visible strength as a weapon capable of goring the enemy. Ceremonial crowns of gods and kings in Mesopotamia often featured horns.

2:6. grave. The word translated "grave" is the Hebrew *Sheol*. It was common belief in the ancient Near East that there was continued existence beyond the grave in a netherworld of some sort. It was considered an act of God's judgment to be sent there, but it was not seen as a place of ongoing reward or judgment. Since the grave was the means of entry into the netherworld, Sheol is often simply another way of speaking of the grave.

2:8. world upside down. The actions of God were often seen as bringing reversal to the world. This reversal could be in terms of the created world (mountains reduced to dust, valleys lifted up, sun going dark); the social world (the poor receiving honor, as here, the mighty being deposed); or the political world (empires tumbling). This world-upside-down motif was a way of expressing God's sovereign control. It could be used to convey judgment or reward and came to be connected with the future kingdom of God, where wrongs would be set right and a new order would take shape.

2:8. foundations of the earth. The foundations of the earth are sometimes viewed as pillars (Ps 75:4) and other times as water (Ps 24:2). Both possibilities have been suggested by interpreters of this passage, which contains the only occurrence of the word here translated "foundations." Both water and pillars are part of the ancient view of the structure of the world.

2:9. thundering from heaven. Thunder and lightning were considered to regularly accompany the presence of a deity in the ancient Near East, often in a battle setting. From the Sumerian Exaltation of Inanna, to the Hittite myths about the storm god, to the Akkadian and Ugaritic mythologies, the gods are viewed as thundering in judgment against their enemies. Baal is depicted as grasping a handful of thunderbolts. Thundering terminology is picked up in royal rhetoric as Hittite or Assyrian kings portray themselves as the instruments of the gods, thundering against those who have violated treaties or stood in the way of empire expansion.

2:10. kingship in this period. The reference to kingship here is surprising since Israel has not yet instituted a monarchy. Nevertheless, kingship was well known in the ancient world of this time, and segments of Israel had already dabbled with the idea (Judg 9). Furthermore, that kingship was a future expectation is reflected in passages such as Genesis 17:6; Numbers 24:17; and Deuteronomy 17:14-20.

2:11-36
The Decline of the House of Eli

2:13. three-pronged fork. Examples of the three-pronged fork have been excavated by archaeologists at Gezer. These bronze implements are short-handled with long, straight tines (like a pitchfork with a short handle) and date to the Late Bronze period. The term used here describes a similar utensil in Old Assyrian texts.

2:13-16. priestly practices. The text contrasts the normal procedure at Shiloh to the procedures used by Eli's sons. Both differ from the prescribed procedure in the Pentateuch (see Lev 7:30-34). The Pentateuch details which parts comprise the priest's share. The normal practice at Shiloh was for the priest to receive whichever part came up from the boiling pot on the end of the fork. Eli's sons insisted on taking what they wanted, when they wanted it. Their ritual offenses came in three areas: (1) their selection of the best parts for themselves; (2) their preference for the meat being roasted rather than boiled; and (3) their refusal to yield the fat for burning on the altar (Lev 3:16; 7:25).

2:18. linen ephod. The linen ephod is a garment reserved for the priesthood (see 2:28), so this is an indication that Samuel has become involved in an apprenticeship. The ephod was most likely a type of apron. Linen was the basic material, though higher ranking priests would have had gold thread woven into the fabric.

2:19. garment made by Samuel's mother. The robe described in this verse is likewise a priestly garment (see Ex 28:31-34) but is also worn by other people of standing and authority (kings, prophets, Job and his friends, God). It is identified as a garment characterizing priests in 1 Chronicles 15:27. It was typically fringed with a distinctive hem that indicated a person's standing.

2:22. women at the entrance of the tabernacle. In the ancient Near East there are many examples of women serving the temple in various capacities. From menial tasks to priestly duties, from celibacy to prostitution, from short-term periods as a result of vows to lifelong dedication—examples of all sorts are available. It is therefore difficult to identify the nature of the service that the women mentioned here are performing. The indictment of the sexual misconduct of Eli's sons suggests that the women were either involved in some duty of piety or were supposed to be virgins. It must be noted, however, that there is no evidence of religiously motivated celibacy in Israel, and the text does not describe the women as virgins. For further discussion see comment on Judges 11:39.

2:27. prophet. The role of prophet was well understood in the ancient Near East, as evidenced by over fifty texts found in the town of Mari that report various messages given by various prophets. Generally the prophet offered a message from deity. For more information see the comments on Deuteronomy 18.

3:1-21
Samuel Becomes a Prophet

3:3. the temple. The term used here suggests a building. For more information see comment on 1:7.

3:3. lamp of God. The menorah in the tabernacle was to remain lit all night (Ex 27:21; Lev 24:1-4), but it was never supposed to be extinguished, so the comment that it had not yet gone out would be pointless. On the other hand, we have seen that the practices at Shiloh did not necessarily follow what was stipulated in the Law. The phrase "lamp of God" is also used to refer to hope (2 Sam 21:17; 1 Kings 11:36; 2 Kings 8:19), and that would also make

sense in this context.

3:3. incubation dreams in the ancient Near East. In the ancient world it was believed that a person sleeping in the temple or its precincts may become privy to divine plans. Some would perform sacrificial rituals and spend the night in the temple in order to receive such revelation. This process is referred to as incubation. In early literature kings such as Naram-Sin and Gudea sought information through incubation. In the Judges period this practice is observable in the Ugaritic epics of Aqhat (where Daniel is requesting a son) and Keret (where Keret is requesting a son). Though Samuel is simply performing his regular duties and clearly has no expectation of revelation, his experience would be understood in light of the common association between temple and revelation. There are no known examples in the ancient Near Eastern literature of such unintentional incubation dreams.

3:4-10. Samuel's dream? Since Samuel gets up to go to Eli and speaks when the Lord arrives (v. 10), modern readers would not usually characterize his experience as a dream. Yet these elements are not contradictory to dreaming by ancient definitions. In ancient Near Eastern literature (examples from Mesopotamian, Egyptian, Hittite and even Greek) there is a category called auditory message dreams. Well-known dreams in this category would include those of the Egyptian king Thutmose IV (fifteenth century), Hittite king Hattushilis (thirteenth century) and Babylonian king Nabonidus (sixth century). In these examples the dreams were meant to validate either their kingship or tasks they are undertaking. In auditory message dreams the god appears (see v. 10) and sometimes startles the person awake. The content of the dream is a spoken message by the deity rather than events or symbolic images. There are a number of examples of the person responding verbally to the deity (e.g., Nabonidus). By ancient Near Eastern standards, then, Samuel's experience could be classified as a dream.

3:11-14. importance of repeated messages. The message given to Samuel is virtually the same as that pronounced by the man of God in chapter 2. The repetition of the message indicates its importance and verifies its truth. It also serves to provide affirmation of Samuel's prophetic calling.

4:1—7:1
The Capture and Return of the Ark

4:1. political climate in the early Iron Age. In the Late Bronze Age (1550-1200) there had been an ongoing struggle between major political powers seeking control of Palestine (see comment on Josh 9:1). With the arrival of the Sea Peoples around 1200 (see next comment), all of the major powers were either wiped out (e.g., the Hittites) or neutralized (Egypt). Moving into the Iron Age, the power stalemate was replaced by a power vacuum. The absence of major powers vying for control of the region allowed for the smaller states to test their strength, develop and build regional "empires." The Philistines were able to take advantage of this early in the period. Then David and Solomon were able to build a substantial empire in Syro-Palestine without needing to be concerned about political powers in Mesopotamia, Anatolia or Egypt.

4:1. Philistines. The group of Philistines that are well known through the narratives of Judges and 1 and 2 Samuel came into the Palestine area with the migration from the Aegean region of the Sea Peoples about 1200 B.C. It is the Sea Peoples that are generally thought to have been responsible for the fall of the Hittite empire and the destruction of many cities along the coast of Syria and Palestine, such as Ugarit, Tyre, Sidon, Megiddo and Ashkelon, though the evidence for their involvement in those areas is circumstantial. Their battles with the Egyptian pharaoh Rameses III are depicted on the famous wall paintings at Medinet Habu. This international upheaval is also reflected in the Homeric epic of the siege of Troy. Coming from Crete, Greece and Anatolia, the Sea Peoples may have used Cyprus as a base from to launch their attacks. Following the repulsion of the Sea Peoples from Egypt, the tribe that came to be known as the Philistines settled on the southern coast of Palestine. There they established their five capital cities of Ashkelon, Ashdod, Ekron (Tell Miqne), Gath (Tell es-Safi) and Gaza.

4:1. Ebenezer and Aphek. Both of these sites are in the area of an important pass between the hill country and the plain. The area is about twenty miles west of Shiloh and north of Philistine territory (about twenty miles north of Ekron, the furthest north of the five major Philistine cities). Aphek is identified with modern Ras el-Ain, also called Tell Aphek, by the Yarkon River. It is named in Egyptian texts as early as the nineteenth-century Execration texts and appears in the itineraries of Thutmose III (fifteenth century). Excavations have uncovered evidence of Philistine settlement on the site in this period. The identification of Ebenezer is less certain. Many now believe that it is the site called Izbet Sar-

tah located on the edge of the hill country across the pass from Aphek and about two miles further east. The small settlement (half an acre) was established late in the Judges period and was abandoned early in the eleventh century. One of the oldest and longest proto-Canaanite inscriptions was found at this site. The ostracon has eighty-three letters but no coherent words, and has been identified as an abecedary (alphabet list). Some interpreters think it should be classified as early Israelite.

4:3-4. ark and cherubim. The ark was a wooden box, open at the top, approximately three to four feet in length and two and a quarter feet in both width and height, based on eighteen inches a cubit. It was overlaid inside and out with sheets of the finest gold. Four rings (also gold covered) were attached to the sides for the insertion of two gold-encrusted poles, which were used to carry the ark and protect it from the touch of all but the high priest. A golden cover, decorated with two winged cherubim, sealed the ark. The primary function of the ark was to store the tablets and to serve as a "footstool" for God's throne, thereby providing an earthly link between God and the Israelites. In Egyptian festivals the images of the gods were often carried in procession on portable barques. Paintings portray these as boxes about the size of the ark carried on poles and decorated with or flanked by guardian creatures. Biblical descriptions as well as archaeological discoveries (including some fine ivory pieces from Nimrud in Mesopotamia, Arslan Tash in Syria and Samaria in Israel) suggest the cherubim are composite creatures (having features of a number of different creatures, like the Egyptian sphinx), often four-legged animal bodies with wings. The cherubim appear in ancient art with some regularity, flanking the thrones of kings and deities. The combination of cherubim as throne guardians, chests as footstools and statements in the Old Testament concerning Yahweh being enthroned on the cherubim supports the concept of the ark as representing the invisible throne of Yahweh. The use of empty thrones was widespread in the ancient world. They were provided for use by deities or royal personages when they were present.

4:3-7. use of the ark in battle. In the divine warrior motif the deity is fighting the battles and defeating the deities of the enemy. In Assyria Nergal is the king of battle, and Ishtar is viewed as a war goddess. The Canaanite Baal and the Babylonian Marduk are divine warriors. This is not to be viewed as "holy war" because in the ancient Near East there was no other kind of war. In most situations prayers would be made and omens asked to assure the god's presence. Standards or statues of the deity were usually carried to symbolize their presence. Assyrian kings of the ninth and eighth centuries regularly refer to the divine standard that goes before them. The ark, as Yahweh's standard, represents the Lord as clearing the way before the Israelites and leading the armies into Canaan. This concept is not very different from the Assyrian belief that the gods empowered the weapons of the king and fought before him or at his side. Nearly every army in the ancient Near East included priests and diviners (as seen in the Mari texts), prophets (2 Kings 3) and portable sacred objects (Assyrian Annals of Shalmaneser III [858-824 B.C.]). In this way, the god(s) could be consulted on the battlefield or invoked to lead the soldiers to victory.

4:9-10. Philistine control of Israel. It is difficult to be certain how much of Israelite territory came under Philistine control at this time. Most estimate that it would have included from the Jezreel Valley south through the central hill country, skirting the Jerusalem hills but extending to much of the Negev.

4:10. thirty thousand Israelites slain. This is clearly a significant loss of life, but it is difficult to be certain of how to read the numbers. For further information see the comment on Judges 20:2.

4:12. Shiloh. The site of Shiloh has been identified as Khirbet Seilun, about halfway between Bethel and Shechem. This seven-and-a-half-acre site is situated in a strategic location where it enjoys fertile land, a reliable water source and access to the main north-south route through the heartland of Israel. Though this chapter does not say anything about the destruction of Shiloh by the Philistines, Jeremiah 7:12-15 suggests that it was destroyed at this time. Substantial Iron Age I ruins have been found at the site, along with evidence of destruction by means of fire.

4:12. dust on the head. Putting dirt, dust or ashes on one's head was a typical sign of mourning throughout the Old Testament and into the New Testament period. It is a practice also known from Mesopotamia and Canaan. Many mourning rites function as a means for the living to identify with the dead. It is easy to see how dust on the head would be a symbolic representation of burial.

4:21. names with significance. The giving of names in the ancient world was a significant act. A name was believed to affect a person's destiny; so the person giving the name was exercising some degree of control over the person's future. Often the name expressed

hopes or blessings. At other times they preserve some detail of the occasion of the birth, especially if the occasion appeared significant. This name is built from the same noun/adjective that is attached to the ark as well as used to describe Eli (v. 18). Though the bearing of a son would have normally been viewed as significant, everything of national significance is gone—Eli, his sons and, especially, the ark. The future looks grim.

5:1. Ashdod. Ashdod is about three miles from the coast directly west of Jerusalem. The tell of the ancient site is about three and a half miles south of the modern city. It features a twenty-acre acropolis and a lower city of over one hundred acres. It is mentioned in the Ugaritic texts, where it is an important center of trade, and excavations have demonstrated a large Late Bronze Canaanite settlement on the acropolis. The Canaanite city was destroyed by the Sea Peoples. The site was then settled by the Philistines and became one of their five principal cities. The Iron Age settlement of Samuel's time period is represented in stratum X, which is Philistine in culture. At this time the city was well fortified and was beginning to expand from the acropolis to the lower city. No temple has yet been unearthed in that stratum.

5:2. Philistine temples. The Philistine temples of this period feature a holy place where the statue of the god was prominently displayed on a raised platform. For further information about Philistine temple architecture see the comment on Judges 16:29.

5:2. Dagon. There is evidence of Dagon as a important god within the Semitic pantheon of deities as early as the third millennium in Mari. Assyrians worshiped him in the first half of the second millennium, and in Ugaritic literature he is positioned as the father of Baal Haddu. His temple in the town of Ugarit was bigger that the temple of Baal. It is generally assumed, then, that the Philistines did not bring this god with them from their Aegean homeland but adopted him upon their arrival in their new territory. Dagon is often identified as a god of grain or of storm, but both of these remain somewhat speculative.

5:2. ark as trophy of war kept in temple. The ark would have been placed in the temple to indicate that Yahweh, Israel's God, was a defeated prisoner of Dagon. His inferiority had been demonstrated on the battlefield, and his subordination was represented in his humble servitude before his master Dagon. It is possible that it was believed that continuing opportunities for humiliation would result. This is very similar to how conquering kings treated captive kings (see comment on Judg 1:6-7). There are several examples in the ancient world of statues of a god being carried off as trophies of war. The Marduk statue is taken from Babylon by the Hanaeans (seventeenth century), by the Elamites (thirteenth century) and by the Assyrians (seventh century), and in each case is eventually recovered and restored to his temple. Additionally the statue of Shamash was taken from Sippar by the Suteans (eleventh century). In the eighth and seventh centuries this was a common practice of the Assyrians, and Isaiah prophesies that captivity will be the fate of the gods of Babylon (Is 46:1-2). Assyrian king Esarhaddon speaks of taking the gods of his enemies as booty.

5:3-4. importance of fall, hands and head. The repeated fall of Dagon was a clear indication that Yahweh was not defeated, inferior, subordinate or about to suffer humiliation. While the ark's presence in the temple of Dagon had been intended to humiliate, the cutting off of the hands and head of Dagon indicated destruction. The head of a conquered foe was typically displayed as evidence of his death (see 17:51-54) and cutting off hands was a way of counting casualties (see comment on Judg 8:6) as well as mutilation that demonstrated the powerlessness of the enemy. In a Ugaritic text, Anat, the goddess of battle, carries the heads and hands of her slain opponents away from the battlefield. In addition, this makes sense given how images were manufactured. In a Hittite prayer of this period, a promise is made to supply a life-sized statue of the king with head, hands and feet of gold, and the rest of silver. Since the images of the gods were generally clothed, more care and expense was afforded to the portions that would show. Images were often not cast in one piece but made in parts and joined together with tenons.

5:5. holiness of threshold. The threshold was typically made of a single stone that spanned the doorway, raised slightly from the level of the floor. Sockets were cut into the outer edges of the threshold on which the gates or door swung. The height of the threshold would prevent the doors from swinging out. Entryways were often considered both sacred and vulnerable. Superstitious belief held that stepping on the threshold would allow demons that haunted the entryway to gain admission. Perhaps that was the preferred explanation among the Philistines for Dagon's troubles. Similar superstitions have continued in the Near East and the Far East from Syria to Iraq to China, but ancient information concerning this superstition is lacking.

5:6. plague of the Philistines. The connection with rodents in the passage (5:6, in a sentence preserved only in the Septuagint; 6:4) suggests that the affliction is infectious and is possibly bubonic plague. The Hebrew term translated "tumors" could easily be used to represent the boils (buboes) that are symptomatic of the plague. There is some question, however, whether bubonic plague is attested in the ancient Near East at this early a date. As a result, others have proposed that the plague be understood as bacillary dysentery, which can be transmitted through food infected by mice. If this is correct, however, the connection of the swellings is unclear.

5:8. rulers of the five cities. The five rulers of the Philistines appear to be equal in authority. The term used to describe them is likely the Philistine term, and most scholars believe it has its roots in the language of the Sea Peoples (Greek or another Indo-European language). Until more information is found, it is impossible to offer a clearer political analysis.

5:8. Gath. Gath has been tentatively identified as Tell es-Safi, five miles south of Tell Miqne/Ekron. Of the five major cities of the Philistines it was the closest to Judah. There has been little excavation at the site, though it has been confirmed that there are Iron Age remains. The city was located by the Elah Valley, one of the principal passes from the coastal plain into the hill country surrounding Jerusalem.

5:10. Ekron. Ekron has been identified as Tell Miqne in the Sorek Valley, about twenty miles southwest of Jerusalem and fifteen miles from the Mediterranean. It features a forty-acre lower city, a ten-acre upper tell and a two-and-a-half-acre acropolis. Excavations since the early 1980s have given a good picture of this town, which, by the divided monarchy period, was known for its production of olive oil (with over one hundred processing plants). An inscription found on the site in 1996 (dated to the seventh century B.C.) provided the first example of the Philistine dialect of West Semitic using the Phoenician script. In this period it was fortified with a mud-brick wall over ten feet thick. A large public building (over twenty-five hundred square feet) from this period has been excavated that archaeologists believe to be a palace-temple complex. If they are correct, this is likely the building where the ark would have been housed and where the leaders would have met.

6:2. priests and diviners. Since it was now suspected that the supernatural power connected to Yahweh and the ark was more than the Philistines or their gods could handle, the specialists were consulted for their advice on what was to be done. Priests would have expertise in the treatment of holy objects and issues of purity, whereas diviners would be skilled in incantations, omens and magical procedures.

6:2. importance of proper procedures. The plagues that had followed the ark around Philistia made it clear that they were dealing with an angry god. Appeasement of the deity would require certain gifts and rituals. Popular belief would have expected that such appeasement would only work if acceptable gifts were offered, correct words were spoken, and appropriate actions performed. Incorrect procedures might prove entirely fruitless or might make the deity angrier still. This all took place in the realm of magic, a science that required precision.

6:3. guilt offering. For discussion of this offering see comment on 5:14-16 ("reparation offering"). One of the offenses this offering is designed to address is sacrilege, the desecration of sacred areas or objects. The crime addressed by the reparation offering was appropriating that which was holy into the realm of that which was profane. The Philistines were therefore admitting to desecrating the ark.

6:4-5. efficacious symbols of the plague. Making symbols of the mice and tumors was an act of sympathetic magic in which the representation of something stands for the reality. By sending the tokens back with the ark they were hoping to rid themselves of these divine punishments. Images of mice and other animals, believed to have been used in magical rituals, have been found in excavations throughout the ancient Near East.

6:4-5. role of rats. In the comment on 5:6 it was noted that some readings connect the plague to rodents. The Hebrew word used is often translated "mice" but is more generic and could refer to rats as well. Bubonic plague is spread through fleas that infest rats.

6:7-9. oracular mechanism. The success of this strategy would determine both whether they had assessed the problem correctly and whether their gift was acceptable to the deity they were seeking to appease. Besides offering a gift of appeasement and attempting to rid themselves of the plague through sympathetic magic, the Philistines are also asking for an oracle from Yahweh. They are doing this because sending the ark back is an admission that Israel's God is more powerful than theirs. Such an admission is humiliating, and they would not do it unless they were absolutely convinced that Yahweh was the cause of their

problems. That is what the oracle is intended to determine. In an oracle a yes/no question is posed to deity, and a mechanism of some binary nature is used so that deity can provide the answer. In Israel the priest carried the Urim and Thummim to use in oracular situations (see comment on Ex 28:30). In the ancient Near East, when they wanted a natural mechanism for oracles, they tended to use the liver or kidney of sacrificed animals (a divinatory practice called extispicy; see comment on omens at Deut 18:10). Here the Philistines use a natural mechanism for the oracle (see Gen 24:14 and Judg 6:36-40 for other occurrences). Their yes/no question is whether or not Yahweh, Israel's God, is the one responsible for the plagues. Their oracular mechanism is based on the normal behavior of cows. If the answer to the question is "no," the cows will act like normal cows: they will go to the barn to nurse their calves, or they will wander into the field. If the answer to the question is "yes," the Lord will override the natural behavior of cows: they will ignore their bulging udders and their hungry, bleating calves, and will trot merrily along the road straight to Israelite Beth Shemesh (uphill). The thought behind this process is that if deity is providing the answer, he can alter normal behavior and override natural laws in order to communicate his answer, just as he had done in sending the plague.

6:9. Beth Shemesh. Beth Shemesh was located in the border region between Israel and Philistia. It occupied about seven acres on a ridge overlooking the Sorek Valley that ran along the north side of the city. The journey from Ekron to Beth Shemesh followed the Sorek Valley and was about nine miles. The archaeological site is Tell er-Rumeilah west of modern Ain Shems. There is an Iron Age occupation level at the site dated to the mid-eleventh century, the time of Samuel. In this level a residence has been found with a spacious courtyard paved with flagstone surrounded by several chambers.

6:13. wheat harvest. The wheat harvest occupies the months of May and June in this region.

6:15. rock as altar. Other passages where a rock serves as an altar include Judges 6:20-21; 13:19; and 1 Samuel 14:33-34. By elevating the sacrifice off the ground in this way, the blood could drain. More often Israelite makeshift altars consisted of a number of large stones piled up.

6:19. putting seventy to death. There is considerable controversy concerning the number who died at Beth Shemesh. The NIV translates seventy, following a few Hebrew manuscripts. A more convincing array of manuscripts sets the number at 50,070. This is odd because the Old Testament generally rounds to even ten thousands. It is also unlikely because Beth Shemesh was a small country town that would have had a population of less than one thousand. Even the number seventy has been taken as a conventional indication of a large number (see comment on Judg 8:30).

6:19. punishment for looking into the ark. Despite popular modern speculation the text gives no indication of the mode of death for the offenders. Numbers 14:20 forbids even the priests to look *at* the ark. It would have been difficult for the people of Beth Shemesh to avoid that, but their curiosity led them to violate the sanctity of the ark by going well beyond an incidental glance. Restricted access to sacred space and holy objects was common in the ancient world (see comment on Lev 16:2), so treating the ark as a common object of curiosity would have been recognized as an act of desecration.

6:21. Kiriath Jearim. Listed as a city within Judah (Josh 15:60), the site is commonly identified with Tell el-Azhar, nine miles west-northwest of Jerusalem, but this is unsubstantiated by archaeological finds or extrabiblical references. Its association with Mahaneh Dan in Judges 18:12 puts it in that general area (see the comment on Judg 13:25). This location places it only six miles from Gibeon, with which it is also associated (see comment on Josh 9:17). It is about seven miles northeast of Beth Shemesh.

7:2-17
Defeat of the Philistines

7:3. foreign gods and Ashtoreths. Here the Ashtoreths are distinguished from the foreign gods. Ashtoreth is the name of the goddess known in Canaan as Ashtar or Astarte, the consort of Baal (see comment on Judg 2:13). The use of the plural here may suggest that all deities and their consorts should be disposed of.

7:5. Mizpah. Though several cities shared this name (it means something like "outpost" or "garrison"), this one in Benjaminite territory is the most well-known. It is often associated with the eight-acre site called Tell en-Nasbeh about eight miles north of Jerusalem. Mizpah at this time was an oval enclosure surrounded by a wall about three feet thick. It guarded the main north-south road between the hills of Judah and the hills of Ephraim.

7:6. pouring out water from a well. Though

wine libations are known from sacrificial texts, there are no other examples of ritualized water libations mentioned in the Old Testament. Rabbinic sources speak of water libation as one of the rituals practiced during the Feast of Tabernacles. In that context it is thought to accompany prayers for rain. In Mesopotamia water libations were among the offerings given to the dead, and they also poured out water from a well to ward off evil spirits when the well was dug. None of these possibilities makes sense in this context, where it is connected to repentance and purification.

7:6. fasting in religious practice. Fasting is little attested in the ancient Near East outside of the Bible. It generally occurs in the context of mourning. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10). In connection with their repentance the Israelites fasted in order to remove any sin or other obstacle that may have led to their subjection to the Philistines. For similar efforts related to military action, see Judges 20:26 and 2 Chronicles 20:1-4.

7:6. Samuel's leadership. Samuel's leadership is described by the same term that serves as a title for the judges (see comment on Judg 2:16-19). This rounds out his credentials as prophet, priest and judge. The three roles are combined in this passage as he leads them in repentance in order to bring about their deliverance.

7:7. Philistine response. Why do the Philistines attack when the Israelites gather for a religious observance? In the ancient Near East rituals were generally performed prior to military initiatives. One of the ways that spies or informants could tell military action was afoot was when suspicious gatherings took place for rituals not connected with known festivals. Assyrian kings regularly received reports from their informants regarding a vassal king's involve-ment in rituals that could be suspected of being connected with battle preparations.

7:9. lamb for a burnt offering. Lambs were offered daily in the sacrificial system (see comment on Ex 29:38) and were also used for purification offerings (see Lev 12:6 and 14:10). Those offerings required one-year-old lambs. This lamb is a suckling, in Akkadian referred to as a spring lamb, and therefore offered the most tender meat. In one Assyrian text from the time of Ashur-Nirari V (eighth century) a spring lamb is used in an oath-taking ceremony connected to the making of a treaty.

7:10. thundering from heaven. Thunder and lightning were considered to regularly accompany the presence of a deity in the ancient Near East, often in a battle setting. From the Sumerian Exaltation of Inanna, to the Hittite myths about the storm god, to the Akkadian and Ugaritic mythologies, the gods are viewed as thundering in judgment against their enemies. Baal is depicted as grasping a handful of thunderbolts. Thundering terminology is picked up in royal rhetoric as Hittite or Assyrian kings portray themselves as the instruments of the gods, thundering against those who have violated treaties or stood in the way of empire expansion. For further information concerning the divine warrior see comments on Exodus 15:3; Joshua 3:17; 6:21-24; 10:11.

7:11. Beth Car. This site is mentioned only here and remains unidentified.

7:12. memorial stone. In the ancient Near East it was common practice to use stones, often inscribed, to mark boundaries. Babylonian *kudurru* stones were boundary markers that were sometimes inscribed with the details of the royal grant assigning rights to the land. They were public and legal indicators of ownership and were believed to enjoy divine protection. Like this stone, the *kudurru* stones were sometimes given names (for example, "Establisher-of-Permanent-Boundaries"). The Egyptians also erected memorial stelae to indicate the borders of their territory, especially that which had come to them by conquest. Examples are known throughout the second millennium. Both Babylonian and Egyptian examples usually had lengthier inscriptions on the stone describing summary accounts of the victory or stipulations or curses regarding the continuing possession of the land.

7:12. Shen. Many versions and translations read "Jeshanah," and most commentators consider this more likely. Shen is otherwise unknown, while Jeshanah is usually associated with Burj el-Isaneh. It seems less likely, however, that the Philistines would flee straight north (though they did have garrisons in that direction). It is possible that Shen ("tooth") is just a reference to a natural formation.

7:12. Ebenezer. The Ebenezer mentioned in 4:1 (Izbet Sartah) was about twenty miles northwest of Mizpah. The location named Ebenezer in this chapter is likely at a different place. Samuel is giving the name here and us-

ing the meaning of the name ("tone of help") to show that this Ebenezer represents victory rather than the humiliating defeat that had become associated with the other Ebenezer.

7:14. Ekron to Gath. The line from Ekron (Sorek Valley) to Gath (Elah Valley) is about five miles north-south. The coastal plain of the Philistines lies to the west of the line and the Shephelah leading into the hill country of Judah to the east. This verse probably indicates that those towns in the Shephelah that the Philistines had taken over were recovered.

7:14. Amorites. The Amorites along with the Canaanites were the primary inhabitants of the land prior to the coming of the Israelites and the Philistines. For some information about their background see the comment on Numbers 13:29.

7:16. Samuel's territory. The Bethel-Gilgal-Mizpah circuit appears to be all in the territory of Benjamin. There are several towns named Gilgal, including one listed on the northern boundary of Judah. If this is the correct Gilgal, Samuel's circuit would have started by traveling from his home in Ramathaim about fifteen miles southeast to Bethel. Two miles further south would get him to Mizpah, and from there Gilgal was nearly ten more miles. The return trip home would have been about twenty-five or thirty miles. There are sites named Gilgal closer to Bethel and Mizpah that may be intended here. In the Mari documents there is a diviner named Asqudum who regularly makes a circuit of four towns providing his services to the citizens.

7:17. altar at Ramah. The text does not specify whether this is an altar for sacrifice or a memorial altar (see comment on Josh 22:9-34). If it is an altar for sacrifice, it may be replacing the one that was in Shiloh and had been destroyed by the Philistines.

8:1-22

The Request for a King

8:2. role of Samuel's sons. Samuel was "judging" on the circuit mentioned in 7:16. This was not the sort of judging he had been involved in earlier in the chapter (7:6) but would have involved giving decisions concerning disputes among the people (see comments on Ex 18:13-27 and Deut 16:18-20). Samuel's sons were serving this type of function, not the delivering type of judges found in the book of Judges. Their territory was very remote (see next comment), rather than central as Samuel's had been.

8:2. Beersheba. Beersheba is located at the southern extremity of the land in the northern Negev at Tell es-Seba' (three miles east of the modern city). Archaeological finds from this period suggest that the site was in transition from being a temporary to a permanent settlement. Some of the first houses were just being built. The population would have been less than two hundred. Therefore this was a very minor appointment.

8:6. kingship in the ancient Near East. The kings of the ancient world enjoyed nearly limitless power and authority, and regularly claimed divine support for their rule. Kingship was believed to have been lowered from heaven and to have its roots in the original creation and organization of the world. The king functioned as vice-regent for the divine ruler, and it was his duty to preserve order and justice in society. He was entrusted with a divine stewardship over the people and the land. Kings were often considered to possess a divine office while they lived (understood differently in the various times and cultures) and to become gods when they died. Justice and law came from them. They often had priestly duties and were depicted as shepherds. The maintenance of the temples and provisions for them was an important obligation of the king. Throughout the ancient Near East kings were military leaders. They brought protection or deliverance for their people as well as acquiring other lands. These conquests brought access to additional natural resources and trade routes, as well as bringing plunder into the royal coffers and slave labor into the kingdom. Both of these would reduce the burden on the population of the country.

8:6. what the leaders want. The leaders of Israel have decided that they want a permanent head of government empowered with centralized authority over the tribes and commanding a standing army. They have concluded that their organization as a federation of tribes has put them at a military disadvantage. They believe that a king with a trained standing army at his command will level the playing field and enable them to successfully defend their land. They have been mistaken in assessing their problem as a political problem and consequently opting for a political solution. What Samuel seeks to clarify for them is that their problem is not political but spiritual. Their political solution will solve nothing unless it is accompanied by a spiritual solution.

8:7. divine king versus human king. In Israel's tribal structure there had been no provision made for a human centralized authority. Moses had provided prophetic authority and Joshua had been granted military authority, but no one had succeeded Joshua in such a position.

Moses had been understood to be the intermediary, giving God's instructions as God led the people. Likewise, as the book of Joshua repeatedly indicates, Joshua was subordinate to God's commander (Josh 5:13-15), and the victories were the Lord's victories. Each tribe had its leadership, but central authority belonged to the Lord and was his to give. The judges were those whom the Lord raised up and endowed with a recognized central authority (see comment on Judg 2:16-19). The fact that God was seen as raising up military leaders and that God was the one who brought the victories demonstrates that God was the one who was the king leading out the armies in battle. Victory in battle was assured if the Lord was pleased with Israel. By making their request, the leaders are implying that God has been less than successful in bringing victory and that somehow a king will do a better job.

8:11. prerogatives of kingship. Kingship requires a supporting administration. The administration must be housed and fed. Buildings need to be erected to house the administration, and land must be owned by the crown. A standing army must be raised, and it likewise must be housed and fed. The king must then have access to laborers and goods of every sort. Taxation and forced labor were the major means of providing for the monarchy and stood as royal prerogatives. This would bring about dramatic political and economic changes. This portrayal of kingship is similar to that known in the ancient Near East of this period, particularly observable in Ugaritic texts as the model of Canaanite kingship.

8:11. chariots and horses. Israel had not previously had cavalry or chariotry. This development within a standing army required the centralized authority of kingship. Training was required that only a permanent army could provide. Construction and care of the chariots and stabling and caring for the horses all required significant administrative oversight.

8:11. running before chariots. Those who run before chariots proclaim the presence of the king and protect the person of the king. In Hittite texts the gods are said to run before the king's chariot, leading to victory. The men who run before the king's chariot function as heralds (see 2 Sam 15:1; 1 Kings 1:5; 18:46).

8:12. infantry commanders. In the spontaneous calling out of an army in times of emergency (as previously practiced in Israel), trained commanders were not part of the picture. Part of a standing army, however, involves the permanent appointment of such officers. Such military divisions are also known from Assyrian and Babylonian military terms, where, for instance, one of the lower officers is the commander of fifty.

8:12. working the king's fields. Once an administration is set up, certain lands become royal lands (2 Chron 26:10). Land can become forfeit to the throne as a result of criminal activity, or land can come to the throne through lack of heirs to inherit ancestral property. This land would be farmed to provide food for the administration as well as to supply stockpiles against emergency. Those who work the land may be forced laborers (in a form of taxation), slaves from foreign peoples or debt slaves who have no other way to recover from losses.

8:12. making the king's weapons. The king's weapons would have included bow and arrow, sword, dagger, shield and javelin. At this period the Israelites had either not yet acquired iron-working technology or had been effectively prohibited from producing iron weapons, so their weapons would have been bronze. It was common even into the Middle Ages to have a royal smith who would even travel with the army to service the weapons of the king. The Nuzi texts list carpenters and bronze-workers among the palace staff.

8:13. cooks, bakers, perfumers. Cooks and bakers staffed the royal scullery. The extended family of the king and his administration (often from the extended family) would have to be regularly fed in royal style. Additionally there may have been prisoners of the king and household servants who would need at least meager provisions. Perfumers performed a number of different duties at the court. The king's garments were regularly perfumed, and spices were burnt in order to maintain a pleasing aroma around the palace. Additionally some spices were recognized as having medicinal value, in which case the perfumer might be performing the task of pharmacist. Assyrian texts and Egyptian tomb paintings both portray elaborate procedures for preparing these spices and ointments.

8:14-15. land confiscation. Attractive properties were frequent targets of royal confiscation. The king's administrators and favorites were rewarded and kept loyal in this way (see comment on 22:7). This practice is well-known from Hittite and Ugaritic materials as well as from Kassite period Babylon, where land grants to courtiers were very common.

8:16. commandeering of donkeys and slaves. It was not unusual for a king to commandeer a slave who caught his attention or stock animals that were noteworthy. The commoner would have little choice but to offer as a gift

that which had attracted the king.

8:17. tithe of grain and flocks as taxes. In Ugaritic literature the tithe is a fixed payment to the king made by each town and village. In earlier biblical passages the tithe was treated as something due the priesthood and the sanctuary. Here the tithe describes royal taxation.

9:1-27

Saul and Samuel Meet

9:1. status of Kish. Traditionally translations have identified Kish as a "valiant warrior," but the NIV "man of standing" is probably a better choice. Such prominence could be achieved through military prowess (see Jephthah, Judg 11:1), but many of the people described by this phrase have no known military reputation. It is likely that the phrase has broader application (see comment on Judg 6:12).

9:1. Benjamin. The tribe of Benjamin was descended from the youngest son of Jacob. Its more recent history was disreputable in that it had been nearly exterminated in a civil war during the Judges period (Judges 20—21). Its tribal allotment was small but strategically placed between the powerful tribes of Judah and Ephraim. Jerusalem, not yet in Israelite control but destined for greatness, was in Benjaminite territory.

9:2. Saul's appearance and stature. People in the ancient Near East placed high value on the stature and appearance of the king. The earliest kings were temporarily empowered warlords—mighty champions and fierce fighters. Even after kingship evolved into a permanent institution, the king who carried the aura of a great champion was the pride of his people. A few examples include Sargon of Akkad, described as mighty in battle; Tukulti-Ninurta of Assyria, who had no rival on the battlefield; Nebuchadnezzar, a valiant man strong in warfare; and Gilgamesh, a heroic warrior of great stature as well as beautiful in manhood.

9:2. Saul outside the Bible. As yet no mention has been found of Saul in any ancient Near Eastern inscriptions. He had little contact with other peoples except the Philistines, and there have been no significant finds of Philistine historical archives.

9:4-5. scope and distance of Saul's search. Saul lived in Gibeah, about six miles north of Jerusalem. The hill country of Ephraim was about fifteen miles northwest of his home. Though Shalisha and Shaalim are obscure, most interpreters identify them with Baal-Shalisha and Shaalbim respectively, which stand at the northwest and southwest extremities of the Ephraimite hill country. Just the circumference of this area would entail a sixty-mile trek, a large area to cover in this three-day search (v. 20). The region of Zuph is generally inferred (from 1 Sam 1:1) to be the region of Samuel's hometown in the hill country of Ephraim.

9:6. Samuel's reputation. It is intriguing that Saul, who lives only a stone's throw away from Samuel's hometown and within the circuit of Samuel's territory, appears ignorant of this nationally renowned figure. Rather than suggesting that Samuel's renown was less than reputed, it likely indicates the spiritual and political naivete of Saul.

9:6-9. role of the local "man of God." Though Samuel had a national reputation, to the local people among whom he had lived all his life he was like a village holy man. These holy men were supported by the gifts of the villages they served and would have been consulted on any number of minor personal matters. Areas of expertise would include issues of health and illness, rituals and prayers, legal and political affairs and a variety of other personal and community matters.

9:8. gift of silver. A quarter of a shekel of silver would have been the equivalent of a week or so of wages for the ordinary working man. This would be appropriate considering the value of the donkeys that had been lost.

9:9. terminology for prophets. Three terms are used in this passage: man of God, seer and prophet. The first is a general term that could apply to either of the others. The seer and the prophet were engaged in basically the same activity, but the structuring of the role in society was different (much like the difference between the offices of judge and king). Nevertheless, it is a terminological change that is noted here, not a sociological one.

9:11. coming out to draw water. Towns were usually situated on high ground in the vicinity of a water source (spring or well). In later periods tunnels were built to give secure access to the water sources, but at this period one would have to go outside the city walls to get the daily supply of water. Typically this would be done in the early evening rather than in the heat of the day.

9:12. high place. The high place (Hebrew: *bamah)* is a place of worship where an altar is functioning. It is typically not an open-air shrine but an indoor facility, housing sacred furniture and precincts large enough to accommodate a priesthood (we cannot assume that all of them were on high ground). The Mesha Inscription shows that such shrines

were also part of Moabite worship. Possible examples have been found at sites such as Megiddo and Nahariya.

9:12-13. sacrifice at the high place. Though the name of this town is not given, most assume that it is Samuel's hometown of Ramah (Ramathaim, see 1:1). After the fall of Shiloh he built an altar in Ramah (7:17), and with the ark in exile this was probably functioning as a central sanctuary. Sacrifices were typically occasions for meals, and that proves to be the case here as well. This may be a new moon sacrifice, which was a festive occasion (see comment on 20:5). Alternatively it could be an enthronement ceremony, specially called since Samuel had been forewarned of Saul's arrival.

9:13. blessing the sacrifice. No other passage in the Old Testament speaks of blessing the sacrifice. Blessing is usually the offering of kind words that it is hoped the deity will bring about. Since sacrifices were often associated with petitions, Samuel's blessing may have reflected the hope that the petition be granted.

9:21. Saul's objection. In the ancient Near East kings usually tried to attach some significance to their ancestry when none was evident, lest this weakness be used as a reason for revolt by some ambitious competitor. The lack of ancestry could label one as an imposter or pretender. The objection of genealogical unworthiness is not uncommon in the Bible, and, in fact, is sometimes worn as a badge (Amos 7:14). For information concerning the tribe of Benjamin, see the comment on 9:1. Nothing further is known of the status of Saul's clan.

9:22. hall where they ate. The portions of meat that were to be eaten by the priests and the worshipers were at times required to be eaten on the premises (for example, Lev 7:6). Since feasting was an important part of sacrifice and worship, sanctuaries provided rooms for that activity. The word used in this verse to describe this room is used elsewhere for the various rooms attached to the sanctuary in the temple complex. Archaeologists often find auxiliary rooms attached to the main sanctuary, but it is frequently not possible to determine what each room was used for.

9:23. choice cut of meat. The thigh (NIV "leg," v. 24) was considered one of the prime pieces of meat and was usually reserved for the officiating priest (Lev 7:32-34). Here Samuel yields it to his guest of honor.

9:25-26. sleeping quarters on roof. Though the presence of stairways and supporting pillars (among other evidences) show that many houses had second (or even third) stories, archaeologists are usually not able to recover more than the floor plan of houses in the remaining rubble of occupation levels. Second stories (rooms on the roof) were desirable for family activities and sleeping because they offered better ventilation.

10:1-27

The Anointing and Selection of Saul as King

10:1. anointing with olive oil. Anointing a king was common practice in some parts of the ancient Near East. Much of the evidence comes from Hittite sources describing enthronement ceremonies. There is no evidence of kings being anointed in Mesopotamia. In Egypt the pharaoh was not anointed, but he anointed his officials and his vassals. His anointing of them established their subordinate relationship to him and indicated his protection of them. This model would fit the idea of Saul being anointed as a vassal to God. But in 2 Samuel 2:4 it is the people who anoint David. This anointing suggests some sort of contractual agreement between David and the people he will govern. In Nuzi, individuals entering a business agreement anointed one another with oil, and in Egypt oil anointment was used in wedding ceremonies. For information on royal coronations see comment on 11:15.

10:2. Rachel's tomb at Zelzah. Locating this site is extremely complicated. Detailed study including attempts to reconcile many variants and difficulties offer two main possibilities. One is that the tomb should be located in the vicinity of Kiriath Jearim (see comment on 6:21). Kiriath Jearim is about fifteen miles south-southwest of Samuel's home. The second follows the supposed course of Saul's journey in this passage as he appears to be traveling east from Ramah to Geba. This would place Rachel's tomb along that road.

10:3. great tree of Tabor. Judges 4:5 refers to the "Palm of Deborah" where she held court, and Abraham pauses at the great tree of Moreh (see comment on Gen 12:6). Trees served as landmarks, meeting places and even sacred sites. Where the sun is hot and shade is desirable, trees can take on special significance.

10:3. worship at Bethel. Throughout much of Israel's history, Bethel was considered an important sacred site. The ark was housed there for at least part of the Judges period, and it was a place of altar and sacrifice (see comments on Judg 1:22-23; 20:26-28; 21:4).

10:3. products for sacrifice. Goats, bread and wine were the basic makings of a sacrificial

meal. By receiving consecrated bread, Saul is again being treated as a priest (see comment on 9:23) and being recognized as an honored personage.

10:5. Gibeah of God. The designation "of God" suggests there was some sort of shrine or sanctuary on this hill (Gibeah = hill), but it was currently also occupied by a Philistine garrison. Since 13:3 speaks of a Philistine garrison at Geba, many have identified the two as the same location, the modern village of Jaba about six miles north of Jerusalem. No excavations have been conducted there, but surface surveys have found Iron Age remains on the site. It overlooks the strategic pass across the deep canyon of the Wadi Swenit from Micmash that leads from the north into the region of Jerusalem. For discussion of Gibeah see comment on 10:26.

10:5. high place. There is a difference between outdoor cultic places and the "high place" *(bamah)* mentioned in many places as religious centers in the local towns and cities (1 Kings 11:7; Jer 7:31; Ezek 16:16; 2 Chron 21:11; Mesha's Moabite Stele). The high place could be outdoors but often was an indoor facility, built to house sacred furniture, an altar and precincts large enough to accommodate a priesthood.

10:5. musical instruments. These are all typical musical instruments of the time and are attested in ancient Near Eastern texts, reliefs and paintings as early as the third millennium. There is still some disagreement among authorities as to which of the Hebrew words in this passage ought to be translated "harp" and which as "lyre." The one the NIV translates "lyre" is a ten-stringed instrument, while the one translated "harp" is thought to have had fewer strings. Both are hand-held with frames made of wood. The tambourine has been identified in archaeological reliefs as the tambour, a small drum (leather stretched over a hoop) that would not have the tinny rattle sound of modern tambourines. The instrument translated as flute is likely a double pipe made of either bronze or reed.

10:6. connection between music and prophecy. One could be trained for the profession of prophet (or seer), and there was a prophetic guild in this early period of Israel's history usually identified as the "sons of the prophets." Typically these prophets would use various procedures in order to prepare themselves for receiving prophetic oracles. Music played an important role in inducing a trancelike state (ecstasy) that was seen as making one receptive to a divine message. In the Mari texts there is an entire class of temple personnel who were ecstatics and who often provided prophetic messages.

10:6. role of the Spirit of the Lord. When the Spirit of the Lord was attached to any activity in the Judges period, it was usually to the calling up of an army. In a tribal society with no centralized government it was difficult to get other tribes to stand with one or two that might be facing problems. The measure of a leader in such situations was his ability to compel others to follow though he had no office of command over them. In Israel this was a mark of the power of Yahweh, for it was he alone who had the authority to call out the armies of the tribes. Yahweh was the only central authority. It was therefore a clear indication of the Lord's authority at work in someone when they exercised authority that was only Yahweh's by calling out the armies (see Judg 11:29; 1 Sam 11:6-8). This was one of the distinguishing features of the judges of Israel. Saul's central authority is going to be permanent and more extensive than that possessed by the judges, but it still receives its endorsement by the empowerment of the Spirit of the Lord. In 11:6 the empowerment of the Spirit is going to result in Saul's raising an army, as the judges had done. Here it is associated with prophetic activity, specifically to his receptivity to divine guidance.

10:8. Gilgal. As noted in the comment on 7:16, there are several sites with the name of Gilgal. It is impossible to be certain which one is intended here.

10:8. purpose of sacrifices. Burnt offerings and fellowship offerings are two of the most general types of sacrifices. The former often accompanied petition, while the latter served as an opportunity for festive celebration and a communal meal before the Lord. It is likely, then, that these sacrifices would have been directed to either the initiation of kingship or perhaps toward military activity against the Philistines. Between the sacrifice offered in Samuel's town, the sacrifice of those going to Bethel, and these in Gilgal, it becomes evident that sacrifice in this period was not restricted to a central location.

10:10. Saul as a prophet. Kings in the ancient Near East were often considered to have prophetic gifts. This was especially true in Egypt, where the pharaoh was the representative of the gods and spoke for them. Civil leadership in Israel up to this time has also often combined authority for ruling with prophetic activity (Moses, Deborah, Samuel). Samuel accumulated priestly, prophetic and governing roles, but the governing role was the result of the other two. With Saul the issues concern

to what extent someone chosen as king will also accumulate priestly or prophetic roles. Kingship in the ancient Near East was at times configured with those roles included. It is then very logical to ask, "Is Saul also among the prophets?"

10:17. Mizpah. Though several cities shared this name (it means something like "outpost" or "garrison"), this one in Benjaminite territory is the most well-known. It is often associated with the eight-acre site called Tell en-Nasbeh about eight miles north of Jerusalem. Mizpah at this time was an oval enclosure surrounded by a wall about three feet thick. It guarded the main north-south road between the hills of Judah and the hills of Ephraim.

10:20-21. process of choosing a king. Evidence from Mesopotamia suggests that divination was used to confirm a designated king but not to propose one. Divination was not considered acceptable in Israel. The process used here is more like an oracular process and is very similar to that used in Joshua 7 (see comment on Josh 7:14-18).

10:25. regulations of the kingship. This appears to be a document that frames a constitution or charter of some sort. One possibility is that it details the people's subordination to the king and the king's subordination to the Lord. In Egypt the coronation ceremony involved a proclamation by the god Thoth that gave the official approval of the gods for the king's accession. There is nothing in this chapter that actually depicts Saul as being crowned; he is merely acclaimed as the one that has been selected (see comment on 11:15).

10:26. Gibeah. Saul's hometown of Gibeah was long been identified with Tell el-Ful about three miles north of Jerusalem, though many have not been convinced despite a small fortress uncovered at the site that archaeologists dubbed "Saul's fortress." The archaeological, textual and topographical evidence are now all thought to favor the theory that Gibeah and Geba are one and the same and are to be identified with Jaba on the southern rim of the Wadi Swenit about six miles north of Jerusalem.

11:1-11
Saul Defeats the Ammonites

11:1. Jabesh Gilead. Jabesh Gilead was a city in the Transjordan, probably along the Wadi el-Yabis, a tributary of the Jordan River that cut through the north Gileadite hill country. A number of sites in the area have been proposed as the ruins of Jabesh Gilead, none of which have proved convincing. The most likely candidate is Tell Maqlub, lying on the northern edge of a bend on the Yabis River. There is detailed evidence for Iron I Age (c. 1200-1000 B.C.) material remains in this area. The city is described as having a treaty relationship with Israel from the period of the judges (chap. 21; cf. 2 Sam 2:4-7). Jabesh Gilead was not incorporated into Israel until after the death of Saul. Cf. 1 Samuel 11:9-10.

11:1-2. Nahash. Ammon and Israel had continually fought over the area east of the Jordan River (see Judg 11:33). Based upon fragments from the Dead Sea Scrolls, a restoration of 1 Samuel 10:27b gives evidence that Nahash had also threatened the Israelite tribes of Gad and Reuben, a fact confirmed by the Jewish historian Josephus (A.D. 37-100). Nothing is known of Nahash from extrabiblical literature, no Ammonite historical documents from this period having survived.

11:1-2. Ammonites. Apart from the Bible, the Ammonites are only known from written sources from the Late Assyrian annals (c. 733-665 B.C.) and from local fragmentary epigraphic sources (to c. 590 B.C.). The Bible describes them as a Transjordanian people related to the Israelites through Abraham's nephew, Lot. From the period of the exodus and following, the Ammonites were perennial enemies of Israel until their conquest by Saul's successor, David (2 Sam 10—12).

11:2. gouging out the right eye. The practice of blinding one's enemies is found with the Philistines (against Samson; Judg 16:21) and Nebuchadnezzar of Babylon (against Zedekiah of Judah; 2 Kings 25:7). It was also a common Assyrian practice performed upon vassal kings who had broken treaties. The Jewish historian Josephus (A.D. 37-100) states that the right eye was gouged out in this case, which made the soldier unable to fight, since the shield was held over the left eye. However, in the context of 1 Samuel 11 the purpose of the gouging out of the eyes appears to have been reproach. Incapacitating mutilation of subjected individuals is also seen in the treatment of kings whose thumbs and big toes were cut off (see comment on Judg 1:6).

11:4. Gibeah. See comment on 10:26.

11:6. role of the Spirit of God. The Spirit of God rested upon Saul as it previously did upon the judges Othniel, Gideon, Jephthah and especially Samson (Judg 14:6, 19; 15:14). When the Spirit of the Lord was attached to any activity in Judges, it was usually to the calling up of an army. In a tribal society with no centralized government it was difficult to get other tribes to support one of their num-

ber that might be facing problems. The measure of a leader in such situations was his ability to compel others to follow though he had no office of command over them. In Israel this was a mark of the power of Yahweh, for it was he alone who had the authority to call out the armies of the tribes. Yahweh was the only central authority. It was therefore a clear indication of the Lord's authority at work in someone when they exercised authority that was only Yahweh's by calling out the armies. This had been one of the distinguishing features of the judges of Israel. In 1 Samuel 10, the Spirit had caused Saul to behave like one of the prophets, while here in 1 Samuel 11, Saul exercised the authority of calling out the armies of Israel. His Spirit possession was reflected immediately in his righteous indignation, similar to the situation where Samson in his fury killed thirty at Ashkelon (Judges 14:19), and it was confirmed by the response of the troops.

11:7. oxen pieces as messages. A biblical parallel to dismemberment as a message comes from Judges 19:29-30, where the unnamed Levite cut his concubine into twelve pieces, evidently an invitation to participate in the intertribal war against the tribe of Benjamin. The idea was that whoever did not come for the battle would be punished in like manner. A letter from the city of Mari has a certain Bahdilim asking the king of Mari if he can cut off the head of a prisoner and send it around as a warning to troops who are not being cooperative in assembling for battle.

11:8. Bezek. Bezek has been located at Khirbit Ibzik, a site west of the Jordan River, twelve miles northeast of Shechem and about fourteen miles west of Jabesh Gilead. It is placed on the southwestern slope of the Ras es-Salmeh, a steep mountain range overlooking the Manasseh hill country. It was thus a convenient place from which to cross the Jordan River to arrive at Jabesh Gilead.

11:8. size of army. The number of soldiers mentioned varies greatly in ancient versions of the Old Testament. The later texts, however, give expanded numbers for both Israel and Judah. Many archaeologists would estimate the entire population of Canaan at this time as being barely this many. The Hebrew term for thousand has often been viewed as a term denoting a unit of soldiers and not to be taken as referring to an actual number (see comments on Josh 8:3; Judg 20:2).

11:9. distance from Bezek to Jabesh Gilead. If both Bezek and Jabesh Gilead have been identified correctly by modern archaeologists, then the two cities were about thirteen or fourteen miles apart. This could easily be covered in a march that began in the evening and concluded in the Ammonite camp in the early hours of the morning.

11:12-15
Saul Affirmed as King

11:14-15. reaffirmation of kingship at Gilgal. Gilgal, a cultic center on Samuel's circuit, remains unlocated, but most think it was near Jericho (see comment on 1 Sam 7:16). As the sacred site closest to the battle scene, it is chosen for the coronation. Even though Saul has been designated by two different processes as the one who will be king, it is only now, after he has proven himself in military affairs (remember, the people wanted a king who would lead their armies into battle), that he will actually be crowned. The text says nothing of reaffirmation but states that they made him king. In Mesopotamia there were ceremonies to celebrate enthronement each year connected to New Year's celebrations. Coronation in the ancient Near East would generally involve investing the king with the royal insignia and regalia and anointing him. There was commonly an aspect of the ceremony in which the king's legitimacy was affirmed by the chief deity. The anointing and the affirmation of legitimacy had already taken place in this case.

11:15. fellowship offerings. One portion of the fellowship offering was offered to God, and another portion was consumed by the worshipers. Typical use of this offering was for ratification of treaties or covenant agreements. For more information see comments on 10:8; Exodus 24:5; and Leviticus 3:1-5.

12:1-25
Samuel's Speech

12:15. Samuel clearing himself of claims. Politics has not changed much in three millennia. It is common for a ruler to blame the country's problems on a previous administration. It was also not uncommon in the ancient world for charges to be trumped up against anyone who might be seen as a threat to the power of the ruler currently in power. It was therefore understandable that Samuel would want to take steps to procure an affirmation of his innocence in matters of government. It was the ruling party's duty to maintain justice, and Samuel wanted verification that he had not been accused of any injustice. The legal process described here consisted of three parts: (1) the witnesses are listed (Yahweh, his

anointed [i.e., the king] and the people, v. 3), (2) Samuel appealed to these witnesses, and (3) the witnesses responded. This pattern is also attested in Ruth (4:4, 11) and Joshua (24:22).

12:6-12. time span of recounted history. Exodus 12:40 says that the Israelites were in Egypt for 430 years. First Kings 6:1 says that it was 480 years from the exodus to the dedication of the temple. The coronation of Saul may be as much as eighty years prior to the dedication of the temple, meaning that Samuel is covering somewhere between 800 and 850 years of history in five short verses. That would be like a contemporary speaker addressing the failures of Christianity from the Crusades to the present in one hundred words or less.

12:12. divine kingship. Ever since the book of Exodus the text has been developing the idea of Yahweh fighting for the Israelites, resulting in the Lord being praised as warrior and king. The book of Joshua indicates repeatedly that the Israelites' victories are the Lord's victories. Yahweh was established as their king and champion and led them forth victoriously in battle. References to Yahweh as king of Israel abound in Scripture (e.g., Ex 15:18; Num 23:21; Judg 8:7; and 1 Sam 8:7; 10:19). The concept of deity as king was not unique to Israel, however. Both Marduk (Babylonian) and Baal (Canaanite) demonstrate their kingship by subduing the sea, which is personified in their divine foe (Tiamat and Yam respectively). The issues of bringing secure order out of conflict, being proclaimed king and establishing a dwelling are intertwining themes in the ancient Near Eastern literatures concerning cosmic battle. More specifically, the Assyrians, for example, claimed that the god Assur was the monarch and that the reigning king was in essence his earthly representative. The difference in Israel, until now, was that Yahweh did not have an earthly counterpart, as did the other nations. The fact that God was seen as raising up military leaders and that God was the one who brought the victories demonstrates that God was the one who was the king leading out the armies in battle (see comment on 8:7). Now Saul's kingship was to be an earthly reflection of Yahweh's rule in heaven.

12:17-18. rain during the wheat harvest. Rain during May and June in Palestine, the months of the wheat harvest, was almost unknown and thus was interpreted as a supernatural occurrence. Furthermore, it could endanger the crop (see Prov 26:1). Thus God was standing as divine witness against them.

12:19. Samuel's revised role. Like Moses and Deborah before him, Samuel, until this point, had exercised political leadership by virtue of his prophetic office. With the initiation of kingship, the role of the prophet would now become an advisory one. Rather than leading the people as the recipient of divine messages, the prophet would offer guidance to the king, who would retain the freedom to accept or reject it. This passage also emphasizes the intercessory role of the prophet (for more information see comments on Deut 18:14-22).

12:25. king and people identified. In the ancient Near East the king was often considered the personification of the state. As a result the king could be held accountable for the peoples' behavior, and the people could be punished or blessed based on the conduct of the king.

13:1-22

Saul Offers the Sacrifice

13:1. chronological note. The age of Saul at his accession is not precisely known since this verse has not survived intact in most ancient manuscripts. The Greek version of the Old Testament (called the Septuagint) added the number thirty here, but that is probably a secondary calculation, possibly based on David's age at his accession (2 Sam 5:4). Saul had an adult son, Jonathan, and at least one grandson before his death (2 Sam 4:4). Saul's length of reign is listed as two years, though most interpreters believe that part of the number has dropped out of the text (i.e., x-two years). However, the Jewish historian Josephus (A.D. 37-100) and Luke (Acts 13:21) both know a tradition that Saul reigned for forty years. Because of the unique spelling of the number in the earliest manuscripts, it is now believed by many that the original number for the length of his reign has been lost.

13:2. size and nature of standing army. Saul's selection of three thousand men probably represented a choice of men to serve as retainers or an imperial guard, rather than the total of the volunteers for the war, which would have been more. Standing armies in the ancient Near East were made up of professionally trained soldiers and mercenaries. They served garrisons and border posts as well as providing for a palace guard. The number of three thousand might simply represent three companies (one stationed with Jonathan and two with Saul). Geba is not a large site, and it is unlikely that it would have housed more than a few hundred men under normal circumstances, but the Israelites would soon have to face the combined military forces of the Philistines (see comment on verse 5).

13:2. Micmash. Rising about two thousand feet above sea level, the site of Micmash (modern Mukhmas) is about four and a half miles southwest of Bethel. Sparse Iron Age finds at the site have led some experts to prefer identification with Khirbet el-Hara el-Fawqa just over half a mile to the north, where more evidence of occupation at this time was found. The mountainous terrain in the area is an obstacle to chariot warfare.

13:3. Philistine garrison at Geba. Geba has been identified as the modern village of Jaba about six miles north of Jerusalem. No excavations have been conducted there, but surface surveys have found Iron Age remains on the site. It overlooks the strategic pass across the deep canyon of the Wadi Swenit from Micmash that leads from the north into the region of Jerusalem.

13:4. distance from Gilgal to Micmash. Again there are numerous sites named Gilgal, and their precise locations are unknown (see comment on 7:16). The Gilgal in 10:8 appears to be near Geba. If Saul's encampment is the Gilgal from Joshua's time, it was much further east, near the Jordan River, about twenty miles from Micmash. In this case he would have been far removed from the theater of operations.

13:5. Philistine army. The Philistines had overwhelming military superiority in this situation, with thirty thousand (often amended to three thousand) chariots and six thousand horsemen (charioteers). If the amended number is correct, there were two soldiers per chariot, known from contemporary Egypt, Anatolia and Assyria. For comparison, Shalmaneser III of Assyria (ninth century B.C.) claims to have crossed the Euphrates River with an army of 120,000. Provincial Assyrian governors were required to raise troops for the Assyrian army, often amounting to as much as 1,500 cavalry and 20,000 troops. Since there were over twenty provinces, the entire amount of Assyrian troops was very large.

13:6. hiding places. Pits and cisterns were dug for the collection of water and would have served as convenient hiding places if they were dry. These would typically have been in the area of towns. There were forested areas on either side of the Wadi Swenit in ancient times so thickets would have been available. Wadi Swenit and Wadi Kelt also feature many caves in the walls of the cliffs. Caves in Palestine often offered protection for people in danger. Sometimes caves were used for family tombs. These would have been well-known by the inhabitants of the area and protected from easy access. There is extrabiblical inscriptional evidence for cave-dwelling refugees in a cave near the Judean fortress city of Lachish. On the walls is written, "Spare me, O merciful God, spare me, O Yahweh," and, "Save, O Yahweh."

13:7. Gad and Gilead. Both the terms Gad and Gilead were employed as general designations for Israelite lands east of the Jordan River. Gilead was inhabited by the tribes of Reuben and Gad. The Israelites fled to these areas since they were somewhat removed from the base of Philistine operations.

13:8. Saul's conundrum. Offering a sacrifice to enlist a deity's favor before an impending battle was common in the ancient Near East. This favor would hopefully ensure the god's willingness to participate in the conflict. The *Iliad* provides many examples of this in contemporary Greek literature, and Hittite and Assyrian accounts (e.g., Esarhaddon of Assyria, seventh century B.C.) amply attest the use of sacrifices and omens to determine the will of the gods before going to battle as an essential part of military strategy. In Saul's case the need for the ritual was interfering with the strategic element of timing. His choice attempted to acquire the ritual benefit (by offering the sacrifice himself) and still try to take advantage of striking before the strategic military moment passed.

13:8-13. Saul's offense. In general it was not unusual for a king to serve some priestly functions (see comment on 2 Sam 8:18). In consideration of the dominant role Samuel has had, however, it is to be expected that the charter of Saul's kingship (10:25) drew distinct lines of delineation between their respective roles. It should be noted that Saul is not accused in verse 13 of violating priestly protocol or committing desecration, but of breaking the command of God.

13:9-10. function of the sacrifices. Burnt offerings and fellowship offerings are two of the most general types of sacrifices. The former often accompanied petition, while the latter served as an opportunity for festive celebration and a communal meal before the Lord. Additionally the peace offerings are sometimes thought to represent an acknowledgment of the deity's kingship—an important element prior to battle. For general information on the sacrifices, see the comments on Leviticus 1:3-4; 3:1-5.

13:14. man after his own heart. This statement means that God was now going to select someone of his own choosing (according to his own will or purpose rather than according to the will and purpose of the Israelites). This wording does not concern the piety of David

but demonstrates God's exercise of will in rejecting Saul (a man fulfilling Israel's desire, 9:20) and replacing him with someone who was measured by a different criterion. Akkadian uses the same terminology when it speaks of the deity Enlil installing a king of his own choice. Even Nebuchadnezzar puts a king of his own choice in Jerusalem.

13:15. Gilgal to Gibeah. The distance for the army to travel from Joshua's Gilgal to Gibeah was about fifteen miles or a day's journey (for difficulties in identification see comment on 13:4).

13:16. Geba and Micmash. These two sites face one another across the deep canyon of the Wadi Swenit, along the strategic pass that crosses the wadi from the north into the region of Jerusalem. Micmash is a little over a mile northeast of Geba.

13:17-18. routes of raiding parties. The Philistine raiding parties turned in three different directions. The Ophrah road was due north and led to the town of Ophrah five miles north of Micmash. The Beth Horon road led west to the town of the same name, about twelve miles from Micmash. It went through Gibeon and would have been one of the major supply lines from the Philistine plains into the Jerusalem hills. Last, the border road overlooking the Valley of Hyenas (Zeboim) was southeast of Micmash, probably where the Wadi Swenit met the Wadi Kelt about halfway between Micmash and Jericho. This is the major pass into the Jordan Valley.

13:19-20. iron monopoly. For the ancients there were many technical difficulties in smelting iron, including maintaining a consistently high temperature, adequate draft, combining a proper amount of carbon and iron (called "carburization," which transforms the wrought iron into steel), and heavy tools to remove slag from the iron itself. Weapons made of uncarburized iron are inferior to bronze weapons. Consistent carburization is not evident in Palestine until the tenth century. It is not certain where iron smelting began, but it was widespread throughout the Near East (especially Anatolia and northern Iraq) by the end of the second millennium B.C. The widespread use of iron in place of bronze is now thought to be the result not only of the availability of the technology for smelting iron but also of the increasing difficulty of procuring the tin needed to make bronze. What must be noted, however, is that the text does not indicate an inferiority in iron technology but the absence of blacksmiths. Bronze weapons would have still been very useful to the Israelites. It is likely that these verses indicate that blacksmithing had been outlawed so as to prevent the manufacture of metal weapons of any sort.

13:21. charges for smithing. The smithing charges here can be seen to be exorbitant when measured against the fact that the average monthly income was approximately one shekel. The implements that were sharpened (plows, mattocks, pickaxes, goads) were for agricultural enterprises. They may have been made of iron or bronze, but the Israelites were prohibited from operating the smithies needed for sharpening them. Iron plows have been uncovered throughout Palestine for this period. Iron mattocks (apparently a type of hoe) have been found at Tell Jemmeh in southwest Palestine. Goads were pointed implements used to encourage the oxen to continue plowing.

13:22. weapon shortage. This verse confirms that neither iron nor bronze manufacture was permitted to the Israelites. We must assume that the Philistine rule in the area had resulted in the confiscation of weapons and that the law against blacksmithing of any sort had made only the most primitive weaponry available to them.

13:23—14:48
Victory at Micmash Pass

13:23. Micmash pass. The Micmash pass is the strategic pass that leads from the north into the region of Jerusalem across the deep canyon of the Wadi Swenit. For more information on Micmash see comment on verse 2. A contingent had advanced from the Philistine camp to the slope of the ravine (or pass) which separated Micmash from Gibeah/Geba and the Israelite camp. The site was surrounded by the hills which formed the north side of the wadi. Micmash was inaccessible except for the pass which linked it to Gibeah/Geba.

14:1, 6, 17. armor-bearer. Jonathan's armor-bearer was more than a porter of military equipment. He fought together with him and probably served the function of a squire or apprentice. The closest parallel from ancient Near Eastern literature is the member of the chariot crew that holds the shield.

14:2. "pomegranate tree" at Migron. Though some commentators have identified Migron as a threshing floor, others have suggested that it is the ancient name for the Wadi es-Swenit. There is a rock of Rimmon (Hebrew for pomegranate) located one mile east of Gibeah/Geba (see comment on Judg 20:45) with a large cave that may have been serving as Saul's headquarters. On the other hand, if

"threshing floor" is correct, there is an ancient threshing floor between Geba and Wadi Swenit, and Ugaritic texts attest to the threshing floor as a place where a king (Danil) met with the people. The open area of a threshing floor, however, would seem less likely in this context.

14:3. linen ephod. An ephod was part of the priestly wardrobe (see comment on Ex 28:6-14) and in both Egypt and Mesopotamia was reserved for clothing images of deity and for high-ranking priests. The ephod is elsewhere closely associated with oracles (it contains the Urim and Thummim, see comment on Ex 28:30, and was used for oracular consultation in Judg 8:27).

14:4-5. terrain: Bozez and Seneh. Khirbet el-Miqtara is a small settlement not far from the pass on the south side of the Wadi Swenit where the cliffs begin to get steeper. This area features some large outcroppings where someone could scale the cliffs without being seen.

14:6. divine warrior ideology. In the divine warrior motif the deity is fighting the battles and defeating the deities of the enemy. In Assyria Nergal is the king of battle, and Ishtar is viewed as a war goddess. The Canaanite Baal and the Babylonian Marduk are divine warriors. In this worldview human warfare is viewed simply as a representation of warfare among the gods. The stronger god would be victorious regardless of the strengths or weaknesses of the human combatants. Therefore, if Yahweh fights on their behalf, Jonathan is convinced that they will be victorious.

14:10. explanation of oracular mechanism. Oracular mechanisms of this period generally operated on a binary mechanism whereby designated occurrences could offer either a yes or a no answer from deity. The designated occurrences were typically options between an ordinary versus an extraordinary occurrence (see comments on Judg 6:36-40 and 1 Sam 6:7-9). In this case, however, either of the Philistine challenges could be seen as typical and appropriate. It would seem, instead, that Jonathan is looking for Yahweh's direction through an (inadvertent) invitation from the Philistines to come into the camp.

14:14. area of battle. The Hebrew text is very difficult, and translations vary greatly (NIV: "in an area of about half an acre"). The reference to half a furrow in the Hebrew text suggests that Jonathan cut a swath half a furrow wide (estimated at ten to fifteen yards) through a field of about one acre.

14:15. earthquake. In the ancient Near East the thundering in the sky and the trembling of the earth are commonly paired together as an indication of the divine involvement in battle (see comment on 2:9). Additionally, the dread of a deity as a divine warrior was often believed to precede a powerful, successful army into battle. Egyptian texts attribute this terror to Amun-Re in the inscriptions of Thutmose III, and Hittite, Assyrian and Babylonian texts all have their divine warriors who strike terror into the hearts of the enemy. It is a common motif that one of the ways a deity achieves victory is by throwing the enemy into confusion. An example in Egyptian literature occurs in the myth of Horus at Edfu: Horus confuses the enemy so that they begin to fight one another until none remain.

14:19-20. oracular use of the ephod. The Urim and Thummim were kept in a pouch in the priest's ephod (see above, verse 3). Information from the Urim and Thummim presumably would be gained by posing a yes-no question and then shaking out one of the stones. It is thought that the same stone would have to be shaken out three times in succession to confirm the answer. When Saul instructs Ahijah to withdraw his hand, he has made the decision to discontinue the oracular process and proceed without divine guidance.

14:23. aspects of divine intervention. Evidence for crediting the Lord with the victory would be seen in four elements that typically indicated divine intervention: direction through an oracle (v. 10); success by the outnumbered army (v. 14); earthquake (v. 15); and confusion and panic among the Philistines (v. 20). These are all connected to the work of Jonathan, while Saul was experiencing no such divine help or guidance even though he anxiously sought it.

14:23. Beth Aven. The town of Beth Aven has not been identified with any certainty. The way it is introduced in the texts suggests it was more prominent than Ai. Tell Maryam is often considered the prime candidate. It has not been excavated, but surveys have turned up Iron Age remains. Hosea is thought to use Beth Aven as a pejorative name (lit. "house of wickedness"; cf. Hos 4:15; 5:8; 10:5) for Bethel (house of God), north of Micmash. As still another alternative, some manuscripts of the Old Testament read Beth Horon, which was due east of Micmash. Any of these towns would have been on a route of pursuit to Aijalon.

14:24. fasting for battle. Fasting is little attested in the ancient Near East outside of the Bible. It generally occurs in the context of mourning. In the Old Testament the religious use of fasting is often in connection with mak-

ing a request before God. The principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10). This would be a normal procedure to use in rituals preparing for battle but is incomprehensible as a requirement during the battle. The emphasis Saul places on the fast is for the sake of his own vengeance rather than for the sake of consecration to the Lord.

14:31. Micmash to Aijalon. Aijalon (modern Yalo) was a few miles southwest of Beth Horon and about twenty miles west of Micmash. The town was on the edge of the hill country.

14:32-35. eating without draining blood. Sacred literature from Ugarit and Mesopotamia, as well as Israel, identified blood as the life force of any animal. As such in Israelite tradition it belonged to the life-giver, the creator God Yahweh. Therefore the Israelites were prohibited from consuming meat which still contained blood. This sacred fluid had to be drained from the meat and "poured on the ground like water" so that it returned to the earth. In sacrificial contexts the blood was to be poured on the altar (see Lev 17:11-12). The prohibition against eating meat with the "blood still in it" in Leviticus 19:26 is tied to the injunction against participating in any form of divination or sorcery. Thus, rather than a dietary law, this decree involves the practice of draining blood from a sacrificial animal into the ground or a sacred pit, which was designed to attract the spirits of the dead (see 1 Sam 28:7-19) or chthonic deities, and to consult them about the future. Such practices are found in several Hittite ritual texts and in Odysseus's visit to the underworld (*Odyssey* XI, 23-29, 34-43). These practices were condemned (Deut 18:10-11) because they infringed on the idea of Yahweh as an all-powerful God, who was not controlled by fate.

14:33-35. rock as an altar. Having a stone function as an altar was not unprecedented. A stone served as an altar for the sacrifice at Beth Shemesh (6:14). Secular slaughter of animals was permitted as long as the animal's blood was poured out on the ground (Deut 12:15-24).

14:37. no reply by the oracle. It is generally assumed that the Urim and Thummim were being used for oracular inquiries (see next entry) and that for an answer to be affirmed it would have to be repeated a specified number of times.

14:40-43. binary process for determining guilt. Saul arranged a lot-casting ceremony similar to that used to elect him king (10:19-21) and to condemn Achan (Josh 7:16-18). According to a section of text provided by some reliable manuscripts, the decision was made through the use of the Urim and Thummim (see Ex 28:30; Lev 8:8; Deut 33:8), items kept in the priest's ephod. No description of these objects is found in Scripture, although traditions from the Hellenistic and later periods suggest they were markers, whose appearance and presentation when cast like lots would determine God's will (see Num 27:21; 1 Sam 14:37-41; 28:6). The practice of posing yes-no questions to the gods (asking oracles) is known throughout the ancient Near East. Particularly of interest are the Babylonian *tamitu* texts, which preserve the answers to many oracular questions. Positive and negative stones (thought to be bright stones and dark stones) were also used widely in Mesopotamia in a procedure called psephomancy. In one Assyrian text alabaster and hematite are specifically mentioned. The yes-no question would be posed and then a stone shaken out. The same color stone would have to be shaken out three times consecutively for the answer to be confirmed. *Urim* is the Hebrew word for "lights" and therefore would logically be associated with bright or white stones. One recent study has pointed out that hematite, because of its use for weights and seals, was termed the "truth stone" in Sumerian. The Hebrew word *thummim* could have a similar meaning. Hittite KIN-oracles feature a detailed description of the question, concluding with the request that the answer be favorable. Then there is a series of three castings of the lot to determine the answer. In this context a series of yes or no questions were posed, and after this binary inquisition the lot indicated Jonathan as the offender.

14:47-48. Saul's conquests. The narrator's selection has focused on the spiritual failures of Saul, but here he makes it clear that there were many victories. There is no suggestion in the text or evidence from extrabiblical materials to suggest that these victories represented an expansion of Israelite control or territory. Moab, Ammon and Edom are the neighbors to the east and south. Philistines and Amalekites border on the southwest and are the Israelites' archenemies during this period. Zobah is an Aramean state located in the Beqa Valley region of modern Lebanon. It is possible that these battles of Saul's were defensive rather than offensive.

15:1-35

Saul's Amalekite Failure

15:2-8. Amalekites. The Amalekites were a nomadic tribe inhabiting the desert south of Judah in the Negev and Sinai. The biblical writers saw them, like the Edomites, as descended from Esau. They were the traditional enemies of the Israelites, beginning in Exodus 17:8-13, where they attempted to block the Israelites from crossing into West Asia from Egypt. The passage here is the first recorded instance of the Israelites invading Amalekite territory. The Amalekites are not mentioned in any extrabiblical source.

15:3. the ban. The "ban" is sometimes chosen as the English word to represent the concept of total destruction that is commanded here. Just as there were some types of sacrifices that belonged entirely to the Lord while others were shared by priest and offerer, so some plunder was set aside as belonging solely to the Lord. Just as the whole burnt offering was entirely consumed on the altar, so the ban mandated total destruction. Since the warfare was commanded by Yahweh and represented his judgment on Israel's enemies, the Israelites were on a divine mission with Yahweh as their commander. Since it was his war, not theirs, and he was the victor, the spoil belonged to him. Although the divine warrior motif occurs throughout the ancient Near East, the *ḥerem* concept is more limited—the only other occurrence of the term is in the Moabite Mesha inscription, but the idea of total destruction is also in the Hittite material. The best analogy for us to understand *ḥerem* is to think in terms of radiation. A nuclear explosion would destroy many things and irradiate much more. The abhorrence and caution with which we would respond to that which has been irradiated is similar to what is expected of the Israelites regarding things under the ban. If radiation were personified, one could understand that once something was given over to it, it was irredeemable. It was this condition that Saul exposed himself to by not following the instructions for the ban. Although peoples outside the land were exempt from this, God had singled out the Amalekites for destruction because of their acts against God's people (15:2).

15:4. Telaim. Telaim (Telem in Josh 15:24) was a city of uncertain location in the Negev, but not far from Ziph (modern Khirbit ez-Zeifeh), about thirty miles south of Hebron. The city belonged to the tribe of Judah.

15:4. size of army. Saul had only used three thousand men in 1 Samuel 13, and David fought against the Amalekites with only four hundred men. The word translated "thousand" in these passages should be rendered by its alternate meaning, "companies" or "divisions." Rather than a specified number, it has been suggested that each clan supplied a division, with the number varying dependent on the size of the clan. Later in history these companies were standardized as having a thousand, but here there may be as few as ten in a division. Thus two hundred military divisions came from Israel and ten from Judah. The precise numbers of soldiers would not be known.

15:6. Kenites. The Kenites are mentioned in Scripture as having a nonaggressive relationship with Israel. It has been argued that the term *Kenite* is a reference to metalworking and that the Kenites were itinerant smiths. They were usually found on the southeast border of Judah near Edom. Many of the Kenites were linked to Moses (Judg 1:16, 4:11). Some have suggested that they enjoyed a status as ritual specialists.

15:7. Havilah to Shur. The location of Havilah is uncertain but was probably on the western edge of the Arabian Peninsula near modern Medina (see comment on Gen 25:18). Though it is not impossible that Saul chased them all the way to Egypt, other possibilities are allowed in the wording of the text. One is that Saul chased them along that road. A second is that the text is identifying a certain group of Amalekites, those working the trade route from Havilah to Shur.

15:12. king's monument. Ancient Near Eastern kings often commemorated a victory with a commemorative stele. These would typically offer the details of the successful military campaigns and proclaim the suzerainty of the king over the area. One of the most famous is a stele of the Egyptian king Merenptah (c. 1224-1214) commemorating a victory over the Libyans. They tended to glorify (and enhance) the king but additionally were usually intended to elaborate on how the deity had brought victory to his favored one. Saul's monument was at the Judean town of Carmel. Absalom set up a similar monument in the King's Valley (2 Sam 18:18).

15:22. obedience better than sacrifice. In the ancient Near East oracular instructions from the deity typically concerned ritual procedures for the king to perform. If there were instructions to carry out some military activity, it could easily be assumed that the deity would give such a command in order that his or her temple could benefit from the booty that would be taken. As a result, it would be

difficult to separate the ideas of obedience and sacrifice. Obedience to most oracular instructions would inevitably result in sacrifices being offered to the deity. It is easy to understand how Saul would see obedience in terms of sacrifice rather than as an alternative possibility.

15:23. comparison of offenses in ancient Near East context. The Hebrew word that the NIV translates "rebellion" has to do with pressing one's case. It is used to describe the Israelites' contentiousness in the wilderness. Here it represents Saul's attempts to justify and excuse his actions. Samuel compares this to divination. Divination assumed that there was knowledge to be gained about the activities and motives of the gods through the use of various indicators (such as the entrails of sacrificed animals). It professed to be able to identify what would please the deity without specific input from the deity. In the same way Saul was contending that he knew what would be pleasing to deity (despite Yahweh's specific commands). His contentions claimed the same kind of information divination would offer—that he had an inside track on what would please God. The Hebrew word NIV translates "arrogance" is used when someone is trying to force a particular course of action. Samuel appropriately compares this to idolatry (specifically he refers to teraphim; see comment on Gen 31:19) in that the idols were typically used to manipulate and coerce the gods into particular courses of action (see comment on Deut 4:15-18). Food and gifts were presented to the gods so that the gods would be obliged to grant requests or bestow blessings. Samuel is suggesting that that is exactly the activity Saul intends to engage in as he plans to present all of these cattle to the Lord. Saul was attempting to manipulate with gifts in the same way that idol worshipers did.

15:27. Samuel's hem. As the high priest's garments had an elaborately decorated hem (Ex 28:33-34), Samuel's robe would also have had a distinctive fringe or design marking him as a prophet. It may have been specially dyed or contained a special stitching, and it symbolized his power and authority. Its importance for identification is indicated by the fact that a hem impressed on a clay tablet is used to identify a prophet in the Mari texts. A husband divorced his wife by symbolically cutting off the hem of her robe. Grasping the hem of the garment was a common phrase found in Ugaritic, Aramaic and Akkadian (languages related to biblical Hebrew). In Akkadian the phrase was "to seize the hem." Grasping the hem of someone's garment was a gesture of supplication and submission, both in Israel and Mesopotamia. Saul's grasping of Samuel's skirt was a final plea for mercy. This is also the case in the Ugaritic Baal Cycle, where Anat seizes the hem of Mot's garment to plead for her brother Baal. Old Babylonian texts evidence the seizing of the hem as a means of forcing a person into a legal confrontation. When the hem ripped, the prophet recognized this as a symbolic act. The tearing of the garment represented the tearing of the kingdom from Saul's hands.

15:33. put Agag to death. The word used here is unique in the Old Testament and is sometimes translated "hacked to pieces." Dismemberment was a common procedure for the execution of high-ranking enemies and is depicted on a relief of the Assyrian king, Shalmaneser III.

16:1-12
David's Anointing

16:1-13. succession narrative and Hittite apology. The description of David's rise to the throne of Israel has some similarities with annalistic documents from Hittite Anatolia of the fourteenth and thirteenth centuries B.C. The Proclamation of Telepinu is a decree or an edict with a long prologue justifying the king's cause. Telepinu, a usurper, attempted to justify his accession to the throne by recalling events that actually happened generations before the reign of the king he overthrew. Although, like David, he did not claim any hereditary legitimacy, he showed that he belonged to a line of legitimate and successful predecessors whose principles were betrayed by the king whom he removed. A second example, the Apology of Hattusilis, was a document whose purpose was to justify the revolt that brought Hattusilis to the throne. Like Telepinu, he claimed to have taken the throne because of an unworthy predecessor. David's replacement of the unworthy Saul has superficial similarities with these two Hittite kings. The biblical text, however, is anxious to demonstrate that David did not usurp the throne and in fact did nothing to undermine the reign of Saul. He was not involved in any plot but was simply a pawn in the divine plan.

16:1. anointing with olive oil. Anointing a king was common practice in some parts of the ancient Near East. Among the Egyptians and Hittites, anointing was believed to protect a person from the power of netherworld deities. Much of the evidence comes from Hittite sources describing enthronement ceremonies.

There is no evidence of kings being anointed in Mesopotamia. In Egypt the pharaoh was not anointed, but he anointed his officials and his vassals. This anointing established their subordinate relationship to him and indicated his protection of them. In the Amarna texts there is reference to a king of Nuhasse (in modern Syria) being anointed by the pharaoh. This model would fit the idea of David being anointed as a vassal to God. In 2 Samuel 2:4 it is the people who anoint David. This anointing suggests some sort of contractual agreement between David and the people he will govern. In Nuzi, individuals entering a business agreement anoint one another with oil, and in Egypt, oil anointment is used in wedding ceremonies. For information on royal coronations see comment on 11:15. The spices used for anointing purposes were myrrh, cinnamon, cane and cassia (see recipe in Ex 30:23-25). Oil symbolized the gifts of God to the people and the responsibilities now laid on their leaders through this ceremony. In Israelite practice, anointing was a sign of election and often closely related to endowment by the Spirit. Additionally, throughout the ancient world anointing symbolized an advance of a person's legal status. Both concepts of protection and change of status may correlate to the king's anointing, for it would offer him protection on the throne and identify him with the divine realm.

16:4. Bethlehem. The village of Bethlehem was about six miles south of Jerusalem, lying on the border of the fertile region of Beit-Jalah and the dry region of Boaz near the Judean Desert. Bethlehem may be mentioned in a fourteenth-century letter of Abdi-Hepa, king of Jerusalem. He refers to a town called Bet-Ninurta, which some have suggested could be read as Bit-Lahama. There are meager Iron Age (c. 1200-586 B.C.) remains found at Bethlehem, primarily on the lower city.

16:5. sacrifices at local shrines. Before the construction of the temple in Jerusalem, it was acceptable for the Israelites to perform sacrifices at local sanctuaries, which were quite numerous. Though the term is not used here, this may be one of the high places (Hebrew *bamoth),* man-made installations in which cultic acts were performed. Such installations often included cultic furniture, such as a platform or an altar. In later periods the high places were condemned by the prophets.

16:7. deity searching the heart. It was a common understanding that the gods were not limited to what could be observed on the outside but were capable of deeper insight. In an intriguing Sumerian lament the moon god is portrayed as one who searches the bowels and the hearts of an anointed one who stands before him in supplication. In a Neo-Babylonian text, Shamash (the god of justice) is said to see into the heart of man.

16:10-11. eighth son. The motif of the youngest, eighth son as a hero is seen as early as the Sumerian epic called Lugalbanda in Khurrumkhurra (mid-third millennium), where Lugalbanda is the eighth son who joins his seven older brothers on an escapade to conquer the city of Aratta. Through a series of adventures he emerges the hero.

16:13-23
David at the Palace

16:13-14. role of the Spirit of the Lord. In the Judges period the Spirit of the Lord endowed an individual with central authority that only the Lord possessed (see comment on Judg 6:34-35). The Spirit of the Lord came on Saul in very similar circumstances (see comment on 11:6) and also associated him with prophetic activity (see 10:6). The role of the king represented a more permanent central authority and likewise relied on empowerment by the Lord. The king was an agent of deity and a heavenly functionary just as judges and prophets were. The Spirit did not empower two individuals for the same task at the same time. When David received the authorization for the role as representative, it was taken away from Saul. Just as the Spirit was able to give the positive attributes of courage, charisma, insight, wisdom and confidence, negative results could also be produced by spiritual influence. These would include fear, paranoia, indecisiveness, suspicion and shortsightedness. The term used to describe this spiritual influence in verse 14 does not necessarily suggest something morally evil but has a wide range of negative manifestations (see for instance Judg 9:23; Is 4:4; 37:7; 61:3). Just as God can punish with physical illness, he can discipline by means of psychological affliction. In Mesopotamia the king was seen as being endowed with the *melammu* of the gods (the visible representation of the glory of deity). It designated him as the divine representative and indicated that his legitimacy was approved by the gods. In Assyrian inscriptions it is pictured hovering over the king. The *melammu* could be revoked if the king proved unworthy or incompetent. So in the epilogue to Hammurabi's Laws the king utters a curse on anyone who does not heed the words of the law. If it is a future king, Hammurabi says, "May Anu revoke his *melammu,* break his

scepter and curse his destiny."

16:16-18. court musicians. Court musicians, both male and female, are attested at many royal courts throughout the ancient Near East. They are attested in texts (including, for instance, Uruk and Mari) in the Tigris-Euphrates Valley, Hittite Anatolia and Egypt. Additionally, musicians are frequently portrayed in Egyptian tomb paintings. Musicians were usually retained for the ruler's entertainment or for cultic ceremonies. They were included among permanent palace personnel, as ration lists demonstrate.

16:16. harp. The musical instrument here is more precisely a lyre, a stringed instrument. It usually had two arms rising up from the sound box. The strings were attached to the crossbar at the top of the instrument. Examples of lyres have been found at Canaanite Megiddo.

16:20. gifts sent with David. One can assume that David's father Jesse was honored by the drafting of his son into royal service and thus sent gifts. Bread and wine are occasionally mentioned as gifts in the Old Testament. The precise purpose for gifts in this passage is unknown. However, without any formal taxation, David's family may have made a donation to the royal kitchen, since David himself was part of the king's house. There are many examples of subordinates in the Neo-Assyrian period bringing gifts of food to the Assyrian monarch.

17:1-58
David and Goliath

17:1. Philistines. The group of Philistines that are known through the narratives of 1 and 2 Samuel came into the Palestine area with the migration from the Aegean region of the Sea Peoples about 1200 B.C. It is the Sea Peoples that are generally thought to have been responsible for the fall of the Hittite Empire and the destruction of many cities along the coast of Syria and Palestine, such as Ugarit, Tyre, Sidon, Megiddo and Ashkelon, though the evidence for their involvement in those areas is circumstantial. Their battles with the Egyptian pharaoh Rameses III are depicted on the famous wall paintings at Medinet Habu. This international upheaval is also reflected in the Homeric epic of the siege of Troy. Coming from Crete, Greece and Anatolia, the Sea Peoples may have used Cyprus as a base from which to launch their attacks. Following the repulsion of the Sea Peoples from Egypt, the tribe that came to be known as the Philistines settled on the southern coast of Palestine, where they established their five capital cities of Ashkelon, Ashdod, Ekron (Tell Miqne), Gath (Tell es-Safi) and Gaza. They had overrun Israelite territory in the battle in which the ark was taken (1 Sam 4) and again will do so in the battle in which Saul and his sons are killed (chap. 31). During the reign of Saul there is continual conflict as Saul tries to rid the land of their presence and prevent further incursions.

17:1. location of Philistine camp. Socoh (modern Khirbet Abbad) was a town in the Shephelah Valley about fourteen miles west of Bethlehem near Philistine territory. The site has been surveyed and has produced ceramic remains dated to this time period. Azekah (modern Tell ez-Zakariyeh) was a fortress three miles northwest of Socoh, which controlled the main road across the Elah Valley. The site was excavated earlier this century, uncovering a rectangular fortress with four towers that was dated to this period. This area was of strategic importance to both sides as the main pass between the Philistine plain and the Judean hills. The main road through the Shephelah region heads north from Lachish to Azekah, but about a mile south of Azekah a road goes east following the Wadi es-Sant that opens into the Elah Valley. Ephes-Dammim has not been positively identified but would logically be looked for in this area.

17:2. Israelite camp. The Valley of Elah ("Terebinth") was the broad north-south plain that had an opening where the Wadi es-Sant started its rise into the hill country of Judah, about two miles east of Socoh.

17:4. Gath. Gath has been tentatively identified as Tell es-Safi, five miles south of Tell Miqne/Ekron. Of the five major cities of the Philistines it was the closest to Judah. There has been little excavation at the site, though it has been confirmed that there are Iron Age remains. The city was located about five miles west of Azekah by the Wadi es-Sant that opens up into the Elah Valley.

17:4. Goliath's size. Goliath's height is given in the text as about nine and a half feet. It is suspected that he is of the same stock as the Anakim, the giant inhabitants of the land that the Israelite armies were able to defeat in the conquest. The descendants of Anak are generally considered "giants," though the description "gigantic" may be a more appropriate line of thinking. Champions of this size are not simply a figment of Israelite imagination or the result of embellished legends. The Egyptian letter on Papyrus Anastasi I (thirteenth century B.C.) describes fierce warriors in Canaan who are seven to nine feet tall.

17:5-7. Goliath's armor. Goliath's helmet was likely the typical Philistine feathered headdress known from Palestinian and Egyptian art. His body armor ("plaited cuirass") was probably of a well-known Egyptian style of bronze scale armor that covered the entire body, weighing over 125 pounds. One of the best descriptions of scale armor comes from the Nuzi texts, where a mail coat was comprised of anywhere from seven hundred to over one thousand scales of varying sizes. These scales were sewn onto a jerkin of leather or cloth. The front and back were sewn together at the shoulders (with a space for the head) and probably reached to the knees. His greaves were probably made of molded bronze around the entire calf, padded inside with leather, a type known from Mycenaean Greece. His scimitar (NIV: bronze javelin) was probably a heavy, curved, flat sword with a cutting edge on the outer side of the blade (see comment on Josh 8:18). His spear was something like a javelin, with an iron spear point that weighed over fifteen pounds. It may have been equipped with a ring for slinging, a type known both in contemporary Greece and Egypt. Although most of the weapons were made of bronze, the spear point was made of iron. Goliath's shield was most likely a standing shield, which would have been larger that a round shield.

17:8-10. champion warfare. At times individual combat was used, with the individuals viewed as representatives of their respective armies, so that the divine will could be expressed. Examples of individual combat are known in Egypt on the Beni Hasan wall painting (early second millennium) and in the Egyptian Tale of Sinuhe. It is likewise depicted on a Canaanite vase from the first half of the second millennium. Nearer in time, parallels can be found in the *Iliad* (Hector against Ajax, Paris against Menelaus) and the Hittite Apology of Hattusilis III. A relief from the tenth century found at Tell Halaf depicts two combatants grabbing at one another's heads and thrusting with short swords.

17:11. role of king. The text undoubtedly wants to display Saul's incompetence. The people had sought a king to lead their armies into battle. It was not odd, however, for a king to send out a champion rather than going himself. Even in the event that the king was a great warrior, others would be given the opportunity to prove their skills first. In some senses it would resemble all of the preliminary bouts that precede the "main event" in boxing. As early as the Sumerian epic Gilgamesh and Aka, the practice is seen of the real champion holding back while he sends a capable fighter under his command to engage the enemy. This is also evident in the *Iliad*, where Patroclus dons the armor of Achilles in order to go out and challenge Hector. Nevertheless, given the amount of time that had gone by, Saul should by now have been willing to take up the challenge himself.

17:12. Ephrathite. The Ephrathites were probably a tribal subdivision of the Calebites from the Bethlehem region. Bethlehem was a village within the larger Ephrathah clan, and later the clan became synonymous with the village itself.

17:12. Bethlehem. See comment on 16:4.

17:17-18. food supplies. David came to the camp with about half a bushel of roasted grain (either wheat or barley), loaves of bread and cuts of cheese, all of which were favorites for common people. The grain would typically be fashioned into loaves for consumption, and some would likely be made into beer. In Egyptian texts ten loaves of bread, a half a pound of barley and a jug of beer represented a standard daily wage. The Assyrian annals describe soldiers traveling with grain and straw for their horses. Local governors in Assyria were required to open granaries for armies that were traveling through the region. Since the army is in the vicinity of the Judean hills, it is likely that the people from the area were expected to provide supplies.

17:18. what David is getting from them. David was told to ask how his brothers were doing and to "pick up their assurance." This was likely some sort of token returned with David to confirm that the goods had been provided. This would be proof that Jesse had met his obligations to supply the army and would be the brothers' way of collecting their rations. An Akkadian (a language from Mesopotamia related to Hebrew) pledge was often a cased clay tablet sent with a messenger.

17:19. distance between Bethlehem and Elah. Bethlehem was about fifteen miles from the Valley of Elah, which took most of the day for David to walk.

17:25. reward for killing Goliath. Ancient kings were often interested in procuring the allegiance of those who had demonstrated military prowess. Marriage agreements in the ancient Near East would often function as political or social alliances between families and thus benefit both parties. Thus the champion's family would receive important recognition from being connected to the crown, while the

king would be allied to the renowned hero who had killed Goliath. The Hebrew says nothing about taxes, only that his father's house will be free in Israel. Some have compared the Hebrew word to its Akkadian cognate, which sometimes designates a social class. This then would probably describe a family that had become clients of the crown, supported by allocations of plots of land and supplies, which is implied in 1 Samuel 22:7. This type of client class is well known from Mari texts, the Code of Hammurabi and the Laws of Eshnunna. In these texts, individuals received land grants from the crown, likely based upon service rendered to the king. Perhaps more likely is the comparison to another term in Ugaritic texts that refers to a reward for an act of bravery. It exempts the recipient from mandatory service to palace.

17:36. lions and bears around Bethlehem. Recent excavations in Palestine have uncovered both the lion and the bear in Iron Age levels (early first millennium B.C.). Bears were typically found in the hilly wooded areas of the central hill country, where caves and forests provided their habitat. Similarly the lion would have made its home in the central hills, which were more heavily forested during this period. Although evidence for the lion is lacking in the modern era, the bear survived in the region until early this century. In this region in antiquity the lion was found in Greece, Turkey (Anatolia), the Near East, Iran and India, while there was a Syrian form of the widespread brown bear.

17:37. expectation of divine intervention. The idea that God fought as a partner in battle was a common theme in the ancient Near East. Victories were attributed to deities in both Egypt and Mesopotamia. In fact the encounter was initiated by the deity itself, who then fought alongside the monarch (see comment on 4:3-7). In Egypt regiments were named after the god under whose standard they fought. In Canaan the divine warrior was identified as one who devastated nature. However, it was recognized by these societies that the gods also participated through the use of individual agents who had been commissioned to do the god's bidding in battle. This aspect is seen clearly in contemporary Greek literature as the various gods aid and protect their favorites in the *Iliad*.

17:38-39. Saul's armor. The use of protective armor (shields, helmets, coats and greaves) is attested in Egypt and Mesopotamia by the early third millennium B.C. Though rarely found in archaeological contexts, even early portrayal of soldiers depict them wearing heavy armor (for example on reliefs from the Sumerian city of Lagash and from murals from Hierakonopolis in Pre-Dynastic Egypt). The palace of the Assyrian king Sennacherib (seventh century B.C.) exhibits numerous wall reliefs portraying Assyrian military dress and tactics. The king's tunic and armor would have been very distinctive. If David went out dressed in them, many would have thought that the king himself was going out. Perhaps such a misidentification would have seemed attractive to Saul, who had been sought out by the Israelites to lead them forth in battle. In the *Iliad* a similar switch occurred when Patroclus went out in the armor of Achilles, hoping to intimidate the Trojans. David's refusal would have reflected his recognition that without being trained on how to use the armor and weapons to his advantage, they would become a detriment.

17:40. sling. Although described simply as a shepherd's weapon here, the sling was also used in organized warfare, and Goliath would have been well aware of its deadly potential. Assyrian slingers are depicted on the walls of Sennacherib's palace at Nineveh. In the Babylonian Wisdom composition entitled *Ludlul Bel Nemeqi* the sufferer reports his deliverance by a variety of metaphors, one of which claims that Marduk took away his enemy's sling and turned aside his sling stone. Assyrian sling balls were found at Lachish, an Iron Age Judean fortress town. These were the size of a human fist (two to three inches in diameter) and had been used for the successful Assyrian siege of Lachish in 701 B.C. (possibly also by the Babylonians in their siege of Lachish in 587 B.C.). The Benjaminites were known to be deadly accurate with their slings (Judg 20:16), and it is estimated that a skilled slinger could hurl the rocks at more than one hundred miles per hour. The effective range would probably not exceed one hundred yards. The stone was held in a leather pouch with cords attached at opposite ends. The sling was whirled over the head until the person let go of one of the ends.

17:43-47. prebattle insults. Goliath's insults and curses against David and his God reflect a common rhetoric in these types of confrontations that is found throughout the Near East and eastern Mediterranean. Insulting bravado was intended to demoralize and intimidate the opponent. The curses that were included were not merely empty words but were presumably backed by the person's deity. Sennacherib's representatives at the gates of Jerusalem in 701 B.C. extolled the greatness of the gods of Assyria and ridiculed the God of

Judah as incapable of defending his city (2 Kings 18:17-36). In the Gilgamesh Epic the guardian of the cedar forest, Huwawa, tells Gilgamesh that he should have given his flesh to be eaten by birds of prey and scavengers.

17:43. names of Goliath's gods. Although Goliath's gods are not named, one of the primary deities of the Philistines mentioned in the Bible is Dagon, the patron deity of many West Semitic peoples from the Middle Euphrates region to the Mediterranean coast. Temples to Dagon have been found at the Philistine sites of Gaza and Ashdod. They also worshiped Baal-Zebub, whose temple has been found at Ekron, and the goddess Ashtoreth, who had a temple at Beth Shan (1 Sam 31:8-13). Archaeology, however, has also shown that the Philistines had cultic and architectural connections with the Aegean. Schematic representations of female deities similar to those found in the Aegean have been found at Ashdod, Ekron and Tell Qasile. Cultic vessels showing Aegean influence have also been found.

17:45-47. foundation of David's boast. David's claim would have been acknowledged within the broad theological framework of the ancient world. There are two concepts in tension here. The first is that the stronger, better-equipped warrior is a more effective agent for the gods who are battling. This would be the basis for Goliath's presumed superiority. David is simply following the logic to its inevitable end to arrive at the second concept. If the gods are, in actuality, doing battle with one another through the human agents, then the strength and weapons of the human combatants are irrelevant. Thus Yahweh is described as Yahweh of Hosts, paraphrased with a military description, "the God of the battle ranks of Israel" (author's translation), and David's boast is based on Yahweh's abilities, not his own. This claim would perhaps be psychologically sufficient to undermine Goliath's confidence. Similarly in the *Iliad* Hector acknowledges the superiority of Achilles but suggests that the gods may be on his side and allow him to kill Achilles. In another example, when Hector and Telamonian Aias have fought to a draw, Hector suggests they desist until another day, when the gods will have decided which should win.

17:49. David's shot. The text offers no information concerning the range between David and Goliath when David took his shot. A stone from a slingshot is capable of delivering a killing blow but only when striking a few strategic areas of the head (which was protected). David's shot targeted one of the few vulnerable areas that could render his opponent unconscious. This allowed him to approach and secure Goliath's sword, which he then used to kill his unconscious victim (despite the NIV's implication that the shot killed Goliath).

17:51. cutting off the enemy's head. Killing the enemy with his own weapon was not an unprecedented feat. Similarly, Benaiah took the Egyptian's spear out of his hand and killed him (2 Sam 23:30). In Egyptian literature, Sinuhe killed a soldier from Retenu with his own battle-axe. It can be assumed that Goliath's head was a trophy that was to be put on display. Assyrian king Ashurbanibal was reported to have dined with his queen in the garden with the head of the king of Elam on display in a nearby tree.

17:52. Gath, Ekron and Shaarim. Ekron, like Gath, was one of the five major Philistine cities. It was about five miles north of Gath. Shaarim was a city (and also the name of a highway) near Socoh and Azekah (see Josh 15:36). It is probably the modern site of Khirbit esh-Sharia, which is about one mile northeast of Azekah. Thus Shaarim was about six miles east of Gath and seven miles southeast of Ekron. The road from Shaarim went west and could be taken to either Gath or Ekron.

17:58. extrabiblical information on David. David as an individual is not mentioned by any ancient Israelite inscription, by any source outside of Israel or by evidence of any contemporary material remains at Jerusalem. However, a recent fragment of a ninth-century B.C. Aramaic inscription from Tel Dan has the phrase "House of David," denoting the royal house of the kingdom of Judah, the successor state to the united kingdom of Israel. Thus there is extrabiblical evidence from an enemy state that the Judahites understood their dynastic house to have been derived from a certain David, who most certainly was the famous David of the Bible.

18:1-30
David in Saul's Family and Court

18:4. Jonathan's gift to David. The word for the robe that Jonathan gave to David often denotes a royal robe. Ugaritic texts refer to a special robe worn by the crown prince. If Israel had the same custom, Jonathan would be renouncing his claim to the throne by giving David that robe. He also gave to him his daily warrior's garment and bow. The Israelite sword was carried in a sheath that hung from a belt. The bow was probably made of animal horn and sinews bonded with strips of wood. Jonathan's gifts to David may very well repre-

sent his willingness to give up and transfer his particular position as heir apparent to the throne of Israel. He thus was expressing loyalty and possibly submission to David.

18:5. David's office. The group of armed men over which David is given control here is the standing army made up of the professional military men. It is possible that this is not a field post but more of an administrative position ("secretary of the army"). The position is to be contrasted with the post given to David in 1 Samuel 18:13, which suggests a field command with active duty.

18:6-7. comparison between Saul and David. The comparison of Saul slaying "his thousands" and David "his tens of thousands" is a standard way of expressing a very large number in parallel lines of poetry. The same parallelism can be found in Psalm 91:7, where God protects an individual from a plague, and even in poetry from Ugarit, where the craftsman god, Kothar-wa-Hasis, is described as crafting silver by the thousands and gold by the ten thousands. The intention of these words is to convey large numbers, not to offer a comparison of one being greater than the other. In some cases the greater honor was placed in the last position, but Saul could have been angered simply because David was mentioned in the same breath as himself, thus placing him in the same rank as the king.

18:10. harp. See comments on 10:5 and 16:16.

18:10. spear. Saul's spear appears to have been a sign of his kingship, somewhat like a scepter (also see 22:6; 26:7). Saul stood with spear in hand with his troops in 22:6, in much the same way as the Egyptian monarch is artistically depicted with a scepter. The Assyrian kings were often depicted with weapons in their hands, which were occasionally spears. The spear was not designed to be thrown like the shorter javelins but was usually a thrusting weapon used by the infantry. Nonetheless the *Iliad* portrays mighty warriors hurling heavy spears effectively at their opponents.

18:13. David's office. David is said to be given rule over "one thousand," but the term probably refers to the military division supplied by a clan, with the number varying dependent on the size of the clan. Later in history these companies were standardized as having a thousand, but early on there may have been as few as ten in a division. Apparently Israel's army was divided into these "clans" (Num 31:5; Josh 22:21, 30; Judg 5:8). The army was further divided into "hundreds" (1 Sam 22:7) and even fifties (see comment on 1 Sam 8:12). David is now being put on active duty with a field command.

18:17. marrying the daughter of a king. Marrying the eldest daughter of the king would give David the title of "king's son-in-law," raising his status immensely. In some societies this would have been a potential stepping-stone to the throne, but no such practice is evidenced in Israel. David recognized that his family did not have the same social status as Saul. Saul would have been anxious to procure the loyalty and support of such a noteworthy warrior (see comment on 17:25). Thus David's lower social status was not considered a barrier to his marrying into Saul's family.

18:25. bride price. The bride price was a sum of money paid by the fiancé to the girl's parents (see comments on Gen 29:21-24; Ex 22:16-17; Deut 22:23, 25; 22:29) and typically provided for the wife ahead of time in case the husband deserted her or died. Such provision would not have been necessary for someone in the royal household, but the amount of the bride price would have reflected the status of the bride. David would not have had the means to enter into a royal marriage. However, the price appears to have been set by the father (see Gen 34:12), and thus Saul attached the bride price to the military prowess of the husband-to-be rather than to financial resources. It was not unusual in the ancient Near East for casualty counts to be kept by cutting off some body part: usually hands (see comment on Judg 8:6) or heads (2 Kings 10:6-8 and the practice of making piles of heads by Assyrian king Sargon II). The request for foreskins would have proven that the victims were Philistines, because many of the other neighbors of Israel would have practiced circumcision.

19:1-24
Saul's Pursuit of David

19:13. teraphim. The term *teraphim* refers to a household idol or idols that appear to have had a role in divination (Ezek 21:21; Zech 10:2) and were associated with luck and prosperity of the family. They were explicitly condemned by the biblical authors (Ex 15:23; 2 Kings 23:24). The narrator in Genesis 31 referred to Laban's gods as teraphim. The fact that Rachel was able to hide them under a saddle (Gen 31:19) suggests that some were quite small, though from this passage, it appears that David and Michal's teraphim were of human size and shape. Many of these small figurines have been found in Mesopotamia and Syro-Palestine. They were a part of the "popular" or local religion, not associated with temples or national cults for the major deities. One recent study has suggested they were figurines of the

ancestors, but others see them more generally related to the family's patron deity.

19:18. Ramah. In his desire for safety, David moved only two miles east of Gibeah/Geba to Ramah, which was Samuel's hometown.

19:18-24. Naioth. The term Naioth is associated with Ramah and is used only here in this context. It is probably not a proper noun but a generic word for camps. In the Mari texts the Akkadian word related to this Hebrew term is used to describe the encampments of mobile shepherding communities on the outskirts of town. It is possible that Israelite prophetic groups may have occupied shepherd's residences or simply formed a similar type of camp outside Ramah.

19:20. entranced prophesying. One could be trained for the profession of prophet (or seer), and there was a prophetic guild in this early period of Israel's history, usually identified as the "sons of the prophets." Typically these prophets would use various procedures in order to prepare themselves for receiving prophetic oracles. Music played an important role in inducing a trancelike state (ecstasy) that was seen as making one receptive to a divine message. In the Mari texts there is an entire class of temple personnel who were ecstatics and who often provided prophetic messages. This ecstatic prophecy, or prophecy that appears to proceed from someone in a "possessed" or trancelike state, was conducted in Mesopotamia through a functionary labeled a *muhhu.* In Israel the phenomenon often resulted in the prophets being thought of as madmen (see for example 19:19-24; Jer 29:26). Here it is not resulting in prophetic messages from the Lord but serves as a sign of the power of God on the messengers. In that sense it could be compared to the tongues of fire in the upper room in Acts 2.

19:22. well at Secu. Secu denotes a bare height and is not to be taken as a proper noun, because it has a definite article (not usual for proper nouns). There are more than half a dozen wells or springs along the two-mile road from Gibeah to Ramah.

19:24. Saul's "nakedness." Even Saul was "infected" by God's Spirit and became possessed (had an ecstatic experience) resulting in stripping off his garments. This is yet another case of Saul being overcome by the Spirit in various ways (cf. 10:10; 11:6; 16:14). The term "nakedness" can denote the removal of the outer garment, not entire nakedness, and that is probably what is involved here. He not only shamed himself in front of Samuel but also laid aside his kingly regalia, confirming his rejection as king.

20:1-42
Jonathan Helps David

20:5. New Moon festival. Keyed to its use of a lunar calendar, ancient Israel marked the first day of the month, with its "new moon" phase, as a festival day (every twenty-nine or thirty days). As on the Sabbath all work was to cease (see Amos 8:5), and there were sacrifices to be made (Num 28:11-15). In the monarchy period the king became a prominent figure in these celebrations (see Ezek 45:17), and this may explain the political importance of Saul's feast. The festival continued to be observed in the postexilic period as well (Ezra 3:5; Neh 10:33). New Moon festivals were also prominent in Mesopotamia from late in the third millennium down to the Neo-Babylonian period in the middle of the first millennium B.C.

20:6. annual family sacrifice. The tradition of an annual family sacrifice had also been reflected in the family of Hannah and Elkanah (see comment on 1:3). This was separate from the agricultural festivals and pilgrimages (2 Chron 8:13). In David's time this meant an ingathering of the family at the clan site, Bethlehem. Since it represented a higher level of obligation and familial loyalty, the annual sacrifice could easily serve as a valid excuse for David to absent himself from Saul's monthly celebration of the new moon.

20:26. ceremonial uncleanness. Saul considers David's absence to be likely due to ritual impurity. No one could participate in cultic activity, like the New Moon festival, when in a state of uncleanness. This could occur in a variety of ways: contact with bodily discharges such as semen or blood; contact with the dead or the diseased; and contact with an object that has come in contact with something that is unclean (see the laws of impurity and the methods for ritual cleansing in Lev 11—15). Bathing, a waiting period, sacrifices and examination by a priest were the principal means of purification.

21:1-9
David's Flight Through Nob

21:1. Nob. Although its exact location is unknown, Nob is generally believed to lie just north of the city of Jerusalem. Possible locations include Ras el-Mesharif on the slope of Mount Scopus and Qu'meh (see Is 10:32). In David's time it served as the sanctuary site and was served by Aaron's descendants. Presumably it had been moved from Shiloh after the death of Eli and his sons (see 1 Sam 4:10-22).

21:4-6. bread from the table. Twelve loaves of freshly baked bread were placed on the table of the Presence to symbolize the twelve tribes of Israel (see Ex 25:23-30). They were replaced by new loaves each Sabbath, and the old loaves were to be consumed by the priests (see Lev 24:5-9). In this case, due to the need for supplies and David's assurance that his men were ritually clean, Ahimelech had the jurisdiction to allow for a variance.

21:5. purity of men. Since the "consecrated bread" was reserved for priestly consumption, David had to swear that his men were ritually pure before the priests would give him the loaves. Sexual intercourse or contact with women who were menstruating were among the ways that a man could become "unclean" (Lev 15:32-33).

21:7. chief shepherd. Doeg the Edomite is probably a mercenary in the employ of Saul. Many translations allow a slight emendation, rendering "runner" for this word. This would fit well with his function as a royal messenger or spy, whose job was to carry instructions throughout the kingdom and report unusual happenings like David's visit to Nob. A similar use for royal messengers is found in the Mari texts. Nevertheless, chief of shepherds is a common administrative designation, used, for instance, in the titles of the scribe who copied the Ugaritic Myth of Baal and Mot.

21:7. reason for Doeg's presence. Doeg is said to be detained "before the LORD" at Nob. It is possible that he is awaiting a reply to a question sent by the king or a personal oracle. If he is a messenger, the former seems most likely. If he is a herdsman, then he may have delivered a consignment of animals for sacrifice or be giving an account to the officials at Nob of his activities.

21:9. behind the ephod. The ephod, as described in Exodus 28:6-14, was a garment worn by the high priest. In the ancient Near East the ephod was one of the garments used to clothe the image of the deity. Since no image is mentioned here, another alternative is that it hung on a stand of some sort (also a possible explanation of Gideon's ephod in Judg 8:24-27). With the ark still out of the picture, the ephod may have become the holiest relic of the sanctuary. Captured articles of power such as Goliath's sword would therefore be kept there (just as the ark had been put in the temple of Dagon, see comment on 5:2).

21:10-15
David and Achish

21:10. Achish. This King Achish is not referred to in any extrabiblical sources, but the name Achish is attested as a Philistine royal name at a later date. Assyrian records of the seventh century list Ikausu, son of Padi, as the king of Ekron. Ikausu is the same as Achish, son of Padi, named on an inscription from the same period found at Ekron (Tell Miqne).

21:10. why would David go to Gath? Though over twenty miles from Nob, Gath was the closest of the major Philistine cities to Judah. It was most likely David's intention to offer his services as a mercenary to the Philistines. It could be anticipated that they would welcome a proven military man of David's reputation and the opportunity to have this renowned warrior fighting with them instead of against them. Additionally, David's allegiance might eventually give them the chance to launch a strike against Saul and depose him, putting David on the throne of Israel as their puppet. All of this would have argued for the Philistines welcoming David with open arms, but factors were at work for which he had not calculated.

21:11. song. David's notoriety as a mighty warrior and enemy of the Philistines is recalled by Achish's advisers. They quote the chant first mentioned in 1 Samuel 18:7 to warn their lord not to trust him. Its lauding of David has taken on the status of national anthem and neutralizes any positive potential David might have hoped for the Philistines to imagine.

21:13-15. feigned insanity. David was sharp enough to recognize that his negative status as an enemy warrior was obscuring his potential status as a mercenary, ally and potential puppet ruler. Thus he shrewdly reclassified himself by changing his behavior and acting insane. Though David's reputation was well-known, very few Philistines would have ever got a close enough look at David to identify him by appearance. The only evidence they have that he is the famous David is his own self-identification. By acting insane, he discredits that identification. Now he is just a madman claiming to be a famous person. In the ancient Near East, insanity was often identified with possession by a god. A sign of this is that the Hebrew word used here for David's actions, *shaga'*, appears in 2 Kings 9:11, Hosea 9:7 and Jeremiah 29:26 for ecstatic (i.e., "mad") behavior by prophets. These people, while accepted as signs of the presence and sometimes as the messengers of the gods, were not sought after. They must be allowed to live, which is what David was counting on here, but they were also excluded, when possible, from polite society.

22:1-5
David Gathers a Band

22:1. cave of Adullam. This site in the Shephelah (possibly Tell esh-Sheikh Madhkur, five miles south of Beth Shemesh and ten miles southeast of Gath) served as a rallying point and stronghold for David and his men during his period as an outlaw (see 2 Sam 23:13 for its association with David's exploits involving his thirty "mighty men"). It seems to lie in a sort of "no man's land" between Philistine and Israelite territory.

22:1-2. David's band. Like other political and social dissidents before him (see Jephthah's band of adventurers in Judg 11:3), David assembled a group of four hundred men during his outlaw period. This included some family members (since otherwise Saul would probably have imprisoned or killed them because of their association with David), but the majority of his band was probably made up of social outcasts (known in ancient Near Eastern literature as *habiru),* mercenaries and men who saw an opportunity to overthrow Saul. Their bitterness and discontent made them rally to David as their champion.

22:3. Mizpah in Moab. The exact location of this Mizpah ("watchtower") is unknown. Presumably it was a royal Moabite city or at least a fortress. Among the suggested sites are Kerak and Rujm el-Meshrefeh in Jordan.

22:3-4. why protection in Moab. Perhaps because of his Moabite ancestry through Ruth, David felt he could claim kin ties and safely place his parents in the protective custody of the king of Moab (see Ruth 4:17-22). It is also possible that David was counting on Moab's enmity toward Saul (see 1 Sam 14:47). An example of revolutionary fugitives seeking refuge in a mother's country can be seen in Idrimi, king of Alalakh (during the Judges perid), who fled to his mother's family at Emar. Idrimi in exile became the leader of a Habiru band that eventually helped him regain his throne.

22:4. the stronghold. This most likely refers to David's base of operations near the cave of Adullam (see 1 Sam 22:1). Some have suggested that it is a reference to Masada.

22:5. Gad. This is the first appearance of this Israelite prophet or seer. His advice to David to return to Judah and thus face up to Saul provided the type of divine backing David needed to begin his pursuit of the throne. See his involvement with David's census in 2 Samuel 24:11-25.

22:5. forest of Hereth. The exact location of this forested area is unknown, although it must have been in Judah. Suggestions include the site of Khirbet Khoreisa (approximately six miles southeast of Hebron) and Kharas, near Keilah (Khirbet Qila, about six miles northwest of Hebron).

22:6-23
Execution of the Priests

22:6. tamarisk tree at Gibeah. Once again a ruler is depicted as holding court under a tree (see Saul previously in 14:2 and the Ugaritic king Danil in the Aqhat epic). A tamarisk is a tree adapted to desert environments, with many slender branches and scaly leaves. It would be a rare site in the hill country near Gibeah. In this case it may also have marked a cultic site (see the sacred palm under which Deborah served as judge in Judg 4:5).

22:7. prerogatives of officers. One of the ways in which a king, chief or warlord maintained the loyalty and support of his military commanders was through the granting of land (a fief) and the right to its harvests and other resources (see 8:12-15). For instance, Hammurabi's laws and the Mari texts both describe the rights of fief holders and the obligations to the state. Thus Saul is reminding his officers here that their claims to these lands are based on his favor toward them. If they hoped to keep them, they should not consider giving their allegiance to David. Nor should they trust in David's ability to keep any promises of land grants and military commissions to his followers.

22:10. inquiring of God. Among the tasks assigned to the high priests in the ancient Near East was to seek an oracle from deity when requested. Babylonian and Assyrian religious texts mention the examination of animal entrails, the consulting of omen texts or the use of an object associated with the god to divine the future. This might have been done at Nob using the Urim and Thummim (see Ex 28:30) or the ephod (see Abiathar's use of the ephod in 1 Sam 23:5, 9). The giving of an oracle is not mentioned in 21:1-9, but Ahimelech admits that he "inquired of God" for David in 22:15.

22:14. David's office. Since kings seldom paid state visits to each other's capitals, messengers, functioning as royal envoys, served as royal surrogates. This role required them to function as diplomatic couriers, negotiators and occasionally as emissaries to the gods. Embodying as they did the authority and power of their state, kings' messengers were generally treated well by local officials. Their persons were protected, as well as their personal property. Ahimelech recites David's

marks of distinction as his defense for aiding him, including his status as a member of the royal family and commander of the king's bodyguard. Only the most trustworthy and loyal men could be expected to rise to these offices (see 18:27; 2 Sam 23:22-23). Thus as a sign of courtesy, extended to couriers, David was provided with food. Texts from Mari and other Mesopotamian cities list food, garments and other necessities given to royal emissaries to meet their needs on the road and to please their master.

22:16-19. destruction of priesthood by angry king. Saul's order to kill Ahimelech and the entire priestly community at Nob was so outrageous a sacrilege that his own officers refused. Only the Edomite mercenary Doeg was willing to carry out the order and in so doing also massacred the entire population of Nob. Saul's order gave a further sign of his instability and, as he was to discover (28:6), effectively cut him off from any contact with Yahweh. Charges of offenses against deity were often made against kings by their political enemies. Thus the Assyrian king Tukulti-Ninurta charged Kashtiliash with "crimes against Shamash," and the Persian king Cyrus claimed to have been chosen by Marduk to punish Nabonidus for failing to honor the god or his priesthood. Akhenaten, the rogue Egyptian pharaoh of the fourteenth century, had disenfranchised the powerful priests of the god Amun-Re and had scratched out the name Amun in all inscriptions. Thus Saul's action would be seen as just as significant an act of desecration.

22:20-23. Abiathar. Only a single priest escaped the massacre at Nob. Abiathar, the son of Ahimelech, fled to David's camp, bringing with him the sacred ephod (23:6). Once Abiathar had told him what Saul had done, David accepted responsibility and added the priest to his company. This event is the crux of the episode, since it placed in David's camp a divine representative, while Saul was left with no further contact point with God. Subsequently Abiathar was to consult the ephod for David (1 Sam 23:9-12) and serve as the visible symbol of God's presence with the outlaw band. Additionally this episode shows the fulfillment of the prophecy concerning Eli's family (1 Sam 2—3) in that this priestly clan was the family of Eli.

23:1-29
David Pursued and Rescued

23:1. Keilah. Located in the eastern portion of the Shephelah, near the border of Philistine territory, Keilah (Khirbet Qila, six miles northwest of Hebron) must have been a frequent target of raiders. It was also mentioned in the El Amarna tablets as a city contested between the rulers of Jerusalem and Hebron.

23:1-5. Philistines. For the Philistines as a part of the population of Canaan and as enemies of Israel, see comment on 4:1.

23:9-12. oracular use of ephod. For a discussion of the use of the ephod for purposes of divination, see comment on Judges 8:24-27. Abiathar's ability to make oracular inquiries for David stands in stark contrast to Saul's lack of divine guidance.

23:7. walled city. Keilah is identified as a walled city with gates that could be barred. As an important link on the roads north-south through the Shephelah and east into Judah, the city would have to be fortified against attack. Note that it was the unprotected threshing floors, which would have been outside the city walls, that the Philistines attacked in 23:1. Saul saw David as trapped within these walls, assuming he would be easier to capture here than in the open countryside. The site has not been excavated, so archaeology has little light to shed on the text.

23:14. strongholds in the wilderness of Ziph. The site of Tell Ziph is located thirteen miles southeast of Keilah and five miles southeast of Hebron. Although in the tribal territory of Judah, it is within a steppe area that would have been sparsely inhabited and a place in which fugitives could easily hide. The strongholds were small outposts that served as signaling stations and contact points for herdsmen and villagers in the area.

23:15-18. Horesh. The term literally means "wood" or "wooded height," and it simply adds a further qualifier to help locate the region where David and his men were hiding in the Judean wilderness and a setting for his meeting with Jonathan. It is generally identified with Khirbet Khoreisa, about two miles south of Tell Ziph.

23:19. Hakilah/Jeshimon. The barren strip of land running parallel to the Dead Sea on the eastern edge of the Judean Wilderness was known as Jeshimon. Despite its arid nature, the ruggedness of the area provided many hiding places, such as the hill of Hakilah, for fugitives like David (see similar description in 26:1, 3).

23:24. wilderness of Maon in Arabah. David moves further south into the Judean Wilderness along the Dead Sea. The Arabah is simply a term for the entire Jordan Rift Valley and here is probably synonymous with the Judean Wilderness. Maon is probably to be identified

with Khirbet Ma'in, eight miles south of Hebron and four and a half miles south of Tell Ziph.

23:29. En Gedi. The oasis of En Gedi lies midway down the Dead Sea and approximately thirty-five miles southeast of Jerusalem. Fed by a continuous spring, it is a splash of life and color in the midst of an otherwise barren landscape. It has served as a cultic site, military outpost and commercial center during its long history. David's choice of this area was probably based on the large number of nearby caves and the water supply. There are a number of fortresses from the period of the divided monarchy (eighth and seventh centuries) that have been discovered in this area. One is at the spring, while another is at the top of the cliff that offers a view of travelers for miles around.

24:1-22
Saul Spared by David

24:2. Crags of the Wild Goats. The name En Gedi means "spring of the young goat," and thus these crags probably take their name from the spring. Ibexes also live in these hills, adding one more possibility for the place name. However, it is a precarious region to take three thousand men on a search mission.

24:3. Saul's business in the cave. While the sheepfolds outside the cave suggested the presence of possible informants to question about the location of David, Saul's entering alone implies he simply planned to use its privacy to relieve his bowels.

24:4-5. significance of Saul's hem. Like the elaborately decorated hem on the high priest's garments (Ex 28:33-34), Saul's robe would also have had a distinctive fringe or design marking him as the king. It may have been specially dyed or contained a special stitching reserved only for the king's use, and it symbolized his power and authority. A hem impressed on a clay tablet is used to identify a prophet in the Mari texts. In Akkadian literature it was a sign of divorce for a husband to cut off the hem of his wife's robe. In diplomatic contexts it symbolized the breaking of an alliance.

24:6. the Lord's anointed. David's refusal to kill Saul when he had the opportunity (see also 26:8-11) is based on the king's status as the "Lord's anointed." He had been given his position by God and only God could take it from him. Political assassination is a very bad precedent for a claimant to a throne to employ (see the way in which it escalates in 1 Kings 15:25—16:27). Divine right to the throne could serve as an extraordinary insurance policy for the king as long as the mystique of being the "Lord's anointed" was maintained. Thus David's refusal to act demonstrates his loyalty to God's original designation of Saul as king and also provides an argument against future attempts on his own life when he became king. The person of the king was typically seen as being under the protection of deity in the ancient Near East. This is reflected, for instance, in a Hittite blessing on the king that affirms that the storm god will destroy anyone threatening the person of the king.

24:14. dead dog. In Akkadian literature humility was often expressed by using terms of self-deprecation. Comparing oneself to a dead dog or a stray dog was one of the common options. Similar dog metaphors are used in the Amarna letters and the Lachish letters.

24:21. oath not to decimate descendants. It was the common practice in the ancient Near East that a king who did not come to the throne by inheritance would summarily execute the prior king's descendants in order to eliminate any potential competition or sedition. This political expediency, however, by wiping out the family line, was popularly thought to jeopardize the afterlife of those family members who had already died (for further information see comments on Num 3:12-13 and Josh 8:29).

24:22. stronghold. See comment on 22:4.

25:1-44
David Encounters Nabal and Abigail

25:1. wilderness of Maon. See the comment on 23:24.

25:2. Carmel. This town lies within the Judean Wilderness, about eight miles southeast of Hebron and a mile north of Maon. It was taken from the Amalekites by Saul in 15:12, and it is therefore not surprising that the people are inclined to be loyal to Saul (as suggested by Nabal's response to David in vv. 10-11).

25:3. Nabal. This personal name means "the fool." That is an unlikely name for a mother to give her son at birth and is more likely to be a name applied to the man by the biblical writers to indicate his role in the story. His foolishness is in stark contrast to the wisdom displayed by his wife Abigail.

25:7. protection of sheep. David implies in his message to Nabal that his group had voluntarily protected the owner's sheep from attacks by wild animals or raiders (see vv. 15-16). Now, at sheep shearing, a festival time when a count would be taken of the sheep and

rewards would be given to the shepherds, David also asks for support for his men. Contracts between herdsmen and sheep owners during the early part of the second millennium have been found in Mesopotamia at the town of Larsa. Herdsmen would typically receive a fee or commission on the sheep and goats that were delivered safely at the shearing. David's men are claiming a portion of that compensation. It would usually include wool, dairy products or grain. Nabal spurned this request and insulted David instead.

25:18. provisions in Abigail's gift. Nabal had listed bread, water and meat as rewards for his servants (25:11), and now Abigail includes two hundred loaves, two skins of wine and five butchered sheep as part of her gift. This acknowledges the service David and his men had done in protecting Nabal's herds. In addition, as a sign of hospitality during a festival period, she also brings a bushel (five seahs) of roasted grain, one omer (two quarts) of raisins (following the preferred Septuagint reading), and two hundred pressed fig cakes. These latter items were stored food items and would serve David's company well.

25:23-31. persuasive oration in the ancient Near East. As is the case with Abigail's speech, persuasive oration generally appears in wisdom contexts. She suggests David disregard the words of fools (see Prov 26:2) in much the same way that Ptah-Hotep (2450 B.C.) and Amenemope (seventh century B.C.) do in Egyptian "instructions," and the seventh-century B.C. Assyrian sage Ahiqar does. They, like Abigail, also extol the virtues of loyalty and the obligations of rulers to their subjects. This latter trait is an integral part of one of the most famous pieces of persuasive oration in the ancient Near East, the Protests of the Eloquent Peasant from Middle Kingdom Egypt.

25:39-44. king's marriages as alliances. Diplomatic texts from throughout the ancient Near East contain marriage contracts that function as political alliances between countries. Zimri-Lim, the king of Mari during the eighteenth century B.C., successfully placed his daughters in the harems of nearby kingdoms and married several foreign wives himself to increase his power and the stability of his realm. In David's case, prior to becoming king of Israel, he made a series of marriages that strengthened his political and economic position. Thus the marriage to Saul's daughter Michal gave him connection to the royal family. His marriage to Abigail provided him with ties to the area around Hebron, and his marriage to Ahinoam of Jezreel established connections with households in the vicinity of Megiddo and Beth Shan. This kinship network insured that David would have friendly voices in the council of elders from all over the country.

26:1-25
David's Second Chance to Kill Saul

26:1. locations. See the comments on 23:14 and 23:19.

26:8-11. the Lord's anointed. See the comment on 24:6.

26:11. spear and water jug. The spear was generally used by the infantrymen in the front ranks. This is hardly where one would expected to find a king. The fact that Saul always seems to have the spear near to hand (see for instance 18:10; 19:9; 2 Sam 1:6) suggests it may have been an insignia of his office. As a result, this may have been a ceremonial spear. It may also be significant that this is the same weapon he tried to kill David with in their early encounters. The jug or cruse may well have been one of the small disk-shaped vessels known from this period that featured two handles flanking the mouth so that they could be attached to a strap. Depriving a man of his water and weapon in this region would have constituted a threat to his life. David therefore demonstrated how Saul's life was in his hands.

26:19. forced to worship foreign gods. When exiled from their own country, fugitives were denied the opportunity to worship their god at familiar sacred sites. The only option for worship open to them was to serve the gods of other lands, adopting the ways of the people with which they were forced to dwell. Similar sentiments are expressed in the story of the Middle Kingdom Egyptian exile Sinuhe.

26:20. partridge of the mountains. Hunting partridges involved beating the bushes and chasing the birds until they were exhausted. This is an apt description of the manner in which Saul has been pursuing David. There is also a pun here based on the literal meaning of the Hebrew word for partridge, which is the "one who calls upon the mountain" (see Jer 17:11). David is doing this as he reproaches King Saul.

27:1-12
David as a Philistine Vassal

27:2-12. role as a Philistine mercenary. The use of mercenary troops was quite common in the ancient world (see Jer 46:20-21). Very often these men were political fugitives, like David,

and their loyalty to their employer was based on their hatred of the ruler who had exiled them (many of the fifth-century B.C. Greek tyrants joined the Persian army after being expelled from their positions and fought against the Greeks at the Battle of Marathon). Thus Achish of Gath's misplaced trust of David is based on the known enmity between David and Saul, but it is reinforced by the amount of booty which David brings him from his raiding expeditions. David is using this opportunity to (1) escape Saul, (2) obtain wealth through raiding which he can use to ingratiate himself with the elders of Judah (30:26), (3) learn the military tactics and the iron technology of the Philistines and (4) eliminate some of Israel's enemies in his raids. By leaving no survivors, David eliminates any witnesses and thus maintains Achish's trust until the time when he will return to rule in Judah.

27:2-3. Gath. Although its exact location has not been firmly established, the current view places Gath at Tell es-Safi, five miles south of Tel Miqne-Ekron in the northern Shephelah. Its pre-Philistine existence is attested in the El Amarna letters and was traditionally tied to the Canaanite Anakim (see Josh 11:22). As one of the five principal Philistine city-states, Gath was the home of the giant warrior Goliath and one of the leaders in the campaign against Israel (see Judg 3:3).

27:2. Achish. This King Achish is not referred to in any extrabiblical sources, but the name Achish is attested as a Philistine royal name at a later date. Assyrian records of the seventh century list Ikausu, son of Padi, as the king of Ekron. Ikausu is the same as Achish, son of Padi, named on an inscription from the same time period found at Ekron (Tell Miqne).

27:6. Ziklag. The exact location of Ziklag is still in dispute. A number of sites have been suggested, but the two most likely are Tell esh-Shari'a (in the northwestern section of the Negev, about fifteen miles southeast of Gaza) and Tell es-Seba' (most often identified as the site of ancient Beersheba and four miles from the modern city; see comment on Gen 22:19). The dispute arises over possible breaks in occupation during the Iron Age (early monarchy) period at Tell esh-Shari'a and the likelihood that the original site of Beersheba was further west of Tell es-Seba'. While the occupation history of Tell es-Seba' generally matches the information we have on Ziklag, this identification would put Ziklag over thirty miles south of Gath. Both sites place David's stronghold in the Negev, where he could easily stage raids south in the Sinai or east into Edom and Midian. They would also be far enough from Philistine territory to allow him to operate without close scrutiny.

27:7. chronological note. This is the final period before David comes to the throne. His accession is usually dated about 1010 B.C.

27:8. Geshurites. These people lived in a region to the southeast of Philistia in the northern Sinai (see Josh 13:2). They are not to be confused with the inhabitants of Geshur in the southern Golan area of Bashan (Josh 13:11). That area would have been inaccessible to David's raiders. Presumably these southern Geshurites were allied with the Philistines and thus would have made appropriate targets for David's expeditions in the Negev.

27:8. Girzites. The Girzites only appear in this passage and are not mentioned in any other ancient source outside the Bible. Some variant readings identify the people referred to here as the Gezerites. The town of Gezer is ten to twelve miles northeast of Gath. This would seem to be an unlikely raiding area for David if Ziklag is twenty-five to thirty miles south of Gath.

27:8. Amalekites. See the comments on Deuteronomy 25:17-19.

27:8. Shur. The wilderness of Shur lay in the northern Sinai between Canaan and the northeastern border of Egypt (see comment on Ex 15:22). Pastoral nomadic tribes, such as the Geshurites and Amalekites, traditionally inhabited this region and used its arid environment as a defense.

27:10. Jerahmeelites. David's ambiguous response to Achish regarding his raids suggested he was looting villages in Judah. The Jerahmeelites were a Judahite clan associated with the area just to the south of Beersheba (see 30:29).

27:10. Kenites. See the comments on Numbers 24:21-22.

28:1-25

Saul and the Medium from Endor

28:2. David as personal bodyguard. As he was in Saul's service (22:14), David now is appointed as the head of the personal bodyguard of King Achish. This puts him in a difficult situation, since it almost assures that he will have to participate in the battle against Saul.

28:3. mediums and spiritists. For more information on divination as a whole, see the comments on Deuteronomy 18. The practitioners of spiritism and sorcery are condemned because of their association with Canaanite religion and because their "art" attempted to circumvent Yahweh by seeking knowledge

and power from spirits. They represented a form of "popular religion." In this case the banned individuals participated in a form of divination employing ritual pits from which ancestral spirits could be raised to speak to the living about the future.

28:3. banning them. Saul's decision to ban mediums and spiritists from his realm would ordinarily be praised because of their close association with Canaanite worship practices. They functioned as conjurers of ancestral spirits who could speak of the future. Superstitions and the aura of the occult power made these individuals feared and often undesirable. Almost a millennium earlier King Gudea of Lagash had also banned mediums from his realm, so it is not an act connected solely to monotheism. In this instance Saul's ban is paralleled with the death of Samuel to demonstrate that he had no means at his disposal, whether legitimate or illegitimate, to divine God's will.

28:4. location of Philistine and Israelite camps. The eastern end of the Valley of Jezreel is about ten miles wide from north to south. The north end is blocked off by Mount Tabor, while the south end is blocked off by Mount Gilboa. The ten-mile stretch between the two is broken into two passes by the smaller Hill of Moreh. The town of Shunem where the Philistines make camp is on the southwest side of the Hill of Moreh just across the Harod Valley (the southern pass from the Valley of Jezreel to the city of Beth Shan) from Saul's camp at Mount Gilboa. The two camps are about five miles apart. Endor is located in the middle of the northern pass (between the Hill of Moreh and Mount Tabor), about six or seven miles north of the Israelite camp (about a two-hour trek). Saul would have proceeded around the eastern side of the Hill of Moreh and thus have avoided the Philistine camp. Note that Endor (Khirbet Safsafeh) is technically in the tribal territory of Manasseh, outside of the territory controlled by Saul (Josh 17:11). The fact that the battle takes place so far north of Philistia suggests that they were trying to cut the Galilee region off from Saul's kingdom. Saul's position takes advantage of the mountainous terrain and would favor his lightly armed forces.

28:6. means Saul used to seek information. Saul is rightly concerned about the upcoming battle with the massed forces of the five Philistine city-states. He first employs the usual divination methods to consult God and see if the Divine Warrior would give him a victory. These methods included incubation rituals in which the inquirer sleeps within a sanctuary or near a sacred object in order to receive a dream from a god (see comment on 3:3), the use of Urim to cast lots (see comment on Ex 28:30) and the visions of prophets (see Saul's previous association with prophets in 1 Sam 10:10-11). None of these inquiries was answered, and it is made clear that Saul is abandoned by God.

28:7. specialist Saul wanted to use. Since he had no other recourse to seek God's will about the coming battle, Saul broke his own law banning mediums and made a secret visit to the medium of Endor. She has established a reputation as one who could successfully consult ghosts and ancestral spirits. This specialist from Endor used a ritual pit to conjure up the spirits of the dead. Although the process is listed in Deuteronomy 18:10-11 as one of the "detestable acts" associated with Canaanite religion, the actual use of a pit is not mentioned in the Old Testament outside of the Endor episode. As in Hittite magic, the practitioner here is an "old woman." The pits were believed to be magical portals through which spirits could pass between the realms of the living and the dead. The practitioner was one who had special knowledge of the location of such a pit and who was familiar with the procedures necessary to summon the dead. There is no indication in these rituals that the practitioner was possessed by the spirit or that the spirit spoke through her, and so she was not a medium in the modern sense.

28:8-11. procedures for calling up spirits. Examples from Greek (Homer's *Odyssey),* Mesopotamian and, especially, Hittite literature provide the details: (1) done at night, (2) after the spot is divined a pit is dug with a special tool, (3) a food offering (bread, oil, honey) or the blood of a sacrificial animal is placed in the pit to attract spirits, (4) an invocation ritual, including the spirit's name, is chanted, and (5) the pit is covered to prevent spirits from escaping after the ritual is concluded. Both practitioner and client had roles to play in the procedure. The spirits who emerged were in human form and generally were able to communicate directly with the client. In Mesopotamian necromancy incantations, only the practitioner could see the spirit. This was accomplished through ritual ointments smeared on the face.

28:14. prophetic mantle. Since clothing is often a status marker in the ancient world (see Joseph's various changes of clothing in Genesis 37, 39—41), it may be expected that prophets were distinguished by a particular garment. The spirit of Samuel is recognized by his robe (see Elijah's mantle in 1 Kings

19:19 and 2 Kings 2:8, 13-14).

28:8-20. beliefs about afterlife. The spirits of the dead were believed to descend to the underworld known as Sheol. This was a nebulous region of continued existence, but it is not distinguished as a place of reward or punishment.

28:8-11. consulting dead in ancient Near East. Because of a well-developed ancestor cult that pervaded much of the ancient Near East (perhaps reflected in the emphasis on the role of the male heir to care for the father's shrine in Ugaritic documents), the dead were considered to have some power to affect the living. It was believed that if libations were poured out on behalf of dead ancestors, their spirits would offer protection and help to those still living. In Babylon the disembodied spirit *(utukki)* or the ghost *(etemmu)* could become very dangerous if not cared for and often were the objects of incantations. Proper care for the dead would begin with proper burial and would continue with ongoing gifts and honor of the memory and name of the deceased. The firstborn was responsible for maintaining this ancestor worship and therefore inherited the family gods (often images of deceased ancestors). Such care would have been based on a belief, as seen in Saul's consultation of the medium of Endor, that the spirits of the dead could communicate and had information on the future that could be of use to the living. These spirits were consulted through the efforts of priests, mediums and necromancers. This could be a dangerous practice since some spirits were considered demons and could cause great harm. While it is difficult to totally reconstruct Israelite beliefs about deceased ancestors and the afterlife, it seems possible that prior to the exile there existed a cult of the dead or ancestral worship. This is suggested by archaeological remains: (1) utensils, bowls and implements for eating and drinking found in Iron Age tombs in Israel, (2) references to deposits of food and drink offerings for the dead (see Deut 26:14; Ps 106:28) and (3) the importance placed on family tombs (see the ancestral tomb for Abraham and his descendants at Hebron) and mourning rituals performed at these tombs (see Is 57:7-8; Jer 16:5-7). The local and family ancestral cults were condemned by the prophets and the law.

28:24. meal prepared for Saul. There are elements of hospitality customs in the offering of a meal to Saul by the woman of Endor. Like Abraham, she provides a costly meal by slaughtering a calf and making bread (see Gen 18:6-7). It is unlikely that the woman owned more than this one animal, and so she is truly doing Saul great honor. Saul's reluctance to accept her invitation may be tied to her profession or her association with other gods. It may also be a sign of his depression over Samuel's words of doom. His eventual acceptance follows the pattern of indecisiveness and contradictory behavior so often found in his career. There is also a sense of resignation in eating a "last meal."

29:1-11

David's Help Rejected by Philistines

29:1. Aphek/spring in Jezreel. There are a number of different sites named Aphek in various parts of Canaan. This one is qualified by its identification with a spring in the Jezreel Valley. Most likely this Aphek is in the southern Sharon plain and specifically the site of Ras el-'Ain at the source of the Yarkon River. This then suggests that the Philistines first mustered their troops at Aphek (as they did prior to the Battle of Ebenezer in 4:1) and then moved up thirty-five or forty miles into the Jezreel to confront Saul. References in Josephus connect this Aphek with Antipatris (see Acts 23:31), twenty-six miles south of Caesarea Maritima.

29:3. Hebrews. The Israelites are referred to repeatedly by the Philistines as Hebrews (see comment on Gen 14:13). This may have been a generic term, as is the case with Habiru and Apiru in Akkadian and Egyptian texts, or a pejorative label applied to a people without leadership or a defined political state. David's role as a mercenary fits well with the term Habiru in the El Amarna texts.

29:5. David his tens of thousands. This is the third time this chant has been quoted in the text (see 1 Sam 18:7; 21:12). Originally it served as a mark of distinction for David and a source of Saul's jealousy and hatred toward him. In the episodes involving the Philistines, the chant is used as a reminder and a warning that David cannot be trusted to serve Achish loyally. In this instance it provides David with a plausible excuse not to participate in the final battle against the "Lord's anointed."

30:1-31

Disaster at Ziklag and Revenge on the Amalekites

30:1. distance from Aphek to Ziklag. The distance from the Sharon Plain to the southern Shephelah where Ziklag was located is approximately fifty miles. It would not be un-

usual for an armed group and their auxiliaries to take three days to travel this distance.

30:1. Amalekites. One of the curiosities of the Amalekites is that they always seem to be present to cause trouble no matter how many times the Israelites defeat them (see Ex 17:8-16; 1 Sam 15:1-9). In this case the Amalekites respond to David's raiding of their villages (1 Sam 27:8), taking advantage of David's presence at Aphek. The raid is immediately followed up by David's devastating defeat of the Amalekites and the rescue of his family and property. In this way the narrative demonstrates that David was nowhere nearby when Saul was killed. He is acting the role of hero, defeating Israel's enemies and saving his people from harm, while Saul is being defeated by the Philistines at Gilboa.

30:7-8. oracular use of Ephod. David's question is typical of oracular events in which a yes or no response is requested. For other examples of using the ephod for this purpose, see the comments on Judges 8:24-27 and 1 Samuel 23:9-12.

30:9. Besor Ravine. This was a deep wadi bed (three to four hundred feet wide) whose steep sides would have required a great deal of agility and energy to traverse. It is located in the western Negev and served, along with the Wadi Gerar, as the southern border of Canaan.

30:11-13. Egyptian slave. In their effort to escape, the Amalekite raiders had abandoned a sick Egyptian slave. David's hospitality to this man, giving him food, water and raisin cakes, is reminiscent of Abigail's offering to David in 1 Samuel 25:18. It once again displays David's adherence to traditional values and also provides him with the military intelligence his small force of four hundred men will need to defeat the much larger force of Amalekites.

30:14. Kerethites. These people were associated with the Philistines and the Pelethites, and their name suggests a Cretan origin. Their territory in the Negev probably adjoined that of Ziklag and Judah.

30:14. land of Caleb. The allotment given to Caleb and his family was in the area around Hebron and Debir (see Josh 14:6-15; 15:13-19) in southern Canaan. In later periods this was in fact within the territory of Judah (Josh 15:1-12).

30:17. fleeing on camels. For the Amalekites living in the steppe areas of the Negev and northern Sinai, the camel would have been a perfect beast of burden and swift form of transportation for raiding. In this case, they also served to provide a quick getaway for the remnant of the Amalekite band. For more information see the comment on Judges 6:5.

30:18-25. division of spoil. See the comment on Deuteronomy 20:10-15 for a discussion of the protocol associated with the division of spoils following a battle. David adhered to the sacred code that auxiliary troops, left to guard a fortress or the baggage train, should also share equally in the spoil. The two hundred men who were too exhausted after traveling from Aphek to continue in pursuit of the Amalekites still served as a rear guard in case David was forced to flee and thus deserved their share.

30:26. elders of Judah. David's generosity in sending a portion of the loot he had taken from the Amalekites has real political implications. Being able to distribute wealth is a sign of power in the Near East. It marks these local elders as David's clients, and it will be expected that they will support him in his bid for the kingship (see 2 Sam 2:4).

30:27-31. towns. The towns in addition to Hebron where David sent portions of his spoils include Bethel (Khirbet el-Qaryatein), just north of Arad (Josh 19:4); Beth Zur (Khirbet et-Tubeiqah), four miles north of Hebron and associated with Caleb (Josh 15:58); Ramoth Negev (possibly Bir Rakhmeh; named Baalath Beer in Josh 19:8), nineteen miles southeast of Beersheba; Jattir (Khirbet 'Attir), a Levitical city twelve miles southwest of Hebron (Josh 21:14); Aroer (modern 'Ar'arah), twelve miles southeast of Beersheba (Josh 15:22); Siphmoth, an unknown site; Eshtemoa (es-Semu), ten miles southwest of Hebron (Josh 15:50); Carmel (Tell el-Kirmil), seven miles south of Hebron (1 Sam 15:12); Hormah, possibly Khirbet el-Meshash, seven miles east of Beersheba (Josh 15:30); Bor Ashan (Khirbet 'Asan), just northwest of Beersheba and a Levitical city of Judah (Josh 19:7); and Ether (NIV: Athach; Khirbet el-'Ater) in the Shephelah, about fifteen miles northwest of Hebron. Most of these sites are in the area known as the hill country of Judah, though a few are further south in the Negev.

31:1-13

The Death of Saul

31:1. Mount Gilboa. See comment on 1 Samuel 28:4 for the position of the Philistine and Israelite forces within the Valley of Jezreel (see also 1 Chron 10:1-12). The fact that so many of Saul's men and three of his sons are slain on the slopes of Mount Gilboa demonstrates that his army was quickly forced to flee before superior Philistine tactics. They may have been seeking to restore order by regaining the high ground in the battle, but without the leader-

ship of Saul's sons they were quickly cut down and Saul was faced with capture.

31:3-5. Saul's prospects if captured alive. In this period it was common for captured kings to be mutilated and subjected to a life of humiliation. Putting out the eyes or cutting off the thumbs and big toes were just a few of the procedures used. As a sign of their ignominy, they were doomed to spend miserable years begging and fighting for scraps under the triumphant king's table (see comments on Judg 1:6-7), or displayed in public places for whatever abuse passersby might invent. Torturous practices were continued by the Babylonians, Assyrians and Persians, and the literature is full of the gruesome acts performed on captured enemies. Other examples of a king requesting his armor-bearer to kill him exist in Assyrian records. The Elamite king and his armor-bearer stab each other simultaneously.

31:9. cutting off the head. A king's head was a treasured prize used as a means of boasting of one's conquests. Assyrian king Ashurbanipal was reported to have dined with his queen in the garden with the head of the king of Elam on display in a nearby tree. He describes the cutting off of the head as "making him more dead than before."

31:10. armor placed in temple. In addition to stripping the bodies of the slain for loot, Saul's armor (symbol of his position as king and well known to the enemy—see 1 Sam 17:38) was taken as a trophy in much the same way that Goliath's sword (1 Sam 17:54) and the ark of the covenant (1 Sam 5:2) were taken and displayed in a temple. In this way the gods of the Philistines were honored, and Saul and his God were graphically demonstrated to be defeated. See the comment on Judges 2:13 for the name Ashtoreths.

31:10. exposing the corpse. To dismember the body of Saul and leave it unburied was the height of disgrace and shame for the victim and the family/nation. Improper burial was popularly thought to jeopardize an individual's afterlife (for further information see comment on 1 Kings 16:4). The practice of impaling the bodies of their defeated enemies was commonly used by armies in the ancient Near East. For instance, the Assyrians considered it a psychological ploy and a terror tactic (as depicted on the walls of their royal palaces).

31:10-12. Beth Shan. In this period Beth Shan (Tell el-Husn) was either controlled by the Philistines or allied with them. Since it lies in a commanding position in the Jezreel Valley and is a very tall mound, it would be a perfect place to display Saul's dismembered body. The ten-acre mound stands at the eastern end of the Jezreel Valley and guards that important trade route's entrance into the Jordan Valley. It continues as an independent Canaanite enclave into the monarchy period (1 Sam 31:10-12) but was incorporated into Solomon's administrative districts (1 Kings 4:12). This is a double site, with a Roman-Byzantine city (Scythopolis) built at the base of the tell. Archaeological investigations have shown almost continuous occupation of the site since Chalcolithic times (4500-3300 B.C.). The water supply (Wadi Jalud), arable land and strategic location have insured that its population prospered, generally under Egyptian rule (starting with Thutmose III in the sixteenth century) and later under the Sea Peoples and Israelites. From this period archaeologists found remains of twin temples that some identify as the temples of Astarte mentioned here and the temple of Dagon (see 1 Chron 10:10).

31:11-12. Jabesh Gilead. See the comment on 11:1 for the discussion of Saul's original connection with this Transjordanian city. Their rescue of Saul's body from Beth Shan reflects the obligation they felt because of his efforts to save their city from the besieging Ammonites (1 Samuel 11).

31:12. journey from Jabesh Gilead to Beth Shan. Although the exact location of Jabesh Gilead is unknown, it must have been along the Wadi el-Yabis in the northern Gileadite hill country. Tell Maqlub, thirteen miles from Beth Shan, is a likely candidate.

31:12. cremation. Cremation is not sanctioned as a burial rite elsewhere in the Bible (see Lev 20:14; Josh 7:25 for the use of burning as capital punishment). It is possible that the advanced state of deterioration and decay required extreme measure to purify the body. No embalming techniques would have been effective. The burning of the bodies of heroes in the *Iliad* might suggest a similar ritual honoring Saul. The only other peoples in the ancient Near East known to practice cremation were the Hurrians of Mitanni and the Hittites (both mid-second millennium).

31:13. tamarisk tree at Jabesh. A final ironic note in the Saul narrative has him buried beneath a tamarisk tree. He is portrayed as assembling his troops and exercising his power as king under or near a tamarisk tree in 1 Samuel 22:6. His grave is marked by this simple desert growth rather than a palace, capital city or kingdom. The tamarisk grows in sandy soil. It is deciduous and may reach over twenty feet in height, with small leaves that excrete salt. Its bark is used for tanning and its wood for building and making charcoal. Bedouin commonly

plant this hearty tree for its shade and the branches which provide grazing for animals. In Mesopotamian incantations, the tamarisk was a holy tree with purifying qualities. Images were made from its wood and it was at times connected with cosmic stability.

2 SAMUEL

1:1-16

News of Saul's Death

1:1. chronology. The year is approximately 1010 B.C. This date can be arrived at by calculating back from more certain points in time later in the monarchy period.

1:1. Ziklag. Ziklag has not been identified with any certainty. For discussion of the possibilities see comment on 1 Samuel 27:6.

1:2. dust on head. The practice of putting dirt, dust or ashes on one's head was a typical sign of mourning throughout the Old Testament and into the New Testament period. It is a practice also known from Mesopotamia and Canaan. Many mourning rites function as a means for the living to identify with the dead. It is easy to see how dust on the head would be a symbolic representation of burial.

1:2. reverential prostration. The standard method of demonstrating obeisance in the ancient Near East was to bow to the ground. Egyptian tomb art is filled with examples of servants and royal officials prostrating themselves before the pharaoh. In the El Amarna tablets (fourteenth century B.C.) the format of each letter contains a greeting, followed by a set formula of honoring the pharaoh by bowing seven times forward and backwards.

1:2. news dissemination. The normal official means of spreading news was through the use of couriers. Nevertheless couriers would have only been dispatched to certain key locations. Since the administration had been nearly wiped out and the rest were in flight or in hiding, there were likely few if any official couriers to bring word of the results of the battle at Gilboa, especially as far away as Ziklag, some seventy-five or eighty miles south of the scene of battle. Other news carriers would be soldiers returning from battle or merchants traveling from city to city. In this case, however, it is evident that the Amalekite sought David out, expecting to gain favor.

1:6. leaning on his spear. The spear has been an important symbol of Saul, from use as a weapon against David (1 Sam 18:10-11) to an identifying emblem (1 Sam 26:11) to a crutch as he faces death.

1:8. Amalekite. See comment on Deuteronomy 25:17-19. Since it was the Amalekites who had just recently been responsible for the raid on David's town, Ziklag (see comment on 1 Sam 30:1), this man is already in jeopardy, and his message is not likely to be given any credibility.

1:9. Saul's request. Death is imminent and preferable to the alternative (see comment on 1 Sam 31:3-5). Saul's request reflects a desire to end his life with as little pain as possible.

1:10. crown and armband. The headwear mentioned here would more accurately be rendered "diadem," referring to an object hung at the forehead or on the front of a headpiece. It often is a symbol of authority. As early as the Sumerian period the diadem is one of the insignias of royal power bestowed on the king by the god Anu. Perhaps the best-known example of this in the ancient world is the serpent (uraeus) on the front of a pharaoh's crown, which was believed to be a protective device. In the descriptions of Israel's high priest's garments the diadem is generally associated with a "golden plate" (NIV; see comment on Lev 8:9). The armband is not referred to in any other Old Testament passages. Armbands were a frequent adornment in the first millennium. The earliest examples found by archaeologists in Israel date to the eleventh century. Armbands and a diadem are mentioned in a list of jewelry that the Assyrian king Sennacherib gave to his son (and successor) Esarhaddon.

1:11. tearing clothes as sign of mourning. Along with placing ashes in the hair, the tearing of clothing was a common form of mourning in the ancient Near East. One example outside the Bible is found in the Ugaritic Epic of Aqhat (c. 1600 B.C.), in which the sister of the hero tears her father's garment as she foretells a coming drought. Such an act often implied grief over the death of a relative, friend or prominent individual.

1:12. mourning rituals. Many mourning rituals find their origin in (1) identifying with the dead, (2) providing something for the dead or

(3) protecting the living from the dead. Yet it is not always possible to trace back and discover how these values may have been reflected in any particular ritual. Weeping, wailing and lamenting were important in the funeral rites of most peoples of the ancient Near East. Fasting, tearing clothes and setting aside regular clothes were all ways of expressing grief.

1:15. David's order. The execution of the Amalekite has many complex elements linked to it. As already mentioned, the fact that he was an Amalekite put him in grave jeopardy. Second, David had on two other occasions refused to take Saul's life because of his respect for Saul's status as being the anointed by God, and he would expect no less from others. Third, if he received the actions of the Amalekite as having been done in his service, he would be subject to the accusation that he had commissioned an agent to execute Saul. It was important for him to distance himself from the actual killing of Saul, even if it could be justified as a mercy killing.

1:17-27
David's Elegy for Saul and Jonathan

1:17. elegies. Examples of funeral laments have been found in the ancient Near Eastern literatures. Perhaps best known is Gilgamesh's lament for his deceased friend Enkidu in tablet eight of the Gilgamesh Epic. This calls on others to share in the mourning and eulogizes the good qualities and heroic deeds of the deceased.

1:18. Book of Jashar. It is inferred that the Book of Jashar contained ancient poetic accounts of heroic deeds (the only other reference to it is in Josh 10:13). It has not been preserved. The title *Jashar* could be the adjective "upright" or a form of the Hebrew verb "sing."

1:20. Gath, Ashkelon. Gath and Ashkelon were two of the five principal cities of the Philistines. For more information about them see comments on 1 Samuel 5:8 and Judges 14:19 respectively.

1:20. uncircumcised. Circumcision was practiced by many different peoples in the ancient Near East (see comment on Gen 17:9-14) but not by the Philistines. The comment here has little to do with physical attributes or sociological practices, but is an ethnic designation that for the Israelites is a sign of the covenant.

1:21. curse on Gilboa. The curse focuses on the fertility of the area. It is similar to curses such as that found in the Atrahasis Epic that are intended to result in famine. By becoming a place of death (dry, unproductive fields), it would serve as a memorial to the deaths that had occurred there.

1:21. shield rubbed with oil. Israelite shields of this period were made of wood with leather stretched over the surface. They were either round or rectangular with rounded top. Oil was used to wipe the blood off after a battle and to treat the leather so it remained pliable.

1:24. fine clothing. The clothing provided for the women of Israel simply reflects an improvement in the standard of living during the reign of Saul. Successful policing of the trade routes could increase merchant activity, which in turn made imports more accessible and provided outlets for exporting local goods.

2:1-7
David Made King

2:1. oracular inquiry. From chapter 23 through the end of 1 Samuel, David is making oracular inquiries of the Lord by means of the ephod under the guidance of Abiathar the priest. It is likely that is also what is happening here. In an oracular inquiry a yes-no question was posed to the deity, and a binary mechanism was used to determine what the answer was. The normative means laid out for this process in Exodus was the Urim and Thummim (which were kept in a pouch in the ephod).

2:1. Hebron. Hebron was centrally located in the hill country of Judah and was one of the most important towns in the region. It is located about twenty miles south of Jerusalem. This twelve-acre site, occupied about 1200 B.C., was very attractive because there are more than two dozen springs in the area. About the time of David the fortifications of the city were improved and expanded. It served as David's capital for seven years and enjoyed its greatest prominence during this period.

2:4. tribal king. In a previous attempt at kingship the process was initiated on the tribal level (see Judg 9). Since the Philistines had most likely overrun the central part of the land as a result of the battle at Gilboa (1 Sam 31), only a few of the tribes may have had the freedom to participate in designating a new king. It must also be remembered that tribal autonomy had a long history among the Israelites, and a city-state form of government had characterized the previous Canaanite residents of the region. Finally, with three of Saul's sons having been killed along with him, there was no clear information concerning succession to the

throne, even if the tribal leaders were content with Saul's line and the Philistines would have allowed it. All of this makes the procedure of a tribe designating a king very logical.

2:5-7. procuring support. The town of Jabesh Gilead in Transjordan would have still been free of Philistine control. It represented one of the strategic constituencies of Saul because of the deliverance that he had provided them (1 Sam 11). If the leaders of this pro-Saul enclave could be persuaded to acknowledge David, they would serve as bellwether for many of the other Transjordan cities and perhaps others from the northern regions. David suggests to them that they have repaid Saul in providing him proper burial—he is gone and there is no loyalty still due him or his family. David is just as willing to provide for their defense as Saul had been.

2:8—3:5
Conflict Between the Houses of David and Saul

2:8. Mahanaim. Besides serving as an administrative center for the government of Saul's son, this is where David sets up headquarters when he has to flee from Absalom (17:27). The town is also mentioned as one destroyed by Pharaoh Shishak's invasion during the time of Solomon's son. While it is clear that Mahanaim is in the Transjordan region, the precise location is unknown. The most common identification today is with Tell edh-Dhahab el-Gharbi on the northern bank of the Jabbok. There have been no excavations at the site, but surface surveys confirm that it was occupied during this period.

2:9. political control of Saul's house. Abner had been Saul's commander in chief and was his cousin. Rather than take the throne for himself, he procured it for one of Saul's surviving sons, Ish-Bosheth. He appears to have retained the support of a number of the northern tribes. Though Ish-Bosheth was king, the text gives the impression that Abner was in control. It was not that unusual for a military strongman to sponsor a weak heir to the throne. In earlier Egyptian history at the end of the Eighteenth Dynasty, Ay, a military commander (and perhaps father-in-law) of Akhenaten is the principal sponsor and advisor of young Tutankhamun son-in-law of Akhenaten.

2:12. Gibeon. The city of Gibeon is usually identified with the modern el-Jib, located six miles northwest of Jerusalem and seven miles southwest of Ai. The excavations there have discovered a double water system constructed as early as the Judges period. The earlier of the two systems involved cutting straight down through the limestone some thirty-five feet (descended by a stairway spiraling down the wall) to a tunnel, allowing the inhabitants of the city to have access to spring waters at the base if the mound was besieged. A second, later system provided a stepped tunnel leading to another (more reliable) spring. This water system is strong evidence that the site is Gibeon because of the well-known "pool of Gibeon" mentioned here. The identification is further confirmed by jar handles found at the site with the city's name inscribed on them (although it should be noted that jar handles with other cities' names stamped on them were found as well, explained by the city's major industry: wine export).

2:12-13. reason for the battle. Gibeon was a principal city in the region that had been overrun by the Philistines and presumably was still under Philistine control. It is therefore difficult to imagine that either army would be free to initiate military action against the other in Philistine territory. More likely is the possibility that Abner is on his way down to make preliminary arrangements to transfer his support to David. Natural caution would lead David to dispatch a military escort since Abner was not foolish enough to come without his own military entourage. Joab intercepts Abner at Gibeon, and they decide to be entertained by a gladiatorial contest between some of the trainees or mercenaries. Though bloodshed was probably expected in these "games," tempers flare and a full-blown skirmish explodes.

2:13. pool of Gibeon. The pool of Gibeon was a well-known water system—a model of modern engineering. The builders tunneled down through the limestone about thirty-five feet, making the hole almost forty feet wide. Steps were carved into the side spiraling down to the bottom of this pool where a straight set of stone steps descended another forty-five feet through a tunnel to reach the water table (seventy-nine steps in all). This had been built to provide the inhabitants of the city with a secure water supply inside the walls during time of siege. It has been estimated that about three thousand tons of rock would have been removed to accomplish this engineering feat. Only later was a tunnel cut to the spring outside the city.

2:14-16. individual bouts. At times individual combat was used, viewing the individuals as representatives of their respective armies so that the divine will could be expressed (as in the fight between David and Goliath). It is un-

likely that this is the case here because there are twelve pairs (not just one) and because the intent is cited as entertainment. It must be noted, however, that battle is at times portrayed as a festival (as early as Sargon and, closer to this time, in the Tukulti-Ninurta Epic). The NIV translation "fight hand to hand" obscures the fact that this is merely an exhibition. Examples of individual combat are known in Egypt on the Beni Hasan wall painting (early second millennium) and in the Story of Sinuhe. It is likewise depicted on a Canaanite vase from the first half of the second millennium. Nearer in time, examples are known from Mycenaean Greece and from Hittite literature. A relief from the tenth century found at Tell Halaf depicts two combatants grabbing at one another's heads and thrusting with short swords.

2:16. daggers. The weapons used by the combatants are described by the Hebrew word that is typically translated "sword." It can be used for shorter two-edged swords (usually less than sixteen inches) or longer one-edged swords. The context here would demand the former since the combatants are in close quarters and are stabbing one another.

2:21. stripping of weapons. The plunder from personal combat was the possessions of the slain. The rank or status of a warrior would be reflected in clothing, armor or the quality of the weapons. These would become trophies and status symbols for the victor. Asahel is unwilling to settle for any soldier's gear—he wants the commander's.

2:23. butt of the spear. Spears often were made with a metal casing on the butt end that was not honed to a point but was tapered down to a sharp edge. This could be used as a goad or to stick the spear in the ground. Many of these metal ends have been found in excavations and are portrayed on wall paintings.

2:24. geography. The place names mentioned in verse 24 cannot be identified with any confidence. It is likely that the "way to the wasteland of Gibeon" runs northeast toward the Jordan valley. Ammah and Giah are unknown. There is a hill rising out of the fertile valley around Gibeon on the way toward Geba that may be identified as Ammah.

2:29. Abner's itinerary. The Arabah refers to the Jordan rift valley. Abner would have descended into it through the Micmash pass (see comment on 1 Sam 10:5) toward the ford at Adam (see comment on Josh 2:7). Bithron may not even be a place name, and if it is, it remains unidentified.

2:31. buried in father's tomb. Iron Age burial practices featured multiple burials in cave tombs. The body was laid out on its back with personal objects arranged around it.

3:6-39
Abner's Defection and Execution

3:7. sleeping with concubine. Concubines are women without dowry who include among their duties providing children to the family. In the royal household they may represent minor political alliances. Since a concubine has been a sexual partner, a son who used his father's concubine was not only viewed as incestuous but was seen as attempting to usurp the authority of the family patriarch. In a similar way a successor to the throne at times sought to expropriate the authority of his predecessor by taking over his concubines. Israel was a tribal society in transition to a monarchy. The network of support for a king would have been found in the powerful clans and families. Acquiring concubines and wives would therefore be the mechanism for building up the backing of each local area. Support might also be found in wealthy merchants, military leaders or even in priestly families.

3:8. dog's head. This expression is not used anywhere else in the Old Testament. See comment on 1 Samuel 24:14 for information concerning self-deprecation using dog metaphors.

3:9. curse formula. This formula is common in curses in Samuel and Kings and is usually found in the mouth of royal figures. An exception is Ruth's use of this same formula in Ruth 1:17. The formula is also known from Alalakh and Mari. Abner has not specified what it is that God will do. Since this oath is sometimes associated with rituals in which animals are mutilated, it is assumed that the speaker calls down similar mutilation on himself.

3:10. transfer of kingdom by Abner. As mentioned in the comment on 2:9, Abner most likely held the reins of power in the provisional government for which Ish-Bosheth was the figurehead. If the military was loyal to Abner, his defection would leave Ish-Bosheth virtually unprotected. Abner would probably likewise succeed in bringing with him the allegiance of most of the northern tribes that had remained faithful to Saul's family.

3:13-14. Michal's status. As indicated in the comment on 3:7 above, royal harems were the accepted means of establishing a support base both nationally and internationally. Michal, the daughter of Saul, would have represented a certain amount of legitimation for David as he was attempting to lay hold of Saul's kingdom. Ancient law (evidenced in Hammurabi,

Eshnunna and the Middle Assyrian Laws) provides that a man who has been driven from his home by force may lay claim to his wife when he returns. He would retain this right even if she has remarried (often necessary for support) and had children.

3:14. one hundred foreskins. This was the bride price paid by David for Michal (see comment on 1 Sam 18:25). The accomplishment of killing one hundred Philistines would have identified David as a significant military ally meriting marriage into the royal family.

3:17-19. Abner's diplomacy. Abner is now functioning as an agent for David's kingdom. He is not only planning his own defection but intends to bring the northern tribes with him. Tribal decisions were made by the elders who are called together. It is strategic for him to speak to the Benjaminites personally and individually, both because he is a prominent leader in the tribe of Benjamin, and, even more importantly, because Saul was from the tribe of Benjamin, so they would be the most loyal to Saul's descendants.

3:20-21. agreement between Abner and David. It was typical of important transactions that they be sealed with a feast shared between the parties to celebrate the legal arrangements that have been concluded. The twenty men with Abner may be important representatives of the powerful factions in Israel as well as a small military entourage of high ranking officers.

3:22. raid with plunder. Most armies, whether made up of mercenaries, conscripts or professional members of a standing army, considered plunder to be part of the pay of being a soldier (much like a waitress would consider tips). Some raids were carried out with military objectives in mind (expansion, control of trade routes, etc.), but others would be intended to pester an enemy and, at the same time, provide extra pay for the soldiers. Since David had little means to finance an administration or military, plunder was probably the sole source of compensation for the army.

3:26. well of Sirah. This oasis is generally and traditionally located about two miles north of Hebron.

3:29. curse on Joab's house. The curse pronounced by David is wide-ranging. The first category refers to the most serious and humiliating forms of physical disease (for more details on these see comments on Lev 13). The second is the most obscure. The word the NIV translates "crutch" has been now identified from Ugaritic and Akkadian as the word for "spindle" or "distaff." The phrase used here was the common description of a woman involved in menial tasks. A Hittite oath of a soldier, if broken, would result in the loss of manhood. The oath describes this penalty in terms of the violator holding the spindle and mirror. This second curse then threatens Joab's house with decreased virility. The third curse speaks of violent death and the fourth of suffering want or famine.

3:31. mourning rites. See comment on 1:12.

4:1-12
Assassination of Ish-Bosheth

4:3. Beeroth and Gittaim. Beeroth is generally looked for north of Kephireh toward the Bethel/Ai area, perhaps at el-Bireh or Nebi Samwil. It was one of the Hivite cities of Gibeon that deceived Joshua (see Josh 9). This verse tells us that the Hivite population fled to Gittaim (specific location unknown), apparently leaving Benjaminites as the sole population in Beeroth.

4:4. Mephibosheth's injury. Although the biblical text does not clarify the details, it is generally believed that the battle at Mount Gilboa in which Saul was killed led to Philistine control of the entire central region. If that is true, it is likely that the Philistines would have sacked Saul's capital at Gibeah. Such circumstances would explain the frantic flight of Saul's household and the subsequent injury of Mephibosheth. A neck or spine injury could have made Mephibosheth a paraplegic, but it need not have been so extensive as that. Broken legs or ankles improperly set or poorly treated could likewise lame him. Splinting to set bones was a practice known in the ancient world, but compound fractures were often considered hopeless.

4:5. noonday rest. In the semiarid climate of the Near East it is common for the hottest hours of the day (after lunch) to be set aside for rest or napping.

4:6. wheat in the king's house. Though it would not be difficult to document the presence of storehouses in proximity to royal quarters, there is a persuasive textual variant at this point in the text that makes reference to a guard (female) who has fallen asleep because she had tired herself out gathering wheat.

4:12. mutilation and exposure. To dismember the bodies of the assassins and leave them unburied is the height of disgrace and shame for the victim and the family. Improper burial was popularly thought to jeopardize an individual's afterlife (for further information see comments on Num 3:12-13 and Josh 8:29). Public display of enemies' corpses can be seen

in the practice of impaling the bodies on a pike, which the Assyrians used as a psychological ploy and a terror tactic (as depicted on the walls of their royal palaces). The cutting off of the hands and feet was probably understood to extend their pain and suffering into the afterlife, but there is not enough attestation of the practice or the thought behind it to recover the reason with confidence.

5:1-25
David's Victories

5:1. flesh and blood. The actual Hebrew idiom is "bone and flesh," but it expressed the same concept as our "flesh and blood" does. Affirmation of their kinship is offered as a basis for political alliance. Compare the similar context in Judges 9:2.

5:3. role of the elders. The elders here are the clan leaders of Israel. In the absence of a king or other dominant leader, the tribes relied on the collective assembly of the tribal elders. They administered justice in the village culture and served as representatives for the people at major gatherings. The people would look for the endorsement of David by the elders before they would accept his leadership.

5:3. compact with elders. As in 2:4 where an agreement was reached with the leaders of Judah, here all the tribes subscribe to a formal declaration of David's kingship. This would likely have included a written ratification document such as that drawn up with Saul in 1 Samuel 10:25.

5:3. anointed. David had been anointed by the leaders of Judah in 2:4. Anointing designated a change in status and was symbolic of their affirmation of his kingship. For more information on the practice of anointing see comment on 1 Samuel 16:1.

5:4-5. chronology. David's reign is generally believed to take up the first third of the tenth century B.C. (about 1010-970). Forty can often be a round number, but the breakdown in verse five suggests that it should be taken as a precise reckoning.

5:6. Jerusalem. The city is strategically located along an east-west road that runs from the fords of the Jordan near Jericho to the coastal highway. It is also by the most significant north-south road that runs through the hill country from Beersheba to Beth Shan. Its location is also strategic because of its position by the border between Judah and Benjamin. The deep valleys on the east and west of the ridge and the reliable water supply found at the Gihon spring combined to make the location defensible and desirable. The earliest reference to Jerusalem is in the Egyptian execration texts from early in the second millennium B.C., where its kings are named Yaqirammu and Shayzanu. The next reference is found in six letters in the Amarna texts from Abdi-Heba, king of Jerusalem, to the pharaoh requesting military support. Jerusalem was one of the key cities in the region and in the Amarna period was competing with Shechem for control of the hill country. Jerusalem was defeated by the Israelite armies at the time of the conquest, but the inhabitants had not been driven out and it had not been occupied by the Israelites (Judg 1:21). The city of Jerusalem in this period occupied only the north-south ridge covering about ten acres that runs south of the modern city walls. The top of the ridge is only about four hundred feet wide and about fifteen hundred feet long. The population would not have exceeded one thousand. The Canaanite city was built on an artificial platform that was supported by a series of terraces. Archaeologists have uncovered a stepped stone structure over fifty feet tall at the northeast corner of this ridge. This was most likely the platform for the Jebusite citadel referred to in verse 7, and was enhanced by David for use as the foundation of his palace built in verse 11. The city was surrounded by a ten-foot-thick wall that had first been built over eight hundred years earlier. There is little else that archaeologists have found in the city that is attributable to the time of David.

5:6. Jebusites. First mentioned as descendants of Canaan (Gen 10:16), the Jebusites were probably non-Semitic peoples, related to the Hittites or Hurrians, who moved into this region during the early second millennium. They inhabited the hill country along the southern border with Benjamin (Josh 15:8) and the city of Jebus (Josh 15:63; 2 Sam 5:6). After David captured Jerusalem, the Jebusites apparently were either assimilated or were enslaved and eventually lost their ethnic identity (2 Sam 5:6-9).

5:6. lame and blind. There has been some suggestion that this was a magical tactic involving a hex. By positioning lame and blind people on the walls the threat was posed that any who entered the city would become lame and blind. Most, however, have preferred the understanding that this is simply a taunting hyperbole: "Even the lame and blind could hold off your armies!"

5:7. Zion. The etymology of Zion cannot at present be traced, but here (its first occurrence) it appears to refer to the acropolis of the Jebusite city. It later came to represent David's city and was used to refer to the entire city of

Jerusalem through much of the poetic and prophetic literature of the Old Testament.

5:8. water shaft. For over a century many interpreters have identified David's means of entry into the city with Warren's Shaft, a rock-cut tunnel that gave the residents access to the water of the Gihon Spring. More recent archaeological work in the tunnel system by Reich and Shukron, however, has determined that the Warren Shaft was never used as a water tunnel and was not connected to the underground system in the time of David. The following comments explore the various elements involved in this interpretation.

The Gihon spring lies in the Kidron valley on the southeast side of the city. Three or four times a day it gushes water for about forty minutes. It can provide up to forty-five thousand cubic feet per day (enough to fill a pool that is seventy-five feet square and eight feet deep).

The strategic importance of water systems. In time of siege it was imperative for the inhabitants of the city to have access to a secure water supply, but the city walls were on the crest of the hill, while the spring was in the valley. For this reason much engineering creativity was directed toward the use of tunnels and shafts cut through the bedrock that could provide water for the city. Other water tunnels are known from Hazor, Megiddo, Gezer and Gibeon (see comment on 2:13). The earliest rock-cut water systems known from the ancient Near East are from thirteenth-century Mycenaea.

Jerusalem's water system. From inside the city one would enter a passageway that descended gradually by slopes and steps. A sharp right turn would enter a horizontal tunnel that ended in a steep stairway into a natural cave. The distance from the entrance to the cave is about 130 feet. A sharp turn from the cave led one into a fortified tower, where the water from the Gihon Spring collected in a large pool.

David's penetration of the city. The only entryway into the water system from the outside would have been through a channel that forked off from the tunnel that took water from the spring to the pool in the tower. This channel ran the length of the city. It was not a tunnel, but it was covered over by huge rocks. At this stage it is not possible to offer any clear idea of how Joab made his way into the city.

5:9. king's personal ownership of the capital. The title "City of David" may reflect the ancient practice that the capital city became not only the royal residence but the personal estate of the reigning king and his successors. From Tukulti-Ninurta of the thirteenth century to Sargon II of the eighth century, Assyrian kings were known to name capital cities after themselves. Sargon purchased the site of Dur-Sharrukin and built his capital there (Khorsabad) in much the same way that Omri bought the site for his new capital, Samaria (1 Kings 16:24). Such royal estate cities typically housed the administration (composed largely of relatives of the king) and enjoyed certain privileges, including exemption from taxation, corvee labor, military duty and imprisonment, as well as being beneficiaries of the most beautiful and elaborate building projects. Such privileges *(kidinnutu)* were enjoyed, for instance, by Babylonian cities such as Nippur, Sippar and Borsippa, based on their status as religious centers rather than as political capitals. Political capitals such as Nineveh and Babylon also were endowed with similar status.

5:9. supporting terraces (millo). It is now accepted by most that this important defensive structure should be identified with what archaeologists have called the "stepped stone structure" (see comment on 5:6). This structure is made of rock and earth, and allowed for the building area to be expanded by about two thousand square feet.

5:11. Tyre. Tyre was one of the major Phoenician seaports of the ancient world. It was located on a small island (about 150 acres) in the Mediterranean just off the coast about one hundred miles directly north of Jerusalem. The city and its mainland fortress are well represented in ancient sources from as early as Ebla and including Egyptian execration texts, Amarna letters, the Epic of Keret (Ugaritic), the Tale of Wenamon (Egypt) and down into Greek and Roman sources. Besides its significant role in the sea trade of the day, the textile and dye industry (see comment on Num 4:6) and the export of cedar were among the pillars of its economy.

5:11. Hiram. The dates of Hiram I of Tyre (Phoenician Ahiram; Assyrian Hirummu) are commonly cited as 969-936 B.C., based on the chronological reckoning of the Jewish historian, Josephus (first century A.D.). He claims to have extensive records of the history of Tyre and offers much information about Hiram's reign. This dating gives little if any overlap between David and Hiram and is suspect due to the methods of calculation available to Josephus. Contemporary Near Eastern sources offer no information about this Hiram but mention prominently his later namesake, Hiram II. The name is also well known from the sarcophagus of Ahiram, king of nearby

Byblos, around this same time period.

5:11. cedar wood. Cedar trees are slow growing and can live up to three thousand years and attain heights of 120 feet. Beautiful grain, sweet-smelling aroma and durability combined to make cedar the wood of choice for most temples and palaces of the ancient world. High resin content inhibited the growth of fungus. The forests of Lebanon on the west slope of the Lebanon range (at elevation levels of about five thousand feet) were one of the few places where it grew. Both Mesopotamia and Egypt were importing it beginning as early as the fourth millennium B.C. By the year 1000, there was little that remained of the legendary forests, making the rare wood all the more valuable.

5:11. David's palace. Though no remains of David's palace have been discovered by archaeologists, the assistance of Hiram of Tyre suggests that it would have been of Phoenician architectural design. Contemporary Phoenician examples excavated in Syria are identified by the Akkadian description *bit-hilani,* which refers to the characteristic porch with columns that are prominently featured. A palace of *bit-hilani* style has been excavated in Israel at Megiddo and has been identified as Solomon's palace. This most likely offers the closest example of what David's palace in Jerusalem would have looked like. The palace at Megiddo is about seventy feet square. Inside, a number of large halls, an audience chamber, an interior courtyard and about a dozen smaller rooms for residential or administrative use filled out the first floor. It was at least two stories tall and featured a guard tower.

5:13. royal marriages as political strategy. Marriage was a tool of diplomacy throughout the ancient Near East. Towns, city-states, tribes or nations who wished to ally themselves with a ruler or come under his protection sealed the treaty with a marriage of a daughter of their chief family to the suzerain or his son. This was an act of loyalty on the part of the vassal, who would then have a personal stake in preserving the dynasty. For instance, Zimri-Lim, the king of Mari during the eighteenth century B.C., successfully placed his daughters in the harems of nearby kingdoms and married several foreign wives himself to increase his power and the stability of his realm. Similarly Pharaoh Thutmose IV (1425-1412 B.C.) arranged a marriage with a daughter of the Mitannian king to demonstrate good relations and end a series of wars with that middle Euphrates kingdom. In David's case, prior to becoming king of Israel he made a series of marriages that strengthened his political and economic position (see comment on 1 Sam 25:39-44). The marriages in this verse likely assured the support of some of the leading families of Jerusalem.

5:17. stronghold. The stronghold referred to here is not the same as that referred to in 1 Samuel 22:4 and 24:22, but is likely the Jebusite citadel in Jerusalem. The platform for this citadel and a few remnants of the wall have been found by archaeologists at the northern end of the Jebusite city in the area south of the modern walls of the Old City.

5:18. Valley of Rephaim. As the Sorek Valley moves eastward out of the Shephelah near Beth Shemesh, it breaks into several passes into the hills around Jerusalem. The Sorek Valley at one point turns northeast toward Gibeon, while the Valley of Rephaim turns east-southeast toward the area between Bethlehem and Jerusalem. It joins the north-south road from Jerusalem to Bethlehem and then heads northeast into Jerusalem. This would be a strategic location for the Philistines to cut David off from potential reinforcements from Judah.

5:19. oracular inquiry. From chapter 23 through the end of 1 Samuel, David is making oracular inquiries of the Lord by means of the ephod under the guidance of Abiathar the priest. It is likely that is also what is happening here. In an oracular inquiry a yes-no question was posed to the deity, and a binary mechanism was used to determine what the answer was. The normative means laid out for this process in Exodus was the Urim and Thummim (which were kept in a pouch in the ephod).

5:20. Baal Perazim. The "baal" element in this name (as a title for deity) is thought to identify the site as a sacred site and may have derived its name from Perez the son of Judah and progenitor of the line of David. Some identify the site as the ridge between Giloh and Beit Jala about two miles northwest of Bethlehem.

5:21. abandoned idols. Nearly every army in the ancient Near East included priests and diviners (as seen in the Mari texts), prophets (2 Kings 3) and portable sacred objects (Assyrian Annals of Shalmaneser III [858-824 B.C.]). In this way, the god(s) could be consulted on the battlefield or invoked to lead the soldiers to victory. In the divine warrior motif, the deity is fighting the battles and defeating the deities of the enemy. In most situations prayers would be made and omens asked to assure the god's presence. The idols would only be abandoned under the most critical circumstances. There are several cases in the ancient world of statues of a god being carried off as

trophies of war. For examples see comment on 1 Samuel 5:2.

5:24. marching in the balsam trees. If balsam trees are mentioned here, they would be identified as bushlike shrubs called mastic terebinths, common in the hill country. While there are many reasons to be suspicious of that translation, no other suggestion has been persuasive either. There is agreement, however, that some sort of tree is referred to. It has been suggested that David is using a tree oracle in which observations of the trees are taken as divine guidance, but it is difficult to confirm this as a regular oracular procedure.

5:24. divine vanguard. In the divine warrior motif the deity goes out as the vanguard to vanquish the enemy. This is common throughout the ancient Near East. In Hittite accounts, Hattusilis III claims that Ishtar went out before him. In Egypt, Amun-Re is said to have gone out before the armies of Thutmose III. The deity terrifies and confuses the enemy, and at times sends thunder (see comment on 1 Sam 7:10) or earthquakes (see comment on 1 Sam 14:15).

5:25. Gibeon to Gezer. The Valley of Rephaim (where the Philistines were camped in verse 22) is southwest of Jerusalem. The Gibeon-Gezer corridor follows the Aijalon Valley, which is northwest of Jerusalem. Verse 23 suggests that David positioned his army to the west of the Philistines to block their retreat. This would have driven the Philistines toward Jerusalem (about two miles), which they would have passed to the west. Just north of the city they would have veered northwest to make for Gibeon (six miles). There may have been additional Philistine garrisons in this area, or they may simply be heading for the next corridor to the plain. Since the text mentions Gezer, they must have headed northwest out of Gibeon to the Beth Horon pass (about three miles; see comment on Josh 10:10) and down into the Valley of Aijalon (five miles). It is about seven more miles to Gezer, which means that David drove the Philistines completely out of the hill country.

6:1-23
The Installation of the Ark in Jerusalem

6:1. thirty thousand chosen men. David's standing army is now thirty divisions (see comment on Josh 8:3). The importance of the ark as well as its military significance is indicated by the size of the escort. Processions to showcase military might were common in the ancient world and continue in popularity today. The Assyrian army likewise accompanied the statue of Marduk as it was restored to Babylon from Asshur in the seventh century.

6:2. Baalah. In 1 Chronicles 13:6 Baalah is identified as another name for Kiriath Jearim. The ark has been housed in Kiriath Jearim ever since its return from Philistia. The site is commonly (but tentatively) identified with Tell el-Azhar, nine miles west northwest of Jerusalem.

6:2. enthroned between the cherubim. The ark was a wooden box, open at the top, approximately three to four feet in length and two and a quarter feet in both width and height, based on eighteen inches a cubit. It was overlaid inside and out with sheets of the finest gold and had four rings (also gold covered) attached to the sides for the insertion of two gold-encrusted poles, which were used to carry the ark and to protect it from the touch of all but the high priest. A golden cover, decorated with two winged cherubim, sealed the ark. Its primary function was to store the tablets and to serve as a "footstool" for God's throne, thereby providing an earthly link between God and the Israelites. In Egyptian festivals the images of the gods were often carried in procession on portable barques. Paintings portray these as boxes about the size of the ark carried on poles and decorated with or flanked by guardian creatures. Biblical descriptions as well as archaeological discoveries (including some fine ivory pieces from Nimrud in Mesopotamia, Arslan Tash in Syria and Samaria in Israel) suggest the cherubim are composite creatures (having features of a number of different creatures, like the Egyptian sphinx), often four-legged animal bodies with wings. The cherubim appear in ancient art with some regularity, flanking the thrones of kings and deities. The combination of cherubim as throne guardians, chests as footstools and statements in the Old Testament concerning Yahweh being enthroned on the cherubim supports the concept of the ark as representing the invisible throne of Yahweh. The use of empty thrones was widespread in the ancient world. They were provided for use by deities or royal personages when they were present.

6:3. new cart. The use of a new cart would assure that there was no ritual impurity connected to the cart from previous usage (for instance, if it had been used to transport dung or dead animals). However, instructions for the transport of the ark always involved priests using poles to carry it rather than using a cart. The cart precedent was set by the Philistines (1 Sam 6:7).

6:5. worship music. These are all typical musi-

cal instruments of the time and are attested in ancient Near Eastern texts, reliefs and paintings as early as the third millennium B.C. There is still some disagreement among authorities as to which of the Hebrew words in this passage ought to be translated "harp" and which one as "lyre." The one the NIV translates "lyre" is a ten-stringed instrument, while the one translated "harp" is thought to have had fewer strings. Both are hand-held with frames made of wood. The tambourine has been identified in archaeological reliefs as the tambour, a small drum (leather stretched over a hoop) that would not have the tinny rattle sound of modern tambourines. The fourth instrument (NIV "sistrum") is the most difficult because it only occurs here. It is most commonly considered a shaker or rattle of some sort. The last, cymbals, are made of bronze and are in the percussion group, so the only remaining question concerns their size.

6:6. threshing floor of Nacon. The location of this threshing floor is unknown. The text puts it in the vicinity of Obed-Edom's house, which in turn is not far from Jerusalem, but it is impossible to be more precise.

6:7. Uzzah's irreverence. The ark is viewed as an object requiring respect and caution. Its very nature made it dangerous (compare electricity). The word translated "irreverence" occurs only here in the Old Testament, but the same root in related languages means "disdain" (Akkadian) or "negligence" (Aramaic).

6:10. house of Obed-Edom. The name Obed-Edom means "servant of Edom" (perhaps a deity's name; compare Obadiah = Obed-Yah[weh]). Additionally he is identified as a Gittite, that is, from Gath. A company of soldiers (mercenaries?) from Gath made up David's personal bodyguard (see 15:18), and it is possible that this individual is one of them. The house is generally considered to be in close proximity to Jerusalem, but evidence is lacking.

6:13. sacrifice every six steps. When the Assyrian king Ashurbanipal was restoring the image of Marduk to Babylon (seventh century), fatted bulls were offered every two miles along the way (Assur to Babylon is about 250 miles). David would have made about the same number of sacrifices as Ashurbanipal in about a half mile. The text does not specify what was used for an altar or how long the procession took. The word translated "bull" is a general term for cattle that can be male or female. The category of fatted calf is not used in the ritual instructions in the Pentateuch. It is presumed to be an animal that has been specially fed and pampered so the meat will be tender. The text does not specify what type of sacrifice this is intended to be.

6:14. linen ephod. Though the ephod is a priestly garment, David is not necessarily portrayed as actually officiating in the role of the priest. Alternatively he may be taking the role of supplicant before the Lord and thus "offers" the sacrifices, not as priest but as any worshiper would (see comment below on verse 17).

6:14. dancing in the ancient world. Much of the dancing that is attested in the ancient world takes place in cultic contexts, though both Mesopotamian and Egyptian sources frequently depict dancers involved in entertainment. The dancing connected to festivals would probably resemble folk dancing of today, featuring the coordinated movements of a group of dancers. At other times the dances could more resemble ballet, where a scene or a drama is acted out. Single dancers usually performed either whirling, squatting, leaping, hopping-type dances or acrobatics approximating a modern gymnast's routine. Dancers sometimes performed either scantily clad or in the nude. In cultic contexts the participating officials (i.e., priests and administration) at times danced, not just the professionals. In one Hittite ritual this specifically included the queen. There are no known examples of dancing kings.

6:14-21. David's activity. The verb translated "danced" in verses 14 and 16 is used only in this passage. The use of the word in the related language of Ugaritic shows it to be something one does with fingers, thus suggesting snapping or waving fingers. The verb translated "leaping" in verse 16 is used only here and in a slightly different form in Genesis 49:24, where it is a description of the agility of the arms. In the parallel passage, 1 Chronicles 15:29, the verb translated "dancing" is only used of human activity twice (once parallel to singing and rejoicing, Job 21:11; and once opposite to mourning, Ecc 3:4). It generally conveys swaying, trembling or vibrating movements. It is possible, then, that David is not involved in dance at all but is swaying his arms and snapping or waving his fingers.

6:15. trumpets. The trumpet referred to here is the ram's horn (shofar). The shofar is capable of a variety of tones but cannot play a tune so is used primarily for signals either in worship or in warfare. The ram's horn was softened in hot water, then bent and flattened to produce its distinctive shape.

6:17. tent pitched for the ark. The text does not refer to this tent as the tent of meeting or the tabernacle, the two technical descriptions

that typically identify the sanctuary that had been ordained at Sinai. Canaanite religious texts also speak of pavilions used for the dwelling of the gods. Archaeologists have found the remains of a Midianite tent shrine at Timnah that dates to the twelfth century B.C. It too was made of curtains draped over poles. Portable structures of similar design (curtains hung over gold-gilded beams or poles) are found in Egypt as early as the mid-third millennium both in sacred and secular use.

6:17. burnt offerings and fellowship offerings. Burnt offerings were totally consumed on the altar and usually were connected to petitions (see comment on Lev 1:3-4). Fellowship offerings provided a basis for a communal meal, and typical use of this offering was for ratification of treaties or covenant agreements. For more information see comments on 1 Samuel 10:8; Exodus 24:5; and Leviticus 3:1-5. The fellowship offerings are seen in contexts of coronation (1 Sam 11) and temple dedication (1 Kings 8). It is possible that the installation of the ark was combined with an enthronement celebration; see next comment.

6:17. enthronement celebration. Assyrian enthronement festivals from the time of Tukulti-Ninurta I (twelfth century) describe the king taking off his royal robes and praying humbly before the deity. Then the king is re-crowned and blessed. There follows a procession to the throne, concluding in gifts of allegiance being offered by high officials. The similarities in David's festivities can easily be seen. Here it is Yahweh whose enthronement is being celebrated. David sets aside his royal garments and leads the procession as a simple supplicant to the throne room (the tent). Then the sacrifices of petition and allegiance are offered. From verse 21 it might be inferred that on this occasion there was also a reaffirmation of David's election and kingship. Assyrian records also preserve several accounts of the founding of a new royal city (Ashurnasirpal, Sargon, Sennacherib, Esarhaddon). These feature the god being brought into the city accompanied by sacrifices and a banquet (including music), with food and drink being distributed liberally to the people.

6:18. blessings for the people. In the ancient world, blessings (as well as curses) were believed to have a power all their own that would result in their fulfillment. They were often given by the priests to someone leaving the sanctuary after participating in some ritual. In ancient Near Eastern practice a phrase invoking the gods to grant watch care and well-being is used regularly in Ugaritic and Akkadian salutations. Finally, the phrase "the Lord bless you and keep you" is also found in the words (Hebrew) painted on a large storage jar from the ninth century B.C. found at Kuntillet Ajrud in the northern Sinai.

6:19. gifts for the people. The loaf of bread here is a braided ring bread that is perforated in the baking process. "Date cake" is a traditional translation—the word occurs only in this account, and the meaning is uncertain. The treat rendered "raisin cake" could be made out of any dried fruit. Hosea 3:1 specifies that raisins are used to make this morsel, but the context here does not give that information. This would be a block or ball of compressed dried fruit.

6:20. Michal's complaint. In verse 16 the text says that when Michal saw David performing whatever he was doing (see comment on 6:14-21) that she despised him. It is not until this verse that detail is given concerning what offended her. Michal's complaint did not focus on undignified behavior but on David's attire. There are two reasons already mentioned why David may have set aside his royal robes in favor of a simple linen ephod. If he is dancing as part of the procession (see 6:14 above), he may have adopted the attire of those who dance, which was often very little. If this resembles an enthronement festival (see 6:17 above), it was customary for the king to adopt the role of supplicant. Since Michal compares him to a "vulgar fellow," it is likely that the former represents her understanding.

7:1-29

A Covenant and a Dynasty for David

7:1, 11. rest. Here it is indicated that God has given David rest from his enemies, and throughout the Old Testament the Lord speaks of giving rest to his people. This is especially significant in this context where David wants to build a temple, because in the ancient Near East the temple of the deity was supposed to offer rest to the deity. Some of the temple names even suggest that as a primary function of the temple. This divine rest then often results in rest for the people in their land. In contrast the Bible says little about divine rest, and it is never the prerequisite for human rest except for the sabbath.

7:2-3. prophet as advisor. Prior to the time of Samuel, prophets had exercised political leadership by virtue of their prophetic office. With the initiation of kingship the role of the prophet had become an advisory role. Rather than leading the people as the recipient of divine messages, the prophet offered guidance to the

king, who would retain the freedom to accept or reject it. For more information see comments on Deuteronomy 18:14-22.

7:2. cedar dwelling versus tent dwelling. It was a common occurrence in the ancient Near East for a victorious king to show his gratitude to the patron deity by building a temple. Examples go back into the mid-third millennium among the Sumerians and continue down into Assyrian, Babylonian and even Persian times. The temple (home of the god) was expected to bring the protection of the deity to the king and his land. A permanent and luxurious dwelling (cedar) would be intended to insure the Lord's presence and favor. In Ugaritic literature the father god, El, was believed to inhabit a tent shrine (as were many of the Canaanite deities). Baal, in contrast, built for himself a beautiful palace.

7:5. divine permission to build. In the ancient world it was important to procure divine permission to build a temple. If the king proceeded on his own without direction as to the location, orientation, size and materials, he could expect only failure. In the Neo-Babylonian period Nabonidus tells of a king who undertook such a project without the consent of the gods, with the result that the temple collapsed. In the Sumerian *Curse of Akkad,* Naram-Sin seeks an omen that will permit him to build a temple. Though he does not receive one, he proceeds anyway. His action is consequently blamed for the fall of the dynasty of Akkad.

7:8-11. deity as king's sponsor. It is common rhetoric in the ancient Near East for a king to claim the sponsorship of the national deity. Hittite and Mesopotamian documents are especially clear. The deity is acknowledged as having brought the king to the throne, given him the land and established his kingship. The god is relied upon to protect the king, give him victory over his enemies and establish his dynastic line, thereby determining the destiny of the king.

7:13. son to build temple. An inscription survives in which Adad-Guppi, the famous queen mother of the Neo-Babylonian empire (sixth century), reports a dream given by the god Sin. The god told her that it was her son who would construct the temple for him in the city of Harran. This was different to David's situation in that it was a work of restoring a sanctuary that had fallen into ruins.

7:14. father/son relationship between God and king. Egyptian kingship is particularly strong on this point, since the kingship of the pharaoh was seen as derived from the divine realm. More particularly he was conceived as the son of Re, the sun god. In Ugaritic literature, Keret, king of Khubur, is identified as the son of El, the chief god of the Canaanites. Among the Aramean kings the designation was even included in their throne names (Ben-Hadad means son of Hadad). In Mesopotamia, from Gilgamesh in the mid-third millennium through kings such as Gudea, Hammurabi, Tukulti-Ninurta and Ashurbanipal, just to name a few, it was part of the royal prerogative to claim divine heritage.

7:14-15. security despite discipline. In one Hittite treaty of the second millennium the Hittite king, Hattusilis III, guarantees his vassal, Ulmi-Teshup of Tarhuntassa, that his son and grandson will inherit the land after him. The text goes on to say that if Ulmi-Teshup's descendants commit offenses, they will be punished (even with death), but that the land will not be taken away from Ulmi-Teshup's family as long as there is a male heir.

7:15. covenant love. Hittite, Akkadian, Ugaritic and Aramaic examples all show that the positive action of the suzerain toward the vassal is expressed as love, kindness and graciousness, and in return the vassal is expected to respond with obedience and loyalty. In the Amarna letters (from vassal kings of Canaan to their Egyptian overlord) "love" is used as a characterization of friendly and loyal international relationships. It expresses the vassal's intentions to be loyal and to honor the terms of the treaty agreement between the parties. The biblical text shows a clear example of this usage in 1 Kings 5:1. There are rare instances in Mesopotamian literature where an individual is admonished to love a deity, but in general the gods of the ancient Near East did not seek love from their worshipers, nor did gods enter into covenant relationships with them.

7:18-29. observations about David's prayer. In a prayer of Ashurnasirpal I (an Assyrian king a generation earlier than David) to Ishtar he thanks Ishtar for her sponsorship. The benevolent acts he recognizes include raising him up from obscurity, appointing him as a shepherd to the people, making him a name and allowing him to establish justice for his people. These are also some of the same divine services that Nathan has identified to David (verses 8-11).

7:22. monotheism. The statement here that there is no God except Yahweh goes beyond previous statements. Though there were several attempts in the ancient world to magnify one god to the near exclusion of others, these do not come close to the ideal of monotheism represented in ancient Israel (see comments on Ex 20:3 and Deut 6:4).

8:1-18

David's Kingdom

8:1. Metheg Ammah. Many doubt that this is a place name, and a number of creative alternatives have been proposed. If it *is* a place name, the location has not been identified.

8:2-3. selective, proportional execution. The described means of choosing those who would be executed is unparalleled in both the Bible and the ancient Near Eastern records available to us.

8:2. tribute. When one state or other political entity conquered another or extended hegemony over its affairs, the result was the exaction of tribute payments from the subject people. This could take the form of precious metals (by weight or as jewelry or implements), farm produce (a significant portion of the harvest) or labor service. Not surprisingly, this draining of the economy was unpopular and was generally the reason for revolt or warfare. Extrabiblical documentation for this practice is widespread. For instance, the annals of the Assyrian kings often include lists of items received as tribute: the Black Obelisk inscription of Shalmaneser III (859-824 B.C.) contains Jehu's tribute to Assyria of silver, gold, lead and hard woods; Tiglath-Pileser III (744-727 B.C.) received elephant hide, ivory, linen garments and other luxury items from his vassals in Damascus, Samaria, Tyre and elsewhere.

8:3. Hadadezer. Hadadezer is identified as the son of Rehob, which may indicate his association with the important town of Beth Rehob (see 10:6). The Assyrian king who was contemporary to David, Ashurrabi II, reports significant trouble from an Aramean king who is seeking to expand into Assyrian territory. There is no mention of this king's name, but Hadadezer is the most likely candidate. The name itself is familiar since it is also the name of the Aramean king who opposed the Assyrians in the ninth century (Adad-Idri is the Assyrian form).

8:3. Zobah. This important Aramean kingdom was situated in the vicinity of the Anti-Lebanon range and the northern section of the Beqa Valley (southern section of the Orontes) and extended east to the plain of Homs. It is mentioned in Neo-Assyrian records of the eighth and seventh centuries.

8:3. Euphrates River. The bend of the Euphrates at Emar is most likely the area intended here. According to 1 Chronicles 18 this battle took place at Hamath on the Orontes river. NIV's "control" is the Hebrew word for "hand," which elsewhere refers to a stele or monument with a royal inscription (1 Sam 15:12; 2 Sam 18:18) being set up here by David. Verse 13 speaks of a "name" David makes (NIV "became famous"), which is another way that Hebrew speaks of a monument. Egyptian Pharaoh Thutmose III (fifteenth century) boasted of the steles they erected on the banks of the Euphrates.

8:4. chariots. The chariots of Syria during this period are similar to the Assyrian models depicted in reliefs of the ninth century. They featured two yoked horses with one or two others harnessed beside. Two spoked wooden wheels on a rear axle supported a small platform occupied by a driver and rider equipped with bow and spear. The sides only went up to mid-thigh on the standing occupants.

8:4. hamstringing. Horses could not be mercifully shot as they are today, and the Israelites had no use for them and no means to care for them; they certainly did not want their enemies to have continued use of them. Hamstringing involves cutting through the rear tarsal tendon in the hock joint (equivalent of human Achilles tendon), leaving the horses unable to walk.

8:5. Arameans of Damascus. The movement of Arameans into the Levant took place in the eleventh century. Based on other examples from cuneiform literature, the name Aram may in fact have originally been that of a region (cf., Sippar-Amnantum of the Old Babylonian period) that was later applied to people living there. Current evidence suggests that the Arameans inhabited the upper Euphrates throughout the second millennium, first as villagers and pastoralists, then as a political, national coalition. In this text there is no mention of a king of Damascus, suggesting that Damascus has not yet emerged as a major power in the region.

8:5. Damascus. Damascus is located in an oasis watered by the Barada River in the shadow of the Anti-Lebanon range to the west and with the Syrian desert stretching out to its east. It is first mentioned in the lists of Thutmose III in the fifteenth century and is named, though not in a major role, in the Amarna texts. Its major prominence comes in the conflicts with Assyria in the ninth and eighth centuries. The continuing occupation of the site has offered few opportunities for excavation, resulting in no information to illuminate the biblical period.

8:7. gold "shields." The Hebrew term here was long obscure but is now recognized as a technical term borrowed from Aramaic referring to a bow case. Ceremonial bow cases are pictured in later Persian reliefs.

8:8. Tebah and Berothai. Tubikhu is men-

tioned in the Amarna texts as a city south of Homs and may be the Tebah mentioned here. It is also known from Egyptian itineraries. Berothai is Bereitan in the Beqa Valley south of Baalbek. 1 Chronicles 18:8 adds Cun (Kunu) to the list, which was the ancient name of Baalbek (almost fifty miles north of Damascus).

8:9. Tou of Hamath. Tou of Hamath controlled the region north of Zobah and was apparently pleased to see the influence of the kingdom of Zobah checked by the Israelites. While Hamath (modern Hama, about 130 miles north of Damascus) is the name of a city on the Orontes, it also identifies a nation in Neo-Assyrian records. Tou is unknown outside the Bible, but the name is common in the Hurrian language. This suggests that Hamath was not at this time an Aramean state.

8:10-11. dedicating precious metals to the Lord. Dedication of the precious metals to the Lord means that they were donated to the sanctuary's treasury and became part of the assets administered by the priests rather than going into the royal treasuries. Specially selected objects such as ceremonial weapons or important cultic objects would have been kept, while many of the smaller items would be melted down.

8:12. extent of David's control. David's kingdom included Transjordan at least as far south as the Arnon. Territory of Edom focused on the region southwest of the Dead Sea. David's conquests targeted the two major trade routes through the region.

8:13. Valley of Salt. Wadi el-Milh is one possibility, halfway between Beersheba and the Dead Sea, though only the name supports the identification.

8:14. building garrisons. Placing garrisons in annexed territories or in vassal countries allowed a country to extend its supply line and to monitor activities and maintain control. Food supplies and arms could be stored there, and the military personnel could be ready to deal with any deviation from treaty stipulations or to put down any uprisings. Likewise tribute could be collected and merchant activity controlled.

8:16-18. administrative officers and organization. Joab is listed first, reflecting the reality that the military commander was second in command in the administration. This was normal in the Levant. The recorder would have charge of the records and documents of state and could be viewed as a herald or even as the equivalent to the modern press secretary. He also had control of who was admitted to see the king and would have been the protocol officer. The secretary would have been in charge of diplomatic correspondence and would have been comparable in some ways to the Secretary of State. There has been some suggestion that these offices are tailored to Egyptian models of administration, but Canaanite models are equally defensible.

8:17. two high priests. Abiathar descends from the line of Eli (see comment on 1 Sam 1:3), which held the high priestly office at the beginning of this period. Zadok is later identified as representing the line of Aaron through his firstborn, Eleazar (1 Chron 6:8). There is no information concerning how the transfer of power had occurred during the Judges period. It is not impossible that the Zadok line had retained priestly prerogatives in Judah, but one can only speculate. Competing priesthoods are not unusual in the ancient Near East, but typically would represent priesthoods for different gods.

8:18. Kerethites and Pelethites. These were groups of mercenaries who served David as vassals rather than as members of the standing army. The Kerethites are identified as immigrants from Crete and are closely associated with the Philistines, who were believed to come from the same area of the Aegean. The Pelethites are known only from passages such as this, where they are associated with the Kerethites.

8:18. sons as "advisers." The Hebrew text uses the word "priests," but this is not the problem it has been portrayed as. Although the tribe of Levi had been exclusively assigned all of the duties related to the sanctuary (see comments on Lev 10:10 and Num 18:1-7), there is no text that prohibits non-Levites from performing other priestly tasks (see comments on Ex 28:1). It is just that as time went on, priestly tasks not related to the sanctuary were gradually eliminated (see 2 Kings 23:8). The existence of priestly duties carried out within the family context are indicated in post-Sinai contexts (Judg 6:24-26; 13:19; 1 Sam 20:29), and in the general culture of the ancient Near East the oldest son frequently had priestly duties in the veneration of ancestors (see comment on Num 3:1). Saul had been reprimanded for his involvement in a priestly function, but that may have been because it violated the charter (1 Sam 10:25) that delineated his role with respect to Samuel's (see comment on 1 Sam 13:8-13). David's priestly prerogatives may have been attached to the traditional roles in Jerusalem. The existence of such a royal priestly tradition is recognized in places like Psalm 110:4 and perhaps in David's participation in the ceremony of installing the ark (above, 6:14).

9:1-13

David's Care for Mephibosheth

9:3. lame in both feet. See the comment on Mephibosheth and his disability in 2 Samuel 4:4.

9:4. Lo Debar. This was an area north of the Yarmuk River in Transjordan that was allied with Saul and later transformed into a vassal state by David. The site of Tell Dober, which has evidence of occupation in the Iron I and II periods, may well be the city that controlled this region. It lies at the southwestern tip of the Golan and is north of the Yarmuk.

9:7. David's action contrasted to normal. Mephibosheth had good cause to be afraid of David. There is wide precedent in Mesopotamian texts for the elimination of all rival claimants to the throne when a king comes to power (compare Baasha's murder of Jeroboam's family in 1 Kings 15:29). Such purges also occurred years later as a form of revenge for political opposition or rebellion attempted against previous rulers. For example, Ashurbanipal mutilated, executed and fed the bodies of his grandfather's rivals to dogs as part of his first official acts as king of Assyria. David, however, treats Mephibosheth, the only surviving male member of the royal family, as the rightful heir to Saul's estates. His generosity is coupled with the command to eat at David's table. In this way Mephibosheth is treated with honor, though some have noted it also keeps him under observation should he be inclined to subversion.

9:7. eating at the king's table. Political prisoners were seldom kept in prison cells. It was more advantageous for the king to hold them in confinement within his palace or royal city, treating them to the pleasures of the "king's table" but always keeping a close eye on their activities. Reports in ration lists from the Babylonian and Assyrian periods provide evidence of food, clothing and oil provided to "guests" of the king. Persian courts contained political detainees as well as "allies" who were kept in the king's presence to insure a continual flow of taxes and soldiers for the army. Thus Mephibosheth, like Jehoiachin many years later (2 Kings 25:27-30), enjoyed the largesse of the king's court but was not truly free.

10:1-19

War with the Ammonites

10:2. David's intended treatment of Hanun. During David's outlaw period he not only spent time as a Philistine mercenary but also sought out help from Saul's enemy Nahash of Ammon. This would have involved a pact of mutual nonaggression and support, and would have been of benefit to both David and Nahash. Most treaties found in ancient Near Eastern documents are suzerain treaties in which a stronger state imposes tribute and other obligations on vassal states (see the vassal treaties of Esarhaddon). Some, like the treaty ending the war between Egypt and Hittites in the thirteenth century B.C., recognize "brotherhood" or parity between the two sovereigns (Rameses II and Hattusilis III). Since treaties were considered to be "eternal," it is not unusual that David would have sent a delegation to Hanun to renew the elements of this agreement. The hostile reaction the diplomats received suggests Ammon's fear that David wished to transform the treaty from a parity agreement to a suzerain treaty.

10:3. Hanun's treatment of David's men. David's messengers have half their beards shaved (symbolically emasculating them and by extension David) and "their garments [were cut] in the middle at their hips," leaving them naked like slaves or captives (see Is 20:4). These men were ambassadors and as such were entitled to both respect and diplomatic immunity. What may seem like a "prank" was in fact a direct challenge to David's power and authority, and precipitated a war between the two nations. David could not allow such an obvious "rape" or symbolic castration of his representatives to go unavenged. A review of Assyrian royal annals (Sargon II, Sennacherib and Ashurbanipal) contains justifications for a declaration of war based on a violation of a sworn agreement or the physical challenging of Assyrian authority. Although the annals are not as graphic as this example, they also serve as a "dropping of the gauntlet" in political terms.

10:5. till beards grow back. Beards were a symbol of virility (compare the Assyrian king Shamshi Adad's taunting of his son Yasmah-Addu, saying "Are you not a man—have you no beard?" in the Mari letters). The physical message conveyed by Hanun's act is that Israel would be deprived of its strength and thrown into mourning, with garments torn and heads and beards shaved (see Is 15:2). As representatives of the king, these ambassadors were personally embarrassed by their treatment. However, by extension, David was also shamed, and thus he kept them from public view until the "damage" was no longer visible.

10:6. coalition. Very often small states or kingdoms would ally together against a common enemy. In this case, Ammon, feeling the need to strengthen its position against David, en-

listed the help of the Arameans. Twenty divisions of troops came from Beth Rehob on the border between Syria and Israel (in the vicinity of the Huleh Valley near Tel Dan—see Judg 18:28), and from Zobah in the northern Beqa Valley. The former city is also mentioned in Egyptian records from the time of Thutmose III. See the comment on 2 Samuel 8:3 for other conflicts between Israel and the Aramean king Hadadezer. Maacah also lies southeast of Beth Rehob, south of Mount Hermon and east of the Jordan. The last group of soldiers (twelve divisions) come from Tob (et-Tayibeh, twelve miles southeast of the Sea of Galilee in Gilead). The list of allies thus names the regions from north to south, covering the territory from the Orontes to the territory of Ammon.

10:7-12. battle situation. The presence of two separate forces (Ammonites defending the gates of their city [probably Rabbah] and Arameans deployed in the adjoining area) required Joab to divide his own army and make contingency plans with his co-commander, Abishai, in case of a collapse by either Israelite group (compare the account in 1 Chron 19:9-13). This strategy suggests he was surprised by the enemy position and did not have sufficient forces to effectively fight a sustained two-front battle. Although he was in a dangerously untenable position, with enemy troops on two sides, his strategy appears to have worked, at least to the extent of a draw. This may explain why he was not able to follow up his efforts but withdrew to Jerusalem.

10:16. Helam. Although its exact location is uncertain, the city or district of Helam was probably in northern Transjordan, perhaps between Damascus and Hamath (supported by a variant reading in Ezek 47:16)—a site that could serve as a staging area for Hadadezer's Aramean troops from across the Euphrates and an area close enough to be a threat to David's control of the region. The site is mentioned almost a millennium earlier in an Egyptian execration text, but that does not help locate it.

10:17. battle lines. Military formations were designed to take advantage of terrain and the weaponry employed by the army. The text indicates that Shobach, the Aramean commander, had both chariots and infantry. The ranks of infantry, deployed in mass formations led by "commanders of fifty," included spearmen with shields in the front rank and bowmen and slingers placed immediately behind them. When the armies came together, hand-to-hand combat would have employed flat-bladed axes and daggers. The chariots were often placed on the flanks for easier maneuverability.

10:19. subjects of Israel. It was not uncommon in the ancient Near East for the fortunes of war to lead to political shifts of allegiance. With the defeat of the Aramean army, many of the villages and towns that had formerly sworn allegiance to Hadadezer now offered their support and tribute to David. Parallels to this practice can be found in the Vassal Treaties of Esarhaddon as well as in the campaign lists of most of the Assyrian monarchs. It should not be assumed, however, that David was able to take total, structural command of this region of northern Transjordan. Coerced support, won one day in battle, may disappear at the first sign of weakness.

11:1-27

David and Bathsheba

11:1. the time when kings go off to war. Military campaigns, while seldom officially declared, came predictably in the ancient Near East with the end of the winter rains. A period of several months was then available during the spring season, prior to the harvest, when every able-bodied man was needed to work in the fields. Many of the Assyrian and Babylonian royal annals include the notation that a military campaign began in either the first month (Nisannu) or the second month (Aiaru) of the year (the period from March-May).

11:1. king remained behind. Kings, because of the duties of state or physical reasons, could not always accompany the army in every campaign. For instance, the Assyrian king Sennacherib employs an official known as the Rabshekah to besiege Jerusalem in 2 Kings 18:17-35. David's decision to remain behind may reflect his confidence in Joab's military skill, a pressing diplomatic matter or his concern with domestic affairs.

11:1. Rabbah. Rabbah was the capital city of the ancient Ammonites. It was located at the same site as modern Amman in Jordan on the north bank of the Zerqa at the sources of the Jabbok River, about forty miles east of Jerusalem. Because of continued occupation of the area, archaeological excavations have been limited. The ancient acropolis, however, has been investigated but has yielded little about the city at the time of David (perhaps a wall constructed by him).

11:2. roof of the palace. Because of the cool breeze that refreshes Jerusalem in the early evening, many people come out to socialize or to enjoy the air from the privacy of their roof tops. The palace's architecture was most likely

similar to that of more common dwellings, with a large living or sleeping area on the roof (1 Sam 9:25).

11:2. bathing. Bathsheba's bathing is probably an act of purification following her menstrual cycle (see 2 Sam 11:4). This would be based on the laws of ritual purity as described in Leviticus 15:19-24. It is uncertain whether her intent in bathing on the roof was simply to use the air to help dry herself or whether she used the opportunity to bring herself to the attention of the king.

11:3. family of Bathsheba. The father of Bathsheba is Eliam, a member of David's special cadre of "mighty men" (2 Sam 23:34) and therefore the head of an influential household. This Eliam is the son of Ahithophel, one of David's most respected advisors (2 Sam 15:12; 16:23). This information, along with the fact that her husband, Uriah the Hittite, is also one of the "mighty men" (2 Sam 23:39), suggests that David knew exactly whose house he was looking at and was well acquainted with Bathsheba (an alternative translation suggests that it was David who said "Is this not Bathsheba?").

11:4. purification from uncleanness. The reference to Bathsheba's bathing refers to a ritual of cleansing after the completion of the seven days of impurity following her menstrual cycle (see Lev 15:19-24). It also establishes that she was within the most likely time for conception when she had sexual intercourse with David (10-14 days after commencement of menstruation). This also meant that it was impossible for Uriah to be the father of her child.

11:6-7. Hittite in army. As one of the seven major peoples of Canaan (Deut 7:1), the Hittites could easily have been hired as mercenaries, served on labor gangs or intermarried with Israelites during the period of the judges and the monarchy. They may represent descendants of immigrants from the Anatolian empire or the more recent, northern Syrian Neo-Hittite states.

11:9-11. Uriah's behavior. The presence of the ark of the covenant (v. 11) with the army suggests that they were engaged in a form of "holy war" and therefore special restrictions may have been imposed on the military (see the mass circumcision of the men prior to the beginning of the conquest in Josh 5:4-8 and the purity rites required of encamped soldiers in Deut 23:9-11 and 1 Sam 21:5). If Uriah had taken advantage of the opportunity David gave him to have intercourse with Bathsheba, it would have been possible to claim he was responsible for her pregnancy. However, Uriah's insistence on maintaining his ritual purity by sleeping in the guard barracks forced David to take more drastic measures.

11:14-15. letter of doom. Since Uriah was originally sent to David to bring a first-hand report of the military situation, it is not unusual that David would have sent him back to Joab with official dispatches and orders. As a story element, having a victim deliver his own death warrant is found in folklore from many cultures (see the *Iliad*, where the story is reported of Bellerophon, who, falsely accused, carried his own death warrant to the king of Lycia), but this is the only occurrence in the Bible.

11:15-16. deployment of Uriah. As one of David's "mighty men," Uriah would have regularly been placed at the head of a contingent of soldiers and may have been expected to hold a strategic position in the battle plan (see the description of these "mighty men" in 2 Sam 23:8-39). In this case, however, he was intentionally placed opposite an elite force of Ammonite troops and badly outmatched. Uriah's portrayal as the immaculate soldier suggests that he would accept this assignment without question, but he must have wondered at the tactics.

11:16-24. battle tactics. The tactics on each side seem to involve feints and traps. With the city under siege, it would have been unnecessary to launch offensives. It may be that Uriah's troops were sent on a mission to attempt a breach of the walls. Israelite casualties occurred when Uriah's division was met by a foray coming out to engage the would-be breachers and because they were drawn too close to the walls, where they were within range of missiles thrown or fired from above. Joab's anticipation of David's recitation of the well-known incident of Abimelech's death (Judg 9:50-53) shows that this may have either been a calculated risk or a tactical mistake, if the Israelites were simply fooled into a murderous crossfire. However, it also provided a plausible explanation for Uriah's death and probably did not cost the lives of too many other Israelite soldiers.

11:26-27. time of mourning. The standard period of mourning was seven days (Gen 50:10). Only exceptional persons merited a longer time (thirty days for Moses and Aaron in Deut 34:8 and Num 20:29). In the case of a grieving widow, this would allow her the usual amount of time associated with other forms of impurity before she could consider remarriage (see Lev 12:2; 15:19).

12:1-13
Nathan's Rebuke

12:2-4. purpose of the parable. Nathan's para-

ble of the ewe lamb provides a juridical setting for the indictment of David for his adultery with Bathsheba. As chief advocate for the rights of his people (see 2 Sam 15:4; 1 Kings 3:4-28), the king was expected to render judgment and to demonstrate his wisdom. While David does judge the actions of the "rich man," he is not wise enough to discern that he is judging himself.

12:2-12. nature of the indictment. The case presented by Nathan for David's decision may appear to the reader to have nothing to do with David's crimes, since it deals with neither adultery nor murder. What this case demonstrates is that adultery and murder were only the end results of a more serious crime: abuse of power. David is formally indicted by the divine tribunal (God speaking through the prophet) not only for taking another man's wife but for believing that he could take whatever he wanted and being dissatisfied with what God had given him. It is thus made clear that the king is not above the law and will be called to judgment by God, if not by the civil authorities.

12:5-6. deserves death/quadruple compensation. In his outrage, David would like to be able to sentence the offender to death because of his pitiless attitude, but the law was clear enough. The fourfold compensation is consistent with the law in Exodus 22:1 for the theft of a sheep (Hammurabi's Code requires a fine ten times the value of the stolen livestock).

12:8. master's house and wives. Since royal marriages were a reflection of the power of a monarch and represented political and economic alliances made in the name of the state, it would have been necessary, at the succession, for the harem of the former king to become the responsibility of the new monarch. In this way there was continuity of treaty obligations. After the death of Ishbosheth (2 Sam 4:5-7) and David's rise to kingship, it would have been expected that he would extend his protection to Saul's family, including his harem. Thus it is possible that the brief reference to David's marriage to Ahinoam in 1 Samuel 25:43 is a reference to his taking Saul's wife Ahinoam (1 Sam 14:50).

12:11. curse. This punishment follows the crime by suggesting that David's power will be usurped and his wives will be taken from him (see Absalom's taking of David's wives in 2 Sam 16:21-22). This even hints at the possibility that the throne would be taken from him. His violence and sexual misconduct will be matched by the violence and sexual misconduct of his household.

12:15-25
The Death of David and Bathsheba's Child

12:16. David's plea. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and humbling oneself before God (Ps 69:10). Babylonian prayers include similar expressions of supplication and a sense of dependence on the power of the gods to remove evil and restore health.

12:20-23. David's conduct. David's servants did not know the judgment that had been uttered against the child by God. As a result, David's actions were misinterpreted by them. Fasting can be a response to mourning (as David's servants assumed in this case). But David strove to change God's mind, and his fasting was part of the procedure to enhance David's petition. Once he sees that the petition has been denied, he ceases his fast.

12:23. I will go to him, he will not return to me. This is simply David's acknowledgment that his efforts to save his son have failed. He does not expect any petition to bring his son back to life but recognizes that they will only be together in death. It is therefore a poignant expression of the ultimate fate of all humanity, similar to Jacob's mournful reply in Genesis 37:35. Gilgamesh's mourning for his dead companion Enkidu includes the statement that he "has now gone to the fate of mankind," and the hero is reminded by Siduri in the same epic that "when the gods created mankind, they ordained death for him." For more information on afterlife, see the comment on Job 3:13-19.

12:26-31
The Fall of Rabbah

12:26. royal citadel. This verse refers to a citadel, while the next refers to the water supply. It is generally assumed that the water supply for ancient Rabbah was the powerful spring by the city. Whether there were separate fortifications to guard the acropolis and the water supply or whether they were both guarded by a single fortification is unknown. One way to capture a walled city is to cut off its access to water. It may be that the citadel was captured because the Israelite army gained control of the water supply. This was the tactic used by

Antiochus III in Hellenistic times when he captured the same city.

12:27. water supply. Due to the often meager rainfall and the fact that it only comes during the winter months, cities and towns were dependent on wells, springs and cisterns during much of the year. The kings of Mesopotamia often boasted in their annals about their efforts to build canals, aqueducts and water-lifting devices (see also 2 Kings 20:20). Thus the capture of a city's water supply generally meant a quick end to a siege. Nothing is known of the means by which the water supply of Rabbah was protected.

12:28. king accomplishing last phase. The royal annals of ancient kings and pharaohs seldom mention their generals by name and always ascribe victories that the gods have granted to the crown. Kings did not always go on campaigns with the army. Assyrian records speak of the king remaining at home while a high-ranking general or the crown prince was entrusted with accompanying the army. This often happened when there were matters at home that were too pressing for the king to be absent. David's absence from the battlefield might therefore lead his subjects (or detractors) to infer that he is incapacitated, threatened or in some way unable to conduct the duties of king. Even when the king led the campaign, he would often not be the one leading the charge in battle but would be back at camp headquarters planning strategy. It would still be normal procedure, however, when possible, for the king to lead the march into the conquered city. David had himself seen the divided loyalties that resulted when his own victories won him a popular following among the people. These eventually contributed to bringing him to the throne. Joab's pointed statement regarding whose name would be invoked as Rabbah's conqueror might therefore be expected to get David's attention and send him quickly into the field.

12:30. king's crown. The word used here usually refers to a ceremonial headdress. Conical caps or turbans were common among the kings and deities of the ancient world. Those worn by kings were often made of embroidered cloth brocaded with gold and gems. At times an additional gold diadem was worn encircling the turban. The weight of this particular crown suggests that it was made entirely of gold and not worn by the Ammonite king but perhaps sat upon the brow of a statue of the god Milcom (an attractive variant reading in the text). Many of the statues of Canaanite gods feature a conical headdress, so it would not be unlikely for the Ammonite god to be so adorned. It is grammatically possible that it was the jewel in the crown that was taken as plunder and worn by David, rather than the seventy-five-pound crown, which would have been difficult to wear for even a short ceremony.

12:31. labor of captives. One of the sources of heavy labor in Mesopotamia and Syro-Palestine was war captives. While royal annals and inscriptions (such as the Mesha stele from Moab) describe large numbers of captives, these may be exaggerations. More reliable, however, are administrative documents listing rations, clothing and the deaths of slaves. It is likely that these persons were put to immediate use restoring the damage caused by wars but eventually settled and became citizens, tilling farms or serving in the military.

13:1-22
Amnon and Tamar

13:8-9. bread making. The use of a special pan (mentioned in later Jewish literature) in which the kneaded dough is boiled to make a sort of dumpling suggests more than just bread making. Amnon's feigned illness, coupled with the suggestion that he needs someone he can trust to prepare nourishing food, calls for an easily digestible item and evident precautions against suspected poisoning.

13:12-13. Tamar's plea. There are four elements to Tamar's plea. The first is that such behavior is not the custom among the Israelites. Obviously taking brides by force is not unknown (see Shechem's rape of Dinah in Gen 34:2 and the abduction of the female dancers of Shiloh in Judg 21:19-23), but apparently it was considered an unacceptable "non-Israelite" custom. When Tamar describes this act of rape, she uses a "shock" word that is designed to bring someone to their senses. The second and third elements of her plea concern personal honor, hers and Amnon's respectively. She realizes that without witnesses there can be no case made against him, and therefore her only hope is to play upon his better judgment and his character as a prince of Israel. She tells him that he will be counted among the fools, a term that applies to men without principle or personal honor who come to a bad end. In Tamar's final attempt (v. 13) she suggests her willingness to join Amnon's household as his wife.

13:18-19. Tamar's garment. The costly, embroidered robe (the term only appears elsewhere in the Joseph narrative [Gen 37:3]) worn by

Tamar marked her as one of the virgins of the household of David. It implied that she was pure and not yet spoken for, and therefore still under the care and protection of the royal house. Now, by tearing her robe, Tamar demonstrates her grief and the fact that her honor has been compromised. Her right to wear this special garment has ended, and her future prospects have been dramatically changed.

13:19. ashes on head. Like tearing one's garment and wearing sackcloth, placing ashes on the head is a sign of mourning (Esther 4:3; Jer 6:26). The gesture of placing her hand on her head has perhaps been illustrated by the mourning female figures on the Phoenician sarcophagus of Ahiram, thirteenth-century king of Byblos, but there the mourning women are putting both hands on their head. The Egyptian *Tale of Two Brothers* also describes this gesture as an indication of mourning.

13:20. Tamar's fate. Because she was no longer a virgin, her worth to her household was diminished, and it is quite possible that no marriage was contracted for her. This is suggested by the comment that she came under the care of Absalom's household rather than David's. She would have lived an unfulfilled existence. The El Amarna texts equate a woman without a husband with an unplowed field.

13:23-39

Absalom's Execution of Amnon and His Exile

13:23. Baal Hazor. This site is usually identified with Jebel el-'Asur, five miles northeast of Bethel, in a rugged part of the Central Hill Country.

13:23. sheepshearing. The wool industry was extremely important in the ancient Near East. For instance, a large percentage of the administrative tablets from the Sumerian city of Nippur deal with the wool industry and the wool trade. Sheep were sheared in the early summer, generally near sites associated with dyeing and weaving (for instance, a large quantity of loom weights was discovered at Timnah). Since this labor required large numbers of laborers, like the grain harvest, the burden was lightened by associating it with a holiday time as well (see 1 Sam 25:7-8).

13:34. geography. The flight of David's sons from Baal Hazor cannot be reconstructed with any confidence. Undoubtedly it was circuitous, but the text of this verse is too uncertain to provide details. It is possible that the location Horonaim included from the Septuagint in NIV may represent Upper and Lower Beth Horon, where there was a major pass from the Northwest. These sites are identified with Beit 'Ur el-Foqa' and Beit 'Ur et-Tahta, both about ten miles northwest of Jerusalem. Neither city can be seen from Jerusalem, but it can be expected that sentries would have been stationed westward to guard this important approach. The text merely indicates this approach as the road that the travelers were using.

13:37-38. Absalom's flight. After Amnon's murder, Absalom fled back to his grandfather's kingdom in Geshur, in the southern portion of the Golan Heights in Bashan. This independent kingdom and its cities just east of the Sea of Galilee are known from the El Amarna and Egyptian execration texts. David's marriage to Talmai's daughter is just one of several diplomatic alliances created by such unions (2 Sam 3:3).

14:1-20

The Wise Woman of Tekoa

14:2. wise woman. The context of the story and of the political situation requires a person skilled in speaking (see also the wise woman of Abel in 2 Sam 20:16-19). However, for a woman to have an authoritative voice, as each of these women do, a special status is also required. Educated women as well as women in positions of authority (priest, scribe and prophet) occasionally occur in the ancient Near Eastern material, but the category of "wise woman" has not yet been isolated.

14:2. Tekoa. Located about ten miles south of Jerusalem, Khirbet Tequ'a lies in the hill country of Judah and borders on the wilderness. The small size and relative remoteness of this village allowed the wise woman to present a case which might not be known to persons in Jerusalem.

14:2. strategy of the wise woman. The strategy used by the wise woman follows a well-known motif of disguise and legal fiction. For instance, in an Egyptian myth (twelfth-century text) the gods Horus and Seth are each trying to seize the throne left empty by Osiris. Horus's mother, Isis, disguises herself as a herdsman's widow and brings a fabricated case before Seth in which strangers are trying to confiscate her son's property and evict him. Seth becomes indignant on her behalf and by his verdict condemns himself.

14:4-11. king as court of last resort. One of the prime responsibilities of the kings of the ancient Near East was to establish justice and righteousness for the people (prologue to Hammurabi's Code; 2 Sam 8:15; 1 Kings 10:9). To deal with the load of cases that arose, kings

delegated authority to elders and judges who heard most disputes (2 Sam 15:4). Still there are a number of texts (Mari letters and the Code of Ur-Nammu), many of them dealing with the plight of widows and orphans, which identify the king as the court of last resort.

14:7. clan responsible for capital punishment. According to Exodus 21:12 murder is a capital crime (also evidenced in the Ur-Nammu code). It would ordinarily be within the rights and jurisdiction of the clan to carry out this sentence (as in the Middle Assyrian Laws). However, it is possible that the "avenger of blood" (2 Sam 14:11) is not a member of the clan and has been hired to carry out the sentence. This case is further complicated by the lack of witnesses (Num 35:30). Even more serious is the elimination of the heir. This would leave the widow without a caregiver, and the family's land would revert to the clan and nearest male kin.

14:7. advantage to clan of extinguishing line. If a man's last descendant was executed or died, his property would remain within the clan and would be redeemed by the nearest male kin (see Jer 32:6-16). There are economic advantages to be gained from this, since it would strengthen the holdings of a prominent member of the clan (compare Ahab's acquisition of Naboth's vineyard in 1 Kings 21 and 2 Kings 9:25-26) and would ensure the land would remain under cultivation.

14:11. avenger of blood. The legal role of the avenger of blood is described in Numbers 35:16-28 and Deuteronomy 19:6-12. There is some disagreement about whether this person is hired by the clan to carry out sentence or is a member of the clan involved. Blood feuds, even internal ones, were so disruptive that the cities of refuge were established to provide a "cooling down" period and a reexamination of the circumstances of the case (see comments on Num 35).

14:13-17. analogy to Absalom's case. The wise woman skillfully ties her hypothetical case to Absalom's situation. In the analogy the woman stands for the nation (or the people), and David himself has become the avenger of blood who is portrayed as threatening the future of the kingdom and of the inheritance of the covenant by his actions against Absalom. There is also a veiled reference to plotters who stand to gain from Absalom's exile or death as eventual inheritors of David's authority and power. Now, using a wisdom plea, the woman calls on David to be a "just king" who provides a righteous solution to her "case."

14:20. king knows everything. Egyptians also considered their kings to be endowed with all knowledge and capable of discerning what anyone's thoughts were. This was believed to be the basis on which the king was able to rule justly and pronounce righteous judgments.

14:19-20. Joab as Absalom's sponsor. Throughout David's career Joab served as commander of the army and chief political advisor to the king. At times, when it was apparent that David was incapable of making a decision (as with Absalom) or was in danger of harming the authority of the monarchy (see 2 Sam 19:1-8), he used independent judgment. Such autonomy both benefited David and made him wary of Joab's power. In this instance, Joab may have perceived the growing popular support Absalom had with the people and felt it would be better to have him where he could be watched, at court, than working to undermine David's authority in exile. As a "company man," Joab is also interested in securing a smooth and legitimate succession to the throne when the time comes. Thus it is not wise to leave this loose end unattended.

14:21-33
Absalom Restored to Favor

14:24. Absalom's partial restoration. It was not uncommon for persons to be exiled for political reasons. For instance, the Middle Kingdom Egyptian courtier Sinuhe spent over twenty years in forced exile, and Ahiqar, the advisor to the Assyrian king Sennacherib, lived for a time in exile in Egypt. On their return, however, they expected honorable treatment and a restoration of former status. But even though David agreed to Joab's request to return Absalom to the royal court, he was not yet prepared to restore his status (as crown prince?). This suggests that though the death sentence had been lifted, David had no intention of offering a full pardon and was simply keeping Absalom where he could be carefully monitored.

14:26. Absalom's hair. Absalom's virile handsomeness is epitomized by his long hair. Its thickness and weight (between two and four pounds) were considered remarkable. There is a Phoenician inscription from the ninth century reporting the dedication of shaven hair in fulfillment of a vow made to the goddess Astarte. In ancient thinking, hair (along with blood) was one of the main representatives of a person's life essence. As such it was often an ingredient in sympathetic magic. This is evident, for instance, in the practice of sending along a lock of the presumed prophet's hair when prophecies were sent to the king of

Mari. The hair would be used in divination to determine whether the prophet's message would be accepted as valid. Absalom's hair is not connected to any such functions in this text. Instead the reference to the hair simply serves as a foreshadowing of his unusual death (2 Sam 18:9-15), a concept that may be strengthened by an omen text that says that if a man has beautiful hair, the end of his days is near.

14:26. shekels by the royal standard. The standardization of measures in Judah is most likely based on shekel weights first established in Ugarit, Babylonia or Egypt (approximately 3.5 ounces to 1 shekel). There is some variation in these standards, with as much as 4.5 ounces to a shekel occurring.

14:33. Absalom's full restoration. Full parental acceptance is seen in Absalom's long-delayed audience with the king and David's kiss (see Gen 33:4 and Ex 18:7 for the kiss as an affectionate greeting and sign of kinship). A public display such as this demonstrated full reconciliation, but it did not promise Absalom the position of heir to the throne.

15:1—19:43
Absalom's Revolt

15:1. chariot and horses. It is possible that having a chariot and horses and an entourage of fifty runners could be construed as official language for status as either a king or the heir to the throne. The chariots featured two yoked horses with one or two others harnessed beside. Two spoked, wooden wheels on a rear axle supported a small platform occupied by a driver and rider equipped with bow and spear. The sides only went up to midthigh on the standing occupants. The word used here suggests an ornamental chariot of the sort used both in Egypt and Mesopotamia. The luxury transportation of the day, these were typically gilded with all variety of gold, lapis lazuli and precious stones.

15:1. fifty runners. Those who run before chariots proclaim the presence of the king or prince and protect his person. In Hittite texts the gods are said to run before the king's chariot leading to victory. The men who run before the king's chariot function as heralds. Fifty was a regular unit within the military. Having such an entourage gave Absalom a bodyguard as well as the rank of captain. Wherever he went, his fifty runners would have raised attention and given credence to his claim to his status as heir apparent.

15:2-6. Absalom's currying favor with the people. When a prince wishes to displace his father the king, it is inevitable that he will attempt to undermine the king's authority with public statements about corruption or governmental malpractice. For example, the Ugaritic king Keret is denounced by his son for not hearing the cases of widows, the poor or the oppressed. Absalom employs this same strategy, taking advantage of a lack of leadership on David's part (failure to appoint judges) and of growing discontent among the northern tribes. In addition to offering them a model of efficient administration of justice, Absalom also plays the "common man," not allowing supplicants to bow to him but kissing them as an equal or friend.

15:7-10. Hebron. It is shrewd political maneuver on Absalom's part to be crowned in Hebron (nineteen miles southeast of Jerusalem). In addition to being the site of the ancestral burial cave at Machpelah, it was also David's capital city when he was king of Judah. Absalom thereby associates himself with the covenant and the roots of David's original power center. He also puts enough space between himself and Jerusalem to prevent interference and set the stage for his march on the capital.

15:8-9. fulfilling vow. Information concerning vows can be found in most of the cultures of the ancient Near East, including the Hittite, Ugaritic, Mesopotamian and, less often, Egyptian. Vows are voluntary agreements made with deity. Vows would typically be conditional and accompany a petition made to deity. Since this is a religious act, drawing the deity into compact with the worshiper, it may not be broken under penalty of God's displeasure. This may explain why David would accept Absalom's request, even though six years had passed since the vow was spoken.

15:10. sound of the trumpets. The blowing of trumpets or the ram's horn (shofar) was used as a signaling device in battle, for celebration and as preparatory to a major announcement, as in the coronation of a king. The shofar is capable of a variety of tones but cannot play a tune so is used primarily for signals. The ram's horn was softened in hot water and then bent and flattened to produce its distinctive shape. Trumpet signals are attested in Egypt in the Late Bronze Age (this time period) in both military and religious contexts. A preset code would include some combination of long and short blasts.

15:10. king in Hebron. David had been king in Hebron for seven years before moving his capital to Jerusalem. Drawing on this dynastic tradition, Absalom has himself declared king in Hebron. This gives his rebellion greater legitimacy and provides ample indication that

he was drawing support from Judah as well as the northern tribes. Hebron was centrally located in the hill country of Judah and was one of the most important towns in the region. It is located about twenty miles south of Jerusalem. For more information see comment on 2:1.

15:12. offering sacrifices. As in 1 Samuel 10:8 it is likely that the sacrifices were burnt offerings and fellowship offerings, two of the most general types of sacrifices. The former often accompanied a petition, while the latter served as an opportunity for festive celebration and a communal meal before the Lord. These sacrifices would have been directed to the initiation of kingship and perhaps toward military activity against David. The sacrifices were being offered to make petition for God's blessing and in preparation for a feast that would create an alliance between Absalom and those in attendance.

15:12. Ahithophel. This is the first introduction to Ahithophel, one of David's chief advisors. As suggested in the comment on 11:3, he is likely the grandfather of Bathsheba. In nations where kingship is either inherited or won on the battlefield, advisors were essential for providing educated, wise and diplomatic strategies and counsel. Often adorned with titles such as vizier, prime minister or royal steward, these individuals were entrusted with many of the responsibilities for operating the kingdom. During this period the Israelite kings did not designate such an office, and Ahithophel is never listed among the officials of the administration, but his status as royal counselor suggests that he may have enjoyed some of that function.

15:12. Giloh. Although sometimes identified with Khirbet Jala, five miles northwest of Hebron, this hometown of Ahithophel is more likely to be found further south and west, near Debir. It was assigned to the tribal territory of Judah (Josh 15:51).

15:16. concubines caring for palace. Since royal marriages were a reflection of the power of a monarch and represented political and economic alliances made in the name of the state, it would have been necessary, at the succession, for the harem of the former king to become the responsibility of the new monarch. In this way, there was continuity of treaty obligations. It is possible that the concubines left behind were those that David had taken into his harem from the leading Jebusite families of Jerusalem (see 5:13) or from some of the families that were supporting Absalom in Hebron.

15:18. Kerethites, Pelethites, Gittites. These were groups of mercenaries who served David as vassals rather than as members of the standing army. The Kerethites are identified as immigrants from Crete and are closely associated with the Philistines who were believed to come from the same area of the Aegean. The Pelethites are known only from passages such as this where they are associated with the Kerethites. The Gittites may be a brigade of troops formed during David's service with Achish of Gath (1 Sam 27:1-12) or simply a group formed as his personal bodyguard after becoming king. All of these troops seem to be of Philistine or Cretan origin. It is unclear from the text whether these special units of mercenary troops (see 2 Sam 8:18) represented the sum total of the army which David was able to command in his retreat from Jerusalem or simply additional contingents.

15:19-22. mercenaries' loyalty. It became common practice in the ancient Near East to employ mercenary troops to augment native forces (for instance, Egyptian use of Nubians starting with the New Kingdom). However, as David suggests, the loyalty of mercenary troops is generally based on regular payment and, when possible, choosing to fight on the winning side. The remarkable statement by Ittai the Gittite expressing personal loyalty to David implies a long-standing relationship and a fealty that transcends monetary gain.

15:23. geography. David leaves Jerusalem traveling east across the Kidron Valley toward the Mount of Olives, the hill across the valley from Jerusalem. He then continues northeast to Bahurim following the Jerusalem to Jericho road to the Jordan Valley across the region the text refers to as the wilderness. He eventually would have crossed the Jordan at the fords of Jericho and then proceeded north to Mahanaim.

15:24-25. role of the ark. It would be logical to bring the ark along because the ark represents the presence of Yahweh and as such is a powerful talisman (for the significance of the ark in battle see comment on 1 Sam 4:3-7). However, David is discerning enough to recognize that if he is out of favor with God, the ark will do him no good and may even pose a threat. There is also a potential advantage to be gained by leaving the ark in Jerusalem, as he shrewdly uses its continued presence as a cover for the spying efforts of Zadok, Abiathar and the priesthood (2 Sam 15:35-36; 17:15-16).

15:25-26. testing the Lord's favor. Israelites believed that God's favor or disfavor was evidenced in the good or evil that came into a person's life. David's expulsion from Jerusa-

lem is therefore described almost as a trial by ordeal. The king's speech suggests that he is resigned to leave the course of events in God's hands. Remembering the pronouncement of judgment by Nathan, recorded in 12:10-12, David cannot be certain that these tragic events are not punishment for his crimes. David is relying on Zadok's ability as a seer to obtain a word from Yahweh on the king's ultimate fate (compare Saul's use of the witch of Endor in 1 Sam 28:3-8). One Mari prophetic text provides a warning of a revolt and the need to surround the king with trustworthy officials; this might be the type of message David was hoping to receive.

15:28. fords in the desert. The "fords in the desert" is a reference to the fords near Jericho, about a day's journey from Jerusalem. Rather than taking the symbolic step of leaving his kingdom entirely, David plans to encamp on the west bank of the Jordan River, about four miles from the mouth of the river as it empties into the Dead Sea. He would rest here and await news of the developments in Jerusalem (see 2 Sam 17:16).

15:30. Mount of Olives. When dealing with ancient geographic names, it is always possible that the reference is to a landmark or trail that is no longer in existence. In this case, the place name may refer to the Mount of Olives (see Zech 14:4) or perhaps to a specific path up the middle slope of one of the three ridges of the Mount of Olives leading to the northeast. This is less than a mile from the city walls.

15:32. summit where people used to worship. This place of worship is not previously mentioned in the text but probably represents a traditional open-air altar or an abandoned shrine. Some suggest this is to be identified with Nob (1 Sam 21:1, 19), but that is uncertain, and Nob is generally thought to be further north.

16:1-2. food supplies. Any army in the field needed provisions and a supply line. Local governors in Assyria were required to open granaries for armies that were traveling through the region. It is common that the people from the area were expected to provide supplies. In this case, the food also functions as tribute to a sovereign and recognition of David's right to rule. Ziba's gift is less generous than Abigail's in 1 Samuel 25 but is not of inappropriate size.

16:3-4. Mephibosheth's absence. While David's immediate concern is the rebellion within his own household, this chapter reminds us that there is a deposed dynastic house (Saul's) lurking in the background and willing to capitalize on David's weakness to its own advantage. Ziba categorizes Mephibosheth with the disgruntled in a ostensibly successful attempt to curry favor with David. Ziba's accusation is sufficiently believable that David confiscated Mephibosheth's lands. The Sumerian code calls for an adopted son to forfeit land in cases where he has repudiated his legal obligations to the family that adopted him. David had always had the option to confiscate the lands belonging to his predecessor. Here he exercises that option but does not take them for the crown, instead giving them as a grant to a loyal servant.

16:5. Bahurim. Located north of the Mount of Olives, Bahurim was a Benjaminite village (probably Ras et-Tmim or Khirbet Ibqe'dan). Saul had been from the tribe of Benjamin, so it would be expected that here among his kin one would find an enclave of loyalists. This is still practically on the doorstep of Jerusalem, which itself is in the territory of Benjamin.

16:11. the Lord has told him. David is not claiming to have been privy to a discussion between the Lord and Shimei, nor is he suggesting that Shimei has been the recipient of a prophetic oracle of some sort. The way that the Lord had "told" Shimei to curse David was through the events that had transpired. With David's own son driving him from the throne, it would be very easy to infer that David was suffering judgment at God's hands. All that is left to deduce is what the offense might have been that led to the punishment. David is simply acknowledging that Shimei is absolutely justified in thinking that God had cursed him and therefore cannot be blamed for wanting to jump on the bandwagon. Only a future vindication would free David to consider Shimei's acts to be in the category of treason rather than simply a voice recognizing the circumstances through which God is carrying out retribution.

16:21. Absalom and David's concubines. It can be shown in a number of instances that the royal harem is considered the exclusive property of the reigning king. Any attempts to obtain women from the harem are seen as a sign of rebellion or usurpation of power (see Ishbaal's reaction to Abner in 2 Sam 3:6-11 and Adonijah's request for Abishag in 1 Kings 2:20-21). The loss of the harem to another monarch, as described in the Assyrian annals of Sennacherib, was a sign of submission or being deposed. For more information see the comment on 3:7.

17:1. twelve thousand men. This number may actually refer to a levy from all twelve tribes rather than an exact figure. Some scholars suggest that the word translated as "thou-

sand" was simply a military unit. For more information see comment on Joshua 8:3.

17:1-3. Ahithophel's strategy. By eliminating David, Ahithophel believed that any opposition to Absalom's rule would collapse. A quick attack on the disorganized, exhausted "army" of David might well be successful in killing the king and routing his already demoralized forces in a place of their choosing. This was not to be a pitched battle but a surgical strike with a fixed purpose.

17:5-13. Hushai's strategy. Carrying out the role of double agent assigned him by David (2 Sam 15:32-36), Hushai argues against Ahithophel's immediate strike against David. He suggests a militarily sound strategy of consolidating Absalom's control over the capital and the nation before moving in great force against the deposed king. He also raises the specter of a possible defeat early in Absalom's rule that could raise questions about his fitness and restore David's chances of return. He skillfully manipulates Absalom's pride as he paints the grand picture of the new king riding at the head of an endless sea of soldiers ready to overwhelm any meager opposition. Procrastination and additional time for strategic planning are accepted as wisdom here despite the advantages inherent to Ahithophel's strategy (see Amasa's fate when he failed to respond to Sheba's revolt with dispatch in 2 Sam 20:4-13).

17:13. drag the city down with ropes. One of the strategies employed in siege warfare was the use of scaling ladders. It is possible that grappling hooks, attached to ropes, may also have been used for this purpose. These could be climbed as attackers swarmed over the walls or used to dislodge stones from the walls and make them more vulnerable to battering rams. Depictions of sieges in Assyrian palaces include the demolition of walls using picks, but hooks and ropes may also have been used by attackers.

17:17. En Rogel. A spring half a mile south of the Gihon Spring, near the junction of the Hinnom and Kidron Valleys, En Rogel most likely shared the same water source as Gihon (associated with Bir Ayyub, "Job's Well"). It served the needs of the people immediately outside the walls of Jerusalem. Since it was frequented by many people, it would be a place to hear the gossip and it would not be suspicious for Jonathan and Ahimaaz to be stationed here, waiting for word from the city.

17:18. Bahurim. Located north of the Mount of Olives, Bahurim was a Benjaminite village (probably Ras et-Tmim or Khirbet Ibqe'dan). It is a bit ironic that David's spies would be aided and hidden in a well by an inhabitant of Bahurim, since it was also the home of Shimei ben Gera, who had cursed the king (2 Sam 16:5).

17:23. Ahithophel's actions. Suicide is not condemned in the Hebrew Bible. The six examples (Abimelech, Samson, Saul, his armorbearer, Ahithophel and Zimri) that appear in the text even suggest a measure of honor and courage is attached to the act, in much the same way as it is described in Seneca *(70th Epistle).* The Roman philosopher says, "The wise man will live as long as he ought, not as long as he can." Thus Ahithophel's departure is a reasoned journey. He clears up his affairs at home, presumably writing a will and insuring orderly transference of property to his heirs, and then hangs himself. He also cheats the executioner, since his support of Absalom would be interpreted as treason against the Lord's anointed.

17:24. geography. It may be presumed that Absalom did not cross the Jordan until some time after David had left the fords and traveled to Mahanaim, about thirty-five miles from the fords at Jericho. Mahanaim is identified with Telul ed-Dhabab el-Garbi on the north bank of the Jabbok. Its importance as an administrative center is attested to by its use by Ishbaal (2 Sam 2:9) as his capital and its mention in the records of Pharaoh Shishak. There have been no excavations at the site, but surface surveys confirm that it was occupied during this period.

17:28-29. provisions. Once again David receives provisions for himself and his men (see Abigail's supplies in 1 Sam 25:18 and Ziba's proffered provisions in 2 Sam 16:2). In each of these cases, these foodstuffs could be construed as tribute or as the duty expected of a vassal. The Ammonites had been subdued by Saul (1 Sam 11) and later by David (2 Sam 10). Thus the king is acknowledged by his allies with hospitality and respect despite his forced departure from Jerusalem.

18:1-2. military organization. This division of the military into three fighting units made up of sections of one hundred and one thousand is typical of Israelite military structure (see Num 31:48; Judg 9:43; 1 Sam 11:11). Mesopotamian sources, such as the Mari texts, speak of a variety of military groups commanded by officers of differing rank and status. In addition to these regular contingents of troops, special lightly armed forces used in ambushes and reconnoitering, and troops assigned to protect commanders or the king are also mentioned.

18:6. forest of Ephraim. The most likely area

for this battle site is in Transjordan near Mahanaim (see 2 Sam 17:27). This would fit the scene of Absalom bringing the conflict to David rather than David invading Israel by crossing the Jordan. The density of this "forest" is somewhat in dispute, since deforestation and erosion have drastically changed the area south of the Jabbok. The word used here could refer to rugged country with isolated groves as well as a true forest. It is unusual to see the forest attributed to Ephraim, since Ephraim's assigned territory was all west of the Jordan. But the tribe may have made some claims to that territory or had settlers there (see Judg 12).

18:8. forest claimed more lives than the sword. When the Old Testament speaks of land devouring people (as the forest does here), it is indicating a hostile, inhospitable environment that threatens survival. Since this was a battlefield chosen by David and not Absalom, it may be expected that the king's forces utilized the rough terrain and forested areas to their advantage. Ambushes, feints drawing troops into ravines or wadis, and other guerilla tactics may have been employed. Divisions can get disoriented, lost or isolated and become easy targets.

18:9. Absalom's predicament. The text says that it was Absalom's head that got caught, not his hair as commonly assumed. The situation is pregnant with symbolism as the royal mule (the designated mount of kings) deserts the would-be king and leaves him hanging in a tree, a condition for one cursed of God (Deut 21:23).

18:11. ten shekels and a warrior's belt. A bonus of one year's worth of pay and a distinctive article of clothing constituted a significant reward and indicates how strategic Absalom's death was to Joab. Gilgamesh's military attire included both a belt for his dirk and a sash or girdle of some sort, but the word used here (feminine form) is never used elsewhere as a piece of military gear (despite the NIV's addition of "warrior"), usually conveyed by the masculine form. It is used for a woman's sash in Isaiah 3:24 and may refer to a fancy sash or belt worn on special occasions (see comment on 1 Kings 2:5).

18:14. javelins. The "javelin" used by Joab everywhere else refers to a blunt rod used to beat someone. The verb is one that usually means to strike (exception, Judg 3:21). The heart is not always internal, but can refer to the chest or the midsection. If Joab's intention was to stab Absalom, a sword or spear would have been the more likely choice. It seems instead that Joab intends to dislodge Absalom from the tree by whacking him in the midsection. A single rod might have broken under such rigorous use (see Is 14:29), so he uses three. Once the (probably unconscious) victim was brought to the ground, Joab's ten assistants collectively finished the job.

18:14. armor-bearers. Commanders and officers within the army were accompanied by armor-bearers (see examples in the *Iliad).* These trusted individuals formed a bodyguard during battle (see 1 Sam 31:4-6), provided substitute weapons should the commander break or lose one, and apparently even functioned as "friends" and advisers (see David as Saul's armor-bearer in 1 Sam 16:21 and Jonathan's armor-bearer in 1 Sam 14:12-17).

18:16. sounded the trumpet. As part of the preparations for battle, ancient armies throughout the Near East broadcast to their troops a set of designated signals that would call for advance or retreat. The use of trumpets (shofar) and runners might be the only means to control troop movements. They were also used as a rallying sound to assemble troops for battle or, like the fire signals of the Mari texts, as a signal of approaching danger.

18:17. burial practice. Assyrian texts indicate that punishment of rebels regularly included impalement, leaving the bodies unburied. Israelite leaders also engaged in these forms of "display" (see the execution of the five enemy kings in Josh 10:27), but the bodies were not to be left hanging indefinitely (Deut 21:23). Thus even accursed individuals would be buried under a pile of stone (see comment on Josh 8:29)—not to be confused with the honorable funerary mounds of Mesopotamian kings.

18:18. pillar as monument. The Ugaritic Epic of Aqhat (c. 1600 B.C.) mentions that one of the duties that a son owes to his father is to erect a stele or pillar in honor of the ancestor gods. Since Absalom has no [living?] son to do this for him, he does the job himself. This is rather ironic considering that he was not buried in the family tomb. His personal monument becomes a sad marker of a failed life. The tomb in the village of Silwan (across the Kidron valley from Jerusalem) today called Absalom's tomb is from a much later period (Herodian).

18:18. King's Valley. The exact location of this site is unknown. It is often identified with the Kidron Valley, east of Jerusalem, or the confluence of the Hinnom, Tyropoeon and Kidron Valleys. It is also referred to as the Valley of Shaveh in Genesis 14:17.

18:19-23. messengers bringing news. Runners were used by armies and government officials in the ancient Near East. The Mari texts describe battlefield movements being partially

directed by messengers as well as diplomatic dispatches and news of the approach of delegations and caravans. It seems apparent from these texts as well as the biblical narrative that messengers had different ranks. Some, like the *suḫarum* of Mari, were young men employed for their stamina and speed. However, there were also messengers in the lower levels of the diplomatic corps (perhaps comparable to the priestly status of Ahimaaz) who were trusted with more important missions.

18:24. between inner and outer gate. Starting with the Middle Bronze period, city fortifications included both massive wall systems and elaborate, multichambered city gates. The patterns in the Iron Age varied from site to site (both casemate and solid wall construction), but generally a stepped approach and narrow entrance restricted the types of vehicles and the amount of traffic through the gateway. Additionally there was often a right-angle turn inside the outer gate before entrance was gained to an inner gate. Within this area between the gates were guardhouses and meeting places used by legal and business officials. Excavations at the city of Dan have revealed an elevated platform between the two gates where it is thought that the ruler of the city sat when public court was in session.

18:24. roof of the gateway. Whether rectangular or circular in construction, gates were guarded by multistoried towers that could be used as lookout posts. Evidence from Megiddo, Timnah, Hazor and Lachish demonstrates the use of tower fortifications for defense and as platforms for sentries.

18:33. room over the gateway. Since the gates and their attendant towers were multistoried, there would be ample room within their walls for guardhouses and chambers used for quartering troops and as meeting places. David's retreat after the news of Absalom's death into one of these rooms places him in a position to see the disposition of his army while still having privacy. The fact that he did not go back into the city suggests his awareness of the delicate political situation, while at the same time indicates he is not ready to resume his regular schedule.

19:8. king's seat in the gateway. Recent excavations at Tel Dan have revealed what appears to be a stone platform set inside the gate area, which once was canopied and may have held a throne. It could have been used for ceremonial or diplomatic occasions or legal proceedings (see 1 Kings 22:10). The Ugaritic Epic of Aqhat describes King Danil sitting in the gate area judging the cases of widows and orphans. Thus a king enthroned is a king carrying out the duties of the position—an image David now wanted to portray.

19:11-15. process for reinstallation of David. Because Absalom had been anointed king, and because the tribal elders of both Judah and Israel were divided on whether to take David back as king, certain compromises and assurances had to be made. For instance, Absalom's chief general, Amasa, is now given charge of David's army (although not the elite and mercenary troops, which remained under Joab's command). David also has to cajole his own tribe, reminding them of blood ties and previous oaths of loyalty. David's exile and eventual return to kingship could be compared to the similar experiences of Idrimi, the fifteenth-century B.C. king of Alalakh, who was forced from his throne for seven years before regaining the loyalty of his vassals.

19:15. Gilgal. During much of the early monarchy, Gilgal apparently served as a cultic center. Perhaps because of its previous association with the installation of Saul as king and its proximity to the Jordan River (possibly identified with sites near Khirbet Mefjir, about a mile northeast of Jericho), this was an appropriate place for the tribal elders to welcome David back as king. See comments on 1 Samuel 7:16; 11:14-15.

19:24. caring for feet and mustache. The NIV translation suggests a neglect of personal appearance that frequently accompanied mourning. This would also serve as evidence that Mephibosheth had entertained no thought of promoting himself for the throne, for otherwise he would have taken special care to appear kingly. Alternatively, Ezekiel 24:17 identifies bared feet and covered mustache as signs of mourning. The actions attributed to Mephibosheth allow this possibility, because the text simply says he had not "done" his feet or mustache.

19:22, 29. pardon granted on special occasions. The king serves as "head of household" to his nobles and royal court. As such he may operate as a *paterfamilias*, granting life or sentencing them to death for political crimes or disloyalty (see 1 Kings 2:19-46). Shimei and Mephibosheth have both committed crimes against David that could justify the death penalty. However, David chooses on the day of his accession to pardon them as a sign of his magnanimity and willingness to forgive his political enemies (see Saul's similar statements in 1 Sam 11:12-13). It was typical in Mesopotamia for the king to declare *anduraru*—a release of prisoners and debt slaves—connected to his accession to the throne. Similar release could also extend to those guilty of

political crimes as seen in the reform document of the Sumerian king Uruinimgina (twenty-fourth century B.C.), in which even thieves and murderers are freed. In Egypt the coronation of a new pharaoh was often accompanied by proclamations of amnesty.

19:42. eating the king's provisions. Those who eat from the king's table or storehouse are his dependents and must therefore demonstrate their loyalty based on this payment (evidenced in the listing of provisions provided to nobles and members of the bureaucracy in Mari and Babylonian administrative texts). This is the basis of Mephibosheth's crime, since he is one who had accepted David's provisioning (2 Sam 9:6-7). The leaders of Judah disclaim any such ties, insisting that their welcome of David is based on his ability to rule, not bribes or favors granted to them.

19:41-43. basis of intertribal argument. The presence of favoritism and discrimination is bound to end up being reflected in policies and privileges. At the heart of this dispute is whether the monarchy is built around the person and family of David (a position the elders of Judah take, referring to their kin ties) or whether the kingship is an institution deserving loyalty no matter who reigns (Israel's position). This argument foreshadows Sheba's revolt and the eventual secession of the northern tribes under Jeroboam's leadership. The dispute also is reminiscent of the arguments between tribes so common in the Judges period. Both examples indicate that the idea of centralized government under a monarchy has not yet taken firm root among the Israelites. It is easy to think of Israel as having a natural unity reflected in the united monarchy, while the divided monarchy is considered an aberration. In fact, however, until the postexilic period it was tribal loyalties more than unified national loyalties that tended to govern political decisions.

20:1-25
Sheba's Revolt

20:1. Sheba's declaration. The troops of all the tribes but Israel, feeling like outcasts in the reinstallation process, do not initiate military action against Judah or David but simply abandon David under the leadership of Sheba (he sends them "to their tents" rather than mustering them for battle). Sheba's declaration effectively announces withdrawal of support of David's kingship, but it does not indicate support for another king. Since Sheba is a Benjaminite, it is possible that there is still some linkage to the house of Saul and that a Saulide would be sought, but the text does not reveal that element.

20:3. treatment of the ten concubines. Because Absalom had taken sexual possession of these women, they could no longer serve as sexual partners of the king. If they had been in the harem to represent political allies who had supported Absalom, their status as persona non grata would be doubly justified. David maintained his obligation to them, but they would never have children by him. Hammurabi's code requires that widows receive "food, oil and clothing" as their due, and Exodus 21:10 addresses similar rights of concubines.

20:4-5. mustering the army. The short period of time allotted for Amasa to assemble an army from the clans of Judah may be a test of his and their loyalty. Amasa had served Absalom, and the elders of Judah had only recently renewed their oath of loyalty to David. Runners may have been used to gather the troops (see the seven-day mustering of 1 Sam 11:3-5), but the Mari texts indicate the use of inscribed lists that were to be taken to villages and encampments to enlist soldiers. This procedure would have required much more than three days to gather a large force.

20:6. master's men. Joab is the one identified here as Abishai's master. Since Joab is out of favor and perhaps demoted, Abishai is given command of the standing army. The army was divided into three groups. First were the mercenaries, who served as the king's personal army and bodyguard; these were the Cherethites and Pelethites, of which there were probably several hundred. Second was the standing army, which probably included both Israelites and mercenaries; these were the trained professional soldiers who had been under Joab's command and were now being led by Abishai. At this point perhaps only those of Judah had remained loyal, so this may also be only a few hundred, though the standing army would generally have consisted of a few thousand. The third group was all those who were eligible for being enlisted in times of crisis. This was the group that Amasa was trying to organize.

20:8. great rock in Gibeon. Many times the biblical text makes reference to landmarks known in that time but no longer familiar to us (see Deborah's palm in Judg 4:5). Thus the writer here may be referring to an altar or high place such as Nebi Samwil (about a mile south of el-Jib; see 1 Sam 14:33; 1 Kings 3:4) or simply a particularly unusual rock formation near Gibeon (el-Jib, four miles northwest of Jerusalem).

20:8. Joab's gear. It is difficult to reconstruct Joab's ruse. He is wearing his soldier's tunic with the normal warriors' belt and sheath for his sword. The most common understanding is that Joab contrived somehow to tip his sword out of its sheath in a way that appeared accidental. He retrieved it with his left hand and was holding it nonthreateningly when he came up to Amasa.

20:9. taking by the beard. Greeting a nonrelative with a kiss is not often attested except in situations of obeisance (i.e., kissing the feet; found in many ancient texts, including the Epic of Gilgamesh). There are instances in which the kiss is a form of reconciliation (see Joseph and his brothers in Gen 45:15), and this may be the case with Joab and Amasa. It also could be an expression of concern or commiseration with a common problem, as in 2 Samuel 15:5. When men kissed, it would not have been unusual for one to grasp his fellow's beard. This act makes each man vulnerable and is more often associated with aggressive action in battle. Here it is a sign of trust to allow the kiss. In this case, Amasa's trust was misplaced, and Joab used the opportunity to eliminate his rival.

20:14. Abel Beth Maacah. Typically identified with Tell Abel el-Qamh, three miles northwest of Dan in the northernmost part of Israel, Abel Beth Maacah also appears in the list of Thutmose III's conquests. Its strategic importance is attested to by the recording of its capture by Tiglath-Pileser III in 1 Kings 15:29 and the Assyrian annals.

20:15. siege ramp. One of the common methods in siege warfare was the construction of a ramp that could be used as an assault platform for siege towers as well as a means of gaining approach for battering rams (2 Kings 19:32; Jer 6:6; Ezek 4:1-8). The ramps were made necessary because of the common construction of a slopping glacis and high walls that made it difficult to attempt a frontal assault. Archaeological investigations have found evidence of the construction of these ramps (such as at Masada), and depictions of the use of the siege ramp are found in Assyrian bas-reliefs and are described in the annals of Sennacherib and other Assyrian kings. The earliest archaeological remains of a siege ramp were found in connection with the Assyrian siege of Lachish in 701. Though evidence of ramps has not been found for this period, the battering ram had already been in use for nearly a thousand years, so ramps must also have been in use.

20:16. wise woman. See the comment on 2 Samuel 14:2.

20:19. city that is a mother in Israel. Phoenician, Ugaritic and Old Babylonian word parallels to *'em,* "mother," are kin terms related to clan groups. It is therefore likely that the wise woman's argument is related to the extermination of one of Israel's clans, not a "founding city." This is coupled with a long tradition of common sense by the inhabitants of Abel. Joab is therefore encouraged to be "wise" like them and spare his fellow covenantal partners.

20:23-25. administrative offices. This list of officials within David's inner circle is an indication of the growing complexity of David's growing bureaucracy (compare Solomon's administrative lists in 1 Kings 4:1-19). It and the list in 2 Samuel 8:15-18 are typical of similar rosters found in Neo-Babylonian administrative documents. While these offices are unrelated to the story of Sheba's revolt, it would be appropriate for the editor to insert the list here as an indication of the restoration of political order. The inclusion of a new office, that of chief of forced labor, also suggests new policy objectives to strengthen fortresses and improve communication and travel within the kingdom.

21:1-14
Revenge of the Gibeonites

21:1. previous administration offenses as cause for present distress. In the ancient Near East it is common for the king to be understood as the embodiment of the state and the representative of the people. During the reign of the Hittite king Mursilis, a twenty-year plague was determined to have been the result of offenses committed by his predecessor, and attempts were made to appease and make restitution. Likewise the Babylonian king Nabonidus discerned by oracle that some of his difficulties were the result of the neglect of the moon god, Sin, and he sought to rectify that situation. Perhaps most notable among ancient documents for the condemnation of previous kings' conduct is the Weidner chronicle. In this document thirteen kings are criticized for their failure to give due honor to the Esagil sanctuary of Babylon. This becomes the basis for the advice to the current administration to be more faithful.

21:1. famine leading to oracular inquiry. Famine or plague was often looked upon as a sign of divine disapproval or wrath. The Hittite king Mursilis composed a body of Plague Prayers in order to avoid the wrath of the gods. Seeking the "face of the Lord" is a common expression also found in Babylonian and

Hittite sources. Seeking the face of a superior normally meant to have an audience with that personage for the express purpose of seeking his counsel or direction. It is not certain in this instance whether David sought God's presence by means of an oracle, or whether he entered a holy place to speak to God.

21:2-4. Gibeonites. The city of Gibeon (modern el-Jib) is six miles northwest of Jerusalem in the tribal territory of Benjamin. For more information see comment on Joshua 9:3. The Gibeonites were protected by treaty as a result of the incident recorded in Joshua 9. It can be understood that they could easily become the target of nationalistic zeal, but there is no information from the biblical records of Saul's reign detailing his actions against them.

21:5-9. seven of Saul's line executed and exposed. The execution and exposure of criminals and covenant breakers was common in the ancient Near East. Some exposed corpses have been found at Terqa (Tell Ashara) in Syria from about this time period, when seminomadic Arameans traveled to the site to give tribute to the Assyrians. Moreover, many Kassite period boundary stones from Babylonia (late second millennium B.C.) contain curses which include exposure of the corpse in the event of someone transgressing the stipulations of the boundary agreement in question.

21:6, 9. on a hill before the Lord. The hill before the Lord was presumably the Gibeonite high place mentioned in 1 Kings 3. It is normally identified with Nebi Samwil, which is about one mile south of Gibeon. The fact that it was performed before the Lord may indicate a sort of ritual act. The aforementioned Kassite treaty curses were also performed in the audience of a deity.

21:9. harvest time. The beginning of the barley harvest is in April, corresponding to the Hebrew month Ziv. The month name was borrowed from the Canaanites and corresponds to the Babylonian month Iyyar, the second month of the agricultural year. An ancient description of harvest time in Palestine can be found in the Gezer calendar (tenth century B.C.). The calendar mentions a month of harvesting barley followed by a month of harvesting wheat. The crops were either pulled out by hand or cut with a sickle.

21:12-14. treatment of bones and bodies. It can be assumed that only the ashes of Saul and Jonathan were buried here, since their bodies had been burned (1 Sam 31:11-13), which was an unusual custom in ancient Israel. Israelites considered that a person's body ("flesh") and spirit were in principle inseparable. Thus, the individual was both spirit and flesh. Because of this the dead corpse was very carefully treated, as it was still considered part of the person's existence. If the dead person's body was somehow destroyed (e.g., by exposure), that person's existence was severely threatened (for more information see comment on 1 Kings 16:4). This idea is implied in literature and in the material remains from the Mesopotamian city of Ur in the early second millennium B.C. The bodies of dead relatives were buried underneath the shrine room of private residences. They were still considered in some sense part of the family and required eating utensils and other daily life implements. Thus it was important to treat the bones of the corpse with great care. In a similar fashion, David was concerned to take care of the remains of Saul and Jonathan.

21:15-22
Exploits Against the Philistines

21:16. weapons. Either the Philistine's spear or spearhead (the shaft of the spear was not normally made of bronze) weighed three hundred shekels, roughly equivalent to seven and one half pounds, half the weight of Goliath's (1 Sam 17:7). He was girded with a "new sword," an ambiguous term which may have been a special distinction.

21:17. lamp of Israel. The temple was to have a perpetually burning lamp (Ex 27:20). The lit lamps symbolized the presence of God in their midst and the resulting life and hope that they enjoyed because of it. The phrase "lamp of God" is also used to refer to hope (1 Kings 11:36; 2 Kings 8:19), and that would also make sense in this context as the Davidic dynasty represented God's provision of kingship. Similar uses of the word in Ugaritic and Akkadian are tied to perpetuation of rule or divine presence. Assyrian king Tiglath-Pileser III is referred to as the light of all mankind. An Old Babylonian idiom expresses a family having no descendants by the image of its brazier going out.

21:19. spear shaft like a weaver's rod. The spear in question must have been equipped with a thong and a ring for slinging which resembled the wooden rod and rings, tools used to lift the heddle in weaving. This type of spear was a weapon used in the Aegean and in Egypt in the early Iron Age (c. 1200-900 B.C.). There are artistic depictions in both Egypt and Greece of women weaving with the aforementioned tools.

21:20-22. twelve fingers and twelve toes. Deformities were the object of intense curiosity and speculation in the ancient world. There is

an entire series of Mesopotamian omen texts that describe birth anomalies, including those with extra digits on hands and feet.

22:1-51
David's Hymn of Victory

22:1-51. singing a victory song. One way to celebrate victories and commemorate them for years to come is to compose and sing songs. Songs of all sorts are known throughout the ancient Near East from the first half of the third millennium. One Assyrian list of songs about a century before David includes titles of about 360 songs in dozens of different categories. The singing of a song in response to divine help resulting in victory is a common theme in the Bible. Though they may not be the same genre as the Hebrew Psalms, kings from both Mesopotamia and Egypt composed dedicatory hymns to gods, thanking them for victory over their enemies. For example, Tukulti-Ninurta I of Assyria (c. 1244-1208 B.C.) composed a long epic hymn to Ashur thanking him for victory over Babylon, while justifying his conquest of Babylon because of the unworthiness of their ruler.

22:2-3. rock metaphor. The rock in the Old Testament often symbolized security and the defense of an impregnable refuge. God was the rock (or mountain) who gave security and safety to his people. Some of the most important Anatolian and Palestinian deities of the late second millennium B.C. (such as El, the divine creator) were described as deified mountains.

22:5. waves of death metaphor. Here, as in the book of Jonah (2:6-7), the writer equates his circumstances with a watery covering at the entrance to death, which is a synonym to Sheol, the abode of the dead. Swirling waters represented the chaotic, destructive waters that jeopardize not only life, but creation.

22:6. cords of the grave. Noose snares were commonly used by hunters in the ancient Near East. In this metaphor, death or Sheol is the hunter. For many cultures in the ancient Near East, Sheol, the abode of the grave (i.e. underworld) was a very real place where individuals led an amorphous existence, eating clay and dust, hoping that their descendants would take care of their needs. There were gates and gatekeepers to keep the dead inside; thus it was called "the land of no return." This description can be found in the second-millennium Akkadian epic The Descent of Ishtar. Apparently the Hebrew view of the grave was not unlike this, although there is no elaborate description of it in the Old Testament.

22:14-16. Yahweh as a warrior. In the divine warrior motif the deity is fighting the battles and defeating the deities of the enemy. In Assyria, Nergal is the king of battle, and Ishtar is also viewed as a war goddess. The Canaanite Baal and the Babylonian Marduk are divine warriors. Thunder and lightning were considered to regularly accompany the presence of a deity in the ancient Near East, often in a battle setting. From the Sumerian Exaltation of Inanna, to the Hittite myths about the Storm God, to the Akkadian and Ugaritic mythologies, the gods are viewed as thundering in judgment against their enemies. Baal is depicted as grasping a handful of thunderbolts. Thundering terminology is picked up in royal rhetoric as Hittite or Assyrian kings portray themselves as the instruments of the gods, thundering against those who have violated treaties or stood in the way of empire expansion.

22:34. feet of a deer. There were fairly large populations of Iranian deer in Palestine during the period of the Israelite monarchy (although they became extinct sometime last century). They were never domesticated and represented only a small percentage of the meat supply at the Bronze and Iron Age sites in the region. Some deer were kept in captivity, as described by a fifteenth-century ration list from coastal Alalakh (see comment on Ps 18:33).

23:1-7
Last Words of David

23:1. oracle of David. The introductory term translated "oracle" is most commonly used to introduce speeches of the Lord, but it is also sometimes used to introduce wise sayings (Agur's oracle, Prov 30:1) or prophetic speeches (Balaam's oracle, Num 24:3, 15), as verses two and three suggest this is. This is the only insinuation in the Old Testament that David could be classified among the prophets.

23:1. singer of songs. It is unclear whether this phrase represents a description of David or a description of the "God of Jacob." Both can be justified from usage of this terminology in the Ugaritic texts. The former would describe David's singing talents, and the latter would describe God as the treasured object of the songs or perhaps the cherished defender of Israel.

23:5-7. metaphors of kingship. The metaphor begun at verse five has a solar flavor. The rule of a just king is like the warmth of the sun for crops but is devastating to the unjust. Representing the king's justice as the sun (Yahweh

is the king in this case) is found among the Hittites and especially for the kings of Egypt. A Middle Kingdom hymn to the god Amun-Re describes the king as the lord of rays, who gives life-giving rays to those whom he loves but is a consuming fire to his enemies. In Mesopotamia it is Shamash, the sun god, who is the god of justice. Thorns symbolize rebels, who are simply poked into the fire (the result of the sun's heat).

23:8-39
Accounts and List of David's Mighty Men

23:8. David's mighty men. It is generally thought that the thirty were a special group of retainers—champions who had attached themselves to David (see comment on 1 Sam 17:25) and served as his "special forces" group—an elite group of operatives that did not necessarily function within an organized military structure.

23:11-12. Pas Dammim. Pas Dammin, or Ephes Dammin (1 Sam 17:1), was described in Scripture as being between Socoh and Azekah near the Valley of Elah. Thus it was west of Bethlehem towards the Philistine coast. Damun, four miles northeast of Socoh, is one candidate for the modern site of Pas Dammin, but it is difficult to see how that could be described as between Socoh and Azekah.

23:13. geography. Adullam was about sixteen miles southwest of Jerusalem. It is identified with modern Tell esh-Sheikh Madhkur. It is not certain whether the "cave" of Adullam is to be identified with the city itself or with a nearby site. The location of the Valley of Rephaim is uncertain but may be the modern el-Baq'a, an area southwest of Jerusalem (see comment on 5:18). Thus the cave of Adullam was somewhere north and east of the Valley of Rephaim.

23:14. stronghold. The stronghold mentioned here is likely near the site of Adullam (see 1 Sam 22:4). Some have suggested that it is a reference to Masada. The context for this section seems to be when David was in flight and thus was not yet king. During David's rule the "stronghold" was Zion (2 Sam 5:17).

23:15-17. gate of Bethlehem. Neither a well nor a gate has been located in the sparse Iron Age remains at Bethlehem. The remaining Iron Age remains have been located on the slope of modern Bethlehem near the Church of the Nativity. The upper part of the mound does not seem to have been occupied during the Iron Age. Thus David's gate and well were probably on the lower part of the town.

23:20. lion pit on snowy day. Lions, though probably not plentiful, were still roaming the countryside in the Iron Age and became extinct only in modern times. Hunting lions was a favorite sport of kings and heroes. Both Egyptian and Assyrian kings chose lion-hunting scenes to depict their manliness. One of the techniques used to hunt lions was the use of a pit. The lion would be pursued into the pit, where often a net would be used to entangle it. The hunter would then go into the pit with a spear and finish the kill. The likely reason for mentioning the snow would be that it made the footing more difficult. Snow was not an altogether extraordinary occurrence in the highlands of southern Palestine.

23:23. king's bodyguard. The position that Benaiah held here, captain of the king's bodyguard, was the same that David held in Saul's administration (see 1 Sam 22:14). This was probably the mercenary force described as "the Cherethites and the Pelethites" (see comment on 15:18). Captains of the king's bodyguard are well-known from Assyrian records and from Greek sources (e.g., Herodotus) describing the Persian army of Darius I and Xerxes I (521-465 B.C.).

24:1-17
David's Census

24:2. census. Taking a census was a practical measure utilized by governments in the ancient Near East, perhaps as early as the Ebla tablets, c. 2500 B.C. (though the evidence here is scant), and clearly by the middle of the second millennium. However, the benefits derived from this practice were not necessarily appreciated by the people since they led to increased tax levies as well as military or forced labor service. Viewed in this light, it is not surprising that popular notions existed that the census was a source of bad luck or the basis of divine displeasure. Mari texts (eighteenth century B.C.) from Mesopotamia describe men fleeing to the mountains to avoid being counted.

24:5-8. itinerary. The census takers begin by heading east into the Transjordan region to the southeast extremity of the land at Aroer along the Arnon and then proceed north to the northeast extremity at Dan. Tahtim Hodshi is obscure, but the logic of the itinerary would suggest something in the region of Mount Hermon, often considered a northeast boundary. From there they head northwest to the Phoenician coast at Sidon and then begin to move south through the main sections of the country.

It is interesting to note that after the mention of Tyre (outside of Israel proper), the Hivites and Canaanites are mentioned, and then the list skips to Beersheba at the southern extremity of the land. In so doing it fails to mention by name any districts, towns or territories on the west side of the Jordan.

24:9. census results. The total of 1.3 million fighting men has seemed high to the archaeologists who study population density. Estimates of the population of the land at the time of David run between three and nine hundred thousand. While granting that the methods by which such estimates are arrived at can be contested, it must also be remembered that the word translated "thousands" in the text may also mean divisions made up of much fewer than a thousand.

24:10. conscience-stricken about census taking. It was because of God's anger (for undisclosed offenses, v. 1) that David decided to take a census. If he is now conscience-stricken concerning that decision, it suggests that his motive for taking the census may have been to appease God's anger. One way to appease the anger of deity in the traditional Near Eastern way of thinking was to pay him off, that is, offer generous gifts to the sanctuary. Since a census generally levied a head tax to be paid to the temple (see comment on the census temple tax in Ex 30:11-16), it is possible that the census was an attempt to appease God by pouring money into the temple coffers. This was not how Yahweh desired to be treated, and rather than appeasing his anger, it increased it. The punishment was the result of both his original anger and David's attempted appeasement.

24:11. seer. The seer and the prophet were engaged in basically the same activity, but the structuring of the role in society was different (much like the difference between the offices of judge and king). The seers appear to be able to pass on their office either to students or to sons, whereas the prophet is spontaneously called by God.

24:12-15. king and people identified together. In the ancient Near East it was common for the king to be the embodiment of the state and the representative of the people. In Hittite literature, for instance, an offense committed by the king could bring punishment on all the people. Royal prayers were often directed toward the deities to seek forgiveness for past or present royal offenses that were viewed as being the cause of present distress.

24:16. angel afflicting the people. This is the same terminology used for the destroying angel in the Passover account in Exodus 12. In the Mesopotamian epic called Erra and Ishum the plague god (Erra or Nergal) embarks on a massive campaign of destruction and is finally calmed by a subordinate, Ishum, preventing total decimation of the land. An obvious difference (among many) is that here in Samuel the destroying angel is under the absolute control of the Lord, while in the Erra epic, Marduk, the chief god of Babylon, is distant and ambivalent.

24:18-25
Altar and Threshing Floor

24:18. Arauna the Jebusite. When David conquered Jerusalem he did not drive out the Jebusite inhabitants. Arauna, having retained a significant tract of land north of the city, is sometimes identified as the Jebusite governor. In fact the Hurrian word (the Jebusites are usually considered of Hurrian extraction) for a feudal overlord is *ewrine,* leading some to believe that Arauna (variant: Awarna) is a title rather than a name.

24:18. threshing floor. Since the threshing floor was a large, flat, open area, it was a natural gathering spot for the townspeople. Since it was so intimately connected with the harvest, it was a natural site for religious ceremonies and festivals. These combine to make it likely that Arauna's threshing floor already had some sacred traditions attached to it from earlier periods.

24:22. threshing sledges and ox yokes. The threshing sledge was a platform made of boards with pieces of iron stuck through holes. This would be hitched behind the threshing animals and loaded up with rocks. When dragged over the wheat it would aid in the threshing process. For this text they, along with the yokes, become a convenient source of wood for the sacrifice.

24:24. fifty shekels of silver. This is not a great amount of money compared to the four hundred shekels that Abraham paid for the cave of Machpelah (Gen 23). Additionally, 1 Chronicles 21:25 reports that six hundred gold shekels were paid for the entire site.

1 KINGS

1:1-53

Solomon Gains Throne over Adonijah

1:3-4. Abishag's status. The fact that David is said to have had no relations with Abishag indicates that she was never officially taken into the royal harem. Though neither wife nor concubine, her role as final companion to the king provided enough ambiguity to later place her in the middle of a power struggle (see comment on 2:13-21).

1:3. Shunammite. Located in the territory of Issachar (Josh 19:18), Shunem (modern Solem) was seven miles southeast of Nazareth. It is mentioned in Thutmose III's conquest list of the fifteenth century B.C. and in the fourteenth-century B.C. El Amarna letters.

1:5-6. primogeniture in Israel. In the ancient Near East primogeniture is not always the rule. In many texts it is clear that the children divide the inheritance evenly. With regard to succession to rule, in some cultures brothers had priority over sons. In others it was up to the king to designate his successor, and in some cases the subjects had to consent. In Israelite culture the firstborn was generally assumed to have certain advantages, but neither inheritance nor succession inevitably fell to him. See the comment on Deuteronomy 21:15-17 for the ancient Near Eastern context of inheritance rights of the firstborn.

1:5. fifty runners. It was common practice for persons of high political status to display their authority by riding in a chariot, accompanied by an entourage of runners (see comment on 2 Sam 15:1). In battle formation this provided a set fighting unit, as noted in the annals of Sargon II and other Assyrian kings.

1:7-8. support of army and priesthood. In the Ugaritic Epic of Keret, Prince Yassib, Keret's son, makes the argument that the invalid king is no longer capable of carrying out his duties and that he should therefore yield the throne to his successor. Similarly, David's sons positioned themselves to take the throne from their declining father. They went about this by soliciting the support of power groups within the state—specifically, the leaders of the military and the priestly community. Opposition from either of these groups could make for a short reign (see respectively 1 Kings 16:15-18 and 2 Kings 11). Since the dynastic line was staying in power, there was no need to reenlist support among the tribes and clans. With their pressing for the establishment of a coregency (a common practice in Egyptian and Mesopotamian monarchies), rather than seeking to forcibly depose David, Nathan and Bathsheba win the throne for Solomon.

1:9, 19. sacrifices. It is likely that the sacrifices were burnt offerings and fellowship offerings, two of the most general types of sacrifices. The former often accompanied a petition, while the latter served as an opportunity for festive celebration and a communal meal before the Lord. These sacrifices would have been directed to the initiation of kingship (coronation). The sacrifices were being offered to make petition for God's blessing and in preparation for a feast that would create an alliance between Adonijah and those in attendance, following the pattern used by Absalom. Such covenantal meals are a part of treaty and alliance agreements, as exemplified in texts from Mari and the Amarna letters.

1:9. En Rogel. This spring is only about 650 yards south of the Gihon Spring in the Kidron Valley (see comment on 1:33) and only about a half mile from David's palace. The choice of this location for the ceremony is probably due to the fact that the spring lies at the junction of the territory of Benjamin and Judah (presumably suggesting both would have access to its water supply). Adonijah's support base can therefore be inferred as comprising the tribal alliances that brought David to power. His support by Joab and Abiathar would also represent this traditional element. The stone of Zoheleth is sometimes translated Serpent Rock and likely refers to a distinctive rock that had some ritual traditions associated with it.

1:21. treatment of claimants to the throne. There is wide precedent in Mesopotamian texts for the elimination of all rival claimants to the throne when a king comes to power. Such purges also occurred years later as a form of revenge for political opposition or rebellion attempted against previous rulers. One way to better understand Bathsheba's fears for herself and her son Solomon is to look at the murder of the Assyrian king Sennacherib in 681 B.C. by his sons. Although the king had designated his son Esarhaddon as his successor, civil war broke out with portions of the military taking sides. Esarhaddon finally secured the throne and had those guilty of the murder of their father executed. Such intrigue surrounding the succession to the throne was not unusual in the ancient

Near East. There had been bloody strife between David's sons in the past (see 2 Sam 13—15), and a general purge of other claimants might well occur after David's death. Esarhaddon solved the problem for his successor by having his treaty partners sign an agreement to support the disposition of his two sons as king of Assyria and of Babylonia respectively.

1:33. the king's mule. During the early monarchy the proper animal for the king to ride was the mule (see 2 Sam 18:9). Precedent for this practice is found in a Mari letter containing a suggestion to King Zimri-Lim that it would be more in keeping with the dignity of the monarch if he rode in a cart pulled by mules rather than by horses. It is also possible that horses were not in general use by the Israelites until later periods. During this period mules were two or three times more expensive than horses. They were imported and, of course, could not reproduce.

1:33. Gihon. This is a spring now known as 'En Sitti Maryam in the Kidron Valley just below the east slope of David's Jerusalem (see comment on 2 Sam 5:8). In contrast to Adonijah's support base in the traditional tribal groups, Solomon's base appears to be in the royal city, Jerusalem, itself. The Gihon spring, as Jerusalem's water supply, is therefore a fit setting for this ceremony.

1:34. anointing by priest and prophet. The pattern to this point had been for a prophet to anoint the prospective king (see the comment on 1 Sam 16:1). This provided divine sanction for him to rule. In the ancient Near East, priests often played significant political roles, but no prophets from the ancient Near East are known to have played the role of kingmaker. Now, with the first example of hereditary succession, it was appropriate that both the high priest and a prophet participate in this ceremony. In this way, both God (through the prophet) and the religious community that served the people and Yahweh (especially the Jerusalem sanctuary) recognized the king's right to rule.

1:38. Kerethites and Pelethites. See the comment on 2 Samuel 15:18 for discussion of these mercenary troops (probably Cretans and other Sea People descendants). They served as a praetorian guard, whose duties and loyalties were strictly to the king. Use of highly trained, mercenary soldiers is also found in Egyptian, Mesopotamian and Roman sources.

1:41. noise in the city. Though En Rogel is only 250 yards from the southern wall of the city, it is much lower in elevation (near the southwestern end of the foot of the modern village of Silwan). Neither the activity in the city nor that at Gihon can be observed from that vantage point. Nonetheless, the commotion would easily carry across the valley.

1:49. Adonijah's guests disperse. Adonijah's supporters apparently were willing to try to force the succession issue but had no stomach for civil war. Nor did they desire to be personally aligned with one who would undoubtedly now be labeled a rebel. It was clear that Solomon had gained the support of both the king and the political establishment of Jerusalem, and Adonijah's cause was a lost one.

1:50. taking the horns of the altar. Adonijah claims the right of sanctuary when he grabs the horns of the altar (see Ex 21:13-14). Archaeological evidence of horned altars has been found at sites such as Beersheba (see comment on 2:28). Asylum, however, was supposed to be granted for unintentional homicide, and Adonijah's "crime" was presuming his right to rule as king. It seems likely that the altar, because of its tie to sacred space and association with the deity (see the comment on Ex 27:1-8), could be used to take oaths of innocence in the face of possible punishment (as seen in Hammurabi's code).

2:1-11
David's Instructions to Solomon

2:1-11. dying king's instructions. A number of pieces of Egyptian wisdom literature, notably the Instruction of Merikare (from about 2100 B.C.), take the form of instructions to a newly crowned king from his predecessor. As here, the instructions given to Merikare by his father offer advice concerning how certain situations should be dealt with in order to secure a just and unthreatened rule. The new king's responsibility is to deal wisely with those who have shown rebellious tendencies. Even the categories of rebels mentioned show some similarity to the individuals David advises Solomon to act against.

2:5. Joab's crimes. Abner (see the comment on 2 Sam 3:29) and Amasa (see comment on 2 Sam 20:9) had both been military and political rivals eliminated by Joab in defiance of David's intentions. In both instances, David was politically embarrassed and had to publicly denounce Joab's actions. Given Joab's past treatment of opponents, the stability of the kingdom required that he be punished as a criminal.

2:5. blood-stained belt and sandals. The words used for belt and sandals in this verse are never clearly used for military dress (see comment on 2 Sam 18:11). The idea here may be that the clothing stained with blood indi-

cated that the killings were not in battle contexts.

2:7. eating at the king's table. Those who eat from the king's table or storehouse are his dependents and those he chooses to sponsor. It is expected that they will demonstrate their loyalty based on this payment (evidenced in the listing of provisions provided to nobles and members of the bureaucracy in Mari and Babylonian administrative texts). Those sponsored in this way would generally be members of the administration and champions of military repute. Many of these would either be already part of the king's family or would marry into the family (see comment on 1 Sam 17:25).

2:8. Mahanaim. Besides serving as an administrative center for the government of Saul's son (2 Sam 2), this is where David set up headquarters when he had to flee from Absalom (see the comment on 2 Sam 17:24). The town is also mentioned as one destroyed by Pharaoh Shishak's invasion during the time of Solomon's son. While it is clear that Mahanaim is in the Transjordan region, the precise location is unknown. The most common identification today is with Tell edh-Dhahab el-Gharbi on the northern bank of the Jabbok. There have been no excavations at the site, but surface surveys confirm that it was occupied during this period.

2:8. Shimei's crime. See the comment on 2 Samuel 16:11.

2:10. royal tombs. By right of capture, the citadel area of Jerusalem was David's private domain and thus a proper burial site for himself and his successors. Ugaritic shaft tombs within their palace precinct indicate this was a familiar royal practice. Early Iron Age (1200-1000 B.C.) and Iron Age II (1000-600 B.C.) tombs, based on archaeological investigation along the coastal plain in the area of Judah, seem to have been primarily either cave tombs or rectangular chamber tombs, some with forecourts and raised benches for the internment of the corpse. The quality and quantity of grave goods can only be speculated on since there is no trace of the royal tombs from the monarchy period. However, it may be presumed, based on the royal tombs of Mycenae, Egypt and Ugarit, that they would have contained treasures representative of the status of the dead. The place often identified to tourists as David's tomb on present day Mount Zion is a late tradition. The only monumental tombs from the First Temple period are in the modern village of Silwan across the Kidron Valley from David's Jerusalem. These do not date back as early as David (who was buried *in* the City of David) and are not royal tombs.

2:11. chronology. Typical of ancient Near Eastern annals, the narrative describing each of Israel and Judah's kings ends with a summary statement that takes note of the number of years the king reigned and sometimes a mention of contemporary monarchs. Though the number forty is often a round number, here it is broken into very precise divisions, suggesting an actual forty-year reign. David's reign would have extended from about 1010 to 970.

2:12-46
Solomon's Accession to the Throne

2:19. queen mother's throne. There were three different types of queens in the ancient world. The most familiar to our way of thinking is one who is the primary wife of the king (e.g., Queen Esther). While sometimes these royal consorts were little more than ornamentation, in other contexts (such as among the Hittites of the second millennium) they served as royal deputies with extensive power (compare the role of Jezebel in Ahab's court). A second type is the wife (or mother) of the king who accedes to the throne after his death and rules in his place (e.g., Athaliah of Judah, Hatshepsut of Egypt). The third is the queen mother whose royal husband has died but who continues to exert significant political influence over the new king, her son (e.g., Sammuramat of Assyria, Maacah of Judah, see 1 Kings 15:13). That is the role depicted for Bathsheba here. The extent to which the queen mother exercised a significant or powerful role in judicial, economic or social matters would have depended on the personality of the individual. The fact that the mother is named for nearly every king of Judah (though not for kings of Israel) suggests that the role of queen mother was an important one throughout the Davidic monarchy.

2:13-21. Adonijah's request. The network of support for a king would have been found in the powerful clans and families. Acquiring concubines and wives would therefore be the mechanism for building up the backing of each local area. Support might also be found in wealthy merchants, military leaders or even in priestly families. Royal marriages were a reflection of the power of a monarch and represented political and economic alliances made in the name of the state. It would therefore have been necessary, at the succession, for the harem of the former king to become the responsibility of the new monarch. In this way there was continuity of treaty obligations. Consequently a potential successor to the throne at times sought to expropriate the authority of his predecessor by taking over his

harem. As a result any attempts to obtain women from the harem are seen as a sign of rebellion or usurpation of power. The loss of the harem to another monarch, as described in the Assyrian annals of Sennacherib, was a sign of submission or being deposed. Abishag's status would have been ambiguous if she had never officially become part of the harem, in which case Adonijah's request would not have constituted an overt attempt to procure the throne. It is possible, however, that Adonijah wished to position himself for an attempt to take over the kingship by acquiring David's last companion. Certainly Solomon chose to interpret the request as having that intent.

2:26. Abiathar's banishment to Anathoth. The Iron I village of Anathoth was located at Ras-Kharrubeh, about three miles northeast of Jerusalem. In the Persian period the site was moved slightly north to the village of Anata. Apparently Abiathar and his family continued to hold estates in this area (note Jeremiah's ties to Anathoth and the field of Hanamel in Jer 1:1 and 32:7-9). As part of Solomon's purge of Adonijah's supporters, Abiathar was banished to the "country life" and forced to resign his duties as high priest. Solomon's reluctance to execute Abiathar or his priestly family is understandable in light of Abiathar's faithful service as priest and diviner for David (see 1 Sam 23:9-12).

2:28. horns of the altar. See the comment on 1 Kings 1:50. Horned altars have also been found in excavations of Canaanite sites and in Cyprus. The horns may have been used to tie down a sacrifice or support a bowl of incense. Joab's attempt to claim asylum by grasping the horns was rejected, because of his treason against Solomon and his unauthorized murders of Abner and Amasa. The charge and curse for "shedding of innocent blood" in verses 31-33 is an oath of clearance for David's family and a condemnation of Joab's. Egyptian legal documents from the time of Rameses IV, twelfth century B.C., charge officials to be careful not to inflict punishment on a person without proper authorization. The text states that "all that they have done [should] come down upon their own heads."

2:34. buried on his land in the desert. It is likely that Joab was buried in a family tomb near Bethlehem (his brother Asahel was buried there in 2 Sam 2:32). The description is of open pasture land rather than desert, and that would fit the area of the Judean hill country.

2:36-37. Shimei's house arrest. Based on Shimei's earlier cursing of David (2 Sam 16:11) and David's final instructions (1 Kings 2:8-9), Solomon places him under close house arrest—a condition in which the prisoner is responsible for maintaining his own defined boundaries. Apparently there was some concern that Shimei might rally support against Solomon among the Benjaminite tribesmen if he was allowed to travel north of Jerusalem. This compares to the restrictions placed on the movement of slaves in the Ur-Nammu and Hammurabi codes and suggests that Shimei had lost rights as a full citizen. In the Instruction of Merikare (see comment on 2:1-11) those vassals who had a history of rebelling but were not currently involved in rebellion were to be exiled.

2:37. Kidron Valley. Mention of the Kidron as Shimei's northern boundary is a clear indication that he is not to have contact with other members of the Benjaminite tribe—a group that had been a part of Sheba's revolt in 2 Samuel 20. The Kidron wadi is located just east of the Ophel, separating Jerusalem from the Mount of Olives.

2:39. geography. Although a conclusive identification of the Philistine city of Gath has not yet been established, the general consensus is that it is at Tell es-Safi, ten miles southeast of Tel Miqne-Ekron. David's association with Achish and his inclusion of mercenaries from Gath (2 Sam 15:18-23) suggest it was part of Israel's political sphere—at least by treaty agreement. Shimei's journey there to recover his two slaves would have taken him west of Jerusalem as far as the Shephelah and easily outside the confines of his house arrest.

3:1-3

Summary of Solomon

3:1. identity of Pharaoh. The biblical narrator chose not to mention the pharaoh by name, but most likely this would have been Siamun, the next to last ruler of the relatively weak Twenty-First Dynasty. Since this pharaoh was faced with difficulties with the Theban priesthood at home, he was unable to conquer either Philistia or Israel. He therefore chose to ally himself by marriage with Solomon, perhaps as a way of weakening the Philistines along the southern coast of Palestine (c. 960 B.C.).

3:1. marriage alliances. The policy of using royal marriages as a diplomatic tool, tying local leaders as well as foreign monarchs together in treaty and familial alliance, has a long history in the ancient Near East (see the comments on 11:1). The fact that Solomon received a daughter of the pharaoh demonstrates he is in a stronger position than the monarch of Egypt at that time. Her dowry included yield-

ing Gezer to Solomon, thereby giving the king of Israel a strategic site overlooking the northern Shephelah and guarding one of the principal roads between the coast and the hill country around Jerusalem.

3:2-3. sacrificing at high places. The picture portrayed in the biblical narrative is that prior to the construction of the temple in Jerusalem, sacrifice and religious ritual commonly took place at local shrines or *bamoth.* They were constructed for this purpose and in most cases appear to be an installation that could be entered and within which cultic activity took place (see the comment on 1 Sam 9:12-13). Many of them may have had an urban setting, although this does not preclude their existence outside city walls on nearby hills (2 Kings 17:9-11). Their actual appearance and the furnishings associated with the high places are unknown, but the large number of references to them as sacrificial sites suggest some may have been quite elaborate. Eventually the monarchy and the Jerusalem priesthood attempted to suppress the use of the high places because of their desire to emphasize Solomon's temple as "the place which Yahweh will choose."

3:4-15
Solomon's Dream

For information on this section see the comments on 2 Chronicles 1.

3:16-28
Example of Solomon's Wisdom

3:16. prostitution. Despite being prohibited by law (Lev 19:29; Deut 23:18), prostitution was apparently tolerated among the Israelites. In fact, several narratives exist in which a prostitute is a heroine (Rahab in Josh 2 and Tamar in Gen 38). Certainly their social status would have been extremely low, but that may well be an integral part of the Rahab episode, where several unexpected events occur. Solomon's willingness to hear the case of the two prostitutes in here fits in well with his image as a "just king" (making up for the judicial failures of David—2 Sam 15:2-4). It is also in keeping with the legal protections afforded prostitutes in the Mesopotamian law codes (Lipit-Ishtar and Middle Assyrian Code).

3:16-28. royal wisdom in judging. Solomon's wisdom is demonstrated in his ability to discern true justice, a quality which marks him as a "just king." This attribute is claimed by nearly every ancient Near Eastern king as he ascends the throne and establishes his rule as one concerned for the welfare of the state and even the weakest of its citizens (see the prologue to Hammurabi's Code in which he is charged by the gods "to cause justice to prevail in the land"). Other examples of the expectation of royal wisdom are found in the Egyptian Protests of the Eloquent Peasant (twentieth to eighteenth centuries B.C.) and in the appeal of the eleventh-century B.C. Egyptian priest Wenamon, who asked the prince of Byblos for a resolution of his case.

4:1-28
Solomon's Administration

4:7. district system. In an attempt to centralize his authority as king and begin the process of weakening local, tribal loyalties, Solomon reorganized his kingdom. The tribal districts that had been created after the conquest and during the settlement period could be dangerous to the Davidic dynasty. The northern tribes under Sheba had already attempted to secede from the united kingdom (2 Sam 20:1-2). If new political boundaries could be redrawn so that tribal populations and the new Canaanite cities added to the nation were mixed together, then the king might forestall future political problems. This restructuring also aided in financing national works projects (see 1 Kings 9:15-19), the national defense and the initiation of international commercial ventures (1 Kings 9:26-28). Since each district was responsible for maintaining the king's household one month each year, a regular system of taxation (other than the religious tithe) could be initiated, further weakening local autonomy in favor of a centralized national perspective on administration.

4:7. provisions for royal household. The king's household consisted of his immediate family as well as his major government officials and their extended bureaucracy (see the list in 1 Kings 4:1-6). In this way each of the twelve officials given charge of Israel's administrative districts (see the list in 1 Kings 4:8-19) helped finance Solomon's government. Their responsibilities would have included marshaling the natural and human resources of their districts to insure a more efficient and profitable use of their local resources in the national interest. Such provisioning also served as a form of taxation, directing the local districts to give service to the national government. Administrative documents from Ugarit, Mari and Babylon give some indication of royal expectations from local governors. A quota of raw and manufactured goods and materials

are listed, sometimes side by side with previous years' offerings.

4:8-19. geography. Ugarit and Alalakh both yielded administrative texts with a literary form similar to that found here. The geographical designations for the various provinces of Solomon's kingdom are not sufficiently delineated so that exact boundaries can be established for each of them. Each governor apparently had a seat or seats of administration: for example, Ben-Abinadab at Dor and Baana at Taanach and Megiddo. Some of the districts apparently encompassed previous tribal area: Dan's original area in the central highlands, Naphtali in eastern Galilee and Asher on the western slopes of the Galilee. However, what is distinctive is the inclusion of Canaanite and Philistine territory: Dor, a port city of the Sea Peoples mentioned in the Egyptian tale of Wenamon (eleventh century B.C.) and Canaanite Hepher (Tell Ibsar) in the Sharon Plain (Josh 12:17). The placement of Judah at the end of the list (v. 20) suggests that its administration and fiscal responsibilities may have differed from the rest of the districts because of its association with the Davidic house.

4:21. boundaries of Solomon's kingdom. The description of Solomon's kingdom stretching from the Euphrates River in the east (refers to the area where the river turns north in the region of Emar) to the Wadi al-Arish on the border of Egypt is intended to demonstrate the magnitude of Solomon's rule and correlate it to the boundaries of the covenantal promised land of Deuteronomy 1 and Joshua 1. Mesopotamian annals from the time of Sargon of Akkad (third millennium) to the later Assyrian rulers included statements of the extent of their kingdoms. In general they reflect either military campaigns that have taken the king into areas beyond his actual boundaries or an extension of economic hegemony in which the ruler is able to extract tribute or tolls from neighboring kingdoms or foreign merchants. The reality is that there are various levels of what constituted "control" or "boundaries." The text here does not offer the details of the level of control Solomon exercised over each area, but nevertheless several different relationships may be identified. In addition to the traditional territory from Dan to Beersheba, Solomon had provinces (conquered states such as Moab, Edom and Ammon), vassals (tribute-paying, but having native rulers such as Hamath, Zobah and Philistia), and allies (treaty partners such as Egypt and Tyre).

4:22. daily provisions. Such a notation of the quantities of grain and animals made available daily to feed Solomon and his court fits in well with the picture of a monarch on a par with the Egyptian pharaoh. The use of some Egyptian loan words (cor = homer = 6.3 bushels) suggests that the form of this statement may have been modeled after the official records of Egypt or the Canaanite or Philistine kingdoms. Note that all of the items listed could be stored or kept in pasture or corral until they were needed. Perishable foods were also a part of their diet, but these (other than oil) seldom appear as weighed or measured items on administrative lists such as the ration lists found in the Mari texts that keep track of the exact amounts given to slaves, officials and traveling dignitaries.

4:25. own vine and fig. This is a stock phrase that appears in the historical annals and many of the prophets as a sign of peace and prosperity for Israel. When God is angry, then the reverse occurs, and the vine and fig tree are destroyed along with the peace. The idiom refers to the security and moderate prosperity that allow one to enjoy life's little pleasures. The vine and fig provided some shade as well as fruit and enjoying them indicated some long-term prospects—each took several years to become productive.

4:26. horses and chariots. Typically a chariot team included three horses with only two being used at any one time and the third kept as a reserve. The three would be stabled together, so twelve thousand horses for four thousand pens is the correct proportion indicating the potential for four thousand chariot teams (though some may have been used for cavalry). Nevertheless, 1 Kings 10:26 reports that Solomon had fourteen hundred chariots. This is a large contingent of chariots but is not as large as the two thousand that Ahab contributed to the western alliance that met the Assyrians at the Battle of Qarqar in 853 (see comment on 22:1). In the thirteenth century the Hittites and their allies had amassed twenty-five hundred chariots to confront Rameses II at the Battle of Qadesh.

4:30. wisdom of the men of the east. There was a longstanding tradition of wisdom in the ancient Near East. Proverbial statements, such as those by the Egyptian sages Ptah-Hotep (2450 B.C.) and Amenemope (c. 1100) and the Assyrian courtier Ahiqar (c. 700), closely parallel portions of the book of Proverbs. In addition, the longer wisdom pieces, such as Job and Ecclesiastes, are very similar in form and content to the Egyptian Dispute over Suicide (c. 2100) and the Babylonian Dialogue about Human Misery (c. 1000). Even more classical epic poetry, such as the Gilgamesh cycle and

the tale of Ishtar's descent to the underworld, contains elements of wisdom literature that explore issues like human mortality and concern for personal achievement. With such a rich body of literature and tradition, it is a remarkable statement to say that Solomon surpassed all of these ancient sages.

4:31. Ethan, Heman, Calcol, Darda. These renowned wisdom figures are also tied to the genealogy of Judah and Tamar through their son Zerah (Gen 38:30). Mahol (Hebrew *maḥol* = dancers) may actually refer to their role as musicians, a profession which is associated both with worship as well as wisdom performance. Ethan and Heman appear in Psalm titles (Ps 88 and 89) and thus have been incorporated into the formal aspects of temple worship, even though they are not listed here among the Levites.

4:32. three thousand proverbs. The *mashal* or proverb fits into a genre of writing in the ancient Near East which is marked by short, pithy statements expressing common sense or well-known values. Three thousand is a round number and is described as the number that he spoke, not the number he composed. As today, wisdom can often be the result of research and gathering of information rather than reflective of some creative enterprise.

4:32. 1005 songs. It was not uncommon in the ancient world to express "more than" with an x plus one progression or the use of a round number plus one or plus a digit (see Prov 6:16; Amos 1:3). But if the five in this number is functioning the same way, it is unusual. This oriental mode of expression is also observable in something as familiar as 1,001 Arabian Nights. Around 2000 B.C. Shulgi, king of Ur, also had a literary reputation. In hymns to himself he boasts of his education and literary skills, and bears the title of first royal musician.

4:33. plant life. Botanical wisdom in the ancient world did not concern the issues that modern day biologists would study. One area of interest was herb lore, which included medicinal functions as well as use in industry (dyes) and food production. In other cultures it would also include magical properties of various herbs. Another area of botanical wisdom would be agricultural in nature—the wisdom of a farmer concerning seeds and the whole planting, nurturing, fertilizing and harvesting process. Since the statement concerning Solomon's wisdom targets trees, however, and occurs in the context of proverbs and songs, it is more likely that Solomon's wisdom was expressed by using trees in parables or fables with wisdom teachings. Such parables are known in the Old Testament (Judg 9:8-15) as well as in the ancient Near East (e.g., the Sumerian Fable of the Tamarisk and the Palm) and required insight into the nature of the trees and bushes.

4:33. animal life. Though the NIV uses verbs like "described" and "taught," the Hebrew simply says Solomon "spoke about" plant and animal life. As in the previous entry, this suggests that he used his insight to tell stories—parables and fables about animals for the purpose of teaching wisdom. Aesop was not the first to use this medium, and more than a millennium before Solomon the Sumerians were producing animal debates and fables. The most prominent Akkadian fable known to us is The Snake and the Eagle. Additionally, wisdom speech in ancient Egypt (e.g., the Instruction of Amenemope) and Mesopotamia (as in the first-millennium Aramaic Words of Ahiqar) was filled with analogies and parables involving animals and plants.

5:1—6:38
Building the Temple

For more information on chapter 5 see comments on 2 Chronicles 2:1-18.

5:1. relationship between Israel and Tyre. The Phoenicians of Tyre, located twenty miles south of Sidon on an island half a mile off the Phoenician coast, prospered from their control of the naval mercantile trade throughout the Mediterranean. Their independence is attested in the Egyptian Wenamon's report (c. 1080 B.C.), and their influence is found in archaeological levels on Cyprus and later at Carthage on the North African coast. However, their preoccupation with trade and their lack of sufficient farmlands made it necessary for them to establish relations with neighboring nations who were interested in the goods brought by Phoenician ships and could pay for them with grain and other natural resources. Solomon's consolidation of the region of Palestine made him a good trading partner for Hiram and a constant source of income for Phoenician builders and contractors.

5:1. Hiram. The dates of Hiram I of Tyre (Phoenician Ahiram; Assyrian Hirummu) are commonly cited as 969-936 B.C., based on the chronological reckoning of the Jewish historian Josephus (first century A.D.). He claims to have extensive records of the history of Tyre and offers much information about Hiram's reign. This dating gives little if any overlap between David and Hiram and is suspect due to the methods of calculation available to Josephus. Contemporary Near Eastern sources of-

fer no information about this Hiram but mention prominently his later namesake, Hiram II. The name is also well known from the sarcophagus of Ahiram, king of nearby Byblos, around this same time period.

5:3. under his feet. The Assyrian king Tukulti-Ninurta I (thirteenth century) "puts his foot on the neck of" individual conquered kings as well as (symbolically) on that of conquered lands, clarifying that they have thus become his footstool. This is graphically depicted in a tomb painting from the fifteenth century B.C. showing Thutmose IV seated on the lap of his mother (?) with his feet resting on a box that is filled with enemies laid out in a pile. For further information see comment on Psalm 108:13.

5:17. quarrying stone. Limestone from the hill country was quarried for the temple in Jerusalem. This involved simply extracting the stone from the cliffs, not the finishing process of dressing and shaping the stones that would have been done by master craftsmen from Phoenicia (see 1 Kings 7:10).

6:1. chronology. This chronological note attached to Solomon's construction of the Jerusalem temple is at the heart of the discussion of the date of the exodus and conquest periods (see sidebar on the date of the exodus). Most historians would place the dedication of Solomon's temple in 966 B.C. By adding 480 years to this, you get 1446 B.C. as the date for the departure from Egypt. Archaeological difficulties and the strength of the Egyptian hold on Syro-Palestine during the fifteenth century B.C. have brought this date into question. As a result many now see 480 as a stylized number, symbolic of forty years (a typical round number) for each of twelve judges or indicating twelve generations (40 x 12 = 480). Based on the dates for Hiram I and the founding date for the Phoenician colony at Carthage, the temple's construction most likely took place between 967-957 B.C. The note uses typical Phoenician phrasing.

6:1. Ziv. This is the second month of the Canaanite and Israelite calendar. It corresponds to portions of April and May in our own calendar. The fact that the passage identifies this as the second month may indicate that Ziv was not the usual Israelite month name used but represented an official designation known to a larger, non-Israelite audience.

6:4. clerestory window. Because the architectural terms found in the Hebrew are technical terms, their exact meaning is uncertain. Some suggest that the windows were constructed with a narrow opening on the outside and a wider opening on the inside (see Ezek 40:16). It is also possible that latticed windows are meant here. The lack of windows in Mesopotamian temples, however, argues against natural light entering Solomon's temple (see 1 Kings 8:12). The 'Ain Dara temple had false windows carved into the stone with a lattice-work design.

6:5. six side-rooms. This portion of the temple's structure is clouded by the uncertainty over the Hebrew terminology generally rendered "side buildings" or "wings." These may be part of the earliest construction of the building, serving first as storage areas and later expanded upward as the temple grew. Whether they were intended as permanent structures or even buttresses is unclear, as is the materials from which they were built. The architecture of the contemporary temple at 'Ain Dara features tall corridors flanking the hall. It is possible that this verse describes such corridors.

6:6. offset ledges. The side chambers along the outer walls of the temple were offset or recessed as they followed the wall upward. V. Hurowitz provides two interpretations of this architectural feature: (1) a means of enclosing the temple within a "cedarwood crate" (with cedar boards laid horizontally on the recesses) or (2) a sort of "reverse pagoda" shape, creating the visual effect that the outer wall of the temple widened from bottom to top.

6:7. tools used. Earlier taboos against using iron tools in the construction of sacred altars or buildings (see Deut 27:5; Josh 8:31) are somewhat tempered by their apparent use at the quarry but not near the temple site. An early Sumerian account of Gudea's building a temple for his god insisted that there be no noise around the area of the temple during the building project. Masons used large picks (weighing thirty or thirty-five pounds) for quarrying and smaller picks (weighing twelve or fifteen pounds) for the shaping of the stone. Those found in excavations have iron heads of various shapes with wooden handles. Iron-headed sledge hammers and long double-handled saws were also portrayed on Assyrian reliefs.

6:14-35. See comments on 2 Chronicles 3.

6:36. three courses of dressed stone. Perhaps as an architectural buffer against earthquake damage, the walls of the inner court were constructed with a row of cedar planks (in known examples these are about four inches thick) interspersed after every three horizontal courses of stone. This would help compensate for slight irregularities in the stone size and smoothness. This style is also attested at Ugarit, throughout Anatolia, in the palace at

Knossos on Crete and at other Mycenaean sites. See its mention in Ezra 6:4 with regard to the postexilic Second Temple.

6:38. month of Bul. The Canaanite calendar names are used here as well as the older name for month (*yeraḥ,* meaning "moon"). Bul is also found as a month name in Phoenician inscriptions. It means "moisture" and is tied to the rainy season of autumn in the Mediterranean climate. As the eighth month it corresponds to October-November.

7:1-12
Building the Palace

7:1-12. dimensions and architecture of palace. Like other palace complexes in the ancient Near East (such as those at Mari, Nineveh, Babylon and Susa), Solomon's royal precinct would have covered several acres, and the palace itself was larger than the temple. It served as an administrative complex as well as a hall of justice and an armory. Of the structures mentioned here, the "Palace of the Forest of Lebanon" is most fully described (150 feet long, 75 feet wide, 45 feet high), with its three rows of forty-five cedar pillars making it very much like a "forest." The overall style of construction is much like that of the *Bit-Hilani* of Syria and Mesopotamia (see comment on 2 Sam 5:11), with chambers on three sides surrounding a central meeting hall (75 feet long and 45 feet wide). The side rooms would have contained three stories, while the hall would have been open to the flat ceiling. Doors are found at the sides and at either end, and windows in the upper stories allowed light to cascade down into the audience chamber and assembly hall. The other two palaces (v. 8) are not described in any detail, but since they served as living quarters, their monumental character would not have been as important to the prestige of the monarchy as public buildings.

7:9. dressing of stone. The stone for the palaces was to be cut to specific size and shape so that they could be fitted into a "headers and stretchers" pattern, with cedar logs providing additional stability. It was necessary to first saw the soft limestone from the Judean cliffs (it would harden after exposure to air). This would provide a dressed block (ashlar masonry), finer than could be created with hammer and chisel, that would fit together as closely as possible.

7:10. size of stones. The massive foundation blocks were between twelve feet and fifteen feet in length, weighing many tons. The even larger blocks found in the foundation of Herod's temple platform in Jerusalem (one block was over forty feet long and weighed about one hundred tons) suggest this was not an unusual size for monumental construction.

7:15-22. free-standing pillars. These two hollow, bronze pillars are thirty-four feet high (counting the capitals) and nearly five feet in diameter. The description of the free-standing pillars of a temple in the Assyrian city of Kar-Tukulti-Ninurta also contains the details of length, circumference and the design of the capitals with which they were crowned. Of particular interest is the additional fact that they were engraved with inscriptions. This feature would be typical for entryways, and it is likely that these pillars were considered gateposts. One possibility is that Jachin and Boaz may have been the first word of the respective inscriptions and therefore came to be considered their names. Pomegranates and lotus flowers (NIV: "lilies") are often used in architectural decorations.

7:23-51. See comments on 2 Chronicles 4.

8:1-66
Dedication of the Temple

8:2. month of Ethanim. This autumn month (corresponding to September-October) was a part of the rainy season and is tied into the Feast of Tabernacles (see the comments on Ex 23:16b and Deut 16:13-17). The dedication of the temple during the seventh month (its completion is noted in 1 Kings 6:38 in the eighth month) may reflect a year-long celebration after the completion of work or a delay of nearly a year in order to officially tie it into the harvest festival.

8:14-66. See comments on 2 Chronicles 6.

9:1-9
Response of Yahweh

For information on this section see comments on 2 Chronicles 7.

9:10-28
Deeds of Solomon

9:11. twenty towns in Galilee. Since the Galilee is defined various ways (see Josh 20:7; Is 9:1), it is possible that the territory given to Hiram included portions of the western foothills as far as Megiddo. Most likely it would have involved the buffer area between Phoenicia and Israel. Note the return of these lands and cities to Solomon in the Chronicler's account (2 Chron 8:2). Precedent for exchange of territory and cities is to be found in Mesopota-

mian and Egyptian royal records, treaties and annals. For instance, in the Assyrian annals of Sennacherib, the king describes capturing towns in Hezekiah's territory and transferring them to Philistine kings in Ashdod, Ekron and Gaza.

9:14. 120 talents of gold. In the system of weights and measures used in the ancient Near East the talent was the highest unit of weight (equivalent to sixty minas or three thousand shekels). One hundred twenty talents is therefore about four tons of gold. For statistics concerning gold see comments on 1 Chronicles 22:14.

9:15-19. building projects. Both as a part of his consolidation of control over all of Israel and as a check against any armed incursion by the Egyptian pharaoh Shishak, Solomon initiated a program of public works using a corvee or forced labor system. The list found here, which stretches geographically north-south, is similar in style to that found in the Mesha inscription from Moab and in Assyrian royal annals. This program transformed Jerusalem, expanding its living area and defense. It also strengthened the defensive posture of the nation in strategic commercial and military centers such as Hazor, Megiddo and Gezer as well as in the southern border towns of Baalath and Tamar ('Ain Husb). The consistency of building style (casemate walls and six-chambered city gates) at many of these sites helps archaeologists establish architectural links to this period despite the lack of documentary evidence outside the Bible. The infusion of capital necessary to make such vast improvements in the infrastructure would have been a boost for the local economy and kept potentially hostile, Canaanite populations employed more constructively.

9:15. supporting terraces (Millo). The city of Jerusalem in the period of David had occupied only the north-south ridge covering about ten acres that runs south of the modern city walls. The top of the ridge is only about four hundred feet wide and about fifteen hundred feet long. The previous Canaanite city had been built on an artificial platform that was supported by a series of terraces. Archaeologists have uncovered a stepped stone structure over fifty feet tall at the northeast corner of this ridge. This was most likely the platform for the Jebusite citadel referred to here in 2 Samuel 5:7 and was extended by David for use as the foundation of his palace and again by Solomon as the city expanded north to include his palace and the temple complex. It is now accepted by most that the "Millo" (NIV footnote) should be identified with the retaining walls (including the "stepped stone structure") that provided the foundation for these monumental buildings. There is little else that archaeologists have found in the city that is attributable to the time of David and Solomon.

The Wealth and Splendor of Solomon

For information on this section see comments on 2 Chronicles 9:13-28.

11:1-13
Solomon Led Astray by Wives

11:1-3. marriage alliances. Marriage was a tool of diplomacy throughout the ancient Near East. For instance, Zimri-Lim, the king of Mari (eighteenth century B.C.), used his daughters to cement alliances and establish treaties with his neighboring kingdoms. Similarly, Pharaoh Thutmose IV (1425-1412 B.C.) arranged a marriage with a daughter of the Mitannian king to demonstrate good relations and end a series of wars with that middle Euphrates kingdom. The wives of an ancient ruler therefore usually represented political alliances. Towns, city-states, tribes or nations who wished to ally themselves with a ruler or come under his protection sealed the treaty with a marriage of a daughter of their chief family to the suzerain or his son. This was an act of loyalty on the part of the vassal, who would then have a personal stake in preserving the dynasty. In David's case, prior to becoming king of Israel, he made a series of marriages that strengthened his political and economic position. Thus the marriage to Saul's daughter Michal gave him a connection to the royal family, his marriage to Abigail provided him with ties to the area around Hebron, and his marriage to Ahinoam of Jezreel established connections with households in the vicinity of Megiddo and Beth Shan. This kinship network insured that David would have friendly voices in the council of elders from all over the country. The huge number of wives and concubines are designed as a reflection of the wealth and power of Solomon in relation to his nobility and neighbors. The au-

thor does not condemn Solomon for polygamy—it was a necessary part of his political activities. Condemnation is for the way Solomon allowed his wives to turn him away from the Lord.

11:2. prohibition against intermarriage. A chief concern of the biblical writers was syncretism. If Israel was to remain true to Yahweh, then it must be free of foreign influence. According to this viewpoint, intermarriage and the training of children by mothers who were not Israelites could only weaken the covenantal bond (see the comment on Deut 7:3).

11:3. wives of royal birth. Distinction is drawn between those wives who were of higher status or rank than concubines. The Ugaritic texts provide a similar example of division within the harem. In Arhalba's court, wives whose children were in the line of succession (such as Kubaba), were considered truly royal women and distinguished from those who had lesser status.

11:3. three hundred concubines. The harem served both political as well as sexual functions. Wives were part of the alliance system between nations, and they were the means of obtaining an heir to the throne. Many wives were a reflection of power and a hedge against female infertility. Not all wives in a harem, however, were of similar social rank, and those from lesser families would have been designated as concubines, whose children would not have been in the royal succession.

11:5. Ashtoreth. See the comment on Judges 2:13 for this Canaanite fertility goddess, the consort of the storm god Baal. In Ugaritic texts (the Keret epic and the Baal and Anath cycle) she is known as Athtar or Astarte, and in Mesopotamia religious documents she is called Ishtar. Ashtoreth/Astarte was worshiped as the chief goddess of both Tyre and Sidon in Phoenicia, and they took her worship throughout the Mediterranean, where she was identified with the Greek goddess Aphrodite.

11:5, 7. Molech. The Ammonite god Milcom (= Canaanite Baal) is actually named in verse 5 (as well as in v. 33) though referred to as Molech in verse 7. (See the comment on Lev 18:21 for the association of Molech, a Canaanite and Phoenician deity, with child sacrifice.) The name Milcom has been attested in Ammonite inscriptions and personal names, and makes more sense than Molech in this context, since this is a listing of national gods. It is difficult to tell whether Molech in verse 7 is a misspelling or a variant form of the name.

11:7. Chemosh. Described in terms very much like Yahweh in the Moabite inscription of King Mesha (c. 830 B.C.), Chemosh is a national deity who punished his people by allowing them to be controlled by Israel during Omri's reign (see 2 Kings 3), called for a holy war of liberation (much like the use of *ḥerem* in Josh 6:17-21), and fought, like Yahweh, as a divine warrior for the Moabites (Josh 10:42). Outside of Moab, Chemosh may have been worshiped as Kamish at Ebla and, based on an Assyrian text equating him with the underworld god Nergal, appears to have been part of the pantheon of gods in Mesopotamia.

11:14-43
Solomon's Political Adversaries

11:14. Hadad the Edomite. Edom had been conquered by David during his wars to subdue his neighbors (see 2 Sam 8:13-14). David's garrisons had probably been meant to secure control of the trade routes and access to the port on the Gulf of Aqaba. Now, perhaps with half-hearted support from the Egyptians (see comment on v. 22), a new Edomite leader was jeopardizing Israelite control. There is little information to suggest that Edom was a national entity at this time. Hadad more likely represented one of the more powerful tribes in the region. His opposition may have taken the shape of raids on caravans rather than wars of independence. There are no references to him in contemporary extrabiblical sources.

11:15-16. Joab's action against Edom. Such wholesale extermination is known from Assyrian records and the evidence of the mass grave uncovered at Lachish that dates to Sennacherib's 701 B.C. campaign against Judah. Many of the fifteen hundred bodies in that grave were civilians, indicating both the loss of life during the siege and the manner in which much of the garrison was exterminated.

11:17-18. Hadad's journey. Like Jeroboam in verse 40, Hadad sought asylum in Egypt. His flight took him south and east of Edom to Midian in the northern Arabian peninsula and then on to Paran in the northwestern Sinai (possibly the oasis Feran; see Num 13:3). The rough terrain and circuitous route would have protected the refugees from pursuit.

11:18. identity of pharaoh. Unlike verse 40, where Shishak is named as pharaoh of Egypt, the monarch is anonymous here. He is most likely a member of the Twenty-First Dynasty, but there is no indication of his identity. Since Hadad was in Egypt from his childhood to his manhood, he would have had association with several pharaohs, including at least Osorkon (984-978) and Siamun (978-959). All of

the pharaohs of this period would have welcomed political refugees from Palestine and Transjordan in their attempt to balance and counterbalance the growing power of Solomon and Hiram in the region.

11:18. Hadad's exile. It is an interesting fact of political life in the ancient Near East that political dissidents and royal refugees were often taken in by kings (Egypt, Babylon, Persia and even petty chiefs of Palestine, according to the Tale of Sinuhe). These persons were part of a larger game played by rival monarchs, and what was at stake was the economic and political control of the entire region. The refugees were housed, tied to their patron by marriage and then let loose with some financial or military support to cause as much trouble as they could on a rival king's borders. In this way one power could drain the resources of its rival and eventually set it up for conquest.

11:19. Tahpenes. This word is based on the Egyptian term *t.hmt.nsw,* and it is likely not a personal name but a title. It would be comparable to the Hebrew *gebira* ("queen mother"), which follows it as an explanation in the Hebrew text. Her status is therefore indicated as the "wife of the king" and mother of the heir to the throne.

11:22. Pharaoh's attempt to retain Hadad. If this pharaoh is Siamun, as seems likely, he is the same one who had made a treaty with Israel (see 3:1) sealed by the marriage of his daughter to Solomon. This represented a change in policy from the days of David, when he had been undermining Israelite expansion by harboring enemies such as Hadad. Hadad's resolve to go back and organize opposition against Solomon puts Siamun in a very awkward position.

11:23. Rezon. This name, which is etymologically similar to *rozen* ("ruler"), may be a royal title. Though some have suggested that his actual personal name is Hezion (see 15:18), there is little to support that, and he is more likely a father or even grandfather of Hezion. Apparently this former vassal of the Aramean ruler Hadadezer escaped David's slaughter (2 Sam 8:3-8) and spent some time as a brigand chief. Then during Solomon's early reign he was able to establish himself as ruler of Damascus and create a kingdom (Aram) that would rival Israel throughout the tenth and ninth centuries.

11:24. Hadadezer of Zobah. See the comments on 2 Samuel 8:3-8 and 10:6 for the rivalry between David and the Aramean states in northern Transjordan and western Galilee. Zobah was located north of Damascus (see comment on 2 Sam 8:3). It was one of several Aramean kingdoms that controlled portions of Syria and northern Mesopotamia until the expansion of Israel's control under David and Solomon.

11:24-25. Aram of Damascus. This is the name of the small state centered around the Syrian city of Damascus (see 2 Sam 8:5-6). The growth of its power in the period after the division of Israel into two states made it the most influential state in the area of Syro-Palestine. Assyrian sources from the reign of Shalmaneser III mention it as a significant rival and the head of a coalition of states (Battle of Qarqar in 853, see comment on 22:1).

11:26. Zeredah. The birthplace of Jeroboam may be identified with 'Ain Seridah, about fifteen miles southwest of Shechem in the tribal territory of Ephraim.

11:27. supporting terraces (Millo). See the comment on 9:15 for the structural purpose of the Millo.

11:28. Jeroboam's office. As a member of Solomon's bureaucracy, Jeroboam was a local leader of the regional corvee, a corps of men drafted into temporary service (porterage, construction), within the district of "the House of Joseph" (Ephraim/Manasseh). Since the term for "forced labor" is not used, it may be presumed that Jeroboam's work was with Israelites, not slaves. His position might be compared to the *rabi Amurrim* (head of the Amorites) in the Mari texts, whose tasks included both military commands as well as being a local labor organizer, supervising construction projects on dams and the renovation of temples.

11:29. Ahijah. Though Shiloh (see comment on 1 Sam 1:3) had been destroyed at the time of Eli and much of its cultic standing had been lost, it retained its religious heritage because of its ancient tradition. There may be no significance to the fact that Ahijah hails from the northern territory, but he is playing the role of kingmaker that was familiar in this early period of the prophetic office. Both Saul and David had been anointed by the prophet Samuel, who also was trained in Shiloh. This precedent continued throughout the next century as each of the major dynasties of the northern kingdom (Jeroboam, Baasha, Omri, Jehu) rose and fell in accordance with prophetic pronouncement. Sometimes the designated king was content to wait for the proper time (as Jeroboam does), while for other individuals (such as Jehu), the prophetic proclamation initiated a coup. In the ancient Near East priests often play significant political roles, but no prophets from the ancient Near East are known to have played the same role as these Israelite king-

makers. Nonetheless, throughout the ancient world it was believed that prophets not only proclaimed the message of deity but in the process unleashed the divine action. In Assyrian king Esarhaddon's instructions to his vassals, he requires that they report any improper or negative statements that may be made by anyone, but he specifically names prophets, ecstatics and dream interpreters. It is no wonder, then, that this action by Ahijah immediately put Jeroboam in jeopardy (v. 40).

11:30. division of the prophet's cloak. The cloak Ahijah tears is a normal garment (see Deut 22:26) rather than a garment of office. This is a startling action considering the cost of clothing and the likelihood that most people had only one additional set of clothing. Symbolic gestures become one of the common methods used by the prophets to convey a message. Some gestures are common, normal activities, though usually they take a more eccentric turn (see comments on Ezek 4:1). By accompanying the prophetic pronouncement with a gesture, there was a stronger suggestion that the prophecy was being effectuated and brought into reality. There is some similarity to the way the rest of the ancient world viewed the magical realm. In magical practice ritual actions often needed to accompany the incantations that were intended to bring about the desired result. For more information concerning the relationship between the prophets and magical procedures, see comments on 2 Kings 4:34; 5:11.

11:33. Ashtoreth, Molech, Chemosh. See the comments on 1 Kings 11:5 and 7 for these Canaanite gods.

11:36. lamp in Jerusalem. As an eternal flame is a symbol of endurance and remembrance, the reign of a descendant of David in Jerusalem provides a link to God's promise to David's dynasty (2 Sam 7:8-16). Similar uses of the word in Ugaritic and Akkadian are tied to perpetuation of rule or divine presence. Assyrian king Tiglath-Pileser III is referred to as the light of all mankind. An Old Babylonian idiom expresses the concept of a family having no descendants by the image of its brazier going out.

11:40. Shishak. Shishak (Sheshonq I) was the chief of a prominent Libyan family that had been settled in the Egyptian delta region (Bubastis) as a result of conquests several centuries earlier (twelfth century). He married into the family of the Twenty-First Dynasty pharaohs, and when their line died out, he was positioned to accede to the throne as the founder of the Twenty-Second Dynasty (c. 945). He established himself on the throne through the placement of family members in key posts and through further marriage alliances. Once enthroned, he made a determined effort to restore Egyptian power by inaugurating a monumental building program in several areas: the Delta region (including both the area of Tanis and Memphis) and Herakleoplis. The biblical account as well as his statue at Byblos indicate a strong interest in extending Egyptian hegemony into Syro-Palestine. His inscription at Karnak describes his invasion of Palestine in 925 (including a list 154 towns destroyed) and is also commemorated on a stele erected at Megiddo. Jerusalem is spared because of Rehoboam's payment of a huge ransom for the city (1 Kings 14:26).

11:40. Egypt as protector. Just as Hadad sought political refuge in Egypt (see comment on 11:18), Jeroboam turns to Shishak for support and protection. It would have fit quite well into the pharaoh's plans for his own incursion into Palestine to aid Solomon's rival. It is even possible that the price extracted from Jeroboam for this assistance was to step aside when Shishak campaigned along the coast as far north as Taanach and Megiddo and inland to Beth Shan.

11:41. annals of Solomon. It is common practice to end an account of a king with a reference to additional works from which the narrative had been drawn—generally the "Book of the Annals of the Kings of Israel" (see 1 Kings 14:19; 16:14). The source listed here, however, seems to be a separate compendium dealing specifically with events in Solomon's life and additional accounts of his wisdom. From a historical standpoint it is unfortunate that we no longer have access to these materials. In the ancient world royal annals were often kept not just as an unbiased repetition of events but as a means by which a king established his reputation before the gods and for the benefit of later kings. Whether theological or propagandistic or both, they were usually composed with legacy in mind.

12:1-24
Rebellion Against Rehoboam

For information on this section see comments on 2 Chronicles 10—11.

12:25-33
Jeroboam Establishes His Kingdom

12:25. fortification of Shechem. Jeroboam's choice of Shechem (Tell Balatah) as his first capital city was based on its strategic location

(thirty miles north of Jerusalem in a narrow pass between Mounts Ebal and Gerizim), its available water supply and its rich agricultural resources. Its location also allowed it to dominate all commercial and military travel through the Ephraimite region. Archaeological evidence for Jeroboam's refortification of the site is scarce, although there are indications of a casemate wall and towers built in Strata IX following the old Late Bronze fortification line. Destruction layers ending both Strata IX and X may be indications of the incursions of the Egyptian pharaoh Shishak. For the earlier history of Shechem see comment on Judges 9:1.

12:25. Peniel. Peniel/Penuel has been identified with Tell edh-Dhahab, "Mounds of Gold," on the Jabbok, five miles east of the Jordan River. Jeroboam may have relocated here during Shishak's invasion of Palestine, but the appearance of Peniel on Shishak's list of conquests at Karnak suggests it was not a distant enough refuge. Jeroboam may have also used the fortress here to help him control that portion of Transjordan (Gilead) which had previously been ruled by David.

12:26-27. Jerusalem and house of David connection. Since Jerusalem had been conquered by David and the sanctuary there established by David and Solomon, there were strong ideological ties between the house of God and the house of David, both inseparably tied to Jerusalem (for information concerning Jerusalem as personal property of the Davidic dynasty see comment on 2 Sam 5:9). It was the Yahweh who had established the Davidic dynasty who was enshrined at the temple in Jerusalem. Jeroboam therefore had to seek a way to break the political ties with the Jerusalem worship of Yahweh without breaking the traditional ties with Yahweh of the covenant who had brought them out of Egypt and given them the land.

12:28. golden calves. Like the ark of the covenant the golden calves are not idols. Rather both the ark and the calves function as thrones or pedestals upholding the glory of God. Calves were a reflection of syncretism, the religious and cultural borrowing from the Canaanites, so prevalent among the Israelites. Bulls or calves were associated with the god Baal and the fertility cult in Ugaritic texts. El is often referred to as "Bull El," and there is a tale of the mating of Baal and Anat which produced a steer. Quite likely, Jeroboam saw this as an excellent political maneuver, pleasing Israelites who were more comfortable with a mixture of Yahwist and Baalist imagery. Bronze or composite bull or calf figurines have been found in several archaeological excavations (Mount Gilboa, Hazor, the Bull Site and Ashkelon; as well as a ceramic one at Shiloh) but only three to seven inches long.

12:28. calves as thrones. Since Jeroboam's intent was to provide alternative worship centers to Jerusalem, it would have been necessary to furnish those shrines with a religious symbol just as powerful as the ark. The calf symbol was well-known in the Canaanite context of the second millennium and represented fertility and strength. However, so that the calves would not be considered idols, the argument was made that they were instead merely the throne of Yahweh. This is based on the portrayal of Canaanite and Ugaritic gods in sculpture and reliefs standing on the body of a bull. In addition, Mesopotamian moon gods Sin and Nannar are both represented on cylinder seals and in religious texts either with a bull or portrayed as a rampant "ferocious bull." Thus one possibility exists that the golden calves placed in the shrines at Dan and Bethel by Jeroboam were intended to function as thrones or divine pedestals for the invisible Yahweh. Some have noticed that in third-millennium depictions (mostly on cylinder seals) the deity would be depicted standing on the back of a winged composite creature (such as the cherubim were). It was in second-millennium Syria that the bull became the more common "pedestal animal."

12:28. calves' relation to Yahweh. It has been commonly accepted by many scholars that Jeroboam's golden calves were connected to a (syncretistic) worship of Yahweh. This argument is based on the lack of another divine name associated with the calves and the reference to the "gods who brought you out of Egypt." This latter phrase seems to negate the possibility of association with the Egyptian bull-god Apis (despite Jeroboam's Egyptian ties; see 1 Kings 11:40). Ugaritic parallels suggest ties between the calves and either Baal or El. Attempts to tie the calves to Sin, the moon god of Haran and Ur, and to vestiges of the ancestral religion within the Joseph tribes is bolstered by a great deal of textual and archaeological evidence, but they are still open to speculation. Whatever its original intent or background, the calves ultimately became associated with false worship by the Israelite community, whether as a violation of commandment one or two. The latter seems more likely in that even a century later, when Jehu eliminates Baal worship from Israel, he takes no action against the calves (see 2 Kings 10:28-29).

12:29. Dan and Bethel. Jeroboam's choice of

these two sites for his national religious centers was based on their previous association with cultic activity. Bethel was the site of Jacob's theophany (Gen 28:10-22) and an altar (Gen 35:1), while Dan became the shrine for the tribe of Dan in Judges 18:27-31. Geographically, the cities were located at either end of the nation and thus facilitated the peoples' religious pilgrimages and sacrifice.

12:30. Bethel. See the comments on Joshua 8:9 and Judges 1:22-23. Lying only eleven miles north of Jerusalem on the dividing line between the two kingdoms, Bethel (Beitin?) was a natural choice for Jeroboam's shrine. Its sanctuary could attract pilgrims who might otherwise travel south to worship in Solomon's temple. Ultimately, Bethel will eclipse Dan in importance as the "king's sanctuary."

12:30. Dan. See the comment on Judges 18:29. Jeroboam built upon Dan's (Laish) traditions as a cultic site, both from the time when it was a Phoenician colony and later when the tribe of Dan migrated to the area (Judg 18:27-31). Situated in the extreme north and on the border with Phoenicia and Syria, Dan probably served as a site for treaty negotiations as well as a border outpost. Its somewhat isolated position in the foothills of Mount Hermon and the distance to Israel's power center at Samaria, however, may have contributed to a loss of status after Jeroboam's time. Excavations at Dan have uncovered the high place constructed by Jeroboam for the calf. The sanctuary complex was about 195 by 145 feet and featured a large altar in an open-air courtyard. One large horn from the main altar was found as well as a smaller horned altar.

12:31. shrines on high places. Since Jeroboam's strategy has an underlying political agenda, it seems natural that he would have certified the continued use of traditional, local shrines or "high places." This was an acknowledgment of the desire for a greater measure of local autonomy (see the plea made by the tribal leaders in 1 Kings 12:4) and a popular ploy, allowing "popular" forms of religious expression to flourish without undue restriction in places like Mount Carmel, Gilgal, Mizpah and Mount Tabor. While some of these may have been open-air altars, the mention of "houses" suggests a more elaborate cultic installation associated with urban centers (2 Kings 17:9-11; 2 Chron 1:3). The lack of central control over religious practice could of course only facilitate syncretism.

12:31. new priesthood. There is precedent elsewhere in the ancient Near East for deemphasizing one community of priests in favor of another one. For instance, the Egyptian pharaoh Akhenaten attempted to break the power of the Amon priesthood in order to magnify Aten worship. Similarly, the Neo-Babylonian king Nabonidus replaced Marduk as the principal deity of worship in his empire with the moon god Sin. In both cases the revenge taken by the slighted priesthood cost the ruling dynasty its position. Jeroboam's treatment of the Levites in his new kingdom is an indication that he does not trust their loyalties to him. He felt that by appointing a non-Levitical priesthood he could insure that his policies (shrines at Bethel and Dan, golden calves, use of high places, new religious calendar) would be carried out without question. Priests and Levites in Israel exercised significant political influence, so Jeroboam felt it mandatory to appoint loyalists who were dependent on him for their position.

12:32-33. new festival. The eighth month (Marchesvan) spans our October-November, a month later than the principle festivals in Jerusalem, when the New Year and the Feast of Tabernacles were celebrated. The Feast of Tabernacles was a harvest festival (see comment on Deut 16:13-17), so some suggest that Jeroboam's adjustment to the calendar reflected a later fruit harvest in Ephraim than in Judah. Alternatively, the festival period in the seventh month may have taken on certain political elements. 1 Kings 8:2, 65 make it clear that the dedication of the temple in Jerusalem took place in connection with this period. In Babylon the New Year was an occasion for celebrating the enthronement of the national god and the king. Since temple dedication involved the enthronement of Yahweh in his temple, there is at least some level of continuity here. If this festival included celebration of kingship, the Jerusalem practice would, of course, have focused on the elect status of the Davidic dynasty.

13:1-34

The Shrine and the Prophet

13:1. man of God. For discussion of various aspects of prophecy and prophets see the comments on Deuteronomy 18:14-22. As in Judges 6:8 this nameless prophet is a defender of the covenant. His message denouncing Jeroboam and his altar at Bethel clearly infers that this shrine is illegitimate. Ancient Near Eastern prophets often had messages that included admonitions regarding who should receive worship and how, and what were and were not legitimate shrines.

13:2. human sacrifice. See the comments on Genesis 22:1-2 and 22:13-19 for the case against human sacrifice among the Israelites (contrast Judg 11:30-40). While human sacrifice, especially of infants, was practiced by some of the peoples of the ancient Near East (archaeological evidence from Carthage, Nuzi and Tepe Gawra; see Lev 18:21; 2 Kings 3:27), the curse of the man of God in this narrative relates to the defiling of the Bethel altar. The term "sacrifice" is clarified by the next phrase that explains that it is dead men's bones, not executed victims, that will be burned. Any sacred installation would have to maintain its ritual purity. Burning the bones taken from crypts would so utterly corrupt it that it would be difficult to ever use it again.

13:3. the sign. The credentialing of a "true" prophet could come if his/her pronouncements came true or, in a more spectacular mode, when Yahweh sent a "sign" as an verification that the prophet was sent from God. In this case, what was needed was an unmistakable sign of divine wrath against the altar at Bethel. It would not be enough simply to call for its eventual disuse. Instead the immediate destruction of the altar was declared, along with the desecration of the sacred ash from the sacrifice. These ashes contained the fatty residue reserved for God (see Lev 1:16; 6:10 for proper disposal of these ashes). In this way both the vehicle of sacrifice (the altar) and the sacrifice of dedication itself are to be invalidated by divine command. Many of the altars found by archaeologists have been made of limestone, a soft stone that is easy to quarry and readily available. Impurities or inadequate time to cure could be among the causes for the stone to crack when exposed to heat.

13:4. shriveled hand. Most interpreters have identified this physical condition as resulting from some sort of hemorrhage or clot, but these conditions do not explain why the arm remained extended. The latter has been described as a condition today termed "cataplexy" (a shock to the nervous system that causes muscle rigidity).

13:7-9. shared meal and gift. Meals and gifts were often used in the treaty or covenant making process (see Gen 24:52-54; 31:43-46; Ex 24:9-10). Meals were also an integral part of the protocol of hospitality, which, for a time, set aside any enmity between the parties involved (see Judg 19:1-9). The man of God's refusal to make peace with Jeroboam is a further sign of Yahweh's denunciation of the king and his policies. Some similarity can be identified in the scene between Samuel and Saul in 1 Samuel 15:24-31, where worshiping the Lord would have likely involved a festive meal settling their differences and renewing their alliance. In this case, however, the Lord's instructions had clearly prohibited any such rapprochement.

13:11-18. behavior of the old prophet. Though the man of God had successfully repudiated Jeroboam's attempt to enlist his allegiance, he was not as successful in avoiding the overtures of the prophetic community at Bethel. The shared meal would have carried the suggestion of alliance between the man of God from Judah and the prophet(s) of Bethel.

13:21-22. oracle of judgment. Prophets were known to receive messages that were uncomfortable for them and that they preferred not to deliver. This particular oracle showed the old prophet from Bethel to have been deceptive, but that does not prevent God from using him to pronounce judgment on the man of God who had disregarded his original instructions from the Lord.

13:26-32. burial of prophet. The unusual manner of death for the man of God (vv. 24-25) and the witnesses who saw a lion simply standing beside the body and not even attacking his donkey, testify to a judgment of God. This "sign," more than the one that destroyed the altar at Bethel, convinces the "old prophet" that he had been responsible for his colleague's death. In fact his statement in verse 32, certifying the validity of the man of God's curse against the altar and the high places in Samaria, serves as a reinforcement by a "northern" prophet of its inevitable enactment. To honor the man he had betrayed, the prophet provides him with a tomb (in essence adopting him into his family), which he in turn will share—forever intertwining their dual curse. While one interpretation of the unusual death of the man of God might have been that his curse of the altar was ill-founded, the story preserved here simultaneously validates the curse and explains the death.

14:1-20
Jeroboam I of Israel

14:3. gift for the prophet. See 1 Samuel 9:6-8; 2 Kings 5:5; and comment on 2 Kings 8:9 for other examples of bringing a token gift to a prophet. It may be that prophets, like Levites, were landless and depended for their food and livelihood on the gifts of those who consulted them. This gift may have been relatively insignificant since the king's wife was in disguise. Whatever the amount, the gift showed a sense of respect for the God the

prophet represented (see Gideon's "present" for the angel in Judg 6:18-21). The large number of votive images found by archaeologists in Canaanite and Israelite contexts suggest both food offerings and fertility symbols were commonly offered when an oracle or god was consulted.

14:2, 4. Shiloh. For information concerning Ahijah and Shiloh see comment on 11:29. Whether Shiloh (Khirbet Seilun, between Bethel and Shechem) contained an open-air shrine or was the site of a more elaborate temple complex in the period of the early monarchy and divided kingdom is uncertain. In any case the presence of a priestly community affiliated with the family of Eli stems from the time of the judges (1 Sam 1:7-9) and continues into the monarchy (see Jer 7:12-15 for mention of its destruction). Such a center would have also attracted prophets, like Ahijah, associating themselves with the presence of God.

14:9. indictment of the king. There is a long tradition in Mesopotamia recognizing the stereotype of the king who makes disastrous choices and brings on himself the wrath of the gods and the doom of his kingdom. The classic example in Mesopotamia is Naram-Sin of the dynasty of Akkad at the end of the third millennium. In a work known as the Curse of Agade, his desecration of the famous Ekur temple of Enlil in the holy city of Nippur is blamed for the fall of the kingdom (which doesn't happen for several more decades).

14:10-11. curse on the house of Jeroboam. For a ruling dynasty the worst possible curse is one that predicts the extinction of the family and the passing of the kingship to another group. This may explain why the Assyrian kings were always careful to list the kings they had violently deposed as a visible threat to any others that might think to revolt or even "did not bow at the king's feet quickly enough" (Sidqia of Joppa in the annals of Sennacherib). The colorful language describing the complete annihilation of Jeroboam, his sons and all of his clients/bondsmen provides images of them all going up in smoke and leaving no more trace than a dung fire. The further humiliation of their bodies being left unburied and devoured as garbage by scavenging dogs dishonored Jeroboam's house, cutting its members off from their ancestors (see Deut 28:26). For similar curses against a royal house in Israel, see comment on 1 Kings 16:4.

14:15. Asherah poles. See the comments on Asherah and the poles which symbolized her presence in Canaanite cultic sites in Deuteronomy 7:5 and Judges 2:13.

14:17. Tirzah. See the comment on Joshua 12:24 for the premonarchic background of this city. It seems likely that Jeroboam ruled from Tirzah, as did his immediate successors—Baasha, Elah, Zimri and Omri. Tirzah has been identified as Tell el-Farah, seven miles northeast of Shechem on the road to Beth Shan. It is favored by good elevation, a consistent water supply (two springs that feed the Wadi Farah) and a strategic location on the trade route. It also has ready access to the fords of the Jordan at Adam. The gate and fortifications were rebuilt from the Middle Bronze remains, and there is evidence of central planning in the building of new residences throughout the city. Its political importance may also be inferred from its mention in Shishak's list of conquests during his invasion of Palestine.

14:19. annals. The standard method of recording the major events and accomplishments, year by year, of the ancient Near Eastern kings was the production of royal annals. Some of the known chronicles of the ancient world (such as those of the Assyrian kings), while useful in reconstructing chronology and geographic locations, very often are a blatant example of official propaganda. Others (such as those from the Neo-Babylonian period) simply offered unembellished information. The reference to the annals of the kings of Israel again demonstrates that the biblical writers drew their account from larger, more detailed sources.

14:21-29
Rehoboam of Judah

For more information on this section see comments on 2 Chronicles 12.

14:23. high places. Apparently the use of outdoor shrines was common among the Canaanites. This was considered abhorrent to the Deuteronomic writer(s) because these local cult sites promoted a "popular" brand of religion that contained elements of Canaanite worship deviating from the established Yahweh-only doctrine. Thus local altars, sacred poles dedicated to Asherah, sacred groves and any place associated with a Canaanite god (Baal, El, etc.) or the worship of god outside of Jerusalem, "the place the Lord your God will choose" (Deut 12:5), were forbidden. There is a difference between these outdoor cultic places and the "high place" *(bamah)* mentioned in many places as religious centers in the local towns and cities (1 Kings 11:7; Jer 7:31; Ezek 16:16; 2 Chron 21:11; Mesha's Moabite Stele). The "high place" was apparently an indoor fa-

cility, built to house sacred furniture, an altar and precincts large enough to accommodate a priesthood. A clear differentiation is drawn between these two types of religious sites in 2 Kings 17:9-11.

14:23. sacred stones. Standing stones or *maṣṣebot* were apparently a common feature of Canaanite religion and also appear as memorials in a number of Israelite covenantal contexts (see Ex 24:3-8; Josh 24:25-27). Their association with Asherah, Baal and other Canaanite deities is the basis for their being condemned as a rival and threat to Yahweh worship. Archaeologists have discovered sacred stones at Gezer, Hazor and Arad. In the latter two cases, they are clearly within a sacred precinct and part of the cultic practices at these sites. The Hazor stones include incised representations of upraised arms and a sun disk. From basins sometimes found near the foot of such pillars it is inferred that libations (liquid offerings) were poured over them.

14:23. Asherah poles. One common feature of Canaanite worship and syncretized Israelite worship on "high places" and in city shrines is the erection of Asherah poles (Judg 3:7; 1 Kings 14:15; 15:13; 2 Kings 13:6). There is some uncertainty about whether these were simply wooden poles, erected to symbolize trees, or whether they contained a carved image of the fertility goddess or were a part of a sacred grove. The reference in 2 Kings 17:10, which refers to Asherah poles beside "every spreading tree," seems to indicate that these were poles erected for cultic purposes rather than planted trees. As the consort of El, Asherah was clearly a popular goddess (see 2 Kings 18:19), whose worship is mentioned in Ugaritic texts (1600-1200). Her prominent appearance in the biblical narrative indicates that her cult was a major rival to Yahweh worship (see the prohibition in Ex 34:13; Deut 16:21). This explains both the number of examples in which Asherah poles are erected and venerated as well as the strong condemnations of this practice and the depictions of these poles being cut down and burned (Judg 6:25-30; 2 Kings 23:4-7). For more information see the comment on Deuteronomy 7:5.

14:24. male prostitutes. For more information concerning cultic prostitution see the comment on Deuteronomy 23:17-18. The term used here occurs in both feminine and masculine forms and refers, perhaps euphemistically, to ones who have been set apart for particular functions. This same term is used in Akkadian literature to refer to those who have been consecrated as functionaries serving at the shrines or temples. The prostitute was among those functionaries, as was the wet nurse and the midwife. It is unclear what functions the males might have served.

15:1-8
Abijah of Judah

For information on this section see comments on 2 Chronicles 13:1-22.

15:9-24
Asa of Judah

For information on this section see comments on 2 Chronicles 14—16.

15:18. Tabrimmon, Hezion. These two names are known only from this context. Aramaic sources from this period are nonexistent, and Assyrian records do not involve Aramean kings at this time. The names represent logical and legitimate Aramean forms, but no other historical information is available.

15:25-32
Nadab of Israel

15:25. chronology. The attempt on the part of the biblical writer to correlate the reigns of the kings of Israel and Judah is not always easy to synchronize. Most likely, Asa's first year was 914 B.C., but Nadab's first year very likely did not begin until 911 B.C. In addition, Nadab's reign, while it comprised portions of two years, actually only lasted a few months before he was assassinated in the autumn of 910 B.C.

15:27. Gibbethon. Lying about two miles west of Gezer in Philistine territory, Tell el-Melat was likely only a military outpost on the border with Israel (note it is listed in Danite territory in Josh 21:23). Its strategic location is attested by its mention in the campaign list of Pharaoh Thutmose III (1468 B.C.) and of the Assyrian king Sargon II, as part of his suppression of the Ashdod revolt (713 B.C.; Is 20:1).

15:29. wiping out predecessor's family. See the comment on 1 Kings 1:21 for a discussion of political purges at the time of change of administration. By eliminating all future claimants to the throne, Baasha made it more likely that his family would succeed him. The fulfillment of the curse (1 Kings 14:7-16) against Jeroboam's house is similar in form to the Ur III "Curse of Agade" about the Akkadian king Naram-Sin, whose desecration of a shrine in Nippur brought the wrath of the gods down on him and his kingdom.

15:33—16:7
Baasha of Israel

15:33. Tirzah. See the comment on 1 Kings 14:17. Tirzah officially becomes the capital of the northern kingdom of Israel during Baasha's reign. It will remain there until Omri moves it to Samaria (1 Kings 16:24).

15:33. chronology. The reign of Baasha presents one of the most difficult chronological problems in the Bible. If, as this verse states, Baasha came to the throne in Asa's third year and reigned twenty-four years, he would have died in Asa's twenty-sixth year (see 16:8). The problem comes when 2 Chronicles 16:1 has Asa and Baasha at war in Asa's thirty-sixth year. Suggested solutions have been numerous, but none very convincing. Thiele's dates for Baasha are 909-886. He is contemporary with Asa of Judah and Ben-Hadad I of Damascus. This is the beginning of a century-long period when the Arameans of Damascus begin taking a leading role in the region.

16:4. dogs, birds and no burial. The fate assigned to Baasha's family (notice, not to Baasha himself) was the worst that could befall someone in the ancient world. Exposing the corpse represented a final humiliation and a desecration, for most ancient peoples believed that proper, timely burial affected the quality of the afterlife. In the Gilgamesh Epic, Enkidu, returned from the netherworld, reports to Gilgamesh that the one who died unburied has no rest and that the one who had no living relatives to take care of him could only eat what was thrown into the street. A Babylonian curse relates burial to the uniting of the spirit of the dead with loved ones. We know that even Israelites believed that proper burial affected one's afterlife, because they, like their neighbors, buried their loved ones with the provisions that would serve them in the afterlife; most often pottery vessels (filled with food) and jewelry (to ward off evil), with tools and personal items sometimes added. Israelite law required even the body of an impaled criminal to be removed and buried at sunset rather than left to be devoured by birds and other animals. First-millennium Assyrian records demonstrate these concerns as Ashurbanipal punishes his opponents by having their bodies thrown in the streets and dragged around. Being devoured by scavengers made burial impossible and was the most dishonorable punishment possible. From the same period an Assyrian curse declares, "Let dogs tear his unburied body to pieces." On one occasion the corpses were chopped up and fed to dogs. The intention of this atrocity was typically to eliminate any possibility of proper burial and thus to doom the individual's spirit to wander restlessly rather than enjoy a peaceful afterlife. Exposing the corpse was also occasionally practiced by the Egyptians.

16:6. Tirzah. Tirzah was a royal residence of Jeroboam and then the capital city of the northern kingdom, probably beginning in the time of Baasha. It has been identified as Tell el-Farah seven miles northeast of Shechem on the road to Beth Shan. It is favored by good elevation, a consistent water supply (two springs that feed the Wadi Farah) and a strategic location on the trade route. It also has ready access to the fords of the Jordan at Adam. The gate and fortifications were rebuilt from the Middle Bronze remains, and there is evidence of central planning in the building of new residences throughout the city. Its political importance may also be inferred from its mention in Shishak's list of conquests during his invasion of Palestine.

16:8-14
Elah of Israel

16:8. chronology. Elah's reign was brief and apparently uneventful. As with his predecessors, there is as yet no mention of him in extrabiblical records. Thiele places him in 886-885.

16:11. killing predecessor's family. Leaving any living relatives of a king who had been forcibly deposed from the throne by assassination was an invitation to civil war. The relatives would be honor-bound to avenge the death of the previous king, and they would be certain to find those who would support their bid to regain the throne. Such annihilation of ruling families was common practice both in Israel and in the ancient Near East at large.

16:13. worthless idols. The text here speaks only of "worthless things," but that is a common designation of idols in the ninth through the sixth century. It expresses the biblical perspective that the idols are powerless nothings and that the belief in them is conceptually flawed.

16:14. annals. Royal annals were kept throughout the ancient Near East, with most examples coming from mid-second millennium Hittite kings and from ninth- to sixth-century Assyria and Babylon. The annals could be represented by annalistic royal inscriptions that give detailed accounts of military campaigns. In addition there are court chronicles that give information of important events in

each year. There are currently no annals from Israel or Judah that have been discovered by archaeologists.

16:15-20

Zimri of Israel

16:15. chronology. Zimri's seven days are dated by Thiele to 885.

16:15. Gibbethon. Gibbethon was one of the cities listed among those taken by Thutmose III on his campaign into Palestine in the first half of the fifteenth century B.C. Over seven hundred years later it was an important conquest of the Assyrian king Sargon II in his campaign against Ashdod (713-712). If the city is to be identified with Tell Malat, it is strategically located near the intersection of the Philistine plain with the foothills of Judah nearly twenty miles west of Jerusalem and about four miles west of Gezer. Extensive excavations have not been conducted, but there are finds dating to this period on the site, and it is clear that it was a fortified city.

16:16. army naming king. While it was not typically the army's task to designate the king, the support of the military was an important link to securing a contested throne. Military coups were probably more frequent in the Near East than our sources indicate, because most kings desired to present themselves as having come to the throne through legitimate means. Using the might of the military to seize power and enforce one's rule is not a precedent that many would seek to establish. Nevertheless prominent examples of militia-backed takeovers from one's own countrymen can be found in the Assyrian kings Tiglath-Pileser III (745) and Sargon II (722), and the Persian king Darius the Great (522), though each puts a different twist on the story of his succession that suggests a legitimate claim to the throne.

16:18. citadel of the royal palace. Tell el-Farah, ancient Tirzah, shows evidence of destruction and abandonment at this time. There is a fortified citadel that has been found at the northwest corner of the site that is possibly the one that Zimri set aflame. The practice of a king burning down the palace around himself is also seen in 648, when Babylon succumbs to the siege of Ashurbanipal and Shamash-shuma-ukin throws himself into the flames of the burning palace.

16:21-28

Omri of Israel

16:21-22. contesting succession to the throne. When succession to the throne was not a case of a son taking the place of his father, it could be expected that there would be several claimants, each with supporting factions. Nothing is known of the nature of Tibni's claims or who made up his constituency. Likewise the details of the civil war are not given.

16:23. chronology. Thiele's dates for Omri are 885-874. This is a critical juncture in the history of the region because the Assyrians are ready to begin their attempts at western expansion. Ashurnasirpal II came to the throne in 883 and extended his control over the entire course of the Euphrates, thus putting him on the doorstep of the western nations. The Aramean state of Bit-Adini by the western reaches of the Euphrates came under his control, and in 877 he marched to the Mediterranean and then south between the Orontes/Litani rivers and the Mediterranean, collecting tribute from cities as far south as Tyre. Additionally the Arameans of Damascus under Ben-Hadad have become a force to reckon with, and all of this will force Israel to find its niche through international alignment.

16:24. Samaria. It was Omri who built Samaria and established it as the capital of the northern kingdom, Israel. About twelve miles west of the previous capital, Tirzah, the city is located at an important crossroads with easy access to the Jezreel Valley to the north, Shechem to the southeast and the coast to the west. It is near both major north-south routes that run west of the Jordan. The excavations at the site have uncovered what is believed to be Omri's palace on the acropolis as well as parts of the wall separating the acropolis from the lower city. The wall was about five feet thick and built using the finest masonry of the day (ashlar stones set in a trench using headers and stretchers). Ahab improved the fortifications by adding a casemate wall over thirty feet thick.

16:24. two talents of silver. Two talents of silver equals six thousand shekels. This is considerably more than David paid for the eventual temple site in Jerusalem, but it is a substantially larger portion of real estate as well. It is about 150 pounds of silver. Its economic equivalent in buying power today would be between fifteen and twenty million dollars. Even if the entire upper and lower city (which comprised 160 acres in Roman times) was included, this was still expensive real estate.

16:27. Omri in the ancient Near East. Though there are no contemporary sources that record interaction with Omri, sources from the middle of the ninth century refer to Omri in a

number of different ways. The Moabite inscription of King Mesha recounts Omri's past oppression of Moab as the historical background of Mesha's claims of his more recent domination of Omri's successors. Assyrian inscriptions of Shalmaneser III identify Israel as the land of Omri. Since Omri was on favorable terms with pro-Assyrian Tyre and Sidon, it is likely that he also adopted a pro-Assyrian stance. His alliance with the Phoenicians was sealed by the marriage of the crown prince, Ahab, to the Sidonian princess, Jezebel. This strategy aligned him against the Arameans, who stood against the Assyrians and were the most active threat against Israel. Nevertheless it appears that Omri did negotiate a working relationship and maintained an uneasy peace with the Arameans, who were feeling the pressure of the Assyrians and needed friends in the region.

16:29-34

Succession of Ahab of Israel

16:29. chronology. Thiele's dates for Ahab are 874-853. It is certain that he was still on the throne in 853 because he is listed in Shalmaneser III's records as one of the principle members of the western coalition that opposed the Assyrians at the battle of Qarqar in that year.

16:31. Jezebel. The only possible reference to Jezebel in contemporary records is a seal from this time period inscribed with the name *"yzbl."* It is a large seal featuring Egyptian motifs accompanied by the Phoenician inscription of the name. As the king's daughter, it has been suggested that she could have enjoyed a status as the high priestess of the national deity, Baal Melqart.

16:31. Ethbaal of Sidon. Ethbaal was the king of the Sidonians from 887 to 856. He ruled over the entire region of Phoenicia and actually used Tyre as his capital city. Josephus, writing many centuries later, describes him as a priest of the goddess Astarte who had usurped the throne. Josephus is not always reliable on such matters, but he appears to be using some Greek sources that may be translations of Phoenician records. Ethbaal is given much credit in the development of Tyre as an island port and probably built the southern harbor with its accompanying breakwater. No mention of him has yet been found in contemporary records.

16:31. Baal Melqart. Melqart was the chief god of Tyre as early as the ninth century B.C. He is equated with the Mesopotamian god Nergal, lord of the netherworld, and later with the Greek god Heracles. He is at times referred to as the Baal of Tyre and thus his identification with the Baal who enjoys Jezebel and Ahab's loyalty. It should be understood that this is therefore a different god from the Canaanite Hadad, who is usually referred to as Baal in the biblical text. In the ninth-century Aramean inscription of Bir-Hadad, Melqart is a warrior god, but no myths concerning his activities have survived from the Old Testament period. In later texts, Melqart is seen as a dying-rising god (correlating to the cycles of nature), who appears to be brought back to life by fire.

Since the biblical text never uses the title Melqart, there are alternative possibilities. The most common is that Baal is Baal Shamem (lord of the heavens), who is known throughout the first millennium as one of the chief gods of Phoenicia. Most information on him, however, comes after 800, and therefore little can be determined about him from the period of this narrative.

16:32. temple of Baal in Samaria. Excavations in Samaria have not yet located any remains from Ahab's temple of Baal. It has been suggested that the temple contributed to the concept being promoted by Ahab and Jezebel that the city was the sacred precinct of Baal (for the privileges of such status, see comment on 2 Sam 5:9). This would mean it functioned as an independent political unit, just as Zion often did in the south. For the implications of this see the comments in 2 Kings 10:21.

16:33. Asherah pole. Asherah can be either the name of a fertility goddess or the name of a cult object (as here). The goddess was popular in the religious deviations in Israel and was sometimes considered a consort of Yahweh. An indication of this belief is found in the inscriptions from Kuntillet Ajrud and Khirbet el-Qom. In Canaanite mythology she was the consort of the chief god, El. She appears in Mesopotamian literature as early as the eighteenth century, where she is consort of the Amorite god Amurru. The cult symbol may or may not have born a representation of the deity on it. The pole may represent an artificial tree since Asherah is often associated with sacred groves. Sometimes the cult object can be made or built, while on other occasions it is planted. We have little information of the function of these poles in ritual practice.

16:34. rebuilding Jericho. Joshua had pronounced a curse on anyone who would rebuild the city of Jericho. Many interpreters have thought that a practice of the day was that the dedication of a house would feature the sacrifice of a child from the family. This was used to explain the skeletal remains of

children found buried under the thresholds of houses (foundation sacrifices). In similar manner the builder of a city would sacrifice a child who would be buried in a significant location in the city. This interpretation has been largely abandoned, and some researchers now see a connection between the curse and the disease schistosomiasis (bilharziasis). This disease is caused by a blood fluke carried by snails of the type found in abundance at Jericho. It infects the urinary tract and affects fertility and child mortality.

17:1—18:15
Elijah and the Drought

17:1. Tishbe in Gilead. Tishbe is mentioned nowhere else in the Old Testament, and its location is unknown. The traditional identification with Istib, eight miles north of the Jabbok River, has little to commend it.

17:1. withholding of rain and Baal. The policies and actions of Ahab and Jezebel are intended to promote Baal as the national deity of Israel in place of Yahweh. The dispute championed by Elijah concerns which deity is king—which is more powerful. In the Canaanite material available from ancient literature (particularly the information provided by the Ugaritic tablets), Baal is a god of lightning and storm, and responsible for the fertility of the land. By withholding rain, Yahweh is demonstrating the power of his kingship in the very area of nature over which Baal is thought to have jurisdiction. Announcing this beforehand to Ahab is the means by which Yahweh's kingship and power are being portrayed. If Baal is the provider of rain and Yahweh announces that he will withhold it, the contest is on.

17:3. ravine of Kerith. This incident demonstrates Yahweh's control in that he shows he can provide for whomever he wishes. The Wadi Kerith has not been identified with confidence. NIV translates the description as "east of the Jordan," but the Hebrew phrase often means "on the way to," suggesting that the wadi is one that drains into the Jordan from the west. Matching this description and known for its desolate terrain is the Wadi Kelt. Wadi Swenit runs past Micmash and halfway to Jericho meets the Wadi Kelt, which is the major pass into the region of the Jordan. This would be about thirty miles southeast of Samaria. An alternative in the region of Samaria would be the Wadi Faria, which meets the Jordan at the fords at Adam.

17:4. fed by ravens. Ravens are known to roost in desolate rocky areas like the wadi. Their habit of storing excess foods in rocky crags worked to Elijah's benefit. He could observe where they put the food and retrieve it. While much of the diet of ravens consists of carrion, they also eat fruit such as dates.

17:9. Zarephath. Zarephath (modern Sarafand) is a town near the coast of the Mediterranean between Tyre and Sidon. It is listed as a harbor city in thirteenth-century B.C. Egyptian texts. It was a flourishing manufacturing and industrial center throughout the first millennium B.C. and down into Roman times. Its importance here is that it shows that Yahweh had also produced a drought in Baal's own home territory.

17:10. gathering sticks at the town gate. The woman is gathering twigs to start a small fire. The verb suggests foraging for discarded stubble. The traffic through the town gate and jostling of loads there would make it a likely place for one to find small pieces that had been dropped by others.

17:10. widow. In a society that is subject to disease and warfare, it is not uncommon to find widows. Since a widow had no inheritance rights, special provisions were typically made for them under the law, allowing them to glean in harvested fields and protecting them from being oppressed. They needed protection under the law because they were powerless to protect themselves and were often dependent on charity for survival. Based on the statements in the prologues of the Ur-Nammu Code and the Code of Hammurabi, it is clear that kings considered it part of their role as "wise rulers" to protect the rights of the poor, the widow and the orphan. Similarly, in the Egyptian Tale of the Eloquent Peasant, the plaintiff begins by identifying his judge as "the father of the orphan, the husband of the widow." If a god is going to demonstrate his role as a king, one clear way of doing so is to show his concern for the vulnerable by caring for the needs of a widow in desperate need.

17:10-11. Elijah's request. Elijah's request would have been very modest within the range of normal hospitality (which was often offered at the gate of the city). In this time of drought and famine, however, it served only to expose the corporate and personal crises that existed.

17:12. LORD your God. Here the woman clearly refers to the Israelite God, Yahweh. There must have been something recognizably Israelite in Elijah's appearance, and the woman follows standard protocol by pronouncing her oath in the name of the deity of the person to whom she is speaking. Though she uses a

common oath formula, she also unwittingly offers affirmation of Yahweh's vitality. Her phrase betrays nothing of any personal belief in Yahweh.

17:12. flour and oil. One of the typical baked products that formed a basic part of the meal was a small flat cake made of wheat flour and cooked in oil.

17:14. provision of flour and oil: fertility. Grain and oil were two of the major exports of the city of Zarephath. The fact that they were in short supply is an indication of how severe the drought was. They are also two of the most basic commodities for survival. As staple products they represent the major arena where fertility can be observed. The contest between Yahweh and Baal continues as Yahweh demonstrates that he is able to provide for "Baal's people" in "Baal's territory" just as easily as he is able to provide for his own people and just as easily as he is able to withhold from whomever he chooses.

17:18. death of son connected to prophet. Prophets were often considered dangerous and having one around posed considerable risk. The gods could be harsh taskmasters as often as they could be generous benefactors, and the prophets represented them. Additionally, if the prophet were to become angered or offended at any little thing, he might, in an uncontrolled moment, pronounce some sort of curse that would inevitably come true. The woman assumes that her child's death is punishment from some presumed (though unknown) offense that has come to the attention of the deity because of the prophet's presence. She had thus far benefited from Elijah's presence, but now she judges that the cost was too high.

17:21. stretched himself on boy three times. Some have taken this as an example of mouth-to-mouth resuscitation, since in ancient times death was determined as having taken place when the person stopped breathing. But the full weight of a man on a child would be counterproductive to that procedure. The more complete description of the procedure in 2 Kings 4:34-35 suggests a different explanation. In Mesopotamian incantation literature the touching of part to part is a means by which demons exercise power over their intended victims—it is the idiom of possession. In this belief, vitality or life force can be transferred from one body to the other by contact of each part. By imitating the procedure believed to be used by demons, the prophet is able, through the power of Yahweh (notice the prayer), to drive the demons out and restore the boy's life. This is often considered to be one of the clearest cases of sympathetic magic in the Bible.

17:22. return of life versus Baal. Part of the profile of fertility gods was the dying and rising cycle that was related to vegetation and to the seasons. The deity would "die" during the winter months and descend to the netherworld. He would be brought back out of the netherworld and restored to life in the spring to bring fertility back to the land. His power to enable fertility extended beyond crops to animals and people as well. As a god who regularly returned from death, it was believed that these fertility gods also had the power to occasionally restore life to someone who had died. Therefore, by restoring the boy's life, Yahweh is again showing his power in the realm considered to be Baal's central arena (see comment on 2 Kings 4:16-35).

18:1-46

The Contest on Mount Carmel

18:3. Obadiah in charge of the palace. Obadiah holds one of the highest offices in the administration (see comment on 4:6). Though this post later becomes the equivalent of prime minister, at this stage it most likely designates stewardship of royal lands and possessions. It is claimed as a title of an official named Gedaliah on a seal from sixth-century Lachish.

18:4. killing Yahweh's prophets. The standard religious systems of the ancient Near East were openly tolerant of worship of any deities. To ignore a potentially powerful deity or to persecute his worshipers would make one vulnerable to divine anger and punishment. Religious intolerance or persecution do not arise until much later in history. Policies that may look like religious persecution in the ancient world are usually political in nature. When the Egyptian pharaoh Akhenaten took action against the priests of Amun-Re, it was because of their substantial political and economic influence. He was seeking to defuse their power. The agenda of Jezebel was to enthrone Baal as the king and national god of Israel instead of Yahweh. This would have been her act of loyalty to Baal. The prophets of Yahweh would have, of course, contested this move on religious, political, personal and traditional grounds. They would be most capable of mobilizing formal and large-scale opposition among the general population. On political grounds, then, they had to be eliminated.

18:19. Mount Carmel. It is likely that Mount Carmel, south of the modern port of Haifa,

had long served as a boundary between Israel and Phoenicia and was, like many mountains, considered a sacred site. As early as the lists of Pharaoh Thutmose III (fifteenth century), Carmel is probably the one identified as a holy mountain in the vicinity of Acco. It is also the location where Assyrian king Shalmaneser III collected tribute from both Tyre and Jehu of Israel in 841. Carmel actually refers to a mountain range that stretches about thirty miles from the outcropping into the Mediterranean southeast toward Megiddo and stands at the northwestern end of the Valley of Jezreel. It is uncertain which summit in the range is the location of the contest. It is possible that the contest took place at the foot of the mountain rather than on its summit. Sacred mountains usually featured the places of worship at their base rather than at the summit, which would have been considered holy ground inaccessible to the populace. Elijah eventually ascends to the summit to offer his prayer for rain (v. 42).

18:19. eating at Jezebel's table. It is interesting that it is Jezebel's table, not Ahab's, that hosts the prophets of Baal and Asherah. This suggests that she has her own dining accommodations and resources and that she is the sponsor and benefactor of these prophets.

18:23-24. nature of the contest. There are three significant concepts involved in centering the contest around the ability of the deity to send fire. (1) *Fire is an indication of the presence of God.* In biblical texts, from the burning bush and the pillar of fire to the throne vision of Ezekiel (1:4), fire is seen as accompanying theophanies (appearances of God). In this way the contest asked the respective deities to show themselves. (2) *Fire is connected to the lightning of the storm god.* As the storm god, Baal is depicted with lightning bolts in his hand and is spoken of in the texts as flashing forth with fire or lightning. In one text fire is even used by Baal as a means of constructing his house. Baal was therefore considered by his worshipers as the lord of fire. In the continuing agenda of the narrative that Yahweh show his superiority in every area of Baal's domain, the ability to bring fire is strategic. (3) *Fire represents the acceptance of the sacrifice.* Burnt offerings of this sort typically accompanied petition. In this case the petition on everyone's mind was for the drought to end. If both parties had been praying for the drought to end, the resulting rain could be attributed by either group to its own god. As a result the contest is set up to demonstrate which deity is responding to the petition of his followers. If fire is sent, the petition has been granted, and the rain that follows can be attributed to the correct deity. It is therefore important to recognize the close connection between the sending of the fire and the sending of the rain.

18:26-29. prophets' appeal to Baal. The NIV speaks of the prophets "dancing around the altar" (v. 26) and "slashing themselves with swords and spears" (v. 28). In the first description the verb is controversial. It is the same verb as that translated "passover" in Exodus 12 (see the comment on Ex 12:11) and may be better understood as protectively standing vigil. Certainly there is plenty of evidence of ritual dances in the ancient world; however, none of them come from the literature connected with the Canaanites. The self-laceration of this verse is part of a mourning ritual. In Ugaritic literature the gods are portrayed as practicing this when they hear of the death of Baal. Additionally an Akkadian wisdom text from Ugarit compares the bloodletting of mourning rites to that practiced by ecstatic prophets.

18:27. Elijah's taunts. The biblical text offers four activities that Elijah suggests for Baal: thinking, busy, traveling and sleeping. These can be compared to some of the activities in which Baal is engaged in the Ugaritic texts. When the goddess Anat comes to look for Baal, she is told he has gone hunting. Ugaritic literature that portrays the death of Baal features the repeated strain that he needs to be awakened. The classical source used by Josephus, Menander of Ephesus, reports that the Tyrian king, Hiram, contemporary of David, instituted the ritual for the awakening of Herakles (=Melqart, see comment on 16:31). The mythology of the ancient world understood the gods to be involved in a variety of activities similar to those that engage human beings. Though Elijah's words are meant to be taunts, they are not unrealistic depictions of Canaanite beliefs. The prophets of Baal would not have viewed his suggestions as ridiculous or unworthy of deity.

18:30. Elijah's repair of the altar. The terms used suggest a previous altar for the worship of Yahweh that was in disrepair due to an act of destruction. It can probably be inferred that the altar had been torn down as a result of Jezebel's promotion of Baal worship. Destruction of competing or unacceptable high places was often a part of religious reform. It was often believed that the precise location and orientation of a sanctuary or altar had been determined by deity and was significant. Therefore, even though Elijah "builds" the altar in verse 32 with twelve stones that probably make up the entire altar, it can be viewed as "repair" in the

sense that it enjoys continuity with the altar previously operating on the site.

18:32. size and purpose of the trench. The trench size is described in terms of something that holds about half a bushel of grain. A trench that held half a bushel would not be very large. Perhaps the text is making reference to a standard container that holds (Hebrew text: "houses") this amount of grain (the way we would speak of a two-liter bottle) and is suggesting that is how deep the trench was dug all around the altar. The purpose of the trench is to collect the runoff, which otherwise would have simply been absorbed into the dry earth.

18:33-34. soaking of the sacrifice. Some have thought that the pouring of water on the altar would have seemed a great waste to those who were languishing through a third year of drought. It must be remembered, however, that there is no suggestion that this was fresh water. The nearby Mediterranean was full of water—it was just undrinkable.

18:38. fire of the Lord. The storm gods of the ancient Near East are typically equipped with lightning bolts that are their means of sending fire. Assyrian kings throughout this period speak of the gods as a burning flame and of sending fire before them. Esarhaddon (seventh-century Assyria) speaks of his march and attack in terms of an unquenchable fire. All of this is the way that the deity was believed to enter into battle. Fire brought about by his thunderbolts was one of his principal weapons. While the events on Carmel do not show Yahweh using fire to destroy his enemies, he is using it as a means to defeat his opponent, Baal. Another occurrence of fire from the Lord consuming a sacrifice is in the ordination of Aaron and his sons (Lev 9:24).

18:40. Kishon Valley. The Kishon River flows northwest from the northern end of the Jezreel Valley to the Mediterranean just east of Haifa. It is fed from the mountains in the Carmel range and from the hills of Galilee around Nazareth.

18:44. cloud. The text has given no indication of the time of year this event takes place. Summers are usually devoid of rain in Palestine, though there can occasionally be clouds in the sky. The winter is the rainy season. Rain usually comes from the west (the sea), as indicated here. When the rainy season begins in the autumn, showers often come on quite quickly from the west. Comparing the size to a man's hand is indicative of how far away the cloud is—when he holds up his outstretched hand, he can obscure it from his sight.

18:45. Jezreel. Jezreel was between fifteen and twenty miles from the Carmel area. This fifteen-acre site was situated at the southeastern entrance to the Jezreel Valley between the Hill of Moreh and Mount Gilboa. It was here that Ahab had built a winter capital. Excavations have unearthed a large royal enclosure from this time period occupying a large portion of the mound (see comment on 21:1).

18:46. tucking cloak into belt. The "girding of one's loins" typically involves belting tight a loose garment or folding up a long one in preparation for some strenuous activity. This particular passage is difficult because the verb that is used is unique to this verse and its meaning is uncertain. So, for instance, if Elijah had "girded his loins" for the slaughter of the prophets, he could just as well be ungirding them here. Despite the NIV translation, no garment is mentioned here.

18:46. Elijah running ahead of Ahab. This verse does not speak of *outrunning* but of *running before* the chariot of Ahab *until he came* to Jezreel. Those running before the chariot of a king or prince constitute his entourage (see comment on the same phrase in 2 Sam 15:1). Elijah, under the power of Yahweh, was playing the role of prophetic herald, apparently proclaiming the changed attitude of Ahab and his loyalty to Yahweh. The power of Yahweh brings blessing, success and victory. In Hittite texts it is the gods who run before the chariot of the king—here Elijah does so as the representative of God. The eighth-century Aramean king, Bir-Rakib, portrays himself as a loyal vassal to the Assyrian king Tiglath-Pileser III by "running at his wheel."

19:1-18
Elijah's Flight

19:3. Beersheba. Beersheba is the southernmost extremity of the land. It is located in the northern Negev at Tell es-Seba' (three miles east of the modern city). Its name derives from its association with the wells dug to provide water for the people and flocks in this area (see Gen 26:23-33). Archaeological evidence has been found of occupation during the monarchy through the Persian periods.

19:4. day's journey into the desert. Elijah is apparently heading southwest toward the Sinai Peninsula. One day's journey would have taken him about a third of the way to Kadesh-barnea.

19:4. broom tree. The white broom tree *(retama raetam)* is common in this region and grows anywhere from five to ten feet in height. It is the only shrub to offer shade in this dry, desolate region.

19:5-7. angel's provisions. There is nothing striking about the description of the food provided by the angel. It is the same as what Elijah had asked the widow to make for him (see 17:13). Perhaps most significant is that the Israelites in the wilderness were reported to have made such cakes out of manna (Num 11:8).

19:8. trip to Horeb. Horeb is another name for Mount Sinai. If Sinai is to be found down in the southern region of the peninsula, as the text seems to necessitate (see comment on Ex 19:1-2), he must travel another two hundred miles and could therefore easily take forty days. It is true that a caravan could often make seventeen to twenty miles a day, but Elijah is not accustomed to this type of travel and is traveling on his own. Five miles per day under such conditions in this climate would not be unusual.

19:11-13. fire, wind and earthquake with theophany. A theophany is an appearance of the divine presence. In the ancient Near East theophany was often connected with battle, and the warrior god was believed to fight on behalf of his people using thunder bolts (lightning, fire), the stormwind and the trembling earth to terrify the enemy. From the Sumerian *Exaltation of Inanna,* to the Hittite myths about the storm god, to the Akkadian and Ugaritic mythologies, the gods are viewed as thundering in judgment against their enemies. Baal is depicted as grasping a handful of thunderbolts. Thundering terminology is picked up in royal rhetoric as Hittite or Assyrian kings portray themselves as the instruments of the gods, thundering against those who have violated treaties or stood in the way of empire expansion. Israel's Yahweh is also viewed as a warrior God, but here Elijah is shown that there is much more (see next comment).

19:12-17. Yahweh's plan. In the ancient Near East the gods were believed to be active in the events of history. Kings claimed that they were put on the throne by their patron deity and that that deity supported them, gave them guidance and brought them victory and success. It is interesting to note, however, that this involvement of the gods always seems to have the tone of political propaganda. The gods of the ancient Near East do not have a plan that they reveal. While they are believed to be active throughout the scope of history, there is no indication that they had a plan for the direction of history. Here it is made plain to Elijah that Yahweh is not simply a hot-blooded warrior defending or dethroning kings on an arbitrary whim like the gods of the ancient Near East. He has an agenda for history. His warfare is not just wrathful blood-letting—there is a long-term plan that is being carefully worked out. Once all the fire and storm and earthquake are past, the plan can be articulated. The "gentle whisper" in verse 12 is not describing how the Lord speaks. It is descriptive of the resonating silence after all the clamor of destruction. It is with silence hanging in the air that Yahweh's voice of direction may be heard.

19:15-16. anointing three replacements. Elijah made the mistake of thinking that he was indispensable, God's last and only hope. By announcing three successors, the Lord is making it clear that he is never without recourse. The Aramean king, Hazael, will be God's instrument of judgment on Israel (for more information see comment on 2 Kings 10:32). Jehu will become king of Israel and in the process bring God's punishment on the house of Ahab (for more information see comments on 2 Kings 10). Elisha will continue the prophetic work of Elijah.

19:15. Desert of Damascus. The Desert of Damascus refers to the great Syrian desert that stretches from Damascus to the Euphrates river basin. It was this desert that the "fertile crescent" went around.

19:16. Abel Meholah. Abel Meholah is located on the west bank of the Jordan somewhere south of Beth Shan. The most likely candidate is Tell Abu Sus, eleven miles south of Beth Shan at the southern end of the Beth Shan Valley, where the Yabis River enters the Jordan from the east.

19:18. mouths not kissing Baal. On the black stele of Shalmaneser III, the Israelite king Jehu is portrayed kissing the ground before the Assyrian king. In *Enuma Elish* the tribunal of gods kisses the feet of Marduk after he has put down the rebellion and established himself as head of the pantheon. This was the common act of submission offered to kings and gods. Likewise the kissing of the idol involved kissing its feet in an act of homage, submission and allegiance. In the Mari letters the governor of Terqa, Kibri-Dagan, advises Zimri-Lim, king of Mari, to come to Terqa to kiss the feet of the statue of the god Dagan.

19:19-21
Elisha Chosen as Apprentice

19:19. plowing with twelve yoke of oxen. Large landowners could accomplish the task of plowing much more quickly using multiple plows, each pulled by a team of oxen driven by a worker. Here Elisha is in charge of twelve such teams.

19:19. prophet's cloak. The cloak referred to here is an outer garment, not the same as the robe discussed in 1 Samuel 15:27. The distinctive prophet's cloak is most likely made of animal skin and is hairy in appearance (see Zech 13:4), though not all cloaks were so made. Very little is said about prophetic garb in the ancient Near East, so comparison is difficult. It may be of interest that Assyrian inscriptions beginning at this period portray a few individuals wearing lion-headed cloaks. Some of these individuals are involved in ritual activities (dance) and accompany deity. It is guessed that they may be exorcists.

19:21. Elisha's response. Kissing is more often used in greeting than in saying goodbye (a word supplied here by the NIV translators, not in the Hebrew text). Kissing between a father (or grandfather) and a son or daughter is found in several contexts as a prelude to receiving a blessing (Gen 27:26; 31:28, 55; 48:10) and may be implied here. The butchering of the oxen supplies the meal for the celebration that also accompanied the blessing. It would appear, then, that Elisha has requested the opportunity to receive his parents' blessing.

20:1-43

Ahab and Ben-Hadad

20:1. Ben-Hadad of Aram. Aramean history at this time is still in need of much clarification, with at least part of the problem caused by several rulers with the name of Ben-Hadad ("son of [the god] Hadad"). The issue is further complicated by the fact that Shalmaneser III's inscriptions name the ruler of this time Hadadezer (see comment on 2 Sam 8:3). The first Ben-Hadad has been referred to earlier in chapter 15 and ruled during the first part of the ninth century, though no precise dating is possible. In 2 Kings 8 the king murdered by Hazael (about 842) is named Ben-Hadad, and Hazael is later succeeded by a king named Ben-Hadad. The name Bir-Hadad occurs in an inscription dedicated to the god Melqart, but again it is unclear which Ben-Hadad this refers to. It has been suggested that the sequence may be Ben-Hadad I (1 Kings 15), Ben-Hadad II (1 Kings 20), Hadadezer (Shalmaneser Inscription, considered by some a variant name of Ben-Hadad), Ben-Hadad III (Melqart inscription), Hazael, Ben-Hadad IV. There is no other material from the ancient Near East to help unravel this at this time.

20:1. thirty-two kings. Coalitions of many small kingdoms were frequent in these times. When Shalmaneser III invaded the west in 853 at the Battle of Qarqar, he was greeted by a coalition of twelve major kings. Shalmaneser's inscription lists the number of cavalry, infantry and chariots provided by the various members of the coalition. There were still many city-states and tribal groups around at this time, who each would have had a "king," so it is not difficult to imagine thirty-two of them banding together.

20:5-6. terms of tribute. Ahab is initially prepared to meet the demands for tribute and peaceful surrender imposed by Ben-Hadad. The resulting vassal relationship would involve members of Ahab's family being taken as hostages to insure that the terms were met. Assyrian practice of this time was to take princes hostage to provide incentive that good behavior would result, and here the Arameans are doing the same. When Ben-Hadad finds Ahab so agreeable, he insists further that the right of seizure be extended to anything of value that is found in the palace.

20:13-14. role of the prophet. In this period of preclassical prophecy the prophets of Israel served in very much the same role as their ancient Near Eastern counterparts (see comments on Deut 18:14-22). One of the most frequent areas addressed concerned, as here, the advisability of military activity. Since it was believed that God's involvement was essential for the success of the military, the entire sequence begins with the divine command to go into battle. This divine command can be seen as typical in the royal inscriptions of the Assyrians. It was also important to consult the deity about timing and strategies. During the time of Saul and David this type of information was usually gained through the priest's manipulation of oracular devices (see comments on 1 Sam 14:10; 22:10; and 23:9-12). Now, instead of asking questions of a priest to receive oracular responses, the questions are being posed to the prophet, who, as a representative of God, offers the prophetic oracles as responses from God.

20:23, 28. god of the hills, god of the valleys. In the polytheistic setting of the ancient Near East, gods were generally considered as having defined territorial jurisdiction, just as political leaders would have. This jurisdiction could be divided up along national lines (each nation having its patron deities) or by topographical areas or boundaries (rivers, mountains, lakes, plains), as here construed. The fact that Israel was a mountainous country and that the capital cities, Samaria and Jerusalem, were both in mountain regions, would fuel the speculation that Yahweh's jurisdiction was in the mountains.

20:24-25. planned strategy. The tactics that will be used for the second campaign are significantly different. In the first round the Aramean coalition attacked Samaria directly. This was intended as siege warfare. In the second phase the emphasis was not on starving the people out or on breaching the walls of a city, but on pitched battle in open terrain where the Arameans intended to take full advantage of their chariotry and cavalry. Whether because of the different battle tactics or because of the failure of the first campaign, the Arameans assigned a new group of field commanders and filled the ranks with new recruits.

20:26. Aphek. Identification of the site of this battle is complicated by the fact that there are several different towns named Aphek in ancient Israel (perhaps as many as five). The one that has most commonly been proposed as the site for this battle is located just east of the Sea of Galilee on the route from Damascus to Israel. The problem with this is that it is hard to imagine the Arameans choosing a site that far from Samaria or the Israelites going that far afield to engage them. Somewhere in the vicinity of the plain of Jezreel is most logical, and the use of Aphek as a muster point for the Philistines at the battle of Gilboa would likewise raise this possibility (compare the comments on 1 Sam 28:4 and 29:1).

20:30. escape to Aphek. Since the site of Aphek has not been identified, it is impossible to comment on the archaeological record of the fortifications. The collapse of walls is not specifically attributed to siege and breach, or to divine intervention. One of the principal tactics for bringing about the collapse of walls was tunneling beneath them. In fact it has been suggested that the very purpose of dry moats (dug to bedrock) and earthen ramparts was to prevent tunneling to undermine the walls. If the foundation of the wall could be weakened, the superstructure would collapse.

20:31. sackcloth and ropes. Sackcloth is a familiar sign of mourning. The sarcophagus of Ahiram depicts mourning women with what is likely sackcloth wrapped around their hips over their skirts. The ropes are probably a symbol that they consider themselves captives. Both Assyrian and Egyptian reliefs depict captives from Syria with a tether bound around the neck.

20:33. taken up into chariot. A vassal would have run by the wheel of the chariot (as in the Aramean Bir-Rakib inscription), whereas an equal is taken up into the chariot. By referring to Ben-Hadad as his brother and taking him up into his chariot, Ahab is expressing his willingness to renegotiate their former relationship. It is likely that previously Ahab was considered a vassal to Ben-Hadad, in which case there would have been a suzerainty treaty between them. This would have required Ahab to pay tribute and be under the general authority of Aram. In this new "brother" relationship there would be a parity treaty between them that would not require tribute. It would put them on equal terms, providing mutual support militarily and opening up trade routes and merchant opportunities on an equal footing. Ahab's leniency is seen in his settling for equal status rather than pushing his advantage to make Ben-Hadad his vassal.

20:34. terms of treaty. The return of conquered territory would have restored the traditional boundaries between the two nations. The other concession by Ben-Hadad concerned trade opportunities. One of the actions taken when a major city came under the control of a new king was to construct a marketplace for his merchants in a square set up in his honor. A colony of merchants would then take up residence in the city to carry on their trade. This practice is illustrated by the courtyard outside the city gate of Dan. There the archaeologists excavated a series of buildings that has been identified as a bazaar area set up to honor the Aramean conqueror, whose stele (now referred to as the "House of David Inscription") was prominently featured there.

20:35-40. actions of the prophet. The initial encounter with the man who refused to wound him made it clear that even an act of mercy that disobeyed God's command brought forfeiture of life. The wound the prophet requests is apparently one to the head, which would then make very realistic the bandage that he wore. While the bandage serves as his disguise, the wound may have gained him access to the king. It is interesting that while the king has a reputation for mercy (v. 31) and shows mercy to Ben-Hadad, his judgment in this wounded man's case is anything but merciful. A talent of silver is exorbitant and would suggest that the prisoner is a very important person. For "sons of the prophets" see comment on 1 Samuel 19:20.

21:1-29
Naboth's Vineyard

21:1. Jezreel palace. For general comments about Jezreel see 18:45. The palace at Jezreel was excavated in the early 1990s. The rectangular enclosure covers about eleven acres and is surrounded by a casemate wall with towers at the corners. It featured a six-chambered

gate, a moat and earthen ramparts. The moat was cut from rock and averaged thirty feet wide and at points was nearly twenty feet deep. The moat used in Palestine was a dry moat (called a fosse) probably intended to prevent tunneling under the walls of the city. Jezreel was about twenty-three miles from Samaria.

21:3. vineyard as part of inheritance. Ahab's offer is more than fair and even generous. Naboth's refusal is not just based on traditional "family homestead" type of feelings but on theological issues. Possession of the land had been a gift of the covenant. Distributed to tribes, clans and families, the patrimonial landholdings constituted each family's part of the covenant promises and benefits (for more information see comment on Lev 25:23). Documents from both Mari and Ugarit attest to a practice of perpetual ownership of land and strict rules about the transfer of property—but these are not given a religious explanation. It is also possible that, as a royal residence, Jezreel enjoyed a privileged status in which all residents enjoyed certain benefits (see comment on 2 Sam 5:9). Among these was protection from royal expropriation of land even in exchange for other property.

21:7. rights of the king. This passage is believed to represent a true distinction between the rights extended to the king in Israel and those current in Phoenicia. Differences involve issues concerning (1) the ultimate ownership of land and (2) the absolute power of the king. In the first category, Israelites believed that all the land was Yahweh's land, while the Phoenicians would have seen land as royal fiefdoms—all land was on grant from the king. In the second category, Israelite kingship was designed to be less despotic than most monarchies—the king was not above the law. Jezebel would not have been accustomed to such niceties.

21:9. declaring a fast. Fasts could be declared by the king and generally were proclaimed in the context of some sort of critical petition (see 1 Sam 7:6). For instance, in the drought that was experienced in these times a day of fasting would have served the purpose of praying for rain and perhaps seeking out the offenses that could potentially have brought the drought. Just as David arranges for the deaths of Saul's family members to rectify the offense in 2 Samuel 21, so here Naboth's death would be an attempt to bring an end to whatever situation was the basis for the fast.

21:9. seating arrangement. The prominent seating of Naboth would reflect his status in the community and sets him up for the contention that his actions were capable of affecting the entire community. The two false witnesses are seated near him so that they can claim to have heard his words.

21:11-13. Naboth's crime. Cursing the king usually entails a forthright renunciation of loyalty to the king (as in Judg 9:27-28 and 2 Sam 16:7-8) by fixing blame for the situation squarely on his shoulders. Cursing God is likewise associated with disloyalty to him and involves maligning or discrediting him, at times by fixing blame. Isaiah 8:21 features the combination of cursing both God and king in the context of fixing blame for hardship or crisis. As the community is being led in this fast to seek the cause of their crisis, these two planted witnesses claim that they heard Naboth fixing blame for the crisis on God and the king. This is judged as treasonous, and he is sentenced to death by the officials, who have been prompted to respond to the case in that way. An Alalakh text indicates that if a man is put to death for treason, ownership of his property reverts to the palace.

21:19. dogs licking blood. Dogs were scavengers who roamed the streets and alleys feeding on garbage. That anyone's (let alone a king's) body should be so exposed meant that there would be no honor in death or even a proper burial. Improper burial was popularly thought to jeopardize an individual's afterlife (for further information see comment on 1 Kings 16:4). Israelites considered that a person's body ("flesh") and spirit were in principle inseparable. Thus the individual was both spirit and flesh. Because of this the dead corpse was very carefully treated, as it was still considered part of the person's existence. First-millennium Assyrian records also demonstrate these concerns, as Ashurbanipal punishes his opponents by having their bodies thrown in the streets and dragged around. From the same period an Assyrian curse declares "let dogs tear his unburied body to pieces."

21:27. Ahab's response. Sackcloth and fasting were considered some of the basic elements of repentance as well as mourning in ancient Israel. Fasting is little attested in the ancient Near East outside the Bible. It generally occurs in the context of mourning. In the Old Testament the religious use of fasting is often in connection with making a request before God. The principle is that the importance of the request causes an individual to be so concerned about his or her spiritual condition that physical necessities fade into the background. In this sense the act of fasting is designed as a process leading to purification and

humbling oneself before God (Ps 69:10). Sackcloth was made of goat or camel hair and was coarse and uncomfortable. In many cases the sackcloth was only a loin covering. The sarcophagus of Ahiram depicts mourning women with what is likely sackcloth wrapped around their hips over their skirts.

22:1-40
Battle at Ramoth Gilead

22:1. chronology: Battle of Qarqar. Since the alliance of Ahab and Ben-Hadad at the end of chapter 20, three years have gone by. It is generally assumed that the reason their alliance remained strong was because of the threat of the Assyrian king Shalmaneser III who was making his way westward. He finally posed a threat to southern Aram in 853, where he was met by a coalition of twelve western nations at the Battle of Qarqar. Shalmaneser lists Ahab of Israel and Hadadezer of Damascus as two of the most significant parties in the alliance which was led by Iarhuleni of Hamath. Qarqar is on the Orontes River about 150 miles north of Damascus, but only 25 miles north of Hamath. Though Shalmaneser claims victory, study of subsequent history suggests that the western coalition succeeded in their major objective. It was not until ten or twelve years later, after the confederacy had eroded, that Shalmaneser finally shows any indication of control in the region. It is most likely the general success against Shalmaneser that gave Ahab the confidence to take military action against the Arameans and try to regain Ramoth Gilead.

22:12-38. Micaiah and Ahab. See comments on 2 Chronicles 18.

22:38. pool in Samaria. In the excavations of Samaria a large pool (sixteen by thirty-three feet) was discovered inside the northwest corner of the wall by the palace, but it is impossible to say whether this is the pool referred to here. It is uncertain whether the prostitutes are bathing in the pool or the blood or both.

22:39. palace of inlaid ivory. Ivory decor was very popular at this time for inlays in furniture and for wall panels. One of the principal sources of ivory was elephant tusks, which were imported from Aram (where Syrian elephants were not yet extinct). Elephant hides and tusks, as well as live elephants, were at times included in tribute payments. Excavations at Ashurnasirpal's palace at Kalah produced some very fine ivory carvings decorating the walls. Over five hundred ivory fragments have also been found in the excavations at Samaria dating to the ninth and eighth centuries B.C. Many feature Egyptian and Phoenician artistic motifs.

22:41-50
Jehoshaphat of Judah

22:42. chronology. Thiele's dates for Jehoshaphat are 872-848, with other systems generally coming within two years of that. No reference to Jehoshaphat has yet been found in extrabiblical inscriptional material from the ancient Near East.

22:46. male shrine prostitutes. For more information concerning cultic prostitution, see the comment on Deuteronomy 23:17-18. The term used here occurs in both feminine and masculine forms and refers, perhaps euphemistically, to ones who have been set apart for particular functions. This same term is used in Akkadian literature to refer to those who have been consecrated as functionaries serving at the shrines or temples. The prostitute was among those functionaries, as was the wet nurse and the midwife. It is unclear what functions the males might have served.

22:48. fleet of ships. Trade by means of seagoing vessels was already taking place in the first half of the third millennium B.C. By mid-second millennium a fleet of ships from Ugarit numbered 150. Excavations of a sunken merchant ship (off the coast of Uluburun, Turkey) from the period give a good idea of the variety of items being shipped. Trading ships of the first millennium were single-masted with a crow's nest and could feature either one or two banks of oars. Typical length would be about fifty feet, though larger ones are known.

22:48. Ophir. Gold from Ophir is mentioned in an eighth-century inscription from Tell Qasile. The precise location of the site is unknown. The fact that it was shipped in at Ezion Geber suggests an Arabian location, though sites in India and East Africa have been considered.

22:48. Ezion Geber. Ezion Geber was a port city located at the head of the Gulf of Aqaba and may be either Tell el-Kheleifeh (which some identify as Elath) or on the island of Jezirat Far'on (Coral Island), the only site in the region with evidence of an ancient harbor area. The latter has been substantiated by underwater archaeological work that shows massive walls and jetties (though not Iron Age) and a small amount of Iron Age pottery. The technology used for the artificial harbor is similar to that found at Phoenician Tyre.

22:51-53
Ahaziah of Israel

22:51. chronology. Thiele's chronology for Ahaziah places him in 853-852. He is not mentioned in any extrabiblical records.

2 KINGS

1:1-18
Ahaziah, King of Israel

1:2. lattice of the upper room. The excavations in Samaria have demonstrated that the royal palace at this time did have a second story. The style of architecture featured open areas, and the lattice described here would have been a wooden grid offering both shade and air circulation.

1:2. Samaria. Samaria was the capital city of the northern kingdom of Israel. For more information see the comment on 1 Kings 16:24.

1:2. Baal-Zebub. For many years it has been suggested that this name is an intentional corruption of Baal Zebul (Chief Baal), often identified in Ugaritic literature as lord of the underworld. This would explain the Greek form used in Matthew 10:25; 12:24; and elsewhere, "Beelzebul," and the attachment of the title to Satan in the New Testament. "Zebub" means "flies," and if it is a complimentary title, it may refer to the ability to drive away flies who carry disease and infection. A deity named El-Dhubub is known at Ugarit and may mean something similar. Incantations known from Ugaritic invoke Baal Zebul to exorcise demons of disease. Ahaziah, however, is not requesting an incantation effecting healing but only an oracle providing information concerning whether or not he will recover. This is also what is offered by Elijah in verse 6.

1:2. Ekron. The Philistine town of Ekron (Tel Miqne) is about a sixty-mile trip from Samaria. For more information on the site see comments on Judges 1:18 and 1 Samuel 5:10.

1:8. Elijah's clothing. See comment on 1 Kings 19:19 for a discussion of Elijah's mantle. The text here, however, makes no specific mention of Elijah's mantle but describes him as distinguished by hairiness, which could refer either to his garment or his person. The latter is more likely here, because what the NIV translates "belt" is everywhere else a loincloth, which would not be visible if he wore another garment. Certainly another option would be that he is cloaked in the hairy mantle but can be seen to be wearing only the leather loincloth beneath the cloak.

1:10. fire from heaven. The storm gods of the ancient Near East are typically equipped with lightning bolts which are their means of sending fire. Assyrian kings throughout this period speak of the gods as a burning flame and of sending fire before them. Esarhaddon (seventh-century Assyria) speaks of his march and attack in terms of an unquenchable fire. All of this is the way that the deity was believed to enter into battle. Fire brought about by his thunderbolts was one of his principal weapons.

1:17. chronology. Ahaziah's brother, Joram, succeeded him and reigned, according to Thiele, from 852 to 841. As a result, Judah and Israel had kings with virtually identical names ruling over the same period of time.

2:1-18
Elijah Taken Up

2:1. Gilgal. There are several sites named Gilgal, and it is difficult to be certain which is intended here. The best known is in the region of Jericho (see comment on Joshua 4:19), but it would be unusual for their trip to lead them over to Bethel first and then back to Jericho. Additionally, verse 2 speaks of going *down* to Bethel, which would not make sense with this Gilgal. The other possible Gilgal is the one in the vicinity of Geba and Micmash (see comment on 1 Sam 13:4), which is just a few miles south of Bethel and would require a descent to go toward Bethel.

2:2. Bethel. Bethel was the location of one of the calf shrines and was an important religious center. Its history included the patriarchs (Gen 28), the conquest and settlement (Josh 8; Judg 1), and Samuel (1 Sam 7), and, for at least a short time, it housed the ark (Judg 20:26-28).

2:3. company of the prophets. One could be trained for the profession of prophet, and there was a prophetic guild in this early period of Israel's history, usually identified as the "sons/company of the prophets." Typically

these prophets would use various procedures in order to prepare themselves for receiving prophetic oracles. Music played an important role in inducing a trancelike state (ecstasy) that was seen as making one receptive to a divine message. In the Mari texts there is an entire class of temple personnel who were ecstatics and who often provided prophetic messages. Akkadian texts also use the designation *mar bari* (son of a *baru)* to designate a member of the guild of diviners who sometimes offered prophetic oracles.

2:4. Jericho. The trip from Bethel to Jericho was about twelve miles (mostly downhill) and would have taken about half a day. A settlement had reoccupied the site during the time of Ahab (see comment on 1 Kings 16:34).

2:6. Jordan. The Jordan is about five miles beyond Jericho. This would be about the place where Joshua crossed the Jordan.

2:9. double portion. By asking for a double portion, Elisha is not asking for twice as much as Elijah had, but for twice as much as any other successor would receive. This is the normal inheritance right of the firstborn, who would "carry the torch" for the family. Elisha is requesting that he receive the status as the principal successor to Elijah.

2:11. location of Elijah's ascension. Throughout his career Elijah has been mirroring some of the events in Moses' life. As they have now crossed to the east side of the Jordan, they are going toward Mount Nebo (where Moses died), which is about ten miles from the Jordan. The text does not name Nebo, or even suggest they were on a mountain, but it does place them in roughly the same vicinity.

2:11. chariot and horses of fire; whirlwind. The word translated "whirlwind" is typically connected directly to God's activity (the storm of Jonah 1) and at times to his presence (Job 38:1). The chariot imagery is more difficult to assess, because no role is given to the chariot and horses in the passage. In ancient Near Eastern imagery, major deities are at times accompanied by charioteers. There is a deity known as Rakib-El, who is the charioteer of the Canaanite god El. He is textually associated with Hadad, the storm god, but too little is known to elaborate any further on that interesting connection (chariot with storm, as here). In Akkadian literature, Bunene, the advisor to the sun god Shamash, is designated the charioteer. Connection to a sun god offers possible explanation for a chariot of fire. The charioteer would be responsible for transporting the deity, especially into battle. In Israelite religious belief, Yahweh is sometimes portrayed or manifested in ways familiar to ancient Near Eastern thought. For instance, in Elijah's contest with the Baal prophets, Yahweh is shown to be a God who controls fertility and responds with fire, and figurative language often associates him with the sun (Ps 84:11). Here his portrayal may share elements with Hadad, the storm god who is accompanied by a charioteer. These similarities suggest the possibility that familiar imagery was being used to clarify the involvement of deity in this unprecedented event.

2:12. my father. The title "father" is used to designate the leader of a group in both Hebrew and Akkadian. Likewise a "son" is therefore a member of that group.

2:12. chariots and horsemen of Israel. It is uncertain whether Elisha is exclaiming at what he is seeing or is ascribing this title to Elijah. If it is the latter (as 13:14 suggests), the title may be indicating an identification of Elijah's status as the charioteer, a close associate of the deity (cf. Bunene in the comment on 2:11) and the one that brings him into battle.

2:12. tearing clothes. Along with placing ashes in the hair, the tearing of clothing was a common form of mourning in the ancient Near East. One example outside the Bible is found in the Ugaritic Epic of Aqhat (c. 1600 B.C.) in which the sister of the hero tears her father's garment as she foretells a coming drought. Such an act often implied grief over the death of a relative, friend or prominent individual.

2:13. prophet's mantle. Elijah had cast his cloak over Elisha to select him for the task in 19:19. The cloak referred to here is an outer garment, not the same as the robe discussed in 1 Samuel 15:27. The distinctive prophet's cloak is most likely made of animal skin and is hairy in appearance (see Zech 13:4), though not all cloaks were so made. Very little is said about prophetic garb in the ancient Near East, so comparison is difficult. It may be of interest that Assyrian inscriptions beginning at this period portray a few individuals wearing lion-headed cloaks. Some of these individuals are involved in ritual activities (dance) and accompany deity. It is guessed that they may be exorcists. Elijah's mantle is here indicative of his spirit and power that Elisha is inheriting.

22:19-22

Waters of Jericho

2:19. bad water. The history of the water problem at the Ain es-Sultan spring by Jericho can be reviewed in the comments on Joshua 6:26 and 1 Kings 16:34. An alternative

to the parasite theory suggested in those comments is that the geological shifts that could possibly have been related to the fall of Jericho brought the spring water into contact with radioactivity in the rock layers that polluted the water and caused sterility.

2:20. new bowl and salt. The use of a new container suggests one untainted by impurities, thus indicating that this is a ritual undertaking. "Flask" is preferable to NIV's "bowl," though the word is used only here in the Bible and is of uncertain meaning. Salt is used to combat the curse because curse is connected to rebellion and salt is seen as symbolically counteracting rebellion (see comment on Judg 9:45).

2:23-25. Boys and Bears

2:23. age of mockers. Two different descriptions are used for this group. The first (v. 23) uses a noun and adjective combination that elsewhere refers to children or prepubescent youths. The second (v. 24) typically refers to the younger generation, from babies (e.g., Ruth 4:16) to middle-aged men (e.g., 2 Kings 12:8; Rehoboam was over forty, and these are his peers). This is probably a group of young teens. It was Elisha's curse but God's judgment.

2:23. baldhead. If Elijah was a hairy man (see comment on 1:8), Elisha's baldness would be a stark contrast and perhaps suggest to some that he could never have the same powers as his master. This taunt would therefore be a disavowal of his prophetic office and calling and would be strikingly refuted by the immediate fulfillment of his curse. Therefore in verses 19-22 Elisha removed a curse, while in 23-24 he effectuated a curse.

2:24. bears. Syrian bears were not yet extinct in this period and inhabited the forested regions in Israel. Bears were typically found in the hilly wooded areas of the central hill country, where caves and forests provided their habitat. The forested areas would be closer to Bethel than to Jericho. Ravaging wild beasts were often seen as punishment sent from God (see comment on 17:25).

2:25. Elisha's journey. The trip from Jericho to Bethel is about twelve miles, while Bethel to Mount Carmel is nearly seventy-five miles. From Mount Carmel back to Samaria is nearly forty miles.

3:1-27 War with Moab

3:1. chronology. Joram's succession has been previously mentioned in 1:17, but there it was related to the second year of Jehoram, son of Jehoshaphat. Here it is correlated to the eighteenth year of Jehoshaphat. This led Thiele to identify a period of coregency between Jehoshaphat and his son. The year, according to Thiele, is 852.

3:2. sacred stone of Baal. Standing stones were often used in shrines and temples in the niche where the idol otherwise would stand. Sometimes these could have reliefs of the deity inscribed on them, but often they would be blank. Such stones have been found in many excavations in Israel, including those at Dan, Gezer and Arad.

3:4. Mesha of Moab. Mesha is known from the inscription (the Moabite Stone) that details the past control of Israel over Moab and celebrates Mesha's breaking free of that control. The four-foot-high inscription was found at the site of Dibon, just north of the Arnon river, in 1868. It commemorates the building of a sanctuary, and it mentions Omri by name and refers to his son (Ahab, or perhaps his grandson, Joram) without naming him. It makes reference to the Moabite national god Chemosh who had used Israel for punishment of his land but now had brought victory. The next verse makes reference to Mesha's successful revolt against Israelite control (during the reign of Ahaziah?), so the events of the Moabite stone precede the events of this chapter.

3:4. tribute. While one hundred thousand lambs is an immense amount of tribute, it pales in comparison to the over eight hundred thousand sheep that Assyrian king Sennacherib claims to have taken from Babylon.

3:6-8. battle strategy. The allies cannot easily come against Moab from the north because Mesha has fortified the Medeba plains north of the Arnon. As a result they march south through Jerusalem, Hebron and Arad, around the south end of the Dead Sea (through the desert of Edom) and come at Moab from an unexpected direction. The march from Samaria to Arad is about eighty-five miles. From there it may be as many as fifty more to Kir Haresheth if a fairly direct route is taken.

3:8. desert of Edom. The desert of Edom is difficult to identify, but the comment in verse 9 that they had a seven-day march suggests that it refers to the area east of Edom. Perhaps they skirted to the south of the Wadi Zered and moved around to attack Moab from the east.

3:9. lack of water. From the time they left Jerusalem, they would have been traveling through arid, inhospitable land with few water sources. Dehydration comes very quickly in this climate and can be deadly.

3:11. presence of a prophet. It was typical procedure in the ancient Near East for an army to be staffed with some religious personnel (priests or prophets) for the purpose of making oracular requests, reading omens, making appropriate sacrifices and representing God's presence with the army.

3:11. pouring water on the hands of Elijah. Elisha is here identified as the personal attendant of Elijah. Though he performed menial tasks, his mere association with the already legendary prophet offered some hope for divine aid.

3:13. prophets of father and mother. Joram's father and mother, Ahab and Jezebel, had favored the prophets of Baal and Asherah. It is interesting that Joram does not disavow those prophets or the gods they serve, but only replies that Yahweh was the one who had instigated the campaign, so he must be dealt with. This may suggest that oracles had been sought from Yahweh by this northern king and that the oracles had answered favorably concerning this military action, though, alternatively, the alliance may have taken shape only because Jehoshaphat consulted Yahweh concerning his involvement (see 2 Chron 18:4-7). This divine direction, however it came, is now interpreted by Joram as Yahweh's intention to bring about their destruction.

3:15. harpist. The translation of "minstrel" would be preferable here since the instrument is not mentioned. It is most likely a lyre of the same type that David played for Saul. Typically, especially in this early period, prophets would use various procedures in order to prepare themselves for receiving prophetic oracles. Music played an important role in inducing a trancelike state (ecstasy) that was seen as making one receptive to a divine message. In the Mari texts there is an entire class of temple personnel who were ecstatics and often provided prophetic messages. The lyre usually had two arms rising up from the sound box. The strings were attached to the crossbar at the top of the instrument. Examples of lyres have been found at Canaanite Megiddo.

3:17. provision of water. It is likely that the army was in the vicinity of the Wadi Zered. Like all wadis, Zered fills up seasonally with the runoff from the higher elevations. As a result, it can suddenly course with water even though no rain has been experienced at the lower elevations. The digging of pits in the wadi would be a means of capturing the runoff for their use lest it all surge right past them. Prophetic knowledge of rain in high elevations that would bring water into the area is also demonstrated by Deborah (see comment on Judg 4:14-16).

3:22. water appearing as blood. It is not hard to imagine the water having the appearance of blood in a sandstone water course under a rising sun on a hot, hazy day—especially if the Moabites had no reason to think there would be any water scattered in the pits throughout the wadi. But if they actually thought it was blood, where were the corpses? If they come charging in expecting plunder, it is more likely that the Moabites see what appears to be a deserted camp. They therefore take the appearance of the water as an omen that internal rivalries have resulted in the desertion of the camp as the armies fought one another. In fact a Mesopotamian omen series of popular beliefs contains the indication that if a river carries blood, internal strife will lead an army to do battle with itself, brother against brother. The imagery of blood flowing like water is used in Assyrian descriptions of battles.

3:25. treatment of Moab. The ecological destruction was intended to cripple the economy for years. The springs and fields could eventually be cleared of stones, but needing to do so would make it a long, slow process to reestablish a productive agriculture. Sometimes springs would find other, less usable outlets and fields would be so damaged as to have greatly reduced fertility. The cutting down of trees would have even more devastating effects on the ecological balance. Not only would shade and wood supply be lost, but topsoil erosion would increase and the loss of forestation's contribution to the environment would accelerate the development of wasteland conditions. Some fruit trees (such as the date palm) take twenty years of growth before they become productive. Agricultural devastation and deforestation were typical tactics of invading armies seeking to punish those they conquered and as an attempt to hasten their surrender. The Assyrian records and reliefs especially detail punitive measures that include felling trees, devastating meadowlands and destroying canal systems used for irrigation.

3:25. Kir Haresheth. This is a designation for the capital city in the southern section of Moab, otherwise known as Kir-Moab, and identified with modern Kerak, seventeen miles south of the Arnon along the King's Highway. There has been no major excavation at the site, but surface surveys show some slight remains from the Iron Age.

3:27. child sacrifice. Evidence of child sacrifice has been recovered from Phoenician sites in North Africa (Carthage) and Sardinia, and it was also practiced in Syria and Mesopota-

mia during the Assyrian period (eighth to seventh centuries B.C.). Dedicating children to a god as a form of sacrifice is found in several biblical narratives. They can be explained as a means of promoting fertility (Mic 6:6-7) or as a way of obtaining a military victory (Judg 11:30-40), as here. In no case, however, does Yahweh consider this an acceptable sacrifice (Deut 18:10). An eighth-century B.C. Phoenician inscription speaks of sacrifices made to Molech before battle by the Cilicians and their enemies.

4:1-7

Provision of Oil for Destitute Woman

4:1. company of the prophets. See comment on 2:3.

4:1. debt slavery. Because of the fragile nature of the environment in much of the ancient Near East, farmers and small landowners often found themselves in debt. Their problems could magnify if a drought and resulting poor harvests continued over more than one year, and they could be forced to sell their land, goods and eventually even their family and themselves into debt slavery. Israelite law takes this situation into account by providing a fair period of labor service to the creditor as well as a time limit on servitude for the debt slave. No one could serve more than six years, and when slaves were freed they went out debt-free. This would have been a good solution for some, but without their land to return to, many may have chosen to remain in the service of their creditor or to move to the cities to find jobs or to join the military.

4:2. oil. The oil was olive oil, used as shortening in cooking. It was usually mixed with the grain before baking but was sometimes spread over the dough.

4:8-37

Elisha and the Shunammite Woman

4:8. Shunem. Shunem was located at the eastern end of the Valley of Jezreel on the southwest slope of the hill of Moreh. The town is listed in Egyptian itineraries and shows remains from the Iron Age.

4:10. room on the roof. The typical Israelite house of the Iron Age was what is referred to as the "four-room house." On the ground floor it featured a room that stretched the whole width of the house. The front section was divided into three parallel rooms perpendicular to the back room. The center of these three was often an open courtyard area. Most of these houses are believed to have had second stories, though these are rarely preserved for archaeologists' view. The particular architectural terminology used in this verse remains obscure.

4:16-35. giving son, taking son, reviving son. In the Ugaritic Epic of Aqhat, the upright king, Danil, was given a son (Aqhat) by the gods. Falling into disfavor with the gods, his life is taken, but then apparently restored again, revived by the gods. Though none of the details of the Aqhat narrative show any similarity to the account here, the basic motif concerning the power of deity to give, take and give back is a familiar one.

4:18-20. cause of death. The death of the son is usually attributed to sunstroke, though other suggestions range from cerebral hemorrhage or cerebral malaria to meningitis. The few details given make it difficult to achieve any confidence in diagnosis.

4:23. New Moon or Sabbath. Keyed to their use of a lunar calendar, ancient Israelites marked the first day of the month, with its "new moon" phase, as a festival day (every 29-30 days). As on the Sabbath, all work was to cease (see Amos 8:5), and there were sacrifices to be made (Num 28:11-15). In the monarchy period, the king became a prominent figure in these celebrations (see Ezek 45:17). New Moon festivals were also prominent in Mesopotamia from late in the third millennium down to the Neo-Babylonian period in the middle of the first millennium B.C. This would have been a convenient opportunity for people to consult a seer to seek an oracle, which might explain the connection between Elisha and these holy days.

4:25. Mount Carmel. Since there is no information concerning where Elisha is staying in the Carmel range, it is difficult to be precise, but the distance from Shunem to the area of Carmel is about twenty miles.

4:27. taking hold of feet. Taking hold of the feet was a gesture of self-abasement and entreaty. Though this gesture occurs nowhere else in the Old Testament, in Akkadian literature a wide range of fugitives or supplicants take hold of the king's feet to demonstrate their submission or surrender and make their petitions.

4:29. tucking cloak into belt. In order to make sure that a longer garment did not interfere with more strenuous activity, the lower edge of the cloak could be turned up and tucked into the belt.

4:29. laying staff on boy's face. There is no other reference to a prophet being equipped with a staff (the rod of Moses is a different Hebrew word), and the other passages where this word is used speak only of a nondescript stick used for support—often a crutch or cane. From verse 31 it would appear that Elisha and Gehazi considered it possible that the staff would revive the boy. In Akkadian incantation texts a staff is sometimes the instrument by which exorcisms against the *asakku* demons (bringing disease and fever) are effected. Since it was the boy's head that hurt, the staff is laid across his face.

4:34. Elisha's procedure. In Mesopotamian incantation literature the touching of part to part is a means by which demons exercise power over their intended victims—it is the idiom of possession. In this belief, vitality or life force can be transferred from one body to the other by contact of each part. By imitating the procedure believed to be used by demons, the prophet is able, through the power of Yahweh (notice the prayer), to drive the demons out and restore the boy's life. This is often considered to be one of the clearest cases of sympathetic magic in the Bible.

4:35. sneezing seven times. The word translated "sneezed" occurs only here and its meaning is uncertain. From the context, other possibilities would include "convulsed" or "moaned."

4:36-41
Poison Stew

4:36. Gilgal. Uncertain location; see comment on 2:1.

4:38. pot. This is a wide-mouthed cooking pot that could be made of either pottery or metal.

4:39. ingredients of stew. The poisonous ingredient is generally considered the yellow gourds known as colocynths, popularly referred to today as apples of Sodom. They can be fatal.

4:41. adding flour. Flour or meal was believed to possess magical power able to remove evil magic. It is often used in magical incantations and rituals in the ancient Near East, but not quite in this way. Sometimes a flour paste is used to make a figurine that is then used in a magical ritual. Other times the flour is sprinkled in a circle around something that the ritual is to be performed on. As is often the case, Elisha is using procedures that would have some familiarity with the world of magic, but never quite in the common way or with the ritualistic elements.

4:42-44
Feeding the People

4:42. Baal Shalishah. Baal Shalishah is traditionally located at Bethsarisa on the plain of Sharon about fifteen miles west-northwest of Joppa. Other interpreters, however, favor a site closer to Gilgal such as Ein Samiya in the eastern part of the hill country of Ephraim about six miles northwest of Bethel.

4:42. gift for Elisha. The gift is comprised of the firstfruits that would generally be given as an offering to the sanctuary for use by the priesthood. As a man of God, Elisha apparently qualified as a recipient of these gifts.

5:1-27
Elisha and Naaman

5:1. Aram/Syria. The land of Aram, north of the land of Israel, was known by the Greeks as Syria. Current evidence suggests that the Arameans inhabited the upper Euphrates throughout the second millennium, first as villagers and pastoralists, then as a political, national coalition. During this period they are alternately allies and the most troublesome foes of Israel.

5:1. leprosy. Those studying the language have concluded that the term often translated "leprosy" is more accurately rendered "lesion," or, less technically, "scaly skin." Such patches could be swelled or weeping, as well as flaking. Similar broad terminology also exists in Akkadian, where the Babylonians likewise considered it an unclean condition and the punishment of the gods. Clinical leprosy (Hansen's disease) has not been attested in the ancient Near East prior to the time of Alexander the Great. None of the most prominent characteristics of Hansen's disease are listed in the ancient texts, and the symptoms that are listed argue against a relationship to Hansen's disease. The condition discussed in the text is not presented as contagious. Descriptions would suggest that modern diagnoses would include psoriasis, eczema, favus and seborrheic dermatitis, as well as a number of fungal-type infections. The great cultural aversion to skin diseases may be that in appearance and sometimes odor they resemble the rotting skin of the corpse and are therefore associated with death. This natural revulsion adds considerably to the victim's outcast status when combined with the quarantine that is ritually rather than medically motivated.

5:5. Naaman's gift. The gift accompanying Naaman is exorbitant—a king's ransom. Ten talents equals thirty thousand shekels, about

seven hundred fifty pounds of silver. The six thousand shekels of gold equals about one hundred fifty pounds (one gold shekel equaled fifteen silver shekels). Converted to today's buying power, it would be in the vicinity of three-quarters of a *billion* dollars. One can get an idea of the proportions by understanding that a typical wage would have been ten silver shekels per year, and one gold shekel would purchase one ton of grain.

5:6. request to foreign king for healing. A number of examples exist of kings sending to other kings for help in the area of healing sickness. Babylonian exorcists were prized by the Hittites, and Egyptian doctors were famed for their healing skills, especially in their treatment of eye diseases.

5:7. tore robes. The tearing of robes, especially royal robes, was a sign of mourning. This would have signaled a national crisis or tragedy. We are never told which king of Israel this is, though much of Elisha's interaction is with Jehoram.

5:10. trip to the Jordan. Since Elisha is probably in Samaria (see comment on verse 24), the trip to the Jordan would have been about forty miles. There is no easy, direct route from Samaria to the Jordan. He probably would have gone back the way he came: north to Dothan, through the Dothan Valley to the Valley of Jezreel, from Jezreel through the Gilboa pass to Beth Shan and then on to the Jordan.

5:10. washing in the Jordan. In the Mesopotamian *namburbi* rituals protective purification is accomplished by dipping seven times in the river facing upstream and seven times facing downstream. This ritual also includes releasing gifts for the god Ea into the river. The flowing water was believed to carry the impurities to the netherworld. Again, Elisha's chosen procedures are ones that would ring a note of familiarity to those who lived in this world of magical rituals. On the medical level there are a number of locations in Israel (e.g., near Tiberius) that boast of hot springs capable of restoring healthy skin from any number of conditions. Nevertheless, the text refers specifically to the Jordan River, which could not be confused with a mineral spring.

5:11. expected procedure. Naaman obviously had expected different methods to be used. The elevation of the hand here ("elevation" preferred rather than "waving") often accompanied invocations or incantations. Praying with raised hand is referred to in the Aramaic Zakkur inscription and is depicted in numerous reliefs (right hand, palm inward, elbow bent). There is a series of Akkadian incantations called *shuilla* (raising of the hand). The extant copies date to about this period. These compositions include invocation and praise of deity leading up to a prayer seeking appeasement, protection and the removal of evil. It would have been unusual in the ancient worldview for rituals to be performed without the presence of the specialist reciting incantations, accompanied by appropriate gestures, and orchestrating the procedures. The absence of the specialist leads Naaman to think that any body of water could serve the purpose of cleansing. He expected Elisha, the practitioner, to make the difference, while Elisha is careful to remove himself from such a role.

5:12. Abana and Pharpar. The variant reading Amana is probably to be preferred in light of Mount Amana in the Anti-Lebanon range and the Amana River (today known as the Barada) that flows into the plain of Damascus from its flanks. The Pharpar is less certain, though it may be the river el-Awaj, which flows down from the flanks of Mount Hermon to the marshes southeast of Damascus.

5:17. carrying earth back. Naaman makes it clear that his reason for carrying the dirt has to do with sacrifices. This suggests that he intends to build an altar of the earth that he has brought back with him (the word for "earth" here is the same that is commanded for use in altar construction in Ex 20:24; see comment there for further information).

5:18. temple of Rimmon. Rimmon (=Ramman, "thunderer") is believed to be a title of the storm god, Hadad, the head of the Aramean pantheon. Though this association is confidently made, there has been no occurrence of this title outside the Bible (but see Hadad Rimmon in Zech 12:11). The limited excavations in Damascus have not unearthed the temple referred to here, but a basalt orthostat (an engraved standing stone) from this period found incorporated into the substructure of the Umayyad mosque suggests that the mosque was built over the site of this temple.

5:22. company of the prophets. See comment on 2:3.

5:22-23. Gehazi's request. Considering what Naaman had been prepared to offer, Gehazi's request is extremely modest, yet it is still a considerable sum. A talent of silver is three hundred years of wages (for someone making thirty to thirty-five thousand a year, that would be like getting about ten million dollars), and Naaman doubles it. Gehazi is trying to set himself up for life.

5:24. the hill. The word NIV translates "hill" is a technical term for the acropolis area usually

connected to a royal city. This suggests that Elisha is currently living in Samaria.

5:26. rebuke to Gehazi. Whether the money was from Naaman's personal wealth or from the treasury of the Aramean king, Gehazi could have reasoned that he was simply taking back what had been plundered from Israel. But Gehazi does not have charity or replenishment of the national coffers in mind. Elisha's reference to olive groves, vineyards, livestock and servants all reflects what Gehazi could purchase for himself with the money. His newfound wealth would have bought him a life of luxury and leisure. Thus Gehazi was reducing the high prophetic calling to a mercenary vocation that exploited divine power for personal gain.

5:27. transfer of disease. In the ancient world, witches and sorcerers were believed to be able to impose disease through hexes and curses. Rituals to remove various ills (the *namburbu* rituals for instance) usually involved transferring the evil to an object of some sort and then disposing of the object. One would have thought that in the ritual washing, Naaman's disease would have been transferred to the water and carried away. Naaman, however, has also been in contact with the gifts he brought, and here they are treated as a means of transfer of the evil from Naaman to Gehazi. This resembles what we would call contagion (though no medical contagion connected to the infections of skin diseases could have been contracted through natural means so quickly).

5:27. Gehazi's doom. See the comment on leprosy at 5:1. This is not a death sentence, for this condition is not life threatening or even health threatening. It could be categorized as a social disease in that its main consequence is that the victim is excluded from society as an undesirable outcast. Comparison to "snow" most likely concerns the flakiness rather than the color ("white" is added in the NIV).

6:1-7
Recovery of the Axhead

6:1. company of the prophets. See comment on 2:3.

6:2. poles (beams) for houses. Their problem is that the place where they assemble to be instructed by Elisha is too small, so they determine to work together to build a more adequate facility. The Jordan valley, being heavily forested, would be the natural place to find the necessary wood (acacia, tamarisk and willow would be the most likely).

6:5. iron axhead. Though this period is already well into the Iron Age and iron is becoming more widely available as technology and smelting procedures are being improved, implements of iron remain expensive and valuable.

6:6. "floating" axhead. One category of magic involved rites of contact and transference. Through contact with magically endowed objects, properties or characteristics were believed to be transferred from one object to another. The biblical text does not mention what type of wood Elisha cut, but in Mesopotamian practice tamarisk wood was often used in such rituals. Though some may be reluctant to see God's prophet making such extensive use of what appear to be magical practices, the fact remains that these would have appeared as magical to the ancient observer; see comments on 4:34; 4:41; and 5:11.

6:8-23
Blinded Arameans Captured by Elisha

6:9-11. prophets giving military information. In the examples of prophetic activity in the ancient Near East, military advice is commonly given by prophets to kings. The information given by Elisha is far more specific than the examples known from other literature.

6:13. Dothan. Located at Tell Dothan, this is an imposing site covering about twenty-five acres. It is ten miles north of Samaria on the main route used by merchants and herdsmen going north to the Jezreel Valley. The area around the city (the Dothan Valley) provided choice pasture land, so it developed into a major city site as early as the Early Bronze Age (3200-2400 B.C.) and would have served as a natural landmark for travelers. Though it is not mentioned in extrabiblical material, archaeology of the site has confirmed a major settlement on the site for Iron Age II.

6:17. horses and chariots of fire. The text does not say the horses and chariots fill the mountains (plural), but the mount (singular) and that they surround Elisha. This suggests that the "mount" is the tell on which the city of Dothan is located (some two hundred feet above the surrounding plain). They represent a protective bodyguard for the prophet. Yahweh is often portrayed as the "Lord of Hosts"—the com-mander of the heavenly armies. One contingent of his chariotry is here to engage in battle. For more on the horses and chariot of fire see comment on 2:11-13. For information about Yahweh as a divine warrior see comment on 1 Samuel 4:3-7.

6:18. blindness. The word for blindness here is used elsewhere only for those gathered out-

side Lot's house in the town of Sodom (Gen 19). It is a term related to an Akkadian word for day-blindness and also serves in Hebrew (as in Aramaic) to refer to night-blindness (pertinent to Gen 19). Both of these conditions are seen in Akka-dian texts as requiring magical remedies. Day-blindness (hemeralopia) and night-blindness (nyctalopia) have vitamin A deficiency as their principal cause, and vitamin B deficiency may contribute to the sense of confusion evident in both passages. It is therefore of interest that liver (rich in vitamin A) figures prominently in the magical procedures used in Mesopotamia to correct the condition. In an interesting section of the Epic of Tukulti-Ninurta the Assyrian king reports how the gods took his side in the battle. Shamash (the sun god and the god of justice) is said to have blinded the eyes of the enemy.

6:19. trip from Dothan to Samaria. The ten-mile trip would have taken some time when trying to lead a debilitated army of confused men who cannot see very well.

6:21. "father" as title. The title "father" is used to designate the leader of a group in both Hebrew and Akkadian. Likewise a "son" is therefore a member of that group. The king's use of the title indicates his recognition of Elisha's status and reflects his respect for the man of God.

6:22-23. treatment of prisoners. "Captives of the bow" is an expression found in Akkadian texts to describe persons who have been taken as part of the plunder. They are then at the disposal of the victor, who can employ them in slave labor, sell them or set them free. It is Elisha's intention to make use of this opportunity to create friendly relations with the Arameans. The feast laid before them is a banquet or even a ceremonial meal usually accompanying a special occasion or establishing a treaty agreement.

6:24—7:20
Siege of Samaria

6:24. Ben-Hadad. Aramean history at this time is still in need of much clarification, with at least part of the problem caused by several rulers with the name of Ben-Hadad (meaning "son of [the god] Hadad"). The issue is further complicated by the fact that Shalmaneser III's inscriptions name the ruler of this time Hadadezer (see comment on 2 Sam 8:3). The first Ben-Hadad has been referred to in 1 Kings 15. He ruled during the first part of the ninth century, though no precise dating is possible. In 2 Kings 8 the king murdered by Hazael (about 842) is named Ben-Hadad, and Hazael is later succeeded by his son, also named Ben-Hadad (2 Kings 13:24). The name Bir-Hadad occurs in an inscription dedicated to the god Melqart, but again it is unclear which Ben-Hadad this refers to. It has been suggested that the sequence may be Ben-Hadad I (1 Kings 15), Ben-Hadad II (1 Kings 20), Hadadezer (Shalmaneser Inscription, considered by some a variant name of Ben-Hadad), Ben-Hadad III (Melqart inscription, 2 Kings 8), Hazael, Ben-Hadad IV (2 Kings 13). There is no other material from the ancient Near East to help unravel this at this time. If this passage is in its proper chronological place, Ben-Hadad III would be the necessary identification. If the arrangement is viewed as more thematic than chronological, the besieging king may be the successor of Hazael.

6:25. siege leading to famine. The whole idea of siege is to drive the population to the extremities of hunger and thirst so that they capitulate without a fight. Famine in this case is not an environmental condition, but the results of the siege when food supplies have been exhausted.

6:25. prices of undesirable foods. The "donkey's head" would have been one of the least desirable things imaginable to eat for food, yet here it is selling for exorbitant prices. Recall that the standard wage was only about one shekel per month. The second item, literally "dove's dung" (NIV note), may really be pigeon manure, which has been known to be used for food in dire times, or it could refer to pods from a thorny variety of acacia, as it does occasionally in Akkadian. Whether it was being used for food or fuel, even a few ounces of it cost many months pay. In the Cuthean Legend of Naram-Sin (who ruled in Mesopotamia toward the end of the third millennium), six and a half quarts of barley (less than a week's worth of meals) was said to be worth fifty shekels of silver (five years pay) during time of siege.

6:29. cannibalism. Cannibalism is a standard element of curses in Assyrian treaties of the seventh century. It was the last resort in times of impending starvation. This level of desperation could occur in times of severe famine (as illustrated in the Atrahasis Epic) or could be the result of siege (as during Ashurbanipal's siege of Babylon, about 650 B.C.) when the food supply had become depleted, as mentioned in this text and anticipated in the treaty texts. Siege warfare was common in the ancient world, so this may not have been as rare an occasion as might be presumed.

6:32. elders. The elders represent the influen-

tial families of a town or tribe. They are sitting with Elisha as one likely to receive an oracle concerning a suggested course of action or a proclamation that deliverance is near. Meanwhile the unidentified king has lost patience with what has apparently been a long wait for the oracular information (v. 33) and has decided that the siege is punishment from Yahweh. In Israel the distinction was not always sharply drawn between the prophet as *proclaimer* and the prophet as *instigator.* This confusion occurs because the widespread belief in the ancient world still persisted in Israel that the utterance of words by skilled individuals had the power to coerce the gods to act accordingly. The Israelite king has decided that Elisha must have had some role in inducing Yahweh to take this action against Samaria.

7:1. change in prices. A seah is about seven and a half quarts and would be enough to make about a week's worth of meals for a single adult, so the cost is still inflated (but see comment on 6:25 to see how much better it is). Information on prices is provided in Babylonian literature. Whereas in normal circumstances a shekel would buy about a hundred quarts of barley, here it buys only fifteen. During Ashurbanipal's siege of Babylon, barley was going for ten quarts for a shekel. Basic subsistence level for a family of four would be about four quarts of barley per day.

7:2. officer. The term used here is thought to originally have described the third man in a chariot crew who was responsible for holding the shield to protect the driver and the archer. As time goes on it is used outside of chariotry contexts and probably refers to an armor-bearer or, in an administrative role, the king's adjutant.

7:2. floodgates of heaven. The text uses the poetic phrase "windows of heaven" to describe the openings through which the rain came down. This is not scientific language but reflects the perspective of the observer, much as we would speak of the sun setting. The only other occurrence of such a term in ancient Near Eastern literature is in the Canaanite myth of Baal building his house, where the "window" of his house is described as a rift in the clouds. But even there it is not associated with rain. The officer is speaking generally of God's provision, because the issue under discussion is food, not water.

7:3. leprosy. For information on the skin conditions translated here as "leprosy" see the comment on 5:1. These outcasts have even fewer resources at their disposal than the people of the city.

7:6. Hittite and Egyptian armies. The Hittites had left their Anatolian homeland several centuries earlier and had resettled in regions north of Aram, centered in the city-states of Carchemish and Karatepe. It is likely that even Hamath would still be considered a Hittite state at this time. There was already a history of warfare between these Hittite states and the Arameans. Egypt is more difficult here, for there is little evidence to suggest Egypt was active or interested in the Levant during this period. Additionally, the reference to kings (plural) of Egypt (obscured by the NIV) would be odd. Some have suggested that rather than Egypt (Hebrew: *mṣrym)* the text refers to Musri *(mṣry),* though there has been no consensus on where that might be located. The party referred to here should be understood as the same Musri appearing in the inscriptions of Shalmaneser III from this period. Musri is included among the allies from the "Land of Hatti" that fought against Shalmaneser III at Qarqar in 853 and is listed right after Jehu of Israel in the tribute list on the Black Stela of Shalmaneser III from 841. If this Musri is Egypt, as many suppose, then it demonstrates that Egypt was active in the region. If it is a location in north Syria, its identity remains unknown. Some favor this option because it is also named as a neighbor of Arpad (north of Aleppo in North Syria) in the Aramaic Sefire treaty of the eighth century, though others see this Musri as the king's name rather than a place name.

7:10. gatekeepers. The gates of an enclosed city were always locked at night, and, of course, they have been barred during the length of the siege.

7:15. Aramean retreat. The leaders of Samaria suspect a ruse well known in the ancient world—an ambush set by appearing to have given up and gone home. Perhaps the most well-known application of this ruse was its use by the Greeks against Troy in the war several centuries earlier recorded in the *Iliad.* The fleeing Arameans were trailed as far as the Jordan, some forty miles away.

8:1-6
The Shunammite Woman's Land

8:2. land of the Philistines. Though Samaria typically experiences slightly more rainfall per year than the southern coastal plain (land of the Philistines), the alluvial flood plain of the coast is less dependent on the rainfall and would be the logical area to try to weather a famine.

8:3-6. confiscation of land. Land that had been deserted typically reverted to crown

property until a claim was made. The fact that the woman is making the claim suggests that her husband had died, in which case she would be able to claim the land on behalf of her son, who would be the rightful heir to the property.

8:6. income from land. Generally a person would not expect to receive back income from the land for the period of absence. That would be considered the reimbursement to those who had kept the land up and worked it.

8:7-15
Hazael Becomes King of Aram

8:7. Damascus. A trip from Samaria to Damascus was about 125 miles and would have taken a little over a week on foot. Damascus is the capital of Aram and the royal seat. For more information on the site see comment on 2 Samuel 8:5.

8:7. Ben-Hadad. For the confusion concerning the identification of any given Ben-Hadad see the comment on 6:24. Since this is the time of Hazael's accession to the throne, the year is 842 B.C. Shalmaneser indicates that Hazael murdered Hadadezer.

8:8. Hazael. Hazael is referred to in the records of his contemporary, Shalmaneser III of Assyria, where he is identified as a usurper. He reigned from 842 to about 800 B.C. He is also named on a couple of fragmentary Aramaic and Assyrian inscriptions. When the western coalition that had withstood Shalmaneser III at Qarqar fell apart during the 840s, Hazael remained anti-Assyrian and held out for a number of years both in pitched battle and under an unsuccessful siege of Damascus (though he paid heavy tribute). From 836 on Shalmaneser was busy elsewhere (mostly in Urartu) and then was succeeded by weak rulers, leaving Hazael free to focus his attention on Israel for most of his reign. For information concerning his military actions against Israel see comment on 10:32.

8:8. consulting Yahweh. Even though the Arameans did not worship Yahweh, they would not have denied his existence or power. The polytheism of the ancient world was an open-ended system in which divine power was respected no matter what the source. Likewise prophets were held in high esteem and a chance to consult one in time of sickness was not to be missed. Though it is possible that the religious personnel connected to the worship of Baal might have been offended (see comment on 1:2), people would often take that risk to get oracular information from the divine realm.

8:9. gift. As in the case of Naaman, the gift offered is exorbitant. In the ancient world gifts to deity were often attempts to manipulate and obligate, and this must be viewed in the same way. Since prophets were believed to have influence over the gods they represented, this was the king's way of procuring a favorable oracle. He was trying to buy not a falsified report but the prophet's words of power that would carry divine power in their train.

8:12. treatment of conquered cities. The tactics listed here are all standard procedure for eliminating the possibility of future rebellion. The burning of fortified cities would destroy any hope that one might be used for a defensible rallying point for later revolution. The execution of men, children and even unborn babies decimates any present or future army. Ninth-century Assyrian conquest accounts speak of burning the young boys and girls. The practice of ripping open pregnant women is mentioned very rarely. It is a practice attributed to Assyrian king Tiglath-Pileser I (about 1100) in a hymn praising his conquests. It is also referred to in passing in a Neo-Babylonian lament.

8:13. dog. Dogs were considered general pests, making this comparison a common one in statements of humility or self-depreciation. Similar use is found in the Lachish letters and the Amarna correspondence.

8:16-24
Jehoram of Judah

For information on this section see comments on 2 Chronicles 21.

8:25-29
Ahaziah of Judah

For information on this section see comments on 2 Chronicles 22.

9:1-29
Jehu's Coup

9:1. anointing of kings. Anointing a king was common practice in some parts of the ancient Near East. Among the Egyptians and Hittites, anointing was believed to protect a person from the power of netherworld deities. Much of the evidence comes from Hittite sources describing enthronement ceremonies. There is no evidence of kings being anointed in Mesopotamia. In Egypt the pharaoh was not anointed, but he anointed his officials and his vassals. His anointing of them established

their subordinate relationship to him and indicated his protection of them. In the Amarna texts there is reference to a king of Nuhasse (in modern Syria) being anointed by the pharaoh. This model would fit the idea of Jehu's anointing as an indication that he would have the support of the prophets and, presumably, Yahweh. In 2 Samuel 2:4, when the people anoint David, some sort of contractual agreement between David and the people he will govern is suggested. In Nuzi, individuals entering a business agreement anoint one another with oil, and in Egypt, oil anointment is used in wedding ceremonies. In Israelite practice, anointing was a sign of election and often closely related to endowment by the Spirit. Additionally, throughout the ancient world anointing symbolized an advance of a person's legal status. Both concepts of protection and change of status may correlate to the king's anointing, for it would offer him protection on the throne and identify him with the divine realm.

9:1. Ramoth Gilead. The site of Ramoth Gilead has not been identified with certainty, but most accept Tell Ramith for its size, location and Iron Age pottery found in surveys. It has yet to be excavated. If this is the correct identification, it is located on the King's Highway at the juncture where the road south from Damascus would turn west to cross the Jordan near Beth Shan and enter the Jezreel Valley to connect with the main route of the Trunk Road (see sidebar on Trade Routes in Genesis 38).

9:6-10. prophets and inspired coups. In the southern kingdom of Judah, succession to the throne was permanently established by the covenant with the Davidic line. The northern kingdom, Israel, had come into being by means of a prophetic pronouncement (1 Kings 11:29-39), but there was no guarantee of dynastic succession. Each of the major dynasties (Jeroboam, Baasha, Omri, Jehu) rose and fell in accordance with prophetic pronouncement. Sometimes the designated king was content to wait for the proper time (Jeroboam), while in other cases, such as this one, the prophetic proclamation initiated a coup. In the ancient Near East priests often play significant political roles, but no prophets from the ancient Near East are known to have played the same role as these Israelite kingmakers. Nonetheless, throughout the ancient world it was believed that prophets not only proclaimed the message of deity but in the process unleashed the divine action. In Assyrian king Esarhaddon's instructions to his vassals, he requires that they report any improper or negative statements that may be made by anyone, and he specifically names prophets, ecstatics and dream interpreters. It is no wonder, then, that a prophet negatively disposed toward a king must somehow be controlled lest he bring about all sorts of havoc. One can perhaps understand why a king would be inclined to imprison such a prophet, whose very words might incite insurrection or impose doom.

9:14. battle at Ramoth Gilead. The sequence of events is very complex here, because this is 841, the same year that Shalmaneser III of Assyria invaded Aram and engaged in a series of military encounters with Hazael. According to Shalmaneser's records, Hazael met him in pitched battle at Mount Hermon and was defeated. Hazael then safely retreated to Damascus, which was unsuccessfully besieged. Upon failing to overthrow Damascus, Shalmaneser vented his fury on the area of Hauran, just east of Ramoth Gilead, from where he marched to Mount Carmel and received tribute from Jehu. The march from Hauran to Carmel must have gone through the Jezreel Valley. If these events are all to fit together, one would have to suppose that Aram had moved against Ramoth Gilead in the early spring and was met by the combined forces of Judah and Israel. Shalmaneser typically left for his campaigns about May first, and it is about 550 miles from Assyria to Damascus, so he would not be arriving until maybe mid-June. As soon as Hazael received word that Shalmaneser was coming, he rushed north and met the Assyrian army at Mount Hermon. Jehu, still at Ramoth Gilead, likewise got the news of the Assyrian advance and was faced with the question of what Israel's position would be. Gathering the support of the pro-Assyrian party and strengthened by the prophetic anointing, he proceeded with the coup. During the period that Shalmaneser was failing in his siege of Damascus and laying waste the area of Hauran, Jehu was exterminating the house of Ahab and the followers of Baal. Once he established his control, he willingly gave Shalmaneser access across Jezreel and paid tribute at Carmel.

9:14-16. Trip from Ramoth Gilead to Jezreel. It is about forty-five miles from Ramoth Gilead to Jezreel. Jezreel is a fifteen-acre site situated at the southeastern entrance to the Jezreel Valley between the Hill of Moreh and Mount Gilboa. It was here that Ahab had built a winter capital. Excavations have unearthed a large royal enclosure from this time period occupying a large portion of the mound (see comment on 9:30).

9:17-20. sending messengers to approaching

rider. The rapid approach of a small chariot contingent only allows for a few possibilities, and none of them are good. They are either in flight from the enemy or are coming with evil intent. The rider sent out could serve either as a messenger to bring word back to the king or as a negotiator. What is unusual is that in such an uncertain situation the kings would ride out (apparently with no bodyguard) to meet Jehu (v. 21) and thus expose themselves to danger.

9:21. Naboth. For the background of the events concerning Naboth see comments on 1 Kings 21.

9:22. idolatry and witchcraft. This accusation is given as a cause for deposing a queen mother as early as the mid-second millennium, when the Hittite king Murshili II opposed his late father's Babylonian wife on the claim that she practiced sorcery. It should be remembered that both of these kings are related to Jezebel in that she is the mother of Jehoram and the grandmother of Ahaziah.

9:27. Beth Haggan-Gur/Ibleam-Megiddo. Ahaziah takes the road south from Jezreel. This is the direction of home (Judah) but is also the direction toward the northern capital city, Samaria, where he could expect to find protection. The road south skirts the eastern edge of the Jezreel Valley along the foot of the Gilboa mountains. Beth Haggan is where the road climbs out of the valley to the plain of Dothan and then into the hills of Samaria. Ibleam is at the top of the rise at the northern end of the plain. It is nearly ten miles from Jezreel. In full flight in a chariot this distance could have been covered in less than half an hour. But he is still fifteen miles from Samaria. When the decision is made to head for Megiddo, he must turn to the northwest, but it is only twelve miles away and could likewise offer sanctuary to the wounded king. It is also an easier road on level ground as it travels along the southwestern edge of the Valley of Jezreel. Beth Haggan is modern Jenin and is referred to in the Egyptian execration texts and called Gina in the Amarna texts. There is a seven-acre tell there with Iron Age pottery. Ibleam is named in Thutmose III's annals and is identified with Khirbet Belameh. Neither of these sites has been excavated.

9:30—10:17
Extermination of Ahab's Family

9:30. Jezebel's actions. In the ancient world powdered kohl (either galena [lead sulfide] or stibnite [antimony trisulfide]) mixed with oil or water was used as makeup to outline the eye and accentuate its almond shape. Hairdressing may have included scenting, coloring or plaiting. Jezebel's purpose was to be seen as attractive in every way: physically, socially and politically. There is a familiar motif of a woman looking out the window that is represented beautifully in ivory carvings found at Nimrud, Samaria and Arslan Tash (in which she is adorned with an Egyptian wig). In literature the woman is gazing into the distance awaiting news of a husband or son who has gone off to war (see comment on Judg 5:28). In contrast, the ivories are often thought to represent a prostitute, perhaps connected to the worship of Astarte. This could then be a subtle reminder of Astarte and the foreign worship sponsored by Jezebel (note the accusation Jehu made against her in v. 22).

9:30. Jezreel palace. The palace at Jezreel was excavated in the early 1990s. The rectangular enclosure covers about eleven acres and is surrounded by a casemate wall with towers at the corners. It featured a six-chambered gate, a moat and earthen ramparts. The moat was cut from rock and averaged thirty feet wide and at points was nearly twenty feet deep. The moat used in Palestine was a dry moat (called a fosse), probably intended to prevent tunneling under the walls of the city. Jezreel was about twenty-three miles from Samaria.

9:31. calling Jehu "Zimri." The dynasty of Omri, of which Ahab and Jezebel were a part, had seized power from the usurper Zimri (see 1 Kings 16). By alluding to this incident, she may be warning Jehu that his coup will not necessarily lead to a secure hold on the throne but that he in turn is likely to be overthrown. Her question, "Is it peace?" not only suggests negotiation but also queries whether he really believes his destruction of the house of Ahab will bring peace for the country or for him. The alternative would be to ally himself with her and thus take advantage of some continuity. If her makeup has been applied to make her alluring, she may be suggesting that he take over the harem of the former king and thereby establish his legitimacy (for this practice see comment on 2 Sam 3:7). The loss of the harem to a claimant to the throne is described in the annals of Sennacherib as a sign of being deposed.

9:32. eunuchs. Eunuchs were those officers entrusted with the care and supervision of the royal harem. Having been castrated, they posed no threat to the women of the harem and could not engender children by the harem women who might be mistaken for royal heirs. It should be noted that the Hebrew word used here may not be limited to eunuchs—some believe it extends more broadly

to administrative officials. It is logical in this context, however, to think of the queen being accompanied by keepers of the harem.

9:36. devoured by dogs. Assyrian practices (especially Ashurbanipal) include leaving corpses in the street for dogs to devour (as well as pigs, jackals and birds). On one occasion the corpses were chopped up and fed to dogs. Treaty curses also included invoking this doom on rebels. The intention of this atrocity was typically to eliminate any possibility of proper burial and thus to doom the individual's spirit to wander restlessly rather than enjoy a peaceful afterlife. Perhaps most interesting is the Akkadian text in the Maqlu collection of incantations that places a curse on a sorceress (see v. 22) that dogs would tear her to pieces. For more information see comment on 1 Kings 16:4.

10:1. Jezreel. See comment on 9:14-16.

10:6. wiping out predecessor's line. Leaving any living relatives of a king who had been forcibly deposed from the throne by assassination was an invitation to civil war. The relatives would be honor-bound to avenge the death of the previous king, and they would be certain to find those who would support their bid to regain the throne. Such annihilation of ruling families was common practice both in Israel and in the ancient Near East at large.

10:8. heads in baskets. The Assyrians made a practice of piling up the heads of those that had been killed in battle or punished for their rebellion. It was common in this period for such piles to be placed just outside the city gates as a warning to the inhabitants that rebellion was treated harshly.

10:11. group executed. The term translated "close friend" here is a technical term used both in Akkadian and Ugaritic sources describing those who enjoy the sponsorship of the court. They are royal wards who enjoy court privileges and were probably non-Israelite. Additionally Ahab's family, administration and religious personnel were executed.

10:12. Beth Eked of the Shepherds. This location must be somewhere along the nearly thirty-mile route between Jezreel and Samaria, but it has not been identified with any confidence. If it refers to a place where shepherds congregated or gathered their sheep, somewhere around the plain of Dothan would be logical.

10:12-14. treatment of Ahaziah's relatives. Since Jehoram of Israel was the uncle of Ahaziah of Judah, all of these relatives of Ahaziah are at least indirectly associated with the bloodline of the house of Ahab. That is sufficient to bring a death sentence on their heads. The well here is a cistern that would have been very natural in an area where shepherds gathered. It was just such a cistern in which Joseph's brothers imprisoned him around this same area of Dothan.

10:15. alliance with Jehonadab. Jehonadab is the leader of the Rechabites, a rather obscure clan in Israel that apparently lived an ascetic lifestyle and was known for its commitment to a seminomadic existence (some think because of their vocation as itinerant craftsmen) and for its religious conservatism (see the reference to them in Jer 35 some two centuries later).

10:18-27
Extermination of the Cult of Baal

10:19. the great Baal (enthronement) sacrifice. Part of the rhetoric that accompanied the promises of new kings in the ancient world was that they would be more devoted to the national or local gods than their predecessors. This often included commitments to repair, restore, enlarge or embellish the sanctuary. This strategy would gain the support of the priesthood and the pious populace, and, hopefully, bring divine approval of the new reign as well. It was politically correct for the king to take his place as royal patron and foremost of the supporters of the local deity. It is possible that Jehu is calling for an enthronement celebration in which he will take the throne as the vassal of Baal, whose enthronement as king of the gods would likewise be recognized. To be absent from such an event could easily be considered treason.

10:21. temple of Baal in Samaria. Excavations in Samaria have not yet located any remains from Ahab's temple of Baal. It has been suggested that the temple contributed to the concept being promoted by Ahab and Jezebel that the city was the sacred precinct of Baal. This would mean it functioned as an independent political unit, just as Zion often did in the south. Therefore, even after Jehu had been made king of Israel and Ahab's line had been wiped out, control of Samaria, especially the temple precinct, had to be approached separately.

10:22. robes from the keeper of the wardrobe. These robes would have been cultic vestments for the worship of Baal (see Zeph 1:8). It is additionally likely that the occasion and the use of the sacred robes would have prohibited any weapons from being worn—a distinct advantage for Jehu's men.

10:26. sacred stone. Standing stones often occupied the place of the sacred niche in Canaanite sanctuaries in place of an image. These stones were often plain but occasionally

had a figure of the deity carved in relief on the face of the stone.

10:27. use as latrine. It was the practice to rebuild temples on the sites where they had traditionally been because it was believed that the god had revealed the location and it was holy ground. By making it into a latrine area (or perhaps a garbage dump), Jehu was insuring that it would never be the site of a temple again. This greatly reduced any possible resurgence of the official Baal cult in Samaria.

10:28-36
Jehu of Israel

10:32. Hazael's actions against Israel. No military details are given here, but the text describes the loss of the entire Transjordan region to Hazael. After 838 the Assyrians were absent from the west for several decades, and this allowed the Arameans to begin to build their own little empire. This continued during the reign of Jehu's successor, Jehoahaz (see comments on 2 Kings 12—13).

10:34. Jehu in Assyrian records. The fact that Jehu quickly paid tribute to Shalmaneser III upon his accession to the throne of Israel suggests that he probably enjoyed the support not only of the religiously conservative Yahwist party but also of the pro-Assyrian faction of the government (see comment on 9:14). This party saw the breakdown of the western coalition as leading inevitably to defeat by the Assyrians and was tired of the perpetual warfare. Jehu is portrayed in the uncomplimentary posture of prostration on the Black Stela of Shalmaneser that reports the tribute he brought to the Assyrian king in 841. His tribute consisted of items of silver and gold and some javelins.

11:1-21
Athaliah

For information on this section see comments on 2 Chronicles 22—23.

12:1-21
Joash of Judah

For information on this section see comments on 2 Chronicles 24.

13:1-9
Jehoahaz of Israel

13:1. chronology. According to Thiele, Jehoahaz of Israel came to the throne in 814 B.C. in the twenty-third year of Joash of Judah. He reigned until 798 B.C. This was a period when the Assyrians had focused their attention elsewhere. As a result the Arameans under Hazael were trying to enlarge their control of the area.

13:3. Hazael's control of Israel. Hazael was king of Aram-Damascus around 842-800. He is also known from an ivory fragment from Arslan Tash in Syria and from a cylinder seal found at the Assyrian city of Assur. The Assyrians claimed to have taken booty from Hazael. The Aramean king fought with the Assyrian king Shalmaneser III in 841 and was defeated, although the Assyrians were unsuccessful in taking Hazael's leading city of Damascus. The Assyrian threat diminished after 836, and Hazael was able to concentrate on attacking Israel and Philistia.

13:5. deliverer from Aram. The "deliverer" (coming from the same Hebrew root as Messiah) in this case is not mentioned by name. The phrase is reminiscent of the deliverers in the period of the judges. It may have been a neighboring ruler, such as Zakur of Hamath or Adad-Nirari III of Assyria, both of whom were powerful at this time. Even Joash of Judah has been suggested as a possibility.

13:6. Asherah pole. One common feature of Canaanite worship and of syncretistic Israelite worship on "high places" and in city shrines is the erection of Asherah poles. There is some uncertainty about whether these were simply wooden poles, erected to symbolize trees and perhaps containing a carved image of the fertility goddess, or whether they were part of a sacred grove. The reference in 17:10, which refers to Asherah poles beside "every spreading tree," seems to indicate that these were poles erected for cultic purposes rather than planted trees. As the consort of El, Asherah was a popular goddess whose worship is mentioned in Ugaritic texts (1600-1200 B.C.). The Asherah cult continued to be prominent in Phoenicia in the first millennium B.C., when it presumably was introduced into Israel during the dynasty of Omri and Ahab. Her prominent appearance in the biblical narrative indicates that her cult was a major rival to Yahweh worship. For more information see the comments on Exodus 34:13 and Judges 6:25.

13:10-25
Jehoash of Israel

13:10. chronology. By Thiele's reckoning, Jehoash began his reign in 798 B.C. (the thirty-seventh year of Joash of Israel) and ruled for sixteen years (until 782). During this period the Assyrians became more active, and

their influence in the west occupied the attention of the Arameans (see comment on 13:22-25). Joash is mentioned by name in the inscriptions of the Assyrian king Adad-Nirari III (810-783).

13:14. chariots and horsemen of Israel. This phrase, also found in 2 Kings 2:12, appears to have been a popular slogan during the period of the Aramean wars. Elisha was active in the military affairs of Israel and had gained a reputation for mediating Yahweh's participation in Israel's wars. In the mythology of the period there were deities who served as the charioteers to bring the divine warrior into battle (see comment on 2:11). This title may have recognized Elisha's role as a similar one—when he came, Yahweh came with him.

13:15-19. arrow symbolism. Although the acts here performed by Elisha resembled non-Israelite magical phenomena, and no explicit reference to the God of Israel is mentioned, there is an undercurrent of divine will. This particular ritual, apparently in imitation of belomantic (divination by means of arrows) practices, is not attested in Mesopotamian sources, although bows and arrows were often used in their magic rituals.

13:22-25. encounters with Aram. Here the biblical text concurs with Assyrian sources. During the reign of the Assyrian king Shamshi-Adad IV (824-811 B.C.) the Assyrians were concerned with campaigning in Babylonia to the exclusion of the west. Thus the Aramean states were able to thrive. By the reign of Adad-Nirari III (811-783) the Assyrians shifted their emphasis to the west once again. A number of commemorative inscriptions of Adad-Nirari describe the defeat of Damascus and Arpad (other powerful Aramean states) and the collecting of tribute. Jehoash is also recorded as having given tribute to the Assyrians in a stele from Tell al-Rimah. Thus Damascus was weakened by Assyria enough to allow for the deliverance of Israel, which in turn became a client state of Assyria.

14:1-22
Amaziah of Judah

For information on this section see comments on 2 Chronicles 25.

14:23-29
Jeroboam II of Israel

14:23. chronology. Jeroboam II became king in 782 by Thiele's chronology. He may have been coregent with his father Jehoash for eleven years previous to this (793), which was counted as part of his reign. During this time Israel was free of threat from both Aram and Assyria, allowing prosperity and expansion in a time of relative security.

14:25. restoration of borders. Jeroboam's expansion restored Israel to the size it had been during the reign of Solomon. Lebo-Hamath (modern Lebweh [Ematu in the Ebla texts; Lab'u of Assyrian sources]) on one of the sources of the Orontes is in the northern Baqa' of Lebanon, forty-five miles north of Damascus. This was the southern border of the land of Hamath and therefore the northern border of Canaan, and designates the northern corner of the empire. The name appears in city lists of the Egyptian king Thutmose III (fifteenth century B.C.) and the annals of Tiglath-Pileser III of Assyria (eighth century B.C.). The Sea of Arabah (or Wadi Arabah, Amos 6:14), now the Dead Sea, was the southern border of the kingdom.

14:25. Gath Hepher. Gath Hepher is only mentioned here as the home of Jonah. It has been identified with el-Meshed, a site a few miles northeast of Nazareth.

14:27. preclassical prophecy. In the early periods of the monarchy the prophets primarily addressed the king and his court, much as their ancient Near Eastern counterparts did. These prophets have been termed "preclassical." Beginning in the eighth century, however, the prophets increasingly turned their attention to the people and became the social-spiritual commentators that we most readily identify with the prophetic institution; these are the classical prophets and the writing prophets. Their role was not to predict as much as it was to advise of God's policies and plans. In this context, Jonah is in the role of the preclassical prophet, while in the book of Jonah, his role is more like the classical prophet developing at this time. For more information about prophecy in the ancient Near East see comment on Deuteronomy 18:14-22.

14:27. blotting out. The phrase "blotting out" stems from the image of washing a papyrus scroll clean in order to use it again, typical of Egyptian practice. Moreover, erasing the name of an ancestor from an inscription in Mesopotamia angered the gods. Thus Yahweh decided not to erase Israel's name (i.e., destroy it) but promised salvation.

14:28. Damascus, Hamath, Yaudi. Damascus and Hamath were well-known Aramean polities (for more information see comments on 2 Sam 8). Yaudi, however, is not so easily identified. Yaudi is likely the Iaudi of Assyrian

sources, which is always identified with Judah. Assyria was in no position to oppose Israelite expansion from about 773 to 745 B.C., during the reign of Jeroboam.

15:1-7
Azariah (Uzziah) of Judah

For information on this section see comments on 2 Chronicles 26.

15:8-12
Zechariah of Israel

15:8. chronology. The brief reign of Zechariah was in 753 B.C. He was a contemporary with Azariah (Uzziah) of Judah (c. 792-740 B.C.).

15:13-16
Shallum of Israel

15:13. chronology. Shallum succeeded Zechariah in 752 B.C. and reigned for only one month. Azariah was still on the throne of Judah.

15:16. Tirzah. Tirzah was a royal residence of Jeroboam I. It probably became the capital city of the northern kingdom in the time of Baasha and remained the capital until Omri gave the position to Samaria. It has been identified as Tell el-Farah seven miles northeast of Shechem on the road to Beth Shan. It is favored by good elevation, a consistent water supply (two springs that feed the wadi Farah) and a strategic location on the trade route. It also has ready access to the fords of the Jordan at Adam. The gate and fortifications were rebuilt from the Middle Bronze remains, and there is evidence of central planning in the building of new residences throughout the city. Its political importance may also be inferred from its mention in Shishak's list of conquests during his invasion of Palestine.

15:16. Tiphsah. Tiphsah (or Tappuah) may have later been called Thapsacus in Syria, a city on the bend of the northern Euphrates River. The name Thapsacus is not attested until the Greek writer Xenophon in the fourth century B.C. The city of Tiphsah is also listed as one of Solomon's cities (1 Kings 5:4). Tiphsah's distance from Israel shows that Menahem had great influence during a period of Assyrian decline.

15:16. treatment of pregnant women. The practice of ripping open pregnant women is mentioned very rarely. It is a practice attributed to Assyrian king Tiglath-Pileser I (about 1100) in a hymn praising his conquests. It is also referred to in passing in a Neo-Babylonian lament.

15:17-22
Menahem of Israel

15:17. chronology. Menahem's reign is attributed by Thiele to the years 752-742 B.C. Like the three previous Israelite kings, he was a contemporary of Azariah of Judah. His reign overlaps with the beginning of the Neo-Assyrian empire under Tiglath-Pileser III.

15:17-22. Menahem in Assyrian inscriptions. Menahem is mentioned along with other Levantine kings in the Assyrian annals as paying heavy tribute to Tiglath-Pileser III (also known as Pul or Pulu). He also appears on an Assyrian stele found recently in Iran. The tribute list includes silver, gold, tin, iron, elephant hides, ivory, blue-purple and red-purple garments, multicolored linen garments and camels. Menahem, presumably, did not send all of these items but only a portion of them.

15:23-26
Pekahiah of Israel

15:23. chronology. Pekahiah, son of Menahem of Israel, began his reign in 742 B.C. and reigned for two years. Azariah was still the monarch in Judah.

15:25. citadel of the royal palace. This term is also found in Isaiah 13:22, where it is parallel to "palaces of pleasure." There the context appears to refer to a specific structure within the palace complex. It is likely a type of fortification. The Assyrian kings constructed major palatial complexes that were often called "fortresses of the king." They would provide a defensible area inside the city in case the walls were breached or there was a revolt within the city.

15:27-31
Pekah of Israel

15:27. chronology. The text states that in Azariah's last year as king of Judah, Pekah became king of Israel. He is credited with twenty years of rule. Thiele dates his reign from 752 to 732 B.C., thus making him a contemporary of Menahem and briefly Pekahiah. If this is true, then there was more than one person who claimed to be monarch in Israel during this period, which would be consistent with the turmoil described by the writer(s) of 2 Kings. The writer(s) of 2 Kings may have dated Pekah's reign from the es-

tablishment of a separate kingdom on the east of the Jordan. This complexity has yet to be unraveled.

15:25-31. Pekah and Assyrian campaigns. Pekah is found in the Assyrian annals of Tiglath-Pileser III as Paqaha. The Assyrian king claims that when the Israelites overthrew Pekah, Tiglath-Pileser replaced him with Hoshea, the last king of Israel (732 B.C.). Subsequently, the Assyrians demanded heavy tribute from Israel. Pekah is also mentioned on a jug fragment from Hazor. The text simply reads, "wine belonging to Pekah."

16:1-20
Ahaz of Judah

For information on verses 1-9 see comments on 2 Chronicles 28.

16:10. Ahaz and Tiglath-Pileser at Damascus. This meeting took place after Damascus fell in 732. Ahaz, as a loyal vassal, was expected to be present to reaffirm his submission and join the celebration over the king's victory.

16:10. Damascus altar. The reproduction of this altar appears to result from Ahaz being impressed with it rather than from Assyrian compulsion. Judging from what is known of Assyrian practice of this time, it appears that they did not force their vassals to adopt the worship of their chief god, Assur. Thus it should be considered artistic innovation rather than ritual syncretism. Currently no archaeological or textual information exists to provide for an informed delineation of the features.

16:14. bronze altar. See comment on 2 Chronicles 4:1. This is the main altar of the courtyard, used for all of the animal sacrifices.

16:14. rearrangement of altars. The bronze altar had been positioned directly east of the temple, that is, in front of the entrance. Ahaz's new altar had originally been placed between the entrance to the courtyard and the bronze altar, but now became the central focus as the bronze altar was moved out of the east-west axis to a side location north of the new altar. The new altar thus effectively replaced the bronze altar.

16:15. divided functions. The rituals performed on the new altar are characteristically Israelite. There is no cultic innovation here, nor are foreign rituals being incorporated into Israelite practice. The new altar picks up all of the prescribed functions of the sacrificial system. The one function that is left to the bronze altar is one that is not described in Israel's ritual literature. The verb that is used (NIV: "seeking guidance") means to examine or inspect, and may suggest sacrifices in which the entrails of sacrificed animals were examined for omens. It is unclear why Ahaz should reserve that function for the traditional altar.

16:17. tribute. The activity described here is part of the process of tribute gathering. Basins for transporting water from the main laver stood on carts featuring side panels and wheels. Similar objects have been found in Cyprus dating to about the time of Solomon. The bronze bulls that supported the laver (see 2 Chron 4:2-5 for description) would have gone far to make up the quota of bronze that was wanted for the tribute payment. In the ninth century Assyrian king Ashurnasirpal received bronze bulls as part of a tribute payment.

16:18. adjustments for the king of Assyria. It is difficult to be certain whether the described actions are undertaken in order to gather additional tribute for the Assyrians or whether they reflect changes that will underline and confirm Ahaz' submission to Assyrian suzerainty. The reference is to obscure architectural terms.

17:1-6
Hoshea of Israel

17:1. chronology. Hoshea became king in 732

THE WESTERN CAMPAIGNS OF TIGLATH-PILESER III, 734-732

From early in his reign (starting about 743) Tiglath-Pileser was active in Syria attempting to control the trade routes through this economically strategic region. By 738 he had collected tribute from most of the major parties in the area (including Damascus, the port cities and Samaria). During the next few years he was occupied in Urartu (in the Lake Van area to the north), and by 735 he had brought control to that region. In 734 he began what is known as the second western campaign. His initial objective was to march through the region as a show of power to reiterate his control (especially of the trade route) and collect tribute. His route took him down the Great Trunk Road to Gaza. No opposition is noted in any of the sources. In 733 the Assyrian armies returned, with Damascus as the main target. Though the Arameans suffered serious losses, Damascus successfully withstood a forty-five-day siege by the Assyrians. In this campaign Tiglath-Pileser ranged down into the region of Israel. Large sections of Israel were annexed and made into Assyrian provinces, and fortified cities such as Hazor and Megiddo were destroyed. Over thirteen thousand Israelites were deported, but no replacement inhabitants were shipped in, thus depleting the population of Lower Galilee for several generations. The final stage of the campaign came in 732, when Damascus fell and was annexed. In Israel Pekah was executed in favor of the pro-Assyrian Hoshea.

B.C. as a result of the Assyrian decimation of much of the northern kingdom. The synchronisms between the northern and southern kingdoms during this period are very complex, and there are no easy resolutions. It is generally supposed that there were several coregencies that are one cause of the apparent confusion. Assyrian king Tiglath-Pileser III claims in his annals to have put Hoshea on the throne of Judah.

17:4. relations between Hoshea and Assyria. Because of the reestablishment of Egyptian power in the Levant, Hoshea saw fit to negotiate with Egypt in order to be free of Assyrian power. The Egyptian king So has not been absolutely identified, but Osorkon IV who ruled in the eastern delta region of Egypt (Tanis, Bubastis) from 730 to 715 B.C. has been considered a likely match. Nonetheless, Hoshea's appeal to Egypt was unsuccessful. It is not certain exactly when Hoshea was arrested by the Assyrians (or deported). The records of the brief reign of Shalmaneser V (ruled 727-722) are comparatively poor. Sargon II (ruled 721-705) mentions the Samarians (i.e. Israelites) but not a king, suggesting that the king may have already been deported.

17:5-6. the fall of Samaria. The Assyrian sources describe the "ravaging" of Samaria (c. 724-721), which may have denoted the entire land. Some archaeological evidence for the destruction has been found at the Israelite city of Shechem. This accords with the typical Assyrian strategy of wasting the territory of a particular state and then surrounding the main city, which had now been cut off from its resources. Both Sennacherib and Nebuchadnezzar II used this policy against Jerusalem. The fact that the siege of Samaria lasted three years although the Assyrians were unmatched in siege warfare shows that it was heavily fortified. The city fell in 722/721. Although Shalmaneser V is given credit for the conquest of Samaria in the Bible, his successor Sargon II claimed the credit in the Assyrian annals. Sargon also claims to have rebuilt the city.

17:6. policy of deportation. The Assyrian deportation policies had been in effect for nearly four centuries by this time. Sargon claimed to have deported 27,290 people from Samaria. The record is not clear as to whether these were all men and whether they came from the land of Samaria or just the main city. The Assyrian king claimed that he took enough men to form a regiment of fifty chariots. The Assyrians also had a policy of relocating other conquered peoples into Samarian territory (though Tiglath-Pileser appears to have departed from that policy by not repopulating Galilee in 733). Sargon claims to have repopulated the city of Samaria with other deportees. The deportation policy was intended to remove from conquered peoples anything that they might rally in defense of. If they have no land and no nation, and their ethnic identity has been compromised (through forced assimilation), there is no identity to fight for.

17:7-41

The Sins and Fate of Israel

17:9. high places. The picture portrayed in the biblical narrative is that prior to the construction of the temple in Jerusalem, sacrifice and religious ritual commonly took place at local shrines or *bamoth.* They were constructed for this purpose and in most cases appear to be an installation that could be entered and within which cultic activity took place (see the comment on 1 Sam 9:12-13). Many of them may have had an urban setting, although this does not preclude their existence outside city walls on near by hills. Their actual appearance and the furnishings associated with the high places are unknown, but the large number of references to them as sacrificial sites suggests that some may have been quite elaborate. Eventually the monarchy and the Jerusalem priesthood attempted to suppress the use of the high places because of their desire to emphasize Solomon's temple as "the place which Yahweh will choose" and to eliminate the syncretism that thrived at the high places. For more information on high places, see the comments on Deuteronomy 12:2-3.

17:10. sacred stones. Standing stones or *maṣṣebot* were apparently a common feature of Canaanite religion and also appear as memorials in a number of Israelite covenantal contexts (see Ex 24:3-8; Josh 24:25-27). Their association with Asherah, Baal and other Canaanite deities is the basis for their being condemned as a rival and threat to Yahweh worship. Archaeologists have discovered sacred stones at Gezer, Dan, Hazor and Arad. In the latter two cases, they are clearly within a sacred precinct and part of the cultic practices at these sites. The Hazor stones include incised representations of upraised arms and a sun disk. The stones at Dan are in the gateway, and the clear remains of the presentation of votive offerings were evident.

17:10. Asherah poles. One common feature of Canaanite worship and of syncretized Israelite worship on "high places" and in city shrines is the erection of Asherah poles. There is some uncertainty about whether these were simply wooden poles, erected to symbolize

trees or perhaps containing a carved image of the fertility goddess, or whether they were a part of a sacred grove. The reference here to Asherah poles beside "every spreading tree," seems to indicate that these were poles erected for cultic purposes rather than planted trees. As the consort of El, Asherah was a popular goddess whose worship is mentioned in Ugaritic texts (1600-1200). Her prominent appearance in the biblical narrative indicates that her cult was a major rival to Yahweh worship. Pictures on seals excavated in Palestine show Asherah as a stylized tree in the Iron Age. For more information see the comments on Exodus 34:13 and Judges 6:25.

17:11. burning incense as pagan ritual. Incense was used for a variety of reasons in the extrabiblical world. The Phoenicians used it to prepare the body of the king for future life. One inscription from Byblos has a king describing himself as lying on incense. It was also used in the cult of the dead at Canaanite Ugarit. In Mesopotamia, incense was used for dedicatory and propitiatory offerings. They believed that the incense helped transport prayers to the deity, who would then inhale the incense. All of these practices were condemned by the writers of Scripture.

17:16-17. unacceptable worship practice. The molten images of calves or bulls were typical cult items in Canaan. Calf images have been found at a number of sites in this region (for more information see comments on 1 Kings 12:28). Worship of the starry hosts refers worship of the celestial gods (sun god, moon god and Venus particularly; in Babylonia, Shamash, Sin and Ishtar respectively), who were primary in most ancient religions. Controlling the calendar and time, seasons and weather, they were viewed as the most powerful of the gods. They provided signs by which omens were read and they looked down on all. The Zodiac is not yet known at this time. For information concerning Baal see comments on Judges 2:11-13. Evidence for "passing [or burning] children through the fire" outside of Scripture is scant but known in the Assyrian and Aramean world (see comment on Deut 18:10). Divination and enchantments were also well-known in Mesopotamia. Divination assumed that there was knowledge to be gained about the activities and motives of the gods through the use of various indicators (such as entrails of sacrificed animals). Thousands of omens and incantations have been uncovered in the past one hundred and fifty years of archaeological research.

17:24. resettlement of Samaria. Although the king of Assyria is not mentioned here, Assyrian sources claim that Sargon II reorganized the area in 720 B.C. These same texts do not cite the specific people groups that were deported to Samaria. However, some Arab tribes were transported to Samaria within five years of the reorganization. Babylon was under Assyrian control during this period. Cuthah is identified with Tell Ibrahim, twenty miles northeast of Babylon. Avva is now identified with the town of Awa (Ama, Akkadian, Amatu in eastern Babylonia). Hamath was the major Aramean city on the Orontes River in Syria. Sepharvayim has been tentatively identified as Sipirani, south of Nippur, though Shabarain in Syria is still a possibility. Whatever the case, Assyrian policy was to resettle an area with a diverse population.

17:25. god-sent lions. Ravaging wild beasts were considered one of the typical scourges that deity would send as punishment. As early as the Gilgamesh Epic in Mesopotamia the god Ea had reprimanded Enlil for not sending lions to ravage the people rather than using something as dramatic as a flood. The gods used wild beasts along with disease, drought and famine to reduce the human population. A common threat connected to negative omens in the Assyrian period was that lions and wolves would rage through the land. In like manner devastation by wild animals was one of the curses invoked for treaty violation (see also Deut 32:24).

17:25-29. syncretism in Samaria. Assyrian inscriptions from the age of Sargon II state that the new settlers were taxed as if they were Assyrians. Furthermore, they were instructed in the proper way to revere God and king. Most groups in antiquity believed that gods had jurisdiction over precise geographic areas. Thus Yahweh had ownership of Samaria and was worthy of worship. Nonetheless the settlers brought their own deities. In the open-ended thinking that accompanied ancient polytheism, there was always room for more gods. If a god had demonstrated power, it would be dangerous not to acknowledge him (see comment on Josh 2:11). Sargon had effected a religious syncretism in the area, with the express purpose of lessening the impact of nationalistic tendencies.

17:30-31. list of gods. The deity Succoth Benoth is not known from Mesopotamian sources. Benoth may be Banitu (fem. "the creator"), often used as a term for Ishtar. Nergal was the Mesopotamian god of plagues and of the underworld. His principal cult center was in fact at Cutha (twenty miles northeast of Babylon). Ashima is known from an inscription from Teima in Arabia as well as from

some Aramaic personal names, but nothing is known about the deity. The Avvites are now identified with the town of Awa (Ama, Akkadian, Amatu in eastern Babylonia). Nibhaz and Tartak have been identified with the Elamite deities Ibnahaza and Dirtaq (Dakdadra). Adrammelech is thought to represent Addir-Melek. Addir is a title meaning "mighty one" and is applied to both Baal and Yahweh. Melek means king and would refer to the divine king. Lastly, Anammelech is believed to represent an assimilation of the Canaanite goddess, Anat (or her male counterpart, An) with Melek (a title often applied to the West Semitic deity Athtar). Little is known of these last two gods, but some associate them with the god Molech (see comments on Lev 18:21; Deut 18:10).

18:1—20:21
Hezekiah of Judah

18:1. chronology. See comments on 2 Chronicles 29.

18:4. bronze serpent, Nehushtan. Nehushtan is not attested outside Scripture. The term is apparently a conglomeration of the Hebrew terms for bronze *(neḥoshet)* and serpent *(naḥash).* Figures of serpents crafted in copper or bronze have been found in numerous locations in the ancient Near East. They were apparently cultic images. Often the image of the serpent is held by a deity. It was especially prevalent in Syro-Palestine in the late second and first millennia B.C. Nehushtan appears to have been a deity of healing (especially snake bites), possibly considered an intermediary between Yahweh and the people of Israel (see comment on Num 21:8-9). A well-known bronze bowl from Nineveh with Hebrew names on it depicts a winged snake on a pole of some sort.

18:8. defeat of the Philistines. The Philistine seaports had been in Assyrian control since Tiglath-Pileser III (745-727 B.C.). Hezekiah likely invaded this area in 705 after the death of Sargon II of Assyria in battle. Counting on the vulnerability of Assyria, Hezekiah probably commandeered anti-Assyrian groups in the area to begin open rebellion against the powerful state. The purpose of the attack was to loosen Assyria's hold on the trade routes to Egypt. Sargon's successor, Sennacherib, however, was able to establish pro-Assyrian governors in Philistia.

18:11. places of northern deportation. The areas of deportation of the Samarians are not all precisely known. Halah was a city and province northeast of Nineveh. Sargon's capital was built there using enemy captives as laborers, probably including Israelites. Habor (Habur) was a large tributary of the Euphrates in eastern Syria. The area had a large Aramean population. Gozan (Tell Halaf) was a city by the headwaters of the Habur River and was the chief city of the Assyrian province of Bit Bahian. Israelite personal names have been found in the Assyrian documents from Gozan. These areas had suffered a decline of population because of the constant Assyrian incursions in the region in previous centuries. In this region the deportees were probably farming the king's lands. The "cities of the Medes" were probably regions of Media in northwest Iran that were controlled by Assyria. Sargon's campaigns to Media are well documented. Sargon's inscriptions record the resettlement of the fortress cities of Harhar and Kishessu by deportees. These Israelites would have been serving in a military capacity on the front line.

18:14-16. Hezekiah's tribute. The inscriptions of Sennacherib state that Hezekiah paid thirty talents of gold (about one ton) and eight hundred talents of silver (about twenty-five tons). The Assyrian texts are more detailed, as they claim that Hezekiah was required to send his daughters, concubines, male and female musicians, ivory, elephant hides and various other objects.

18:17. Sennacherib's officials. Tartan, Rabsaris and Rabshakeh appear in some translations, while the NIV refers to them as "supreme commander," "chief officer," and "field commander." The NIV is correct that these are titles rather than names. They are well-known from Assyrian texts. The first, Tartan (Akkadian, *turtan*), the "field marshal," was the chief military officer. He represented the king and was sometimes the crown prince. The second, Rabsaris (Akkadian, *rab sha reshi*), the "chief eunuch," was probably the representative of the separate military division, the king's bodyguard. The third, Rabshakeh (Akkadian, *rab shaqe*), the "chief cupbearer," is thought to be the provincial governor.

18:17-37. Sennacherib threatens Jerusalem. For information see comments on 2 Chronicles 32.

19:2. Shebna the secretary. Shebna was a high-level bureaucrat during the reign of Hezekiah. He was at one point a "royal steward," a position of uncertain function. The royal steward was probably the top civil servant in the administration. The office is documented numerous times in the text as well as in the corpus of official seals and their bullae

(see sidebar in Jer 32). Shebna was later demoted to scribe or secretary (presumably because of some unknown scandal). A tomb has been found near Jerusalem with a fragment of a personal name (with Yahweh as an ending) and the title royal steward. Some believe this to be the tomb of Shebna referred to in Isaiah 22:15-16.

19:8. Sennacherib against Libnah. Libnah was in the Judean Shephelah eight miles northeast of the fortress city of Lachish. It is probably to be identified either with Khirbet Tell el-Beida or Tell Bornat (five miles further west), strategically located by the Wadi Zeita guarding the best route to Hebron from the coast. The Assyrian annals describe Sennacherib besieging Gath and Azekah, and wall reliefs at Nineveh show the siege of Lachish. Libnah was in this vicinity, showing that the Assyrian monarch was slowly moving toward the intended victim, Jerusalem.

19:9. Tirhakah. Tirhakah (Nubian: Taharqa) was a Kushite king of Egypt in the Twenty-Fifth Dynasty (reigned 690-664 B.C.). For geographical identification of Cush see comment on Numbers 12:1. Although no extrabiblical text confirms this, the biblical title "King of Kush" may have been given to him while he was crown prince. He was an energetic builder in Egypt, refurbishing temples and city walls at Memphis (his royal residence), Thebes and Napata. He left numerous inscriptions throughout Egypt. Tirhakah campaigned vigorously in the Levant preceding 674 B.C. In that year, Esarhaddon of Assyria attacked Egypt, only to be driven back by Tirhakah's forces. Three years later, however, Esarhaddon captured Memphis, causing the Egyptian monarch to flee to the south. Another Assyrian force came in 666 B.C., causing him to flee to Nubia. He was still recognized as king of Egypt until his death in 664.

19:12-13. list. Gozan was in Syria, where deportees from Israel had been sent (see comment on 18:11). Haran was west of Gozan along the Balikh River in present-day Turkey. Rezeph (Rasappa) mostly likely was the city that became an Assyrian provincial capital in Syria east of Emar and west of Mari along the upper Euphrates. The Aramean tribe of Bit-Adini (Eden) in northwest Syria had been conquered by Shalmaneser III (reigned 858-824 B.C.) and resettled in Telassar, which was most likely Til-Ashshuri ("mound of the Assyrians"), a site in the Zagros Mountain range near the Diyala River in Iraq. Hamath and Arpad were major Aramean city-states in Syria conquered by Tiglath-Pileser III (reigned 745-727 B.C.). Sepharvayim has been tentatively identified as Sipirani, south of Nippur, though Shabarain in Syria is still a possibility. Hena and Ivvah are unknown.

19:15. enthroned between the cherubim. The cherubim were winged creatures associated with the Israelite ark of the covenant and Yahweh's presence. They also accompanied Yahweh in his travels through the heavens (see Ps 18:11). They appear in Assyrian mythological texts as Karibu, angelic intercessors. In Assyrian art they are shown as various composite creatures with one or more faces (human, bovine, aquiline, lionlike) and two or four legs. For more information see comment on Exodus 25:18-20.

19:23. cutting down the cedars of Lebanon. Isaiah is paraphrasing the boasting of the Assyrian king Sennacherib. The Assyrian royal annals of the ninth and eighth centuries B.C. employed the motifs of traveling through difficult passes, cutting mighty trees and supplying the army with water. Sennacherib claimed to have felled the Lebanon cedars and used them to build his royal palaces and public buildings in Nineveh.

19:28. hook in the nose. This image has parallels in Assyrian literature and iconography. Esarhaddon is depicted on a stele from Zinjirli in Syria as leading Baal of Tyre and Tirhakah of Egypt by a rope tied to a ring through their lips. Ashurbanipal claims to have pierced the cheeks of Uate' (king of Ishmael) with a sharp edged tool and put a ring in his jaw. Thus Isaiah is again mocking Assyrian practices.

19:29 renewed agriculture. The verse implies that the countryside had been ravaged by the Assyrian army. That the Assyrians intentionally devastated an enemy's countryside is well attested in their annals. Tiglath-Pileser III destroyed the surroundings of Damascus by cutting its orchards. His annals describe similar destruction during his campaigns in Babylonia. In spite of all this, Isaiah tells Hezekiah that the "aftergrowth" would be sufficient for two years, before normal fieldwork resumed.

19:32. no arrow or ramp. Sennacherib has a detailed description in his annals concerning the sieges of forty-six cities and towns of Judah. Furthermore, the Assyrian king claims to have "caged up" Hezekiah in Jerusalem and surrounded the city with "earthwork." However, nowhere in the annals does Sennacherib claim to have begun a siege at Jerusalem, as he did at the other towns. He continues to describe the tribute sent to him by Hezekiah but not the capture of the city itself. For more information see the sidebars in

2 Chronicles 32.

19:35. deity wiping out enemy. In one of Ashurbanipal's inscriptions he claims that Erra (the deity representing plague) struck down Uaite (Arab king of Shumuilu) and his army for failing to keep the terms of their treaty agreement.

19:37. Nisroch. No divinity by this name is known from Mesopotamia. It may be an intentional alteration of a deity's name, such as Marduk, Nusku or Ninurta. This event took place on the twentieth day of the tenth month in the year 681, twenty years after the siege of Jerusalem.

19:37. Ararat. Ararat (or Urartu) was a powerful kingdom in present-day Armenia around the vicinity of Lake Van, Lake Urmia and Lake Sevan. Esarhaddon mentions his brothers who fought against his succession but does not state where they sought refuge. However, Esarhaddon demanded from the king of Shurpia in southern Ararat that he extradite runaway Assyrians, some of whom may have been the brothers in question. The kingdoms of Ararat posed a constant threat to the Assyrian's northern border for about three centuries (c. 900-600 B.C.). Excavations there have exposed a thriving civilization with sophisticated iconography and literature.

20:3. Hezekiah's prayer. A prayer of the Assyrian king Ashurnasirpal I (mid-eleventh century B.C.) is preserved in which he asks for healing from an illness on the basis of his faithfulness to the goddess Ishtar. Besides identifying himself as humble, reverent and beloved by the deity, he speaks of the many rituals that he has faithfully carried out. He mentions his tears and anxiety, and begs for gracious healing. The text of Hezekiah's prayer is found in Isaiah 38:9-20; see comments there.

20:7. poultice of figs. Fig cakes may have been used as condiments and for medicinal purposes at Ugarit. Both later rabbinical Jewish and classical sources (e.g., Pliny the Elder) shared the belief that dried figs had medicinal value. Poultices were sometimes used for diagnosis rather than for medication. A day or two after the poultice was applied, it would be checked for either the skin's reaction to the poultice or the poultice's reaction to the skin. One medical text from Emar prescribes the use of figs and raisins for such a process. They helped determine how the patient should be treated and whether or not he would recover.

20:11. shadow of the stairway of Ahaz. The "shadow of the stairway of Ahaz" may have been a type of sundial. The Qumran Scroll of Isaiah 38:8 renders this phrase "on the dial of the Ahaz roof chamber." A similar idea may be a house model excavated in Egypt that contains two flights of stairs for telling time. On the other hand the structure may have been simply steps leading to a roof or higher structure where shadows were cast at a certain time of the day. The text here does not mention that the structure was used to tell time. Alternatively it may have been something that was used to worship astral deities. If it does represent a mechanism for telling time, it would be the only mention of such a device in the Old Testament. Sundials are known in the Old Testament world from Babylon and Egypt, with archaeological samples going back to the fifteenth century B.C.

20:12. Merodach-Baladan. Merodach-Baladan (or Berodach-Baladan) is the Marduk-apla-idinna II of Assyrian and Babylonian sources. He was a Chaldean sheikh of the Bit-Yakin tribe who was allied with Tiglath-Pileser III of Assyria against another Babylonian ruler (c. 731 B.C.). Ten years later Merodach-Baladan took the throne of Babylon, and Sargon II was unable to remove him until 710 B.C. Once again he became a local Chaldean sheikh and was vassal to the Assyrian king. Upon Sargon's death in battle in 705 B.C. Merodach-Baladan helped to instigate a rebellion against Assyrian rule. It is here that the narrative of 2 Kings is likely to be placed. Based upon Hezekiah's actions against Assyrian rule, he apparently did act in concert with Merodach-Baladan's strategy. The Babylonian sheikh deposed the Assyrian appointee to the Babylonian throne and ruled from nearby Borsippa (703 B.C.) until he was deposed by Sennacherib, the new king of Assyria, in the same year. Merodach-Baladan fled to Elam, where he soon died.

21:1-26
Manasseh of Judah

For information on this section see comments on 2 Chronicles 33.

21:13. plumb line. The measuring line and plummet were ordinary tools used for the construction of mud-brick buildings throughout the Near East. A site was surveyed with a measuring line (usually a rope, cord or thread). The chief builder used a plumb line, weighted with tin or a stone, to test the integrity of the structure.

21:18. garden of Uzza. The garden of Uzza has not been located with any certainty. Some have speculated that it was at the cemetery located in the village of Siloam, east of the City of David. However, Uzza may be a short form

of Uzziah, the leper king of Judah. Thus this may have been Uzziah's private garden that was used by later kings.

22:1—23:30
Josiah of Judah

For information on this section see comments on 2 Chronicles 34.

23:1. function of the elders. The elders (patriarchal family heads) played a major role in the early tribal organization of Israel and evidently still had a function during the monarchy. Elders had been given authority in their local communities and may still have played a limited role in the political leadership during the monarchy. City elders also played a limited role in preserving stability and enacting laws in their communities in Babylonia. However, they did not initiate policy, as the central monarchy controlled the power source of the state, the economy and the armed forces.

23:2. public reading of documents. Even after the invention of the alphabet, many of the people in the ancient Near East were illiterate, and thus the public reading of documents had an important function. Assyrian sources describe heralds standing at city gates reading royal pronouncements to groups of onlookers.

23:3. pillar. The king stood near a pillar or column (platform, according to the Jewish writer Josephus). It may have been a standing structure in the temple reserved for royalty. No clear parallels for this custom exist elsewhere in the Near East.

23:4. constellations and starry hosts. Worship of the starry hosts refers to the worship of the celestial gods (sun god, moon god and Venus particularly; in Babylonia, Shamash, Sin and Ishtar respectively), who were primary in most ancient religions. Controlling the calendar and time, seasons and weather, they were viewed as the most powerful of the gods. They provided signs by which omens were read, and they looked down on all. By the end of the second millennium a major compilation of celestial omens, the seventy tablets of the work known as *Enuma Anu Enlil,* had been compiled and was consulted for nearly a thousand years. Stamp seals from Israel in this period show that astral deities were very popular. There were many constellations recognized by the Mesopotamian astrologers (many, though not all, the same we recognize today, transmitted through the Greeks), but the Zodiac is not yet known at this time. For more information see comment on 2 Chronicles 33:5.

23:4. Kidron Valley to Bethel. Kidron Valley was east of the City of David. Bethel was about ten miles along a main transportation route due north of Jerusalem. Bethel had been the site of the shrine of the golden calf until a century earlier, when the northern kingdom had fallen to Assyria. Josiah also desecrates the altar there (see vv. 15-16), so that is an appropriate place to dump the desecrating ashes of these religious articles.

23:5. pagan priests. The term "pagan, idol priests" (Hebrew, *komer)* has many parallels in the ancient Near East, especially from Assyria. Kumru priests are known from Old Assyrian Period documents from Cappadocia (c. 2000-1800 B.C.) and from a single document from Mari during the reign of the Assyrian king, Shamshi-Adad I (reigned 1814-1781 B.C.). An Arabian queen was given the title of kumirtu priestess in an inscription of the Assyrian king Ashurbanipal (668-631 B.C.). *Kumra'* is also the word for priest in Aramaic in the first millennium B.C. It is plausible that these priests mentioned here served the shrines of West Semitic deities such as Baal and Asherah, though some consider them renegade priests of Yahweh.

23:6. scattering of the dust over graves. The sequence of burn-grind-scatter-eat is also found in a Ugaritic text to indicate total destruction of a deity—every destructive action is being carried out. The scattering of the dust on the graves is a final act of desecration on the image.

23:7. male shrine prostitutes. The Hebrew term, *qedeshim,* refers to "sacred males." Little is known about this practice, but it was thoroughly condemned and may well have had to do with cultic prostitution (see Deut 23:18-19). Cognate terms are found in Akkadian and Ugaritic, where they are also not clear in terms of function. The root means to be ritually clean. A *qadishtu* in Akkadian was a woman of special status. She had particular functions in the temple (midwife, wet-nurse and devotee of the god of the temple) none of which appear to be obviously of a sexual nature. A similar situation can be found at Ugarit. The condemnation of the males here in 2 Kings 23:7 may have had to do with the fact that they were devotees of foreign deities.

23:7. weaving for Asherah. Apparently the women were weaving types of coverings or vestments to adorn the Asherah statue (or pole). The fashioning of woven and embroidered garments used to place on the statues of gods in Mesopotamia is well known.

23:8. desecrating high places. Desecration of sacred places occurs when forbidden cultic practices are performed there. The laws for

preserving the purity of Yahweh's sacred places are outlined in the book of Leviticus, but these desecrate the temple because they represent things not acceptable in Yahweh's presence. Other actions may cause desecration to the shrines of other gods. There were, however, certain common desecrating actions. Turning what had once been a sacred area into a graveyard (see v. 14) or a latrine (see 10:27) would bring permanent desecration.

23:8. Geba to Beersheba. Geba (modern Jaba) was a small village in the territory of Benjamin about six miles north of Jerusalem. No excavations have been conducted there, but surface surveys have found Iron Age remains on the site. It overlooks the strategic pass across the deep canyon of the Wadi Swenit from Micmash that leads from the north into the region of Jerusalem. It probably functioned as a border shrine city. It is paralleled with Beersheba, the southernmost town in Judah. Archaeologists found a dismantled horn altar there that may have been destroyed during the period of Josiah. At any rate the phrase here makes it clear that Josiah purged the entire land of Judah (from north to south) of foreign worship practices.

23:8. shrines at the gates. At Dan standing stones were found at a shrine just inside the city gate, and the clear remains of the presentation of votive offerings were evident. It is thought that the standing stones represented some of the deities of cities that had fallen to Israel. The votive offerings would be in fulfillment of vows made to those deities (perhaps for their aid in overthrowing the city the Israelites were fighting against). For more information on standing stones see comment on 17:10.

23:8. gate of Joshua. The gate of Joshua is not mentioned elsewhere in Scripture, and its precise location is not known. It may have been an alternative name for one of the Jerusalem gates. This was presumably the gate of the governor of the city, who was the highest official in the city administration. A seventh-century B.C. seal from Judah has been found with an inscription in a cartouche reading "governor of the city." There is an artistic scene on the seal that is reminiscent of Assyrian symbolism.

23:9. eating unleavened bread. The term here for unleavened bread is either a generic term for grain offerings or unleavened cakes to be eaten at the Passover celebration. Since leaven was associated with spoilage, and therefore impurity, unleavened bread was used in most sacred ceremonies.

23:10. Topheth, Ben Hinnom, Molech. Topheth was the cultic installation where children were offered to the god Molech. The word is thought to signify the hearth where the child was placed. The Hebrew term has parallel terms in both Ugaritic and Aramaic with the meaning "furnace, fireplace." Scholars have thought that Topheth was at the edge of the valley of Ben Hinnom before connecting with the Kidron Valley. The valley of Ben Hinnom has been identified with Wadi er-Rababi southwest of the City of David. Many consider Molech to be a netherworld deity featuring rituals with Canaanite origins focusing on dead ancestors. An eighth-century B.C. Phoenician inscription speaks of sacrifices made to Molech before battle by the Cilicians and their enemies. The name Molech appears to be related to the Hebrew term *mlk* ("to rule"). Sacrifices to Molech were done at the installation of Baal, which may mean that the term was an epithet of Baal himself, as well as other deities (Jer 32:35).

23:11. horses and chariots dedicated to the sun. White horses were used in important ritual functions in Assyria and were usually associated with Ashur and Sin, major deities in the Assyrian pantheon. White horses were dedicated at the feet of a certain deity. Moreover a number of Assyrian deities rode a horse-drawn chariot on festival days. In Assyrian mythology the sun (god) was carried across the sky in a chariot driven by his charioteer Rakib-il. In the syncretism referred to here, Yahweh was probably being worshiped as a sun god, and the chariot and horses represented his vehicle. Archaeological evidence is provided by Iron Age horse figurines with solar disks and by the Taanach cult stand, which portrays a horse with a sun-disk on its back. This would have some similarity with the golden calf imagery where the calf served as a pedestal or the ark of the covenant that functioned as a footstool. None of these portray deity, but they represent his throne.

23:12. upper room of Ahaz. The upper room typically functioned as an audience chamber, so these were in a prominent location in the palace.

23:13. hill of corruption. The Hebrew phrase for "Hill of Corruption" is probably a wordplay on "Mount of Ointment, or Olives." It has been precisely identified as the hill rising above the modern Arab village of Silwan.

23:13. Solomon's idols. The amenities that Solomon had provided for his foreign wives included the construction of altars and shrines for their worship of their own gods (see the comments on 1 Kings 11:5-7).

23:14. covered with human bones. It is presumed that the human bones were thrown onto the refuse so no one would try to retrieve the items. This was because of the taboo of coming into contact with dead bodies (see comment on Num 19:11).

23:16. exhumation. Josiah is fulfilling the prophecy in 1 Kings 13:2. In both Mesopotamia and Israel the worst criminals were not accorded a proper burial, and their bones were either burned or discarded. This was the worst possible thing for an individual, since one's spiritual existence was intertwined with their physical existence (for more information see comments on Num 3:12-13 and Joshua 8:29). Thus if one's bones were destroyed, the individual's existence was also extinguished.

23:21-30. Passover celebration. For information see comments on 2 Chronicles 35.

23:31-35
Jehoahaz of Judah

23:31. chronology. Jehoahaz began and ended his short reign of three months in 609 B.C., not long after the final collapse of the Assyrian empire at Harran and on the verge of the monumental struggle between Egypt and Babylon for supremacy in the Near East.

23:33. relations with Egypt. The Levant was an unstable area after the collapse of Assyria in 612-610 B.C. Egypt and Babylon now fought a furious war for supremacy in the area. Egypt apparently tried unsuccessfully to lift the siege of the last Assyrian center at Haran in 610-609 B.C. Josiah of Judah tried to block Egypt's invasion of Syria but was wounded at the battle of Megiddo and subsequently died. Because of the power vacuum in the area, Judah became an Egyptian protectorate (609-608 B.C.). Four years later the Egyptians, although delayed, now traveled north and battled the Chaldeans at Carchemish, suffering a tremendous defeat (605 B.C.). The Chaldeans followed by invading Egypt in 601-600 but suffered heavy casualties. At any rate, Judah was only temporarily under the leadership of Egypt.

23:33. Riblah in Hamath. Riblah (modern Tel Zerr'a) was an important administrative and military town near Kadesh on the Orontes River in Syria about twenty miles south of the major Aramean center of Hamath. The Assyrians had set up a fortress here in the eighth century. Later Nebuchadrezzar II of Babylon used it as headquarters during his campaigning in the west.

23:33. tribute imposed on Judah. This is considerably less than the fine imposed upon Hezekiah (three hundred talents of silver and thirty talents of gold; 2 Kings 18:14). The percentage of silver (seven thousand five hundred pounds) to gold (seventy-five pounds) is also different (100:1 instead of 10:1).

23:34. name changing. The name change was somewhat minimal, as the theophoric element (God's name contained in the name) was altered, from El- (generic for god) to Jeho- (for Yahweh). The name change probably had to do with a loyalty oath to a new overlord, which the Assyrian kings had also done. In the previous generation, Psammeticus I of Egypt (father of Necho) was renamed Nabushezibanni by the Assyrian king Ashurbanipal when he was installed as a district ruler. Notice also the name change for Daniel and his friends (Dan 1:6-7).

23:36—24:7
Jehoiakim of Judah

23:36. chronology. Jehoiakim's reign of eleven years was from 609 to 598 B.C. During this time, Nebuchadnezzar of Babylon fought a fierce battle at the Egyptian border in 601-600 with unclear results. Both armies were severely depleted, and the Chaldean king was unable to invade Egypt. This may have encouraged Jehoiakim to rebel against Babylon.

24:1. Nebuchadnezzar and Jehoiakim. Nebuchadnezzar II took the throne of Babylon in 605 B.C. after his victory against Egypt at the Battle of Carchemish in the same year. From that time on Jehoiakim was vassal to Babylon during most of his reign. The Babylonian Chronicle states that the Chaldeans were able to wrest control of the Levant from Egypt after this. Nebuchadnezzar attempted to follow up with an invasion of Egypt (601-600). This attack apparently crippled the Chaldeans for a brief period, possibly causing Jehoiakim to ally himself with Egypt. Nebuchadnezzar's response was to attack Judah with garrison troops from the west. Jehoiakim was captured and shackled (see 2 Chron 36:6), but appears to have avoided exile since he died in Judah.

24:2. invading raiders. The Chaldeans were the designation of the Semitic-speaking people of Nebuchadnezzar II of Babylon. They are mentioned in Assyrian records as inhabiting Babylonia by the beginning of the first millennium B.C. Though we are most familiar with the Arameans connected to the Aramean state north of Israel, there were also eastern Arameans, a Semitic-speaking people who inhabited much of the Tigris-Euphrates Valley, who often appear alongside the Chaldeans. It appears that the Chaldeans were more of a town-based group, while the Arameans were seminomadic. According to Babylonian sourc-

es, the Moabites and Ammonites were subjects of Babylon and were thus required to send troops against a recalcitrant neighbor.

24:7. Babylon versus Egypt. Nebuchadnezzar II attempted to follow up his victory over the Egyptians at Carchemish by invading Egypt in 601-600. They met at the Wadi of Egypt (probably the Wadi el-Arish on the eastern edge of the Nile Delta region). There was evidently a fierce battle, and the troops of Nebuchadnezzar were unable to conquer Egypt. However, the Babylonians were able to regroup for another campaign in the Levant soon thereafter, and the Egyptians were unable to muster a defense against them.

24:8-17
Jehoiachin of Judah

24:8. chronology. Jehoiachin's brief reign was in the last month of 598 and the first two months of 597. Since Jehoiachin appears to have come to the throne while Nebuchadnezzar's army was on the way to Jerusalem, his father, Jehoiakim, can be seen as instigating the trouble that brought the Babylonians west.

24:10-11. 597 siege of Jerusalem. In response to Judah's rebellion, the Chaldeans attacked Jerusalem in 597. The Babylonian Chronicle states that the siege lasted a mere three months, probably the entire reign of Jehoiachin. Although Nebuchadnezzar took credit for the victory in his annals, he did not preside over the campaign but left it to his generals. The relative ease with which the city was captured may be explained by the fact that it was during winter and food would have been scarce. The city's population would have been much larger than normal, since those in the outlying areas of Judah sought refuge in Jerusalem.

24:12. Jehoiachin's imprisonment. The quick surrender by Judah may be the reason why the Babylonians were somewhat lenient in their treatment of the Judahites. The deportation of a rebellious monarch was common treatment by both the Assyrians and Babylonians. They were looked upon as rulers that had broken a loyalty oath with the Babylonians (or Assyrians) and were duly punished. The conquerors normally installed a monarch who was sensitive to their cause, often from the same royal house in order to preserve some sense of continuity with the local population.

24:14. deportation. Though we have no records from Babylon concerning deportation practices, it can be assumed that they inherited Assyrian administrative practices to a certain extent. It was typical policy to deport influential people (rich and the military) as well as skilled workers, who could be employed cheaply in Babylon. The "poor of the land" were either not useful or were not considered a threat by remaining in the land of Judah.

24:17. name changing. As with Jehoiakim, Mattaniah was required by the Babylonians to change his name. The Babylonian Chronicle simply states that Nebuchadnezzar II appointed a king of his choice in Judah and that the new king "was after his heart," meaning that he had been "domesticated" by the Babylonians. As before, the Babylonians thought it in their own best interest to give the king another Hebrew name, so as not to incite rebellion.

24:18—25:26
Zedekiah of Judah and the Fall of Jerusalem

24:18. chronology. Zedekiah, the last king of Judah, reigned from 597 to 586. Necho II (r. 610-595), Psammeticus (r. 595-589) and Apries (r. 589-570) were rulers of Egypt, while Nebuchadnezzar II (r. 604-562) ruled the Chaldean empire.

25:1. siege of Jerusalem. The Babylonians evidently used a siege "wall" (as opposed to a ramp) to attack Jerusalem in 587-586. Assyrian sources describe Esarhaddon using the same type of contraption for his conquest of Shurbia, a Urartian kingdom south of Lake Van, in 672. Esarhaddon claims that his troops "climbed over the siege wall to do battle." This siege wall was probably made higher than the city wall, so as to allow the soldiers to climb atop the defender's wall. As with the Assyrians during Sennacherib's siege of 701, the Babylonians systematically destroyed the Judahite fortresses on the countryside, including Lachish (see Jer 34:7). Another purpose in removing the military threats surrounding Jerusalem was to discourage any Egyptian interference.

25:4. flight of army. It can be assumed by the context of this difficult verse that the king and his bodyguard attempted to escape by the east. The "men of war" may refer to the Babylonian soldiers who made a breach in the city wall, causing Zedekiah to flee.

25:5. plains of Jericho. The king took the Arabah Road (see v. 4), the road from Jerusalem to Jericho, which was in the steppe land of the Jordan Valley rift. The plains of Jericho are stretches of flat and dry ground east of Jericho. It was an open area, which made it easy for the Babylonian troops to retrieve the fugitives.

25:7. Zedekiah's treatment. Blinding was a common treatment of rebellious slaves (even

subject kings) in the ancient Near East. The Assyrian vassal treaties mention blinding as a curse for a future violator of a loyalty oath. Other Assyrian sources mention the blinding of one eye of prisoners of war, in order that they could still be used as a work force but would have been rendered incapacitated in war. Zedekiah was put in a "house of punishment," corresponding to an Assyrian word for prison.

25:8-10. fall of Jerusalem. Nebuzaradan, the commander of the Babylonian armed forces, was the "chief cook" mentioned in a list of high officials of Nebuchadnezzar II. The title "chief cook," like that of "chief cupbearer," was an archaic term for those in high positions in Assyrian and Babylonian courts. They were often sent on military and diplomatic missions (e.g, the Rabshekah was the "chief cupbearer" to Sennacherib, 2 Kings 18:17). Nebuzaradan was responsible for the destruction of the city of Jerusalem, for sending Judahite high officials to be executed (vv. 8-12, 18-21) and for the deportation of a number of the Judahites a few years later (c. 582 B.C.; Jer 52:24-30). Typical of Assyrian and Babylonian practice, Nebuzaradan destroyed the major public centers in the city and the protective walls of the city to make it vulnerable to further attack.

25:13-17. plunder of Jerusalem. The writer of 2 Kings is probably reciting this list of items from nonextant official temple records of Judah. It can be compared to 2 Kings 17:15-20, where the original manufacture of the items was recorded. The large list of bronze objects may be a booty count. The items in 2 Kings 17 that were omitted here had been sent to Assyria in previous years (e.g., twelve bronze bulls were sent by Ahaz to Tiglath-Pileser III; 2 Kings 16:17). No Babylonian sources describe the inventory taken from Jerusalem.

25:22. governorship. It is possible that Gedaliah had previously been in the service of King Zedekiah, based upon a seal impression of the late seventh century B.C. from Lachish that reads, "belonging to Gedaliah, the Royal Steward." Alternatively, however, that bulla may refer to another Gedaliah of this period (see Jer 38:1). The name Gedaliah is also found on an ostraca from Arad. He was probably a ranking member of the "pro-Babylonian" party in Jerusalem. Similar to the Assyrians, the Babylonians desired to found an administrative core with a strong Babylonian presence in Judah. Contrary to Assyrian practice, however, the Babylonians did not repopulate Judah with people from other parts of the empire.

25:23-25. Mizpah. This was the capital of what was left of Judah. Mizpah is an eight-acre site located about eight miles north of Jerusalem. For information concerning its earlier history see comments on 1 Samuel 7:5 and 2 Chronicles 16:6. Recent reassessment of excavation reports have identified an occupation level from this period. One of the artifacts found at the site was a seal belonging to "Jaazaniah, the servant of the king"—likely the same individual mentioned in verse 23.

25:27-30
The Release of Jehoiachin

25:27-30. Jehoiachin in Babylon. The thirty-seventh year of Jehoiachin's exile was 560 B.C. Evil-Merodach (Babylonian, Amel-Marduk, "the man of Marduk") ruled Babylon from 562 to 560. He was the son and successor of Nebuchadnezzar II. He was assassinated by his successor Neriglissar. Very few sources remain from his brief reign. Jehoiachin was given the "seat of seats" by Evil-Merodach, implying that there were other royal prisoners in Babylon. The Unger Prism gives a list of kings who were prisoners in Babylon during the reign of Evil-Merodach. They include the kings of Tyre, Gaza, Sidon, Arvad and Arpad. Jehoiachin is mentioned on a rations list from Babylon, confirming the biblical information that he was fed at the king's table.

1 CHRONICLES

1:1-54
Genealogies of Adam Through Jacob and Esau

1:1-4. Adam's sons. More detail of this section of the genealogy may be found in Genesis 5.

1:5-27. Noah's sons. More detail of this section of the genealogy may be found in Genesis 10 and 11.

1:13. peoples of Canaan. For more information on these people groups see comment on Exodus 3:8.

1:29-54. non-Israelite descendants of Abraham. Comments on these genealogies can be found as follows: Hagar (Ishmael) in Genesis 25:12-18; Keturah, Genesis 25:1-6; Esau, Genesis 36.

2:1—7:40
Genealogies of the Twelve Tribes

2:42-55. prominence of Caleb. Caleb and Joshua were the only representatives of the exodus generation to enter the land of Canaan. Caleb was given a special land grant within the tribe of Judah's holdings in the vicinity of Hebron (Josh 14:6-15). Since the genealogies are being used for land claims, it is important for Caleb's standing to be recognized.

3:1-16. royal line of David. The other prominent line in the tribe of Judah was, of course, the royal line. A number of these names are represented in variant forms from those that were used in Kings: Abijah/Abijam; Joram/Jehoram; Azariah/Uzziah; Shallum/Jehoahaz; Jehoiachin/Jeconiah. Most of these can be explained in one of three ways: (1) variations within spelling of the divine name in the name; (2) variant words with the same meaning; or (3) throne name versus personal name.

3:17-24. postexilic descendants of David. Most of these individuals are unknown outside of this list. Exceptions are Zerubbabel, of whom considerably more is known (see comment on Ezra 3:2), and Hattush (v. 22) who is known only as one who returned with Ezra (Ezra 8:2).

4:21. linen workers at Beth Ashbea. The reference to Mareshah earlier in the verse leads to the suspicion that Beth Ashbea too should be located in the Shephelah between the Jerusalem hills and the coastal plains, but it is impossible to be more specific at this time. Guilds of craftsmen were typically connected with particular towns that had chosen to specialize in that industry. Knowledge of the craft would be passed on from generation to generation. An Alalakh text lists over sixty such house industries as early as the fifteenth century B.C. Textile production was a common industry that was done on a small scale in most homes, but also could support large industrial centers. Linen technology required the processing of flax as well as spinning, dying and weaving facilities.

4:21. men of Cozeba. If it can be identified at all, Cozeba is likely a variant spelling of Achzib in the Shephelah. This has tentatively been associated with the modern site of Tel el-Beida, about five miles from Mareshah.

4:21. king's potters at Netaim and Gederah. It can be assumed that the palace or temple sought to attract to itself the best artisans of the trades that they had need of. Sponsorship would have included providing supplies, workshops, equipment and perhaps some slave labor to help with menial tasks. Addi-

SIGNIFICANCE OF GENEALOGIES TO POSTEXILIC AUDIENCE

Though most of the material of Chronicles covers the history of the preexilic period, it is written for those who returned from the Babylonian exile in the sixth and fifth centuries, and reestablished themselves in the land. Genealogies to them represented the charter of their identity. Their covenant with the Lord had established them as an elect people of God living in the land promised by him. Their family lineage was their certificate of membership. It was their heritage and their legacy. Often in the ancient world genealogies served sociological rather than historical functions. Instead of offering a strictly sequential report of the order of generations, they were designed to use continuity with the past as an explanation of the current structure and condition of society. Israel carried along with this an additional theological emphasis and significance that was inherent in their genealogical reports. Continuity with the past would give meaning to their current theological situation. Individuals in the ancient world found their identity not in their individualism but in their solidarity with the group. This included not only those that made up their contemporary kinship group but extended throughout the generations. The genealogies were their way of fitting themselves into this pangenerational solidarity. Every generation is not necessarily represented. One might compare the selective list of heroes of the faith in Hebrews 11. Americans today take pride in being able to trace their ancestry back to those who crossed on the Mayflower or those who signed the Declaration of Independence. The difference is that in Israel these connections gave rights and privileges rather than being simply status symbols.

tionally they would receive rations, clothing and other needs. The towns mentioned here are again to be found in the Shephelah, but there is no consensus concerning their specific identification.

4:41. Meunites. A number of very different opinions exist concerning the identification of this group. The first is that it should be identified with the Minaeans of South Arabia. Their control of the incense trade had extended up into the region of Palestine by the fourth century. Others would identify the group with the Mu'unaya mentioned in the inscriptions of Tiglath-Pileser III. A third possibility links them to the town of Maon south of Hebron in the hill country of Judah.

4:42-43. new Simeonite territory. The new territory occupied by the Simeonites is due south of their assigned territory in the Negev but probably still west of the Arabah and east of Kadesh-barnea. Moving to this area entails a migration of perhaps forty or fifty miles.

5:1. Reuben's forfeiture. For information on this incident see Genesis 35:21-22.

5:8-9. area of settlement. The Reubenite settlement is in Transjordan alongside the north half of the Dead Sea from the Arnon River (Wadi Mujib) on the south to the Medeba plateau and Mount Nebo on the north. An area often held by the Moabites, it is about twenty miles square.

5:10. Hagrites. The inscriptions of Tiglath-Pileser III mention a tribe of Arameans called the Hagaranu that some have associated with the Hagrites. At this time, however, little is known of them.

5:16. territory of Gadite settlement. Gilead and Bashan are two areas that cover nearly one hundred miles (north-south) of Transjordan. Gilead is the hilly section of Transjordan between the Jabbok on the south almost to the Yarmuk on the north. Bashan is in the area (known today as the Golan Heights) bordered by Mount Hermon to the north, Jebel Druze (Mount Hauran) to the east, the Sea of Galilee to the west and the Yarmuk region to the south. Bashan proper, more limited to the region of the (upper?) Yarmuk, is a broad, fertile plateau region noted for its grazing. Salecah (v. 11) is about sixty miles east of the Sea of Galilee, south of Mount Hauran. The pasturelands of Sharon refer to a location in Transjordan that remains unidentified. The Moabite Inscription also refers to such an area, but does not locate it.

5:19. battle against the Hagrites and allies. The allies with the Hagrites are Arabian tribes. Jetur (by Roman times, Itureans, northeast of Galilee, see Luke 3:1) and Naphish are known from Ishmael's descendants (Gen 25:15). The region of Naphish is referred to in a seventh-century letter to the Assyrian king Ashurbanipal. Nodab (perhaps Adbeel in Gen 25:13) may also be listed in Assyrian records (Tiglath-Pileser III) as a tribal group in Transjordan. Aside from these passing references, nothing is known of these peoples or of this battle.

5:21. plunder. The numbers of livestock and human captives are incredibly large. In comparison, the totals from twenty years of campaigning by the extremely successful Shalmaneser III produced 110,610 prisoners, nearly 10,000 horses and mules, over 35,000 cattle, nearly 20,000 donkeys, and nearly 185,000 sheep. Sennacherib's campaign to Babylon netted 20,000 people, 11,000 donkeys, 5,000 camels, and 800,000 sheep.

5:26. Assyrian relocation of Transjordanian tribes. Tiglath-Pileser III (originally named Pulu) invaded Upper and Lower Galilee in 733 B.C. and reported that he deported 13,520 people (see comment on 2 Kings 15:29). In this campaign the northern kingdom of Israel was reduced to only Samaria and its surroundings, which survived independently for another twelve years. The relocation sites focus on the middle Euphrates, where Gozan (Guzanu=Tel Halaf, about one hundred miles east of Carchemish) is located on the Habur River. Halah is identified as Halahhu of the Assyrian inscriptions, which was located about eight miles northeast of Nineveh.

6:31-46. Levitical musicians. David's three chief musicians, Heman, Asaph and Ethan, all have long and distinguished pedigrees going back to their ancestor Levi through various lines. In the ancient world there were musicians' guilds that serviced shrines and sanctuaries. As early as the third millennium in Egypt there were priests that oversaw the musicians who performed in worship. Hittites and Babylonians both had musicians among temple personnel. Many religious situations, from individual rituals to ceremonies to festivals, were accompanied by musical performance (both vocal and instrumental). For more information see comment on Amos 5:23.

6:48-49. respective duties of Levites and Aaronide priests. The Aaronide priests were more directly involved in the performance of sacrifices and the duties connected to the holy place. The Levites were more directly connected with the other aspects of the sacred enclosure. These would include controlling access to the sacred area and providing for the supply and upkeep of the sanctuary

(see details in 9:22-33).

6:55-56. distinction between villages and pasturelands. The land immediately surrounding Hebron was part of the grant to the Levites. This verse clarifies, however, that the settlements in the Hebron region, including the arable land around them, was still the portion of Caleb.

6:64. Levitical cities. For information on the Levitical cities see comments on Numbers 35:1-5 and Joshua 21:3-40.

7:28-29. territory of Ephraim and Manasseh. Ephraim's settlements ranged from Bethel in the south to Shechem in the north and did not include either the coastal plain (Gezer was the western limit) or the Jordan Valley. Manasseh was positioned north of Ephraim, and included the Samarian hills (up to Gilboa) and the Carmel range skirting the southern end of the Jezreel Valley (thus including Taanach and Megiddo). Manasseh territory included the Jordan Valley (Beth Shan) and the coastal plain (Dor) up to the Carmel promontory.

9:1. royal genealogical lists. There would be a number of reasons to keep genealogical lists in the official palace archives. First, whether land possession was on the basis of royal grant or divine grant, it was tied to families. Therefore property disputes often had to be settled by reference to genealogical records. Second, conscription for government service, whether in labor corvees or for military duty, was conducted on the basis of census figures, as was taxation. Census records typically would have been organized by genealogical categories.

9:3. significance of resettlement lists. This list is composed of those who settled in Jerusalem. It is distinct from the previous lists because they all addressed ancestral holdings being resettled. The reason Jerusalem had so few to live in it is that many of the families of Jerusalem had been decimated in the Babylonian destruction of that city. For people of other tribes to live in Jerusalem, they would have to neglect (if not give up) their ancestral lands in their tribal territories. Willingness to make that sacrifice in order to repopulate Jerusalem merited special notice.

9:22-27. gatekeepers. One of the most important tasks assigned to priestly personnel was controlling access to the temple precinct, the inner circle of the "sacred compass" (on this concept see comments on Lev 16:2 and Num 18:1-7). Defiling the sanctuary with impurity required a purification offering ("sin" offering, see comment on Lev 4:1-3) and could bring punishment on the individual as well as the people. The gatekeepers had to prevent unqualified intrusion. There were also many valuable items in the temple precinct. Gold and silver were plentiful and a temptation to the unscrupulous individual who may not have feared divine retribution for trespass or theft of temple property. These valuables also had to be guarded. Misappropriation of that which was sacred required a reparation offering ("guilt" offering, see comment on Lev 5:14-16). The gatekeepers were charged with guarding against these offenses.

9:28-33. other Levitical duties. All sorts of skills were useful within the priestly ranks. Accounting for the sacred vessels (remember, mostly made of gold) involved inventory procedures, a control and record of usage, and care for and storage of the vessels. The consumables also had to be inventoried and replenished, and there were special sacred recipes for some of the mixtures that were used (see comment on Ex 30:23-25).

10:1-14
The Death of Saul

For comments on the details of this section see 1 Samuel 31.

11:1-9
David Becomes Kings and Conquers Jerusalem

For comments on the details of this section see 2 Samuel 5.

11:10-47
David's Mighty Men and Their Exploits

For comments on the details of this section see 2 Samuel 23:8-39.

12:1-40
David's First Army

12:2. ambidextrous warriors. Left-handedness was not acceptable in the ancient world because it was generally associated with evil or demons. As a result, anyone who was left-handed became ambidextrous because the use of the left hand in many situations was not approved. In battle, however, the ability to use either hand could become a distinct advantage. For instance, battle strategies were often designed to force the enemy to be moving to their left while fighting. For a right-handed soldier, this would put his shield (in

his left hand) away from the enemy and expose him to attack. An ambidextrous soldier could easily switch the shield to his right hand without compromising his ability to fight as he moved. An ambidextrous bowman using a tree or rock for protection would have a wider range of target available because he could shoot from either side without exposing himself to the enemy.

12:15. crossing the Jordan at flood stage. The first month begins in March, when the spring temperatures were melting the snow in the mountains and causing the Jordan to reach flood stage. There is an interesting inscription of Sargon II of Assyria (eighth century) where he claims that he led his army across the Tigris and Euphrates at flood stage as on dry ground. On the one hand, this posed considerable risk to those crossing, but on the other hand (for that very reason), it often made surprise attacks possible because no one would be expecting the crossing to be made.

12:23-40. tribal alliance as foundation for kingship. Israel was still a tribal society despite the decision to have a king at their head. As a result, any potential king needed to procure the backing of the tribal leadership and the military contingents of the clans to support his bid for the throne.

13:1-14
Failed Attempt to Bring the Ark to Jerusalem

For comments on the details of this section see 2 Samuel 6:1-11.

14:1-17
Victory over the Philistines

For comments on the details of this section see 2 Samuel 5:17-25.

15:1—16:43
Bringing the Ark to Jerusalem

15:1. David's building projects in Jerusalem. The only project the biblical text names is the royal palace. Archaeology has, unfortunately, not been able as yet to identify any other buildings built in Jerusalem in the time of David. For the royal palace see comment on 2 Samuel 5:11.

15:20-21. music styles. The terms "alamoth" (used in the titles of Psalm 46 with a possible variation in Ps 48:14 and the title to 9) and "sheminith" (psalm titles to 6 and 12) are left untranslated in the NIV because there is still uncertainty concerning their technical meanings. The former term in its nontechnical use means "maidens" and is therefore sometimes interpreted as being in the soprano range. The latter term means "eighth" and is thought to suggest a certain placement on the octave. Akkadian texts demonstrate the knowledge of the seven-note scale and various keys ("tunings"). Some of the Akkadian notations also concern the intervals used for filling out the chords (e.g., thirds).

For comments on the remaining details of this section see 2 Samuel 6:12-23.

16:26. gods are idols. See comments on Leviticus 26:1 and Deuteronomy 4:15-18.

16:39. tabernacle at high place in Gibeon. Outside of Chronicles there is no specific mention of the tabernacle being at Gibeon. Gibeon is located just six miles northwest of Jerusalem, and 1 Kings 3:4 identifies it as the most important high place and indicates a functioning altar there.

16:42. instruments in worship in the ancient Near East. See comments on 6:31-46.

17:1-27
Covenant Promises to David

For comments on the details of this section see 2 Samuel 7.

18:1-17
Establishment of David's Kingdom

For comments on the details of this section see 2 Samuel 8.

19:1-19
Ammonite War

For comments on the details of this section see 2 Samuel 10.

20:1-3
Defeat of Rabbah

For comments on the details of this section see 2 Samuel 11:1; 12:29-31.

20:4-8
Battles with the Philistines

For comments on the details of this section see 2 Samuel 21:15-22.

21:1-30
David's Census

For comments on the details of this section see 2 Samuel 24.

22:1-19
Preparations for the Building of the Temple

22:2. stonecutters. The dressed stone used in this period is known as ashlar masonry. An iron chisel was used to dress the margin around the edges, while the central part of the rock face was left unworked. In the area around Jerusalem limestone was particularly abundant and could be quarried nearby, but harder stone had to be brought from greater distances. Basalt was available in quantity in the Galilee and the Golan; granite was available in the southern Arabah near Eilat under a cover of sandstone. To quarry large blocks, wooden wedges were driven deeply into cracks and then soaked with water. As the wood expanded it would split the rock. Heavy blocks were moved into place by means of lead balls being spread on the block below. Subsequent blocks would flatten the lead balls.

22:3. iron nails and fittings. At this period iron was being widely used but was still considered decorative. The fittings were most likely decorated plates or bands attached to the door by the nails.

22:3. bronze work. Bronze was refined in a crucible, and then molds were used to give it its shape.

22:4 cedar wood. The principal use of cedar was for making the intricate paneling in the interior rooms. A second possible use was in the beams that would have been interspersed between the courses of stone work. Many of the carvings that were done for the temple used olive wood rather than cedar.

22:14. one hundred thousand talents of gold. This is an immense amount of gold. Its weight of 3750 tons would fetch about $45 billion at today's prices, but it represents far more in buying power equivalence. This is by far the largest amount of gold referred to in the Old Testament. Elsewhere in Chronicles there is mention of 3000 talents (112 tons) of gold (1 Chron 29:4). Outside of Chronicles the largest number is 666 talents (25 tons) of gold, which was the amount Solomon was said to receive yearly. In Egypt the largest known donation of gold and silver made by a pharaoh to the gods is the 200 tons by Shishak (who got lots of it from Jerusalem). In Assyrian inscriptions, kings such as Tiglath-Pileser III, Sargon II and Shalmaneser III rarely list the specific amount of gold taken in tribute or plunder, and when they do it is usually between ten and fifty talents. Centuries later Persepolis was believed to possess the richest hoard in the ancient world. At the time of Alexander's conquest its treasure of gold and silver was valued at 120,000 talents (=4,500 tons) of silver.

22:14. how much gold? In 1993 the statistics for the world mineral reserve base listed a total of 55,435 tons. The United States Central Bank gold reserve was about 9000 tons. A cube of pure, solid gold that is one foot per side weighs 1200 pounds (worth over $7 million in today's market). Solomon's contribution would have filled a standard two-car garage floor to ceiling with such blocks (6250 of them). If the builders would have stacked up blocks such as this they could have built the outer walls of the two main chambers of the temple one foot thick around three sides (with dimensions of 90 by 30 by 30.

22:14. one million talents of silver. As with the number in the last entry this is an enormous amount (almost 40,000 tons) and far exceeds anything else from biblical or extrabiblical sources.

23:1—26:32
Levites and Their Duties

23:28-31. duties of the Levites. See comments on 9:22-33.

24:6. scribe. Scribes in the ancient world were the accountants, the historians, the journalists, the personal secretaries, the tutors and the librarians of their day. Much of a scribe's training involved language and writing, and his apprenticeship would give him additional specialized skills. While many scribes were never more than clerks or middle-class functionaries, some scribes gained wide renown as sages, and others could rise to the rank of prime minister, as is evident in the texts form Ugarit.

25:1. connection between music and prophecy. Typically prophets would use various procedures in order to prepare themselves for receiving prophetic oracles. Music played an important role in inducing a trancelike state (ecstasy) that was seen as making one receptive to a divine message. In the Mari texts there is an entire class of temple personnel who were ecstatics and who often provided prophetic messages.

26:15. storehouse. This term occurs only here and in Nehemiah 12:25. In Akkadian the term refers to the outbuildings at the gates of temples, which fits well the more specific usage in Nehemiah.

26:16. Shalleketh gate. This is the only reference to this gate, and its positioning and function are obscure. From the context it appears to be on the west side (the rear) of the temple area but is not the west gate. Since there is a

forum area to the west (see comment on 26:18), perhaps this gate led into the west end of the forum area while the west gate led from the forum into the temple area.

26:16-18. role of the gatekeepers. One of the most important tasks assigned to priestly personnel was controlling access to the temple precinct, the inner circle of the "sacred compass" (on this concept see comments on Lev 16:2 and Num 18:1-7). Defiling the sanctuary with impurity required a purification offering ("sin" offering, see comment on Lev 4:1-3) and could bring punishment on the individual as well as the people. The gatekeepers had to prevent unqualified intrusion. There were also many valuable items in the temple precinct. Gold and silver were plentiful and a temptation to the unscrupulous individual who may not have feared divine retribution for trespass or theft of temple property. These valuables also had to be guarded. Misappropriation of that which was sacred required a reparation offering ("guilt" offering, see comment on Lev 5:14-16). The gatekeepers were charged with guarding against these offenses.

26:18. court *(parbar).* This obscure architectural term is thought (on the basis of the Temple Scroll from the Dead Sea Scrolls) to refer to an open area (similar to a forum) just west of the sanctuary (that is, at the rear of it) featuring free-standing pillars.

26:20. temple treasuries. See comment on 26:16-18.

27:1-24
Army Divisions and Officers

27:1. significance of lists. Part of the duty of Israelites to their king and country involved service in the army when necessary and regular duty on the corvee labor crews. This latter used forced labor as a form of taxation. This list, however, concerned the organization of the former along militia lines that were not organized strictly by tribe. In the transition to a standing army, the militia system called upon each division to serve one month of "active" duty, thereby forming a rotating standing army in addition to the professional full-time troops and the mercenaries.

27:24. wrath on Israel. For information concerning this see comments on 2 Samuel 24.

27:25-34
Administration

27:25-31. king's property. These stewards had oversight of the estate and assets of the king. Royal holdings existed throughout the land because property that had no heirs reverted to the crown. Likewise, those who had become debtors to the king for one reason or another worked the land for the king. Besides real property and its produce the king also owned flocks and herds that were grazed throughout the land.

28:1-21
Charge to Solomon to Build the Temple

28:1 royal administration in the ancient Near East. The categories listed in this verse include representatives of each tribe (a vestige of the twelve-tribe system that preceded the monarchy), all officers of the military (both king's bodyguard and national army), royal stewards, administration of the palace (scribes, eunuchs, advisers, "cabinet" officials) and David's special forces (an elite group of operatives that did not necessarily function within an organized military structure). No reference is made to priests or Levites, but perhaps their presence is assumed (v. 21). Bureaucratic structures are evident in the ancient Near East as early as the fourth millennium B.C. Magistrates, bailiffs, judges, heralds and inspectors all were part of urban and village administration. But the list in this passage is the administration of the king and state—royal administration, not social administration. One could compare and contrast the Assyrian structure a few centuries later that featured three major officials under the king, roughly equivalent to American secretary of state, president's chief of staff and chairman of the joint chiefs of staff. A second layer would have included much of the palace administration.

28:2. footstool symbolism. The ark was a wooden box, open at the top, approximately three to four feet in length and over two feet in both width and height (based on eighteen inches per cubit). A golden cover, decorated with two winged cherubim, sealed the ark, securing the tablets of the law within it. Its primary function was to store the tablets and to serve as a "footstool" for God's throne. In Egypt it was common for important documents that were confirmed by oath (e.g., international treaties) to be deposited beneath the feet of the deity. The Book of the Dead even speaks of a formula written on a metal brick by the hand of the god being deposited beneath the feet of the god. Therefore the footstool/receptacle combination follows known Egyptian practice. In Egyptian festivals the images of the gods were often carried in procession on portable barques. Paintings portray

these as boxes about the size of the ark carried on poles and decorated with or flanked by guardian creatures. A similar-sized chest with rings (for carrying with poles) was found in Tutankhamun's tomb.

28:11. temple architecture. Temples are typically classified by archaeologists on the basis of the arrangement of the chambers through which one gains access to the inner recesses and by the orientation of the main chamber where the presence of the god is represented. "Direct axis" architecture allowed one to walk in a straight line from the altar to the inner shrine (cella). "Bent axis" required a ninety-degree turn between the altar and the place where the image stood. The door through which one entered the rectangular cella in the direct access arrangement could either be on the short wall ("long room") or the long wall ("broad room"). Solomon's temple was of the "direct axis" style, but it was neither long room nor broad room because the holy of holies (cella) was square, not rectangular. Solomon's temple also featured an antechamber between the altar and the cella as well as a portico, courtyard and many siderooms. These were also common elements in ancient Near Eastern temple architecture. A ninth-century temple at Tell Tayanat in Syria features the exact structure of a portico with two free-standing pillars, a long antechamber and a small cella all on a direct axis, thirty-eight feet by eighty-three feet (Solomon's was thirty by ninety).

28:15-17. temple accessories. Archaeologists have unearthed many examples of temple accessories in excavations throughout the ancient Near East including a variety of braziers, shovels and containers. For more information on specific implements see comments on 2 Chronicles 4.

28:18. cherubim as chariot. This verse has the only explicit connection between the cherubim and a chariot motif. In Ezekiel 1 and 10, creatures that are identified with cherubim accompany Yahweh's mobile throne, but that is never called a chariot. Biblical descriptions as well as archaeological discoveries (including some fine ivory pieces from Nimrud in Mesopotamia, Arslan Tash in Syria and Samaria in Israel) suggest the cherubim are composite creatures (having features of a number of different creatures, like the Egyptian sphinx), often four-legged animal bodies with wings. The cherubim appear in ancient art with some regularity, flanking the thrones of kings and deities, for instance on the side of the throne picture on Ahiram's sarcophagus.

29:1-9

Donations Toward the Temple

29:2. onyx. Sometimes translated "carnelian" or even "lapis lazuli," the precise identification of this stone is unknown.

29:2. turquoise. Another possibility here is "antimony," and some believe it represents the mortar that was used to set mosaic patterns (see next entry).

29:2. stones of various colors. The reference to stones of various colors suggests the use of mosaics. In the classical world mosaics were very popular. The stone was not artificially colored, but rather stones of different shades were imported from wherever they could be found to give color to the mosaic. The earliest mosaic floors were made from colored pebbles laid out in geometric designs. Only later did they begin cutting the stone into cubes (tessellation) and forming them into pictures. No examples of mosaics in the Near East have been found earlier than the eighth century B.C. (Gordion in Asia Minor), though the art of inlay was known as early as the third millennium (as in the royal standard of Ur).

29:2. marble. Some translations call this alabaster. Marble had to be imported from Greece and is not evident in the ancient world until its introduction into Phoenicia in the Persian period. Marble capitals (the decorative tops of pillars) are not attested archaeologically in the Near East until the first or second centuries A.D., though pillars of the material referred to in this verse are mentioned in Esther 1:6, where the same material is used in an inlaid floor. Oriental alabaster was a calcium carbonate-like marble, unlike European alabaster, which is gypsum. It was used for fine vessels throughout the region during the biblical period, as well as for columns in architecture. In Sennacherib's "palace without rival" mostly white limestone was used, though he had some access to alabaster.

29:4. amount of precious metals. This comes out to over one hundred tons of gold and over 250 tons of silver. In Egypt the largest known donation of gold and silver made by a pharaoh to the gods is the two hundred tons by Shishak (who got lots of it from Jerusalem). In Assyrian inscriptions, kings such as Tiglath-Pileser III, Sargon II and Shalmaneser III rarely list the specific amount of gold taken in tribute or plunder, and when they do it is usually between ten and fifty talents. More comparable is the amount of 9,000 talents of gold and 40,000 talents of silver Alexander the Great is said to have taken from the Persian capital, Susa.

29:4. Ophir. Gold from Ophir is mentioned in an eighth-century inscription from Tell Qasile. The precise location of the site is unknown. The fact that it was shipped in at Ezion Geber suggests an Arabian location, though sites in India and East Africa have been considered.

29:7. amount of leaders' gifts. Five thousand talents of gold is nearly 200 tons and the amount of silver is twice that. Another amount of gold is measured in darics—the coined money of the Persian empire. Clearly the author of Chronicles has converted this amount to his own contemporary units. A daric is a gold coin that probably got its name from its originator, the Persian king, Darius the Great, toward the end of the sixth century B.C. This was the first coining of money in the Near East (though the Greek world had been coining money for over a century). The daric bore the image of an archer and weighed about .3 ounces. Ten thousand darics would therefore equal about one hundred eighty-five pounds (about two and a half talents). Perhaps the Chronicler did not just include this with the other gold talents because that part of the donation was given in ingots that had already been sized for merchant transactions. Even before money was being coined, there was limited use of standardized weight pieces either in ingot currency (no decoration or consistent shape), or ring money (in various ring shapes) as early as the second millennium.

29:10-30
Solomon's Coronation

29:21. coronation sacrifice. Burnt offerings and fellowship offerings are two of the most general types of sacrifices. The former often accompanied petition, while the latter served as an opportunity for festive celebration and a communal meal before the Lord. Typical use of this offering in a national context was for ratification of treaties or covenant agreements. Here, the sacrifices were being offered to make petition for God's blessing and in preparation for a feast that would create an alliance between Solomon and those in attendance.

29:29. sources in Chronicles. The Chronicler cites many different sources that he used in the compilation of his work. Most of these have not survived, though the canonical books of Samuel and Kings would have been among them. The sources mentioned here are records of three famous prophets of the period of David, though we do not know whether they are memoirs, anthologies of prophecies or some other type of document. There is no extant literature from the ancient world that is attributed to a court prophet, except those found in the Bible, so there is little precedent for identifying the nature of these works.

2 CHRONICLES

1:1-17
God's Blessings on Solomon

1:3. high place at Gibeon. Located about four miles northwest of Jerusalem, Gibeon (el-Jib) lies in the Benjaminite hill country with several nearby springs and an elaborate tunneled water system making it an important local settlement. The cultic site or high place where Solomon made his huge offering of one thousand sacrifices (1 Kings 3:4) may have actually been on a promontory called Nebi Samwil, about a mile south of Gibeon. The city's prominence is also found in its inclusion in Shishak's list of cities during his Palestine campaign. The use of a high place is not condemned by the biblical writer prior to the construction of the Jerusalem temple and the implementation of "Jeroboam's sin" (see comments on 1 Sam 10:8; 1 Kings 12:28-31).

1:3. Tent of Meeting. See the comments on Exodus 27:21 and 33:7-10 on the construction and use of this sacred installation during the wilderness period. The fact that it has been separated from the ark is only found in this narrative.

1:4. Kiriath Jearim. This village had served as the storage place for the ark of the covenant after its return from the Philistines (1 Sam 7:1-2). The town has been identified with Tell el-Achar, nine miles west-northwest of Jerusalem, but this is unsubstantiated by archaeological finds or extrabiblical references. Its association with Mahaneh Dan in Judges 18:12 puts it in that general area (see the comment on Judg 13:25). This location places it only six miles from Gibeon.

1:5. bronze altar. See Exodus 38:30 and 39:39

for the construction of this altar, which was supposed to stand in front of the tent of meeting (see also 2 Kings 16:14). The presence of the tent of meeting and the bronze altar at Gibeon while the ark was moved to Jerusalem suggests two different, major religious centers prior to the construction of the Jerusalem temple.

1:5. assembly inquiry. Inquiry usually refers to posing an oracular question to the deity, but no question is stated or implied here. A persuasive variant reading understands the search ("inquiry") to be for the altar rather than for an oracle from the Lord. This would make sense prior to the temple-building activities in the following chapters. With the anticipated construction of a new sanctuary, it is important to collect the relics that had been associated with the traditional shrine. Significant holiness would be attached to this altar that had been used by Aaron himself several centuries earlier. If there is an oracle being sought here, it likely concerns the desire to build a temple. Such work was not begun without specific divine approval (see comment on 2:1).

1:6. one thousand burnt offerings. In its magnitude, this can be compared to the mass sacrifices in Exodus 24:5-8 and 1 Kings 8:5. Such extravagance generally marks major covenantal events or the initiation of a new relationship with Yahweh. The huge piles of offerings on tables depicted in Egyptian tomb paintings may parallel, at least in terms of quantity, the devotion and power exemplified in Solomon's offerings at Gibeon.

1:7-12. incubation dreams. Though the passage in Chronicles does not mention a dream, 1 Kings 3 provides that detail. It was common practice for individuals or groups to travel to shrines, make offerings and then sleep before the altar in the hope of obtaining a dream message from the god of that place (see the comments on Gen 28:13-15 and 1 Sam 3:3). The setting therefore was extremely important to incubate a dream theophany (as in the dream of the Ugaritic hero-king Keret). In the vision the person is aroused by the god's appearance and a call to be alert to their pronouncement. Among the many examples from ancient Near Eastern literature, the Assyrian king Ashurbanipal describes a dream in which Ishtar appeared to him, and the Neo-Babylonian king Nabonidus records several dreams in which Marduk or Sin stood before him in all of their glory.

1:7. God's offer. In auditory message dreams such as this (see comment on 1 Sam 3:4-10), it is not unusual at all for conversation to take place between the deity and the king. The dream functions to validate either the kingship or a proposed undertaking of the king.

1:8. Solomon's acknowledgment of God's patronage. Similar phrasing can be found throughout the ancient Near East as kings recognize the deity who has established them. The Hittite king, Muwattalli II, for instance, cites his own unworthiness in comparison to his father's status and accomplishments. He then recognizes the deity as having raised him up and established him on the throne.

1:12. granting of wisdom. Kings of the ancient Near East were supposed to be wise, and it was not unusual for them to credit deity for bestowing wisdom on them. The Assyrian king Sargon was proclaimed to be the wisest ruler in the world thanks to the gods Ea and Belet-ili. The god Asshur assures Sennacherib in a dream that his wisdom had surpassed the wisdom of the experts. Ashurbanipal boasts not only of his great learning and wisdom, but of his technical knowledge and his ability to debate the learned. He credits Shamash and Adad for granting him his wealth of wisdom.

1:14. Solomon's chariots and horses. The accumulation of such a large force of chariots indicates his intention to emulate the grand military displays of his neighbors and rivals. For conflicts in open country and on broad plains, the chariot, accompanied by detachments of infantry and cavalry, was both a shock weapon and a mobile platform for archers. The huge numbers of chariots recorded in the Assyrian annals at the Battle of Qarqar (853 B.C., see comment on 22:1) indicate just how important commanders considered them in their military planning. Solomon's contingent of chariots is not as large as the two thousand that Ahab contributed to the western alliance at that battle. In the thirteenth century the Hittites and their allies had amassed twenty-five hundred chariots to confront Rameses II at the Battle of Qadesh.

1:14. Solomon's stables. The wide distribution of stable facilities uncovered by archaeologists throughout Israel (Megiddo, Tell el-Hesi, Lachish, Beersheba, Hazor) suggests extensive use of chariot corps in the armies of Israel and Judah. The common architectural style found in most of these stables (long hall, divided lengthwise into three aisles by pillars, and a single door) indicates both attention to function and a common building program. They featured low stone pillars with holes for tethering, and large, shallow stone mangers (similar to those depicted on Assyrian monuments). Large installations would have been

necessary to house and exercise these trained stallions. The Megiddo stables (those found generally dated to Ahab's time) could have housed up to 480 horses. When other stable facilities found by archaeologists are included, nearly 800 stalls can be identified.

1:15. Solomon's gold. For statistics concerning the gold of David and Solomon, see the comments on 1 Chronicles 22:14.

1:16-17. trade with Egypt. Solomon's role seems to have been as a "middleman" between Egypt and Anatolia in the horse and chariot trade. The Phoenicians had established most of the commercial links and provided the ships to carry goods throughout the Mediterranean. With them as his trading partners and Solomon's strategic location on the land link between Africa and Asia (see his horse farms in 2 Chron 8:3-4), it would be a natural expectation that Israel would tap the financial markets during a period of relative peace. As early as the Amarna period fine horses were being imported from Egypt, and the Hittites also imported from Egypt. Both Assyrian and Hittite sources differentiate between the large horses available in Egypt (Nubian horses) and their own smaller horses.

1:16. Kue. Located in the lowlands of southeastern Turkey in what is known in classical sources as Cilicia, Kue emerged from the destruction of the Hittite empire in 1200 B.C. to become a major trading center. In addition to its mention as one of Solomon's trading partners, Kue is found in the Assyrian annals as one of the participating states at the Battle of Qarqar (853 B.C.) and in the Karatepe inscription of Azitawada (late eighth century B.C.).

1:17. cost of chariots and horses. The cost of chariots found in inscriptional material ranges from sixty to one hundred shekels per chariot. The fact that Solomon is paying many times that price suggests that these are not ordinary chariots but ornamental chariots used in display and procession contexts. These are widely attested in both Egypt and Mesopotamia. The luxury transportation of the day, these were typically gilded with all variety of gold, lapis lazuli and precious stones. The Amarna letters refer to a chariot of the Mitannian king that was gilded with over three hundred shekels of gold. The price for the horses is also high but not outrageous for a good quality animal. In second-millennium Hittite sources a chariot horse could be bought for twenty shekels. But there are examples in Syria and Babylon from early in the second millennium to the middle of the first millennium where two to three hundred shekels were paid.

1:17. export trade with Hittites and Arameans. For them to receive horses and chariots by any overland route, the Hittites (see comment on 2 Kings 7:6) and Arameans would have had to deal with Solomon and his Phoenician trading partners. During the eleventh and tenth centuries B.C., the Aramean tribes had taken advantage of the weakness of Assyria and Babylonia to establish small states, such as that at Damascus (see the comments on 1 Kings 11:23-25). Realizing that the Assyrians were still capable of reemerging as a major force (as they were to do in the ninth century), it would have been good policy for both Cilicia and Aram to continue to train and equip strong armies, even in the face of inflated prices.

2:1—4:22
Solomon Builds the Temple

2:1. temple building in the ancient world. Early in the second millennium, Gudea, ruler of Lagash, receives instructions through incubation dreams that he is to build a temple for the goddess Ningirsu. The text reports his gathering of materials (wood, stone, gold and silver) and assembling a work force. At the completion of the work there is a dedication feast lasting seven days. As a result of his labor, Gudea is promised long life and a successful reign. Similar details are given over a millennium later when Esarhaddon is instructed to rebuild the famous Esagila temple in Babylon. Another interesting account of temple building is found in the Ugaritic epic in which the god Baal is building a house for himself. Again the elements of gathering appropriate materials, amassing a work force and celebration upon completion are all present.

2:2. conscript labor. The corvee for public works projects like the construction of the temple would be conscripted on the basis of a census. Considering the huge number of projects undertaken during Solomon's reign, it seems likely that native Israelites as well as resident aliens would have served in the corvee. Indications of this are found in Jeroboam's position as chief of the corvee in the Joseph tribes (1 Kings 11:28) and the stoning by the northern tribes of another corvee officer, Adoniram (1 Kings 12:18). The use of forced labor was already widespread in Syria in the second half of the second millennium. The excesses associated with "forced labor" are also used as one of the charges against the Neo-Babylonian king Nabonidus in the Cyrus Cylinder.

2:2. carriers. As with any labor group, there would have been a division of labor between

the skilled and the unskilled. Presumably those delegated to the task of "carrying" would have been unskilled "strong backs," who would have hauled stone, timber and building materials and tools. Such heavy labor generally fell to prisoners of war or slaves in Mesopotamian documents. In this case, where resident aliens were involved, they may have served in this capacity, but that would depend on individual skills or background.

2:2. stonecutters. The parallel passage in 1 Kings 5:15-18 indicates the need for quarriers who wrenched the stone from the cliffs as well as more highly trained Phoenician Gebalites (from Byblos) who dressed the stone for use in the construction of the temple. The work at the quarry was accomplished by cutting trenches (about two feet wide all around) to isolate the stone that was to be used. Then wooden wedges were driven in at the bottom and drenched with water. The resulting expansion of the wood freed the bottom of the stone. Though this took no great skill on the part of the laborers, a supervisor with training would be needed to determine where the trenches should be cut so as to procure the best pieces of stone. The next stage was rough shaping. After this the true masons took over as they dressed the stone surfaces and gave it the proportions needed. The work was done with such precision that no mortar was needed. The Egyptian "satire on the trades" describes the cramped back and thighs of the stonecutter who destroys his arms fashioning "costly stones" for buildings. The work of stonecutters is depicted on some of the wall panels decorating Sennacherib's palace in Nineveh.

2:2. size of work force. The total work force is 153,600 (vv. 17-18), divided into three groups: carriers, stonecutters and officers. Numbers such as these may reflect approximate totals of all those who were recruited to work on the temple over the years it took to build, rather than the number working at any given time. Assyrian and Babylonian kings typically got their work force through their military campaigns. In fact, it was the need for a work force that sometimes instigated military activity. In one report, Ashurnasirpal gathered nearly fifty thousand to work on the city of Kalhu.

2:3-16. royal correspondence. There are many examples of royal correspondence from the ancient Near East, which contain requests for building supplies (such as the cedars of Lebanon), luxury items and diplomatic exchanges. The letter carried by the eleventh-century Egyptian priest Wenamon contained a request for cedar logs and made mention of the long-standing, multigenerational relationship between the pharaoh and the kings of the Phoenician coast. The kings of Mari regularly wrote to their vassals and allies, exchanging news and describing the arrival of manufactured goods, animals and raw materials that they had requested or purchased. In this context, Solomon's exchange of letters with Hiram, although not structured in the formal style typical of extrabiblical correspondence, provides a sense of business as usual.

2:4. burning incense. See the comment on Exodus 30:7-8 for the use of incense in the tent of meeting and evidence of its use elsewhere in the ancient Near East. The burning of incense was a regular part of worship of the gods throughout the ancient Near East, so this is a necessity that would be familiar to Hiram.

2:4. consecrated bread. See the comment on Leviticus 24:5-9 on the preparation and weekly presentation of the "show bread." This sacrifice symbolized both God's presence as well as the promise of fertility found in the covenant. It was common practice in the ancient Near East to set food before the gods, though Israelite practice in this regard was quite different from that of her neighbors (see comment on Lev 1:1-2).

2:4. Sabbaths, New Moons, feasts. See the comments on Numbers 28 and 29, which discuss Israel's religious calendar. Though the recognition of Sabbaths is so far unique to Israel, observances at the New Moons and annual festivals would have been familiar obligations to Hiram and the Phoenicians.

2:5. basis for the claim of Yahweh's superiority. Similar claims of superiority for their patron gods can be found in the Assyrian annals for Ashur and the *Enuma Elish* creation story for Babylon's god Marduk. Such would be the expected rhetoric for any nation in internal documents. When one nation claims superiority of its god(s) over the god(s) of another nation, it is usually based on military supremacy or acts of power. Such claims have greatest credibility when they are found in the mouths of those who have worshiped the other god(s) now being considered inferior. Such is the case in Rahab's statement (based on military supremacy and acts of power; Josh 2:11) and Naaman's exclamation (based on healing act; 2 Kings 5:15).

2:7. imported craftsmen. When Assyrians or Babylonians went on campaigns intended to round up a labor force, a prime objective was to procure skilled craftsmen (see the list of those exiled in 2 Kings 24:14, 16). On the one

hand the sheer demand often required more craftsman than were available locally. Additionally, however, some peoples had further developed certain technologies because of the natural resources that were available to them. Craft guilds often were made up of families that had developed their own techniques and trade secrets that would be practiced and passed on from generation to generation. Such skills were desirable, and merchant trade could establish a reputation that would put such craftsmen in high demand.

2:7. blue and crimson yarn. These were the most exotic and desirable dyes that were available in the ancient world and were very expensive. They had been used in decorating the tabernacle and in embroidering the priestly vestments. The "blue cloth" has more recently been interpreted as a blue/purple or violet color. The dye for this color was one of the major imports of Phoenicia where it was extracted from the murex snail *(murex trunculus)* which inhabited shallow coastal waters of the Mediterranean. An ancient refinery has also been found at Dor along the northern coast of Israel. One chemist estimated that a quarter of a million snails would be needed to produce one ounce of pure dye. This dye was used in the manufacture of the most sacred objects.

2:8. types of lumber. Essentially cedar and cypress trees were to be used for the beams and other structural supports. This usage follows the pattern set by other ancient Near Eastern kings like Nebuchadnezzar of Babylon for their monumental buildings. Almug in 1 Kings 10:11-12 is red sandalwood imported from Ophir (native to India and Ceylon) and is a luxury hardwood used for furniture since it can be highly polished. The algum of Chronicles may be Grecian juniper, a tall coniferlike fir used for timber. Typically they used hardwoods that polished to a fine finish with nice grain or fragrant odor. A number of these woods are also impervious to bugs or mildew. Iron-headed axes and two-handed copper pullsaws were among the principal tools used to prepare the timber. Egyptian tombs and tomb paintings provide much information concerning these and other tools.

2:10. payment of woodsmen. While the wages to be paid to the Phoenician woodsmen are set in an agreement for the totality of the project, it may be assumed that each worker received a daily wage/ration for his labor. These men, while they might have belonged to a guild of woodsmen, may have also included *ḫupshu* laborers (mentioned in Amarna, Nuzi and Assyrian texts), who depended for their livelihood on what they could earn each day. The 125,000 bushels each of wheat and barley and the 120,000 gallons each of wine and oil would have served as rations for six to eight thousand workers for three years.

2:14. engraving. Engraving could be done on bone, ivory, shells, stone, gems, wood and metal of various sorts. The art of engraving included the shaping and inscribing of precious and semiprecious stones as seals and insignia. These cylinder seals and stamp seals were used throughout the ancient Near East as personal identification and the means of sealing official documents and contracts with the names of the participants. In the temple much of the furniture as well as the paneling required engraving work.

2:16. wood delivered by raft. The trade in cedar logs from Lebanon is well attested in Egyptian (Old Kingdom through the eighth century) and Assyrian sources. For a time Tiglath-Pileser III ordered the trade stopped between the Phoenicians and their Egyptian and Philistine trading partners, fearing the construction of a fleet or a growth in wealth sufficient to make them dangerous. Transport of the logs along the Palestinian coast south would have involved either tying them together into rafts, which required staying very close to shore for fear of storms breaking them up, or loading them on ships. Assyrian reliefs show Phoenician ships both loaded with logs and towing them. Reliefs at Sargon's palace show cedar-log rafts being floated down the river for use in his building projects, a process that was used as early as 2000 B.C. in Gudea's temple project. Joppa was the closest port to Jerusalem in antiquity and was the natural debarkation point for the logs. From Tyre to Joppa was nearly one hundred miles; the inland trek from Joppa to Jerusalem was about thirty-five miles.

2:17-18. aliens as conscript labor. See the comment on 2:2 and 2:7 on the use and acquisition of conscript labor.

3:1. Mount Moriah. This identification is intended to associate the site of the temple with the sacrifice of Isaac (see the comment on Gen 22:2) even if it is in name only.

3:1. threshing floor of Araunah. See the comments on 2 Samuel 24:18-25 for David's purchase of this facility. The threshing floor, like the city gate, served as a legally significant spot where grain was distributed, disputes settled (see 1 Kings 22:10), and where God's manifestation might occur (see Judg 6:36-40). A threshing floor would also be outside the walls of the city and elevated to take advantage of the winds to blow away the chaff. The

choice of a temple site in the ancient world was an important matter that often absorbed a good deal of time and energy. It was believed that the deity was the one who would designate the spot. No such process is indicated here. Instead a site with already long-established sacred traditions serves the purpose. There are no oracles asked or any designation of location offered through divine messages.

3:2. chronology. The building begins early in Solomon's reign in the mid-960s. The second day of the second month is in the spring when the rainy season and the early festivals are past. The first day of the month would probably have been the New Moon festival, so the second day begins the work.

3:3-4. dimensions. The text in Chronicles describing the physical dimensions of the temple is incomplete, and the measurements given are different from those found in 1 Kings 6:2 (sixty cubits long by twenty cubits wide by thirty cubits high). Chronicles omits the height for the main structure but lists twenty cubits for the height of the portico in verse 4. This measurement may then be based on simply the foundations. There is also some variation in terminology, but that may be explained by the changes in language usage over time. The cubit "of the old standard" is slightly shorter than the common standard in Deuteronomy 3:11. Unlike Mesopotamian descriptions of temples that intend to glorify the king who built the temple, the biblical text gives information sufficient for the reader to visualize (if not precisely reconstruct) the building.
